

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and activities. It emphasizes that proper record-keeping is essential for transparency and accountability, particularly in financial matters. This section also touches upon the legal implications of failing to maintain such records, which can lead to severe consequences for individuals and organizations alike.

2. The second part of the document delves into the specific requirements for record-keeping, including the types of documents that must be retained and the duration for which they should be kept. It provides a detailed overview of the various categories of records, such as financial statements, contracts, and correspondence, and outlines the best practices for organizing and storing these documents to ensure they are easily accessible when needed.

3. The third part of the document addresses the challenges associated with record-keeping, particularly in the context of digital information. It discusses the risks of data loss, corruption, and unauthorized access, and offers strategies to mitigate these risks. This includes the use of secure storage solutions, regular backups, and access controls to protect sensitive information.

4. The fourth part of the document provides a comprehensive guide to the legal and regulatory requirements governing record-keeping. It covers the various laws and regulations that apply to different industries and jurisdictions, and explains how these requirements can be integrated into an organization's overall compliance framework. This section is particularly useful for organizations operating in highly regulated sectors.

5. The fifth and final part of the document offers practical advice and tips for implementing an effective record-keeping system. It discusses the importance of training staff on record-keeping procedures, the role of technology in streamlining the process, and the need for regular audits to ensure the system is working as intended. The document concludes by emphasizing that a robust record-keeping system is not just a legal obligation, but a key component of an organization's operational excellence and risk management strategy.

PREFACE.

THIS volume of the ANNUAL CYCLOPÆDIA is the first of a new series, and the sixteenth of the whole series. It is uniform with the AMERICAN CYCLOPÆDIA, and will supplement the latter work so far as relates to the events of history, the records of religious movements, science, politics, literature, biography, etc. It is, indeed, a worthy and fitting complement to the sixteen volumes of the revised CYCLOPÆDIA, and is bound up in the same style.

The compass of this work embraces the world's history during the year, in every department of human activity of sufficient importance to be a matter of record. A special article is devoted to the affairs of every country, which contains a sketch of its history during the year, and all official and reliable information on area, population, religion, education, finances, army, navy, commerce, industry, military operations, the public questions agitated, and the reforms effected. Great efforts are made to secure the completest material from all parts of the world, and the superiority of this work over all other publications of a similar scope is each year more generally appreciated and recognized. It is felt that in its several departments the work may be safely consulted as the completest and most reliable book of reference.

The details of American affairs in these pages embrace the administration of the Federal Government; its finances and systems of revenue and taxation; the banking system; the currency, and public questions relating thereto; commerce, manufactures, and the general state of the country, and the important subjects that agitate the public mind; the finances of the States, their debts and resources; their educational, charitable, and reformatory institutions; the various political conventions, national and State, assembled during the year, with their nominations and platforms; the results of elections; also, commercial and other conventions, and their proceedings; the important questions before Congress, such as counting the presidential vote, amnesty, various constitutional amendments, specie payments, etc., with the debates and decisions of that body; important decisions of State and Federal courts; the proceedings of State Legislatures on the various local matters; the extension of railroads, telegraphs, and all those great improvements of every kind involved in the rapid progress of the country.

The most important feature in the international relations of the world during the year 1876 was the thickening of the impending war-cloud in the East. The efforts of Turkey to suppress the insurrectionary movements in the Christian provinces proved unsuccessful. The Government of Servia, yielding to the impetuous sympathies of its subjects with the insurrectionists, declared war against Turkey; and, although the disparity of the military forces made success impossible, yet the

excitement of the entire Slavic race, and especially of the Russian people, rose to fever-heat, and foreshadowed the enlargement of the seat of war by the active interference of Russia. As such an event was regarded as affecting generally and intensely the interests of all the nations of the civilized world, a last though unsuccessful attempt was made by the treaty powers of Europe, by an international conference, to avert a new Eastern war. To conciliate public opinion in Europe, the Government of Turkey deemed it necessary to proclaim a constitution conferring upon its inhabitants, of all races and religions, the principal rights enjoyed by the people under constitutional monarchies. The article "Turkey" has, therefore, a prominent place in this volume, and presents an extensive account of the military operations, of the diplomatic negotiations, and of the new constitution. A special map of the seat of the war, giving most of the places mentioned, will be found a valuable aid in following the progress of the above-mentioned military operations. Another map, on the races and religions of Turkey, will greatly facilitate a just appreciation of the dangerous crisis through which that country is now passing. The attitude of the other great powers of Europe, under the new aspect of the Eastern question, is fully set forth in the articles devoted to their respective countries. The unusual state of affairs in Denmark during the year will be found to be presented in a very clear and satisfactory manner.

The international relations of the United States are presented under the title of "Diplomatic Correspondence."

The special articles on the great religious divisions and denominations constitute, on the whole, a religious history of the year, probably the only one now accessible in the English language.

The advance in the branches of astronomical and chemical science, with new and valuable applications to various purposes, is extensively described. A notice has also been taken of the International Congresses of the adepts of various sciences.

The great engineering enterprises of the world in progress are fully described, and also numerous mechanical improvements.

The narrative of geographical discoveries in the different parts of the earth is very complete; also, under the title "Earth," we present summaries of the area and population of the large divisions of the globe, according to the latest statistical information.

Under "Archæology" will be found very full descriptions of the discoveries of Schliemann and Cesnola.

The results of the Centennial Exhibition are presented in a summary but very complete manner.

The record of Literature and Literary Progress in the United States and in each of the countries of Europe is as important as during any preceding year.

The biographical department is very full, and embraces brief notices of deceased persons of distinction in State, Church, society, and literature; there are also notices of many living persons who were distinguished during the year.

The volume contains numerous illustrations of noted cities and places in the various countries of the world, and also steel portraits of the two leading candidates at the recent presidential election in this country.

All important documents, messages, orders, and letters from officials and others, have been inserted entire.

APPLETONS'
ANNUAL CYCLOPÆDIA.

A

ABDUL-AZIZ, Sultan of Turkey, born February 9, 1830; died June 4, 1876. He was the thirty-second Sultan of the Turkish Empire, and the second son of Mahmoud II., the first sovereign of Turkey who weakened the fanatical spirit with which the Mussulmen opposed changes in her laws and her military organization. Abdul-Aziz succeeded his brother, the Sultan Abdul-Medjid, on June 25, 1861. On ascending the throne he imitated the conduct of his predecessor at his accession in 1839, introducing some reforms, and announcing that he would make many more which would put Turkey on an equality with the Christian nations of Europe. Like Abdul-Medjid, he inherited from his father, Mahmoud, the belief that it would be well to modernize Turkey. His accession to the throne awakened great hopes, as it was thought that he was brave, patriotic, and determined. To the great regret of the Old Turkish party, he confirmed the *hatti-asherif* of Gylhane, and the *hatti-humayun* of 1856, and thus bound himself to the execution of the great reforms depending upon those documents. He, furthermore, promised to restore order in the interior, and economy in the finances, and in this latter measure led the way by reducing his own civil list \$3,000,000, and by dismissing his brother's *seraglio*. Changes were also made among the high officers of state, none of which, however, betrayed a peculiar policy or a firm determination on the part of the Sultan. He showed a great fondness for the army, increased the number of soldiers, introduced new uniforms and armaments, thus swelling the budget very largely, while the actual condition of the troops remained unchanged. In the midst of these great financial difficulties, a reform of the ministry of finance was begun, and a commission appointed to take charge of the public debt. These and other measures led to the contraction of a number of loans, by means of which

the national credit was to be restored, but which, in reality, were wasted for the most trivial purposes. In 1863 he paid a visit to the viceroy of Egypt, which at the time was looked on with suspicious eyes by the other nations of Europe. This journey, as well as the reception ceremonies instituted by his mother, again consumed large amounts of money. In 1862 his armies conquered the Montenegrins, but the impending ruin of his empire became all the more apparent. In the Danubian principalities he had to acknowledge Prince Charles of Hohenzollern, who thus converted another Turkish dependency from an elective into an hereditary monarchy. In spite of the dissatisfaction prevailing throughout the entire empire, he undertook in 1867 a journey through Europe, in the course of which he visited the Paris Exhibition, and passed through England, Germany, and Austria. This journey, which had consumed a large amount of money, was looked upon by a number of enthusiasts as an event of great importance in the history of civilization. The civilization of Europe had indeed made a deep impression upon the Sultan, and he declared, upon his reception by the Grand-Vizier, that he would make it his chief aim to develop the means of communication, the public credit, and the education of his nation. But in spite of his good intentions, and of many reforms introduced by him, the political and social condition of the empire remained virtually unchanged. In March, 1868, a change took place in the formation of the Council of State, which henceforth was to be the central government for the whole empire. In opening this constitutional council, which was composed of thirty-four Mohammedans and sixteen Christians, he delivered a speech in person, in which he promised reformatory legislation, reports on the condition of the empire, and an approach to European civilization. In the mean time the

continted anarchy existing in his empire, and the insurrection in Candia, occupied the entire attention of himself and of his ministers, and at the same time absorbed the resources of the empire. In the year previous, giving way to the counsels of the other European nations, and in order not to be involved in difficulties with Servia while having the revolt in Candia on his hands, he had withdrawn the Turkish garrison from the important fortress of Belgrade, and had thus granted Servia complete political autonomy. In addition to this state of affairs, a conflict threatened with Greece in 1868, which country was aiding the rebels in Candia. As a war against Greece would have brought on new complications with the European powers, the Sultan, although hating the Greeks, and dreaming of the restoration of the power and the glory of his empire, permitted the difficulties to be adjusted by his ministers at a conference of the powers in Paris. The victory here gained by Turkish diplomacy gave the Sultan and his government the courage and the power to force Ismail Pasha, who in 1867 had been invested with the title of khedive of Egypt, and who had for some time been meditating to throw off his allegiance to the Sultan, to an apparent subjection, so that in 1870 the latter came to Constantinople as if suing for mercy. But in the visits of 1872 which the khedive paid the Sultan, he succeeded, by making a wise use of the financial embarrassments of the latter, in regaining the concessions made at his previous visit, and in obtaining at the same time a new law of succession for his house, and almost all the prerogatives of an independent sovereign. In the mean while the condition in the immediate dominions of the Sultan assumed every day more threatening forms. One ministry followed another at short intervals, while the influence of the Russian ambassador, General Ignatiéff, had become all-powerful with the Sultan. The state of the finances had fallen so low that the revenues barely sufficed to pay the interest on the public debt. This was the condition of the country when in 1875 the revolt in the Herzegovina broke out, which, originating in the refusal of a few villages to pay still further the exorbitant taxes imposed upon them, soon spread over the whole province of Bosnia. Owing to the depleted condition of the treasury, the government of the Sultan was unable to meet it with such energy as it demanded. Abdul-Aziz himself appeared to be entirely unable to comprehend the gravity of the situation. In this emergency the *softas*, the theological students, demanded his abdication, and the council of ministers, in the name of the nation, decreed his removal from the throne, proclaiming his nephew Murad V. as his successor. Shortly afterward, on June 4th, he was found dead in his chambers. As rumors began to circulate that he had been assassinated at the instigation of the existing government, his

successor had his body examined by a number of physicians, who arrived at the following verdict:

1. That the death of the ex-Sultan Abdul-Aziz was caused by the hæmorrhage produced by the wounds made in the blood-vessels of the bends of the arms.

2. That the instrument shown to us could perfectly inflict those wounds.

3. That the direction and nature of the injuries, as well as the instrument which caused them, lead us to conclude it to be a case of suicide.

The report was signed by the following physicians:

Dr. Marco, doctor to Abdul-Aziz Khan; Dr. Nouri, Dr. Sotto, *attaché* of the imperial and royal embassy of Austria and Hungary; Dr. Spagnolo, Italian; Dr. Marc Markel, of the British embassy; Dr. I. de Casho, Italian; Dr. A. Marroni, of the French embassy; Dr. Jules Mullingen, English; Dr. G. D. Dickson, of the British embassy; Dr. O. Vitalis, of the Sanitary Administration; Dr. Eduard Spodaro, Italian; Dr. Nouridjan, Armenian; Dr. Iatropoulo, Hellenic; Dr. Abdinour, Dr. Servet, Dr. Miltiade Bey, Greek; Dr. Moustapha, Dr. Mehemet.

A favorite scheme pursued by Abdul-Aziz, during the greater part of his reign, aimed at the abolition of the law of seniority by which he himself had ascended the throne, to the exclusion of the sons of his brother, and for which he desired to substitute a law similar to that prevailing in other European states, thus giving the throne to his oldest son in preference to his nephew Murad Effendi, who was entitled to it by the law of succession then prevailing. To prepare the way for this important change, he permitted the introduction of a similar law in Egypt; empowered his nephew Murad to establish his own household by making him a pasha, thus destroying the exclusiveness of the imperial harem, and finally abolished the barbarous custom of killing all male children of princesses married to high officers of state. On his journey through Europe, in 1867, he also endeavored by all possible means to have his son regarded as his successor, while he kept his nephews in the background. His plans, however, failed, and he was succeeded by his nephew Murad. See Azam, "L'avènement d'Abdul-Aziz" (1861); Millingen (Osman-Seify-Bey), "La Turquie sous la règne d'Abdoul-Aziz" (1868). See also MURAD V., and TURKEY.

ABDUL-HAMID II., Sultan of Turkey, was born September 22, 1842. He is the second son and fourth child of Abdul-Medjid. He succeeded his brother, Murad V., as Sultan of Turkey, on August 31, 1876. His life has been quiet and uneventful. His mother died young, and he was adopted by his father's second wife, herself childless, who is very wealthy, and has made him heir to all her property. During the lifetime of his father he, as well as his elder brother, the deposed Murad V., led a merry life, his every wish and fancy being indulged to the utmost, his education chiefly consisting in being diverted by the amusements and tricks devised for his entertainment by the numerous slaves surrounding

him. His initiation into all the depravities of harem life was unusually early and complete; but his vigorous constitution withstood the effects of the excesses that undermined his brother's health, and when he married he was a strong, hardy lad. He accompanied his uncle, Abdul-Aziz, and his brother Murad, to the Paris Exhibition in 1867. On this journey he was continually kept in the background by his uncle, who wished to advance the interests of his own son as heir-apparent to the throne. Abdul-Hamid also acquired on this journey a great taste for geography, and in his kiosk on the Sweet Waters, which he has since inhabited regularly every summer, he has a very extensive and comprehensive collection of maps, military, geological, and statistical, the study of which constitutes his favorite pastime. He also contracted a fondness for European manners and dress, and has introduced French customs and demeanor into the daily life of all those by whom he is intimately surrounded. He inherited from his father a small palace on the Sweet Waters, where he resided with his wife and two children, a boy of six and a girl of three years, up to his elevation to the throne, eating at the same table, and playing with the little ones. He is an orthodox Turk, and a resolute opponent of the "Young Turkish" party—being an "Old Turk," but not an extreme one. He is considered a much abler man, mentally and physically, than his brother whom he succeeded. The only symptom of Orientalism in his own personal appearance is in the fez, which he dislikes, but still continues to wear, because it is the necessary token of his nationality. The state of affairs has not been changed by his accession to the throne. He introduced a few financial reforms, but the condition of the empire remains in the same precarious state as under his predecessor. (*See TURKEY.*)

ABYSSINIA, a country of Eastern Africa; area about 158,000 square miles; population variously estimated at from 3,000,000 to 4,000,000.

The war with Egypt continued during the year. The cause for this war was stated by Egyptian authorities to be the punishment of bands of Abyssinians, who for more than three years had disturbed the neighboring territory, and continued their depredations in spite of all remonstrances with King John. At the same time all commercial intercourse with Egypt was prohibited, and a small army was stationed in Hamasen for hostile purposes. Hamasen, the scene of all these battles, is the northern part of Tigré, that part of Abyssinia lying nearest to the Red Sea. On the north, east, and west, it is surrounded by Egyptian territory.—The Abyssinians, on the other hand, claim that the war was commenced by Egypt for the sole purpose of aggrandizement; that only one incursion of any account had been made by Abyssinians into Egyptian territory during the year, that of the Dembelas to Ku-

nama in 1878, which was, however, immediately punished by Munzinger. This raid was decidedly free from all political objects; it was one of those made to capture slaves and cattle, and undertaken regularly every year, not only by the Abyssinians, but also by the Egyptian troops and the Mohammedan tribe of the Algedes against the heathen tribe of the Kunamas. Munzinger put an end to these raids by the Egyptian troops and the Algedes, and since the defeat of the Dembelas they have also entirely ceased on the part of the Abyssinians. The other disturbances resulted from quarrels between the different nomadic tribes, where it was hard to tell who was right and who was wrong. These quarrels deserve no attention, and were only raised to the dignity of state affairs by Egyptian officials in Massowah and Keren. The statement that the Abyssinians interrupted commerce also lacked all foundation. Every day a larger or smaller number of Abyssinian traders arrived in Massowah, while Arabians traveled unmolested through all parts of Abyssinia. Only with Amhara the intercourse was temporarily interrupted by internal disturbances. There were also no Abyssinian troops in Hamasen at any time; only in Asmara, on the road from Massowah to Adowa, a few troops were kept by the governor of the town to preserve order.—After the decisive defeat which the Egyptians sustained at the close of 1875, the Khedive immediately took measures to retrieve the disaster. A large army was collected in Massowah early in January, under the command of Prince Hassan, the khedive's son, General Loring, and Ratib Pasha. This expedition left Massowah on January 10th, and toward the end of the same month reached Goura, 50 miles south-southwest of Massowah, without having encountered the slightest obstacle. An entrenched camp was then established, to let the soldiers rest without exposing them to surprise; for it was known that King John, at the head of the armed population of Abyssinia, was moving about the provinces. According to the spies, he did not wish to disperse his army in face of an invasion of the country, because none of his provinces were rich enough to permit him to fix himself anywhere with his troops. The Egyptian expedition, without provisions, remained a month in the entrenched camp at Goura without seeing the enemy. On February 17th they were informed by spies that King John and his army would have to pass between the entrenched camp and the defile of Cazachor. The Egyptian troops, then placed under the command of Osman Pasha, consisted of three batteries and nine battalions. The batteries, armed with mountain-pieces, and seven battalions, left the entrenched camp, and took up their position, six kilometres ahead, on the slope of two hills forming a valley, which, prolonging itself beyond them, becomes a plain of some miles in extent. The bed of a dried-up stream passes at the bottom

of this valley, and extends across the plain, cutting it in two. The Egyptians occupied both sides of this bed, and distributed themselves from the banks to about the middle of the heights. Facing them, at the extremity of the plain, they could see the Abyssinian army, which seemed to intend advancing to force the defile occupied by the Egyptians. Osman Pasha established his batteries at the

head of his army, facing the plain and the Abyssinians. From time to time the latter attempted to break them, and each time they were repulsed by the Egyptian artillery, and already the khedive's troops were shouting victory, when the most horrible of surprises changed their shout of triumph into cries of despair. While the mass of the Abyssinian army was pretending to wish to force the de-

VIEW IN THE MOUNTAINS NEAR MAGDALA.

file, this was simply a *ruse* of war. Behind them soldiers had entered the dried-up bed of the stream; crawling along the ground, they got round the hills on which the Egyptian troops were massed. These hills they ascended from the opposite side, and then, once arrived at the summit, by thousands, men and women, soldiers on foot and on horseback, from behind rocks, trees, and hollows, rushed down with furious cries on the rear flanks of the Egyptians. Dreadful confusion ensued. The Egyptians made no attempt at resistance. Driven on both sides, they rushed into the dry channel; panic seized them; the artillerymen abandoned their pieces in the van, and added to the confusion. The bulk of the Abyssinian army crossed the valley and engaged with the soldiers of the Nile. They fought hand to hand. Hassan Pasha, with heroic efforts, then succeeded in gathering around him some of the officers, with 500 or 600 soldiers, who, together forming a compact body, fought their way through the Abyssinians to the intrenched camp. Of the seven battalions and three batteries this was all that survived. Rachid Bey, Giebri Bey, Colonel Deye, and many other foreign and Egyptian officers, remained dead or wounded on the field of battle. The fol-

lowing day, while the intrenched camp, reduced in number to 2,000, was fortifying, the enemy did not appear. The day after that they were seen in the distance, but disappeared before the firing with which they were received. On the 19th they made an assault, but were repulsed. A cannon-ball passed close to King John; he was thrown from his horse, and the assault was interrupted. On the fourth day the Egyptians succeeded in projecting explosive balls into the Abyssinian camp. This caused great terror, and the day after a messenger arrived from King John. "It was time," he said, "to put an end to this struggle. He was ready to make honorable concessions and to come to a humane arrangement." They required him to consent to a rectification of their frontiers, and to return the prisoners, and arms; in fact, to act as if he had been defeated. The Abyssinians on the other hand demanded the cession of Massowah. As this virtually implied the complete abandonment of Hamasen, which the Egyptians claimed belonged to them, the demand was refused, and all available troops were sent to Massowah. In the mean while an Abyssinian chief, Walda Michael, revolted against King John, incited, as it was supposed, by the Egyptians. On Au-

gust 17th he attacked the royal forces at a place of some importance, called Zakzaga, in Hamasen. The battle lasted six hours, and ended in the complete defeat of the king's troops, who

HILL FORT BETWEEN MAI AND ABACA.

were put to flight. Zakzaga was given up to pillage, followed by an indiscriminate slaughter of old men, women, and children. Mr. Lager, a well-known Swedish missionary, who, to-

ABYSSINIAN WARRIORS.

gether with his three servants, had taken refuge in a native temple, was dragged out and murdered in cold blood. An Englishman, who

is supposed to have held some post in the Abyssinian army, together with some half-dozen Greek traders, shared the same fate. Besides this town, fifteen villages are said to have been burnt, and the number of the victims is estimated at 1,500. Mrs. Lager was taken prisoner, but was released after being detained for four days. It was stated that Walda Michael's soldiers were all armed with Remington rifles, which were supposed to have been furnished by the Egyptians. Immense quantities of these weapons had been purchased by Egypt during the past years. It is possible, of course, that the many reverses which were sustained by the Egyptian troops when in Abyssinia, and which resulted in their leaving the country without their arms and superfluous baggage, may account in some measure for the fine equipment of some portions of the native Abyssinian regiments; but it was evidently in the interest of the khedive, in his struggle with King John, to incite rebellion among the powerful native chiefs, and furnish them with the means of successfully seconding him.

The King soon succeeded in reducing the rebels, and then marched on Massowah, which he was reported to have captured during August. It was also reported that Ratib Pasha, one of the ablest Egyptian generals, had been killed in the defense of that city.

ADVENTISTS. SEVENTH-DAY ADVENTISTS.
A special session of the Seventh-day Adventist General Conference was held at Battle Creek, Mich., beginning March 31st. Fifteen delegates were present, representing the State Conferences of California, Ohio, New York, Minnesota, Wisconsin, Michigan, Indiana, Illinois, Maine, and Iowa, or ten out of the fourteen State Conferences. Letters were also received and read in behalf of the Kansas, Vermont, and Ohio Conferences, in behalf of the cause among the Norwegians in the United States and Europe, in behalf of the cause in Sweden and in Virginia. The meeting, it was stated by the president, was held to consider what means could be furnished to meet the demand for a more extensive and active prosecution of the work of the denomination among the people of the United States, and the scenes of its operations in Europe. Highly-favorable reports of the work were made from the several State Conferences, Canada, and Colorado. The publication was recommended of a small hymn-book for use among the Swedes. A resolution was passed recommending the devotion by members of the church of one-tenth of their income to the cause of God. The ministers were advised to set this duty before the brethren, and a committee was appointed to prepare a tract upon the subject of systematic benevolence. Efforts were ordered to raise \$10,000 to establish a press in Europe. The management of the Hygienic Agency was approved, and increased activity in the prosecution of the health reform and the publication of books on that subject was recommended.

A debt was reported of \$10,000 on the college, against which were unpaid pledges sufficient, if paid in, to meet it.

The fifteenth annual session of the Seventh-day Adventist General Conference was held at Lansing, Mich., beginning September 19th. A conference recently organized in Kentucky and Tennessee was recognized and admitted to the General Conference. Elder James White was chosen president. Resolutions were adopted regretting the neglect of the health reform and the return to old, unhealthful habits of living as likely to work only evil to the people, and to displease God, and advising ministers "to practise the reform themselves and teach it to the people on all suitable occasions," urging young men and middle-aged men to engage in the work of the ministry; noticing an increased interest in camp-meetings and pledging greater efforts to improve them; expressing interest in the spread of the doctrines of the church in the Southern States, and pledging aid to the work "as fast and as far as our means and men will allow;" recommending special efforts to secure the interest of persons and companies in different parts of the world holding the Sabbath doctrines of this church, in its tract and missionary work; commending the school of the General Conference to the people of the church, and urging contributions to it "to place it upon a good financial basis;" noticing "with joy" the appearance of a French paper issued in Europe under the direction of the General Conference Committee; reiterating the precept that one-tenth of the income of members of the church should be given to God; and recognizing with gratitude the continued and growing feeling of fraternity between their own denomination and the Seventh-day Baptists.

The following is a summary of the statistics of this denomination as they were presented to the General Conference, September 19, 1876:

CONFERENCES.	Ministers.	Licentiate.	Churches.	Members.	Pledged to the Synod, and Balance Fund.

Explanation was made that the report from Michigan was incomplete, and the reports from New England, New York, and Illinois, were

given as for 1875, with modifications for a few known changes which had taken place, the reports from those States for 1876 not having been received. The report showed a gain from 1875 of 27 ministers, 59 churches, 2,012 members, and \$11,279.85 in contributions for systematic benevolence. Companies of Seventh-day Adventists were noticed as having been organized in Texas, Virginia, and Maryland. The treasurer of the Seventh-day Adventist Educational Society reported that his receipts and expenditures for the year beginning August 12, 1875, had been each \$12,354.73. The society had property, consisting of the college grounds and buildings, detached lots of real estate, detached buildings, etc., valued at \$51,651.37, and was indebted \$13,860.89, leaving \$38,290.48 as the amounts of its assets after all debts were paid. The treasurer of the Seventh-day Adventist Publishing Association reports that his receipts and expenditures for the thirteen months ending September 15, 1876, had been each \$161,423.56. The association had property valued at \$142,656.82, and was indebted \$45,937.23, leaving as its net assets \$96,719.59. The treasurer of the Health Reform Institute reported that his receipts for the thirteen months ending September 14, 1876, had been \$18,188.15, and his expenditures \$14,584.78. The institute had property valued at \$39,490.18, and was indebted \$1,800, leaving \$37,690.18 as the amount of its clear assets. The treasurer of the General Conference reported that his receipts and expenditures for thirteen months, ending September 15, 1876, had been each \$6,194.09. The meetings of the General Conference and the several societies were held in connection with a *camp-meeting*, at Lansing, Mich., which was estimated to be the largest ever held by one denomination. Sixteen hundred and twenty-two persons were permanently encamped on the ground, and the regular daily attendance at the meetings numbered between two and three thousand.

AFGHANISTAN,* a country in Central Asia, bounded north by east by Turkistan, east by British India, south by Beloochistan, and west by Persia; area 278,000 square miles, population about 4,000,000. Present ruler, Amir Shere Ali. The army of the Emir, according to late accounts, is said to consist of 100,000 men, divided into fifty-seven regiments of infantry, thirty batteries of artillery, and twenty regiments of cavalry. The pay of the soldiers was, in 1876, raised by the Amir to seven rupees a month.

The Governments of both Russia and British India sent, in 1876, special embassies to Afghanistan, an indication of the growing desire of each of these powers to obtain a controlling influence upon this battle-field of their Central Asian policy. The transactions of both em-

* For an account of the regulation of the northern frontier, and of the population of the several provinces, see ANNUAL CYCLOPEDIA for 1874.

embassies are kept a profound secret, and the reports of the Indian and Russian newspapers are too contradictory to be of any value. The Indian Government selected as its envoy a native Mohammedan of India. Special embassies were also received by the Amir from the rulers of Bokhara and Kelat, and all the reports from Afghanistan concurrently point to the growing excitement concerning the approaching crisis in the complications of Central Asia. The Amir devoted special attention to his army. The number of troops and the pay of the soldiers were increased; dependent chieftains were ordered to send their contingency of troops to Cabool; and even a gun-manufactory was established in the same city.

One of the mountain-tribes living along the frontier between Afghanistan and British India, the Afridis, made repeated inroads into Indian territory. They were reported to number about 10,000 soldiers, and to have received promises of aid from other tribes. The Indian Government at first endeavored to pacify them by negotiations and promises of subsidy, but, when this proved unavailing, determined to put an end to their inroads by force of arms.

As the absence of trustworthy information makes it impossible to give a connected account of the progress of Afghan affairs, we give the views of men well known as authorities on all questions of the state of Central Asia and the situation in Afghanistan.

Emil Schlagintweit, the well-known explorer of Central Asia, gives the following account of the relations of Russia and Persia to Afghanistan (*see Augsburg Gazette*, No. 285, 1876): "In Afghanistan, the state of affairs is by no means satisfactory, although Shere Ali seems to be slowly getting the upper hand of his rivals. Europeans are carefully excluded." After citing several cases in support of this statement, among others the case of Colonel McGregor, who wished to make a scientific trip

to Herat, but was refused permission to enter the country, M. Schlagintweit continues as follows: "The report that Russia had sent a diplomatic agent to Cabool is not confirmed in the Indian papers. The cause for the report seems to have been the defeat which Persia some time ago suffered at the hands of the Turkomans in its recent expedition against Merv, and which may be made the basis of Perso-Russian demands upon Afghanistan. This will be looked upon very unfavorably in India, but cannot be prevented. Merv, the oldest city of Central Asia, which was once celebrated for the fertility of the country surrounding it, gradually decayed after fanatical conquerors destroyed the dam which collected the waters of the Murghal River to irrigate the fields. As the country became less cultivated, the manners of the Turkomans living there decidedly deteriorated, and they became the most daring robbers, carrying off slaves and booty from the north of Persia. Persia, as well as Russia, repeatedly sent out troops to punish the Turkomans, but the former power was always defeated. Thus in 1860, 22,000 Persians were repulsed by 5,000 Turkomans, while, only a few months ago, five Persian battalions and ten cavalry regiments with one battery were so completely defeated by an equally strong force of Turkomans, that the Shah of Persia was forced to discontinue the campaign. The Turkomans, emboldened by this success, now threaten Russian settlers on the Atrek line, and even now Russian journals discuss the necessity of a regulation of the border, by which the left shore of the Atrek would come to Russia. At present Russia employs skirmishing-parties to punish the robbers, thus smoothing the way for a revival of old treaties between Persia and Cabool, which are so distasteful to England. On January 23, 1858, the Shah and the ruler of Herat agreed that, if it should ever become necessary for the subjects of Herat to furnish auxiliaries to Persia for the purpose of punishing the Turkomans, they may send as many troops to Persia as they desire, but only for a temporary stay or to pass through that country. On the other hand, the Shah considers himself bound to aid Herat if it is threatened by a foreign power, whether it be Afghanistan or some other. In the Treaty of Paris, of 1857, Persia bound herself to England never to interfere in the internal affairs of Afghanistan; but this treaty leaves Persia free with regard to all its other neighbors. At present Afghanistan is as much interested in the punishment of the Turkomans as Russia and Persia. The occupation of Mymana, the newest province of Afghanistan, effected only in March of the present year, would be seriously endangered, if the large number of those dissatisfied with the change would effect a union with the Turkomans. The dethroned Amir was brought to Cabool, and is there held in close confinement, that he may not become the head of a conspiracy. A

decisive blow can only be dealt the Turkomans, if they are attacked at the same time from the direction of the Caspian Sea as well as from Merv. The cause for a joint step of the three interested states exists. A joint action on their part, however, does not appear probable, even to an Asiatic; to him it seems rather that Russia will enter the campaign alone. Russia, however, fears to disturb its amicable relations to Persia, as it would be impossible to prevent a violation of Persian territory in pursuing defeated bodies of Turkomans, and of Afghan territory in case of an attack on Merv. The idea of an agreement with Persia, therefore, becomes plausible, while at the same time the interests of Afghanistan would be taken into consideration. Such agreements must arouse anew the suspicions of England, who found it such a difficult matter to secure in the Afghan frontier a line inaccessible to Russian influence."

Captain Burton, another high authority on the questions relating to Central Asia, speaks in the following manner of the relations of India to the Amir of Cabool: "Afghanistan, this restless state of robber chieftains, has, thanks to our intervention, considerably increased in area and population. But, nevertheless, Shere Ali complains because Lord Lawrence recognized his elder brother, Afzul Khan, who was friendly to us, because Lord Mayo did not fulfill all of his wishes, and because Lord Northbrook did not pay his subsidies (I should rather say his tribute) as regularly as he desired. For that reason he refused to receive the English mission to Kashgaria in Cabool, under the pretext that he was not able to protect its members in his country, saying, 'Their blood be on their own heads if they come to Cabool!' For that reason, also, he will not permit an English resident at his court, and the native representative of the Indian Government, Wakil-i-Sarkar-i, is barely permitted to address the Amir in the durbar. It is a fact that this miserable chief believes, because we have taught him to believe it, that he holds the road to British India in his hands. He is convinced that he need only offer his assistance to Russia, to drive us from India. That he hates us, we know; during the mutiny of the Sepoys, he urged his wise father, Dost Mohammed, although in vain, to invade the Punjab; that he despises us, we must see, and we must feel that our policy has given him a right to do so."

AFRICA. The area of Africa, according to the latest calculations, amounted to 10,901,100 square miles, with a population of about 206,000,000.*

The further existence of the Transvaal Republic, an independent state of Southeastern Africa, was seriously endangered by a disastrous war with the Kaffres, in which the army

of the republic was completely routed. In consequence, a general desire for annexation to Great Britain became manifest among the population. The Transvaal Republic has been an independent state since 1848. (*See TRANSVAAL REPUBLIC.*)

The difficulties of the British Government and the Orange River Free State with regard to the South African diamond-fields were settled satisfactorily for both parties during the year.

The project of a South African Confederation under the protectorate of Great Britain received a powerful impulse by the disastrous war of the Transvaal Republic against the Kaffres. It gained in popularity both among the inhabitants of the British colonies and the two republics of Orange River and the Transvaal, being opposed only by the extreme republicans of the latter. In the early part of the year, President Brand, of the Orange River Free State, went to England to settle the disputed boundary question, and was received with great distinction, both in the Cape Colony and in England. President Burgers, of the Transvaal Republic, who visited the Cape Colony in March, was also received with great honors, and everything was done to impress the two Presidents with the desirability of the proposed confederation. In March, Mr. Froude, the historian, sent a report to Lord Carnarvon, the Colonial Secretary, on the advantages to be derived from the confederation scheme. The report was very favorably received throughout the South African colonies. On August 3d Lord Carnarvon opened a conference on South African affairs. The members attending the conference were, Sir Garnet Wolseley, as vice-president, President Brand of the Orange River Free State, Sir Theophilus Shenstone, Secretary of the Interior, of Natal, Messrs. Akerman and Robinson, members of the Legislature of Natal, and Mr. J. A. Froude, who represented West Griqua-Land. Lord Carnarvon, in his opening address, stated that the conference was to be of a deliberative character only, that the communications of the different members were to be of a confidential character, and the object was to deliberate on the interests of South Africa, which was constantly growing in importance, and possibly on the constitution of a South-African Confederation. President Brand stated that in accordance with a resolution of the national Legislature he was not empowered to take part in the deliberations on the confederation scheme, but that he would take part in the discussion of other questions. The following sessions of the conference were held with closed doors, and its results are as yet (November, 1876) unknown.

The war of the British on the West Coast with the Ashantees was succeeded during the past year by one with Dahomey. An outrage on a British merchant at Whydah, the principal port of Dahomey, led a British officer after an investigation to impose a fine of palm-oil,

* For the area and population of each of the geographical and political divisions of Africa, see ANNUAL CYCLOPEDIA for 1876.

amounting to about £6,000, upon the King, to be paid by June 1st. The King refused to pay the fine, inviting the British to visit Abomey, his capital, where he promised to pay the demand in powder and bullets. The British in consequence blockaded the ports of Dahomey, thus preventing any supplies from reaching the natives. The King in retaliation blockaded the paths into the interior, and imprisoned a number of whites residing at Whydah.

In May, the Sultan of Zanzibar entered into a treaty with Great Britain to suppress the slave-trade in his dominions. He rigidly enforced this treaty, and in consequence was troubled with a rebellion among the tribes in the interior, which he, however, succeeded in quelling with the aid of the British.

The difficulty between Zanzibar and Egypt, on account of the occupation by the latter power of five ports on the Indian Ocean belonging to Zanzibar, was settled by the withdrawal of the Egyptian troops in February. This act of McKillop Pasha, the Egyptian general, was disavowed by the Khedive.

The advances of Egypt into the interior of Africa received a decided check. Fighting continued during the year, and the Abyssinians appeared to be successful. King John of Abyssinia was also troubled during the year by revolts of native chiefs, incited by the Egyptians, which greatly impeded his operations against the latter. (See ABYSSINIA.)

The attempts to restore the disordered finances of Egypt to a sound basis did not meet with the expected result. The relations of the Egyptian Government to its subjects in the Soudan continued to be of the most friendly character. The native tribes, not subject to the jurisdiction of Egypt, also sought the friendship of the latter power. M'tesa, the chief ruling on the north shore of the Victoria N'yanza, and the ruler of the Somauli country, sent ambassadors to Cairo. (See EGYPT.)

An insurrection broke out, in the early part of the year, among the native tribes of Algeria, which, however, was suppressed in a very short time. (See ALGERIA.)

The Empire of Morocco was disturbed during July by an insurrection among the Ghitan tribe, who refused to furnish their usual military contingent. An extraordinary mission was sent by the Emperor to France and Italy during the year, in order to negotiate commercial treaties. (See MOROCCO.)

Quite a tumult was caused among the Jews of Tunis by the murder of one of their number by a Mohammedan. Order was restored by the immediate execution of the offender, and through the personal efforts of the consuls, to whom the Bey had given satisfactory guarantees. During the month of March an attack was also made upon the consular judge of Italy, which for a time caused considerable excitement. During the year the Government commissioned M. Krantz, a French engineer,

to provide for Tunis a system of railroads to connect with the railroads of Algeria. (See TUNIS.)

The war in Liberia between the Government and the native tribes was brought to a successful close in April by the intervention of the United States. The war was followed by financial difficulties, which embarrassed the Government considerably.

The British dominion in Africa was again enlarged during the year, by the purchase of the island of Socotra, in the Indian Ocean, from its native prince, adding 1,362 square miles, with 8,100 inhabitants, to the British territory in Africa. (See SOCOTRA.)

During the months of July and August, Commodore Hewett undertook an expedition against the negroes living on the shores of the Niger. These negroes, who had formerly done a profitable business in bringing the native products down to the coast in their canoes, and who had lost this carrying-trade entirely through steamers which were sent up the river, made several attempts to stop the English trade. A large number of vessels were attacked by them, among them the King of Masafa, which was almost completely destroyed. In order to put a stop to these depredations, Commodore Hewett, on July 29th, set out on an expedition against the negroes, having with him about one hundred sailors and marines. He met with the first resistance on July 31st. Effecting a landing under the cover of his gunboats, he succeeded in completely defeating the negroes, losing one dead and fourteen wounded in the affair. On August 2d he again defeated the negroes, and pressing on reached Omitoha, 170 miles from the mouth of the river, on August 5th. Here the commodore had a long interview with the chief, and as no further disturbances were to be expected the expedition returned, destroying on its way a village, the inhabitants of which had blocked up the river.

During the month of August disturbances arose among the native tribes on the Gaboon. The French authorities immediately blockaded the mouth of the river, and dispatched troops to restore quiet.

AGOULT, MARIE CATHERINE SOPHIE DE FLAVIGNY, Countess d', a French authoress, better known under the *nom de plume* of Daniel Stern, born at Frankfort-on-the-Main, in 1805; died March 5, 1876. She was the daughter of the Vicomte de Flavigny, a French nobleman, who, during the emigration of the French princes, married Marie Bethmann, the daughter of one of the richest bankers in Frankfort. She received her first education in the convent of the Sacred Heart, married the Count d'Agoult in 1827, and after that passed several years in traveling through Switzerland, Italy, and Germany. Her first literary productions were a series of pleasing novels, "Hervé," "Julien," "Valentia," and "Nélida," which appeared from 1841 to 1845 in the *Presse*.

She then published her experiences in Germany in a number of articles in the *Revue des Deux Mondes* and in the *Revue indépendante* (1847), and after the Revolution of 1848 appeared as a political writer. Among her works of this class best known are "Lettres républicaines" (1848), in which she severely criticises the state of affairs under the government of Louis Philippe, and the "Histoire de la Révolution de 1848" (8 vols., 1851-'53; third edition, 1869), which shows the people and the events of that time in a most favorable light. A different kind of work is her "Esquisses morales et politiques" (1849; third edition, 1859), which is a sort of ethical hand-book in the form of maxims and aphorisms in the style of the "Maximes" of Rochefoucauld, and gives short and good advice on the different affairs of life, on the conflict of morality with the passions, and the questions of the age, and which is certainly to be regarded as her best work. She also published "Trois Journées de la Vie de Marie Stuart" (1856), "Florence et Turin" (1862), and "Dante et Goethe" (1866). Her daughter Cosima, the fruit of a connection with Franz Liszt, was married first to Hans von Bülow, and subsequently to Richard Wagner. Her biography was written by Pommerin (1868).

AGRICULTURE. The following statements respecting the crops of the United States for 1876 embody the latest reports of the Department of Agriculture:

Corn.—The returns of November make the corn-crop only 2 per cent. short of the great crop of last year, and fully 50 per cent. greater than the crop of 1874. The aggregate is 1,295,000,000 bushels. Less than 1 per cent. of the crop is raised in New England, scarcely 6 in the Middle States, 20 in the Southern, 44 in the Ohio basin, and 29 west of the Mississippi.

The product of the South is 10,000,000 bushels greater than last year; that of New England is 300,000 greater, and there is less in the Middle and Western States.

The States of the Ohio basin, seven in number, including Michigan and Wisconsin, increased their proportion from 39 per cent. in 1850 to 41 in 1860, and since that date continue to advance their proportions, the percentage being 44 in 1870 and at the present time, notwithstanding the more rapid progress of corn-growing in the States of the Missouri Valley. These States—Minnesota, Iowa, Missouri, Kansas, and Nebraska—produced only 7 per cent. in 1850, advancing to 15 in 1860, to 21 in 1870, and 28 in 1876. The increase in Kansas has been most rapid of late, nearly equaling in amount in this year the crop of the much more populous State of Missouri. Iowa, as yet, grows more than four-tenths of the crop of this section.

Illinois is credited with about 250,000,000 bushels, and Iowa with 155,000,000. Next in rank are Ohio, Indiana, Missouri, and Kansas. These six States produce six-tenths of the total product. Tennessee, which once held the highest rank in the country, now stands first

in the Southern States, followed by Texas, Alabama, and Georgia.

The extension of this culture westward continues to be rapid. This year the Missouri Valley, together with the western half of the Upper Mississippi, yields two-thirds as much as the area from that river eastward to Pennsylvania, including the States on both sides of the Ohio. In quality the crop is superior to its predecessor.

There has been an increase of area in all sections, aggregating about two million acres, the advance very slight in the Gulf States from Alabama to Louisiana, and scarcely perceptible in the Middle States. It is largest west of the Missouri. Wisconsin shows the heaviest increase in the Northwest, and Texas and Georgia in the South.

Cotton.—The returns of November indicated an extremely favorable season for gathering cotton, except in some portions of North Carolina. The following is a synopsis: "Frost has injured the top crop in the northern belt, notably in Arkansas. The fibre is cleaner than usual and of superior quality in the southern belt. Drought in the Gulf States, rain-storms in the Carolinas, the boll-worm in the Southwest, and the caterpillar in certain locations near the Gulf coast, are chief causes of injury to the crop. The harvest will be completed at a much earlier date than usual. The crop must be smaller than that of last year, however favorable and long the remaining season for gathering. In comparison with the last crop, the percentages of the Atlantic coast States are relatively larger by reason of the poor returns of 1875, and smaller in the Southwest from comparison with the remarkable yield of that region. They are as follows: North Carolina, 92; South Carolina, 99; Georgia, 110; Florida, 100; Alabama, 77; Mississippi, 78; Louisiana, 83; Texas, 100; Arkansas, 74; Tennessee, 101. The average is between 88 and 89."

Potatoes.—As returns for condition, during the latter part of the season, have foreshadowed, the potato-crop, in production, falls not only far below the extraordinary crop of 1875, but considerably below an average crop. Among the causes of diminished yield, drought was the most widespread and effective. During the season for the formation and growth of the tubers, excessively dry weather prevailed, with a few local exceptions, throughout the entire section north of the thirty-sixth parallel and east of the Rocky Mountains, the section in which the potato-crop is mainly grown. The drought was the most severe and protracted in the Middle and Eastern States, except a northern belt including the greater part of Maine. Within this designated area, also, the beetles east of the Mississippi, and the grasshoppers west, effected some reduction in localities, though not to a serious extent. Another cause of diminished production is an unusual decrease in acreage, especially in States which grow this crop extensively, amounting to 15

per cent. in New York, 31 in New Jersey, 7 in Pennsylvania, 11 in Ohio, and 8 in the entire country. This was occasioned in part by the very low prices realized for last year's crop. New York, growing one-fifth of the entire crop, and more than twice the quantity of any other State, falls off from last year 49 per cent. Other States (in the order of importance) fall of: Pennsylvania, 44 per cent.; Ohio, 32; Illinois, 36; Michigan, 58; Wisconsin, 10; Iowa, 34; Indiana, 20; New Jersey, 68. The entire crop is about 34 per cent. less than the previous one. There is also a very general decline in quality.

Sweet Potatoes.—The crop of 1875 was a fair one in both yield and quality; that of this year very nearly equals it in both respects. The greatest falling-off in yield is in Louisiana—25 per cent.—owing to a general and severe drought at the critical season. The same cause, operating in a less degree, reduced the product below that of last year, 13 per cent. in Florida and Alabama, 12 in Mississippi, and 7 in Georgia. The average reduction is not over 3 per cent. in any other State, while in a majority of those producing the crop the yield equals or exceeds that of 1875. The excess averages 11 per cent. in Kentucky, 9 in New Jersey, 8 in South Carolina, 7 in Missouri, 5 in Delaware, 4 in California, and 2 in Tennessee, West Virginia, Indiana, and Kansas. A majority of the States growing sweet potatoes, and those producing the larger part of the crop, also report an average quality equaling or exceeding that of the previous crop.

Hay.—The reported entire product is 8 per cent. above that of last year, and the average quality about 5 per cent. better. Maine returns a product 2 per cent. greater than that of 1875, which was 10 per cent. above the previous crop. In the other New England States there is a decline in product averaging 12 per cent., owing to the severity of the drought before the crop was cut. In the remainder of the country, except on the northern border of the Gulf, where but little hay is grown or saved, the crop was generally in advance of the drought; the dry weather commencing about the time of harvesting, and thus greatly contributing to good curing. The only States out of New England not returning a product greater than in 1875 are New York, Delaware, and Alabama, 100; Mississippi, 93; Louisiana, 88; Kansas, 97; Nebraska, 95. States indicating a large relative increase in product are California, 59 per cent.; Virginia, 35; Kentucky, 33; New Jersey, 30; Illinois, 20; Tennessee, West Virginia, and Ohio, 15; Texas, 14; Michigan, 13; Arkansas, 11.

As a rule, to which the exceptions are few and slight, the quality is superior to that of last year's crop, both in respect to intrinsic excellence and the condition in which it was cured and housed or stacked. The States returning an average quality not superior to that of the previous crop are Maryland, 100; North Carolina, 99; Mississippi, 95; Louisiana and Arkan-

sas, 97; Minnesota and Oregon, 98. Indiana reports an average superiority of 21 per cent.; Kentucky, 15; Vermont, Ohio, and Illinois, 11. In the latter two States the crop was greatly damaged last year by excessive rains during the entire harvest season. The reporters this year occasionally note injuries by wet weather in harvest, the most important of which are injuries to the clover-crop, while curing, in parts of Indiana and Illinois; but statements that the crop was cured without injury, or in the best condition, are the rule. County returns of unprecedented crops are frequent. In Pennsylvania, Sullivan reports a crop more abundant than ever before; Tioga, the heaviest product ever gathered, all housed in good condition. The product in Henrico, Va., was never exceeded; Bath also produced much the best crop for years, and secured it in excellent condition. Williamson, Tenn., reports immense quantities, mostly German millet, put up in fine condition; Lincoln, Ky., an immense crop of excellent quality; Sandusky, Ohio, the best crop ever grown. Unprecedented and well-saved crops are also returned from Howland and Wabash, Ind.; Fayette, Ill.; Walworth and Outagamie, Wis.; Henry, Iowa; Maries, Mo.; and Sonoma and Placer, Cal.

Beans.—Returns from all sections indicate that the product is about 7 per cent. less than last year. Grasshoppers in the Northwest, and drought in other sections, are the principal causes of reduction. The States in which the product is not less than in 1875 are Delaware, 100; Vermont, 101; California, 102; North Carolina, 103; Florida and Arkansas, 105; Wisconsin, 110; Oregon, 122. Among these States, last year, Wisconsin reported 85 and California 82, as compared with the crop of 1874. As dry weather prevailed very generally during the season of curing, the quality (which is not specifically reported) is probably better than the average.

Peas.—In the Northern States, returns for this crop have exclusive reference to the product of shelled peas, for table-use or for provender; but in the Southern States, while varieties for table-use are included, the principal crop is of the variety known as cow-peas, of which the vines constitute an important forage-product. Texas returns a product 5 per cent. above a fair crop in 1875; but in all the other Gulf States the product was largely reduced by drought. In Clarendon, S. C., and Wilkes, Ga., the crop was also damaged by early frost. In the northern tier of Southern States the product fully equals that of last year. Among the Northern States, Minnesota returns a product 38 per cent. above last year's short crop; Vermont and Delaware return 100. In the remaining States east of the Missouri, the product falls somewhat below that of 1875. Kansas reported last year 33 per cent. above the previous crop; this year 21 below, reduced by grasshoppers. Nebraska, last year, 122; this year, 100. California pro-

duced 5 per cent. above a short crop last year. The entire product is about 5 per cent. short of that of 1875.

Buckwheat.—Last year the product exceeded that of the previous crop; this year it falls about 8 per cent. short. Drought at the time of filling was the principal cause of reduction; but in parts of Pennsylvania, Maryland, and Virginia, storms of rain and wind in harvest, or after the crop was matured, did much injury. In parts of the Ohio Valley the crop did not fill well, owing to excessive wet weather. It was much reduced by grasshoppers in Iowa, Kansas, Nebraska, and Colorado. Massachusetts and Connecticut report a product equal to last year's; but in New York it was 34 per cent. less; New Jersey, 23; Pennsylvania, 26. North of the Ohio the comparative figures for 1875 and 1876 are, respectively: in Ohio, 105 and 90; Michigan, 132 and 88; Indiana, 112 and 92; Illinois, 83 and 96; Wisconsin, 45 and 155. High figures mean a large increase over the previous crop; but if, for instance, the product for 1875 was but a fourth of an average crop, 200 for 1876 would only indicate half a crop. West of the Mississippi the crop, except in Minnesota, 109, was much less than in 1875, the figures being, in Missouri, 287 and 93; Kansas, 206 and 72; Nebraska, 544 and 78. The product in Kentucky was 2 per cent. greater than last year, and in Oregon 5 per cent. In all the remaining States it fell below.

Sorghum.—Returns show an increase of about 14 per cent. over last year's comparatively large crop. The States indicating the highest relative increase are: Georgia, 88 per cent.; Virginia, 87; Kentucky, 82; Texas, 27; Alabama, 19; Tennessee, 14. The only States reporting a product less than last year are: Iowa, 11 per cent.; Maryland and Nebraska, 7; Kansas, 5. Good quality is generally reported. Great improvement in the quality of the sirup, resulting from the introduction of improved machinery and methods of evaporating, is specified in different localities.

Tobacco.—The tobacco counties reporting the comparative product make returns not quite so favorable in the aggregate as those of last year. A decrease of product is indicated in Massachusetts, Connecticut, New York, Maryland, Virginia, North Carolina, and Tennessee. An increase is indicated in Pennsylvania, Ohio, Indiana, and Illinois. Kentucky reports about the same as last year.

In Ohio, Indiana, and Illinois, the increase in product is extraordinary. In Ohio, Montgomery reports the best and finest crop of seed-leaf tobacco ever produced; Monroe, that the quality was depreciated by excessively wet weather. In Illinois, the season was very propitious for maturing and curing in Saline; in Johnson, the crop was eaten by worms, the ravages of which were worse than for years. Vernon, Mo., also had more tobacco-worms than ever before; but other returns from Missouri are favorable in respect to yield and quality.

The quality of the entire crop averages about the same as that of last year. The depreciation is not noticeable in Connecticut, Virginia, and North Carolina. The average quality is superior to that of the previous crop in New Hampshire, Massachusetts, Pennsylvania, Kentucky, Indiana, Missouri, Ohio, and Tennessee. The reported causes of deterioration in North Carolina are worms, early frosts, and the cutting of late crops before maturity in order to avoid frosts. In Tennessee and West Virginia, only slight deterioration is reported from early frosts and the cutting of late crops prematurely to avoid frost. In Kentucky, Daviess returns the largest crop ever grown, except that of 1872. The estimate for product is 10,000,000 pounds, of which not over 2 per cent. was injured by frost; but perhaps 10 per cent. was not well cured, being cut rather too green.

Flaxseed.—Incomplete returns from Ohio indicate a product equal to that of last year; Indiana, 1 per cent. less; Illinois (having an extraordinary crop last year), 15 per cent. less. These three States represent over three-fourths of the entire crop. Among other States in which the production is of any account, Iowa alone indicates an increase over last year; New York, 1 per cent. less. Scattering returns from the States west of the Mississippi indicate that the production of flax is extending.

Apples.—Almost the only complaint about the apple-crop is that its superabundance has greatly diminished its market value. Maine returns a yield 20 per cent. below that of 1875, the causes being previous injury to the trees by caterpillars, depredations by them this season, and, in the southwest part of the State, too dry weather for the maturing of the crop. Vermont falls 4 per cent. below, ascribed to the effects of the severe winter. Drought and September storms reduced the figures in New Jersey to 95, in Delaware to 55, and in Virginia to 92. Missouri reports a production falling 28 per cent. below that of 1875. Severe spring-frosts, canker-worms, codling-moths, an insect allied to chinch-bugs, hail-storms, and, chiefly, premature falling-off from causes not explained, are the principal sources of reduction. With these exceptions, in the entire section north of the thirty-sixth parallel, and east of the Pacific slope, the yield exceeds that of last year; the average excess for the whole area being not less than 17 per cent. The excess in New York is 22 per cent.; Pennsylvania, 23; Ohio, 41; Michigan, 24; Indiana, 39; Illinois, 16; Wisconsin, 54; Iowa, 43; New Hampshire, 63. The codling-moth was destructive to the crop in Utah. In California and Oregon the product was slightly less than last year. In the Southern States, in which the crop is of less account, the general yield is considerably below that of last year, owing mainly to drought. South Carolina alone comes up to 100. With rare local exceptions, the quality is reported as superior, the fruit being comparatively large, and free from worms.

Pears.—The pear-crop falls below the small crop of 1875. The extensive prevalence of the tree-disease known as pear-blight appears to be the leading cause of this diminution. Its prevalence and effect in reducing the crop to a greater or less extent are noted in New York, New Jersey, Pennsylvania, Georgia, Louisiana, Texas, West Virginia, Illinois, and Iowa. The only States in which the product does not fall below that of last year are New Hampshire, 103; Vermont, 100; Wisconsin, 119; Iowa, 105; Oregon, 101; no one of which produces a large crop. In the remaining States the decline is about 20 per cent.

Grapes.—The returns indicate a product somewhat less than in 1875. The small crop in New England averaged better than last year. Pennsylvania returns 103, but in the other States north of the Potomac the falling-off averages about 12 per cent. There appears to be a reduction from last year in the Southern States, averaging about 10 per cent. In the interior, east of the Mississippi, the product is less than in 1875, the greatest reduction—19 per cent.—being in Illinois. West of the Mississippi, Arkansas reports a falling-off of 32 per cent., Missouri of 15. In California the product is reported 2 per cent. larger than last year.

Except in localities where the yield was reduced by the effects of the hard winter or late spring-frosts, the almost exclusive cause of reduction has been a widespread tendency to mildew and rot.

Winter - Wheat.—December returns indicate that the acreage in winter-wheat has been increased about 5 per cent. over that of the previous year. The small area sown in the New England States is fully maintained, and some additions were expected to be made. All of the Middle States return an acreage equal to that of last year, except New York, which loses 8 per cent. The South-Atlantic coast States report a considerable increase, a small deficiency in Georgia being overcome by a marked increase in North Carolina and South Carolina. In the Gulf States, Alabama and Mississippi report an increase which overbalances the decline in Texas. Florida and Louisiana grow but insignificant crops. The inland Southern States all report an increased acreage. North of the Ohio River, Michigan and Wisconsin report a decrease of wheat-acreage; but the other States report increased breadths, enlarging the acreage of this section about 3 per cent. West of the Mississippi River, Missouri enlarges her acreage at least a third, Kansas one-eighth, and Nebraska nearly a half. The Pacific States also report a large increase.

The condition of the crop appears from the returns to be about 10 per cent. above average on the whole. The Atlantic slope, from Maryland northward, enjoyed very favorable conditions of seeding and growth, though the Hessian fly has done considerable damage in sev-

eral counties of Pennsylvania, especially in early-sown wheat. Later-sown crops give greater satisfaction. With the exception of South Carolina, the South Atlantic and the Gulf States are below average. Drought retarded both the sowing and the growth of the crop in many counties. Injuries by grasshoppers are reported in several counties of Texas. A depressed condition is also noted in Arkansas and Tennessee, the latter being 10 per cent. below average. Grasshoppers are complained of in a few cases, but drought was a more general cause of disaster. West Virginia and Kentucky show a superior condition, though seeding was somewhat late on account of drought. All the States north of the Ohio River report a superior condition, especially Ohio and Indiana, which enjoyed remarkably fine conditions for seeding and growth. In several localities of Illinois and Wisconsin the wheat appears to be better rooted than usual, and better prepared to resist the trying fluctuations of winter in those States. West of the Mississippi River, Minnesota and Iowa report a condition slightly above average, while the other States of this region are considerably deficient. Grasshoppers were very destructive at many points, necessitating a resowing of the crop. Wheat sown late to avoid this pest has started very imperfectly. In California, good rains during October facilitated plowing and wheat-seeding, causing a considerable enlargement of acreage, but in several counties the moisture has not been sufficient to bring out the crop. Oregon reports a very promising crop. From Dakota come reports of grasshopper damages. In the Choctaw Nation, Indian Territory, the crop is reported as very satisfactory.

Winter-Rye.—The acreage in winter-rye in 1876 does not materially differ from that of 1875. A small increase is shown in New England and in the States north of the Ohio River, which about counterbalances the decline in the other sections; the Pacific States report no appreciable change.

The condition of the crop, on the whole, is about average. A superior condition appears in the Middle States, South Atlantic States, in the States north of the Ohio River, and on the Pacific slope, while in the other sections there is a deficiency.

Is Production declining?—Agricultural speakers and writers often give the impression, without positive assertion, that we produce less in proportion to population than formerly. If this is so, we eat less than formerly, for we export more. But no intelligent person, after due deliberation, will assert that we feed less to farm-animals, or live less generously ourselves, than our fathers fed and fared. A statistical answer in the negative has been made by the statistician of the Department of Agriculture, in an address delivered before the Agricultural Congress at its last session in Philadelphia.

AIRD, THOMAS, a British poet, born August 28, 1802; died April 27, 1876. He received his education at Bowden and Melrose, and subsequently at the Edinburgh University. On the death of James Ballantyne, Mr. Aird succeeded to the editorship of the *Edinburgh Weekly Journal*, a position which he held for about a year. From 1835 until 1868 he was the editor of the *Dumfries Herald*, a Conservative journal, and when he resigned this post he went into private life. His principal works are "Religious Characteristics" (1827); "The Old Bachelor in the Old Scottish Village," a volume of tales and sketches (1845); "Poetical Works," consisting of a collected edition of his poems, new and old (1848). "The Devil's Dream" is regarded as the most popular of his compositions. He was at one time a contributor to *Blackwood's Magazine*, and in 1852 he brought out for the family of Dr. Moir the "Delta" of Blackwood, an edition of that author's select poems, with a memoir prefixed.

ALABAMA. The session of the Alabama Legislature which began on December 28, 1875, came to an adjournment on the 8th of March. A considerable amount of legislation was necessitated by the new constitution adopted in 1875. The salaries of public officials were revised and fixed as follows: Governor, \$4,000 per annum; Lieutenant-Governor, \$1,500; Secretary of State, \$1,800; Auditor, \$2,400; Treasurer, \$2,100; Attorney-General, \$2,000; Judges of the Supreme Court, \$5,000; Chancellors, \$2,500; Superintendent of Education, \$2,250. Reductions take effect at the end of the terms of the present incumbents. The date for the meeting of the Legislature for its regular biennial sessions was fixed for the second Monday of November, beginning in 1876.

The special joint committee appointed at the preceding session to investigate the facts relating to the alleged election of George E. Spencer to the Senate of the United States submitted their report, together with a summary of the testimony taken. Their conclusions are presented with sufficient fullness in a memorial of the Legislature subsequently adopted, commending to the United States Senate the following considerations, supported by the evidence taken:

2. That the body by which George E. Spencer claims to have been elected to the Senate of the United States was not in fact or in law the General Assembly of Alabama, at the time of the alleged election of George E. Spencer, and never was. There never was a quorum in the Senate that voted for said Spencer, and the records and journals of the General Assembly show that fact. The body that voted for Spencer was organized as a party necessity, and to elect Spencer.

3. By unlawful and corrupt practices and by bargains made by George E. Spencer, and other persons, with his knowledge and approval, both before and at the time of his alleged election, with members of the body by which he claims to have been elected, he procured the influence and votes of members of said body, for the office of Senator of the United States.

4. That being a Senator at the time of his alleged reelection to the Senate of the United States, the said

George E. Spencer corruptly used the influence, power, and patronage, of his said office to procure influence, assistance, and votes, from members of said body, by which he claims to have been reelected to the Senate of the United States on the 3d day of December, 1872.

5. That by like fraudulent and corrupt practices, and to defeat the election of a Senator by the General Assembly of Alabama at the time appointed by law, the said George E. Spencer and others, by his concurrence or connivance, did prevent the attendance of members of the General Assembly at the Capitol, and did so defeat a quorum of the Houses of said body.

6. That afterward when a plan had been suggested by the Attorney-General of the United States, which was adopted, for the reorganization of the General Assembly, the said George E. Spencer and others, with his connivance, in order to deprive a Senator of his seat in said body, to which he had been lawfully elected by the people, and thereby obtain confirmation of his said election to the United States Senate, fraudulently and corruptly conspired to oust said Senator from his seat, and did prevent him from occupying the same during more than one entire session of the General Assembly of Alabama.

7. That said George E. Spencer, while endeavoring to secure his reelection to the Senate, and in order to get money to accomplish his said purposes, and while he was a Senator of the United States, procured persons who had been appointed to offices of trust in the United States Government to convert the public money in their charge to his use, and to commit peculations for his advantage.

Early in the session the commissioners appointed under the act of December 17, 1874, "to ascertain, adjust, and liquidate all claims against the State of Alabama arising from bonds issued or indorsed in the name of the State," submitted their report, together with a plan of adjustment. A good deal of difficulty had been encountered in ascertaining the amount and character of the indebtedness of the State, owing to imperfections in the records and apparent irregularities in the issue and registration of bonds, and to the unwillingness of some of the creditors to make a statement of their claims. The commissioners stated that the entire debt of the State, direct and contingent, as ascertained by them, was \$80,087,563, which they separated into four classes of obligations. The first constituted the "recognized direct debt," and consisted of various five, six, and eight per cent. bonds, amounting in all to \$11,677,470. They proposed to adjust this portion of the debt by canceling interest due and accruing to July 1, 1876, and substituting new bonds for the face of those outstanding, with thirty years to run, at two per cent. interest for the first five years, three per cent. for the second five years, four per cent. for the next ten years, and five per cent. for the remaining ten years, all being renewable at the pleasure of the State at five per cent. This proposition had been accepted by the holders of about \$3,000,000 of the old bonds, and it was thought would be accepted by the rest. The second class of obligations was spoken of as "recognized direct debt arising from aid given to railroad companies," and consisted of seven per cent. bonds to the amount

of \$1,156,000, issued to the South & North Railroad Company (\$720,000), the Grand Trunk (\$220,000), and the Savannah & Memphis (\$204,000). This was liable to an increase of \$36,000, due to the Savannah & Memphis, making \$1,192,000 in all. The commissioners proposed that new bonds be substituted for these, on the basis of fifty cents on the dollar, with thirty years to run, and bearing interest at five per cent. The third class of obligations was designated as the "contingent direct debt," which amounted to \$2,573,098, and consisted of a claim of the South & North Railroad alleged to be \$600,000; alleged balance due the school-fund of \$508,404; claim of W. A. O. Jones, \$150,000; notes executed by Governor Lewis to H. Clews & Co., \$299,660; bonds hypothecated by Governor Lewis with H. Clews & Co., \$650,000; interest on the latter, \$130,000; balance claimed by H. Clews & Co. as due on account current, \$285,029. The first two items are dismissed as forming no part of the bonded debt, and the claim of Mr. Jones as not sufficiently investigated. The transactions with H. Clews & Co. were characterized as anomalous, and the conclusion was reached that the State was only liable for \$310,000, with interest, formerly due to Clews & Co., but for which there are now several claimants whose rights must be determined by judicial proceedings. The fourth class of obligations consisted of bonds indorsed for or issued to railroad companies, and amounted to \$11,597,000 of railroad bonds indorsed by the State, and \$3,024,000 of State bonds loaned to railroads. The policy which granted State aid so liberally to railroad enterprises at a time when the people were impoverished was severely criticised, and it was proposed that all claims on that account be settled by compromise. In place of the liability on account of \$4,720,000 indorsed bonds of the Alabama & Chattanooga Railroad, and \$580,000 of the same claimed as an over-issue, \$1,000,000 State bonds were to be substituted, having thirty years to run, with interest of two per cent. for five years, and four per cent. for twenty-five years, and renewable for thirty years at five per cent. at the option of the State. There were also \$2,000,000 bonds of the State which had been loaned to the same company. These it was proposed to retrieve by a sale of the lands mortgaged to the State to secure their payment. With regard to the liabilities on account of bonds indorsed for or loaned to the Montgomery & Eufaula, East Alabama & Cincinnati, Selma & Gulf, Selma, Marion & Memphis, and the New Orleans & Selma Railroad Companies, the commissioners stated that there was important litigation pending, and suggested that the holders of the bonds might be convinced that their best interests would be advanced by accepting a transfer of the State lien and giving a full discharge for their claims. The commissioners say, after presenting this plan for adjusting the State debt: "To recognize every claim preferred

against the State would render the payment of interest, to say nothing of the principal, of such an enormous debt utterly impossible—even at a very low rate. It would be to acknowledge an indebtedness equal to one-fifth of all the property of the people—and to provide for the annual interest which would accrue would require a tax, if not inhibited by the constitution, which would be tantamount to confiscation. It is apparent, therefore, that a just and honorable compromise is indispensable. Unjust claims must be rejected, and those which are acknowledged must necessarily be reduced.

An act was passed, and received the approval of the Governor on the 23d of February, with this title: "An act to ratify and confirm the settlement of the existing indebtedness of this State, as proposed in the report of the commissioners appointed under the act approved 17th of December, 1874, and which was communicated to the General Assembly by message of the Governor of 24th January, 1876, and to carry said settlement into effect by the issuance of new bonds of this State, at

STATE SEAL OF ALABAMA.

a reduced rate of interest, in adjustment of a portion of said indebtedness, and the surrender of certain securities held by the State in discharge of another portion of said indebtedness." This authorizes the issue of \$7,000,000 of bonds, to be designated as Class A, and to be used in payment of the first class of liabilities; \$596,000 of bonds, designated as Class B, to be used in discharge of the second class of liabilities above mentioned; and \$1,000,000 bonds of Class C, to take the place of all liabilities on account of the Alabama & Chattanooga Railroad Company; \$310,000 acknowledged to be due to H. Clews & Co. is to be paid out of proceeds from bonds of Class A. With regard to the direct bonds of the State loaned to the Alabama & Chattanooga Railroad Company it is provided that the liability of the State on their account shall be discharged on acceptance by the holders of the lien and right of the State upon the property of the road. The execution of this act is placed under the supervision and direction of the same commissioners who submitted the plan of adjustment, viz.: Governor George S. Houston, Levi W. Lawler, and T. B. Bethea.

Several other financial measures were adopted, including a new revenue code providing for various kinds of taxation and defining the duties of assessors, collectors, and other county officials, in the matter of levying and collecting taxes. Another act provides for setting apart a certain portion of the revenue, not exceeding one-fourth, for the payment of interest on the debt, and authorizes the issue of bonds for the same purpose, when necessary, but not exceeding \$1,000,000 in amount, or at a rate of interest exceeding eight per cent. Still another act authorizes temporary loans for the general uses of the State, but not exceeding \$100,000 in amount at any one time, or at a rate of interest exceeding eight per cent.

Several important amendments were made to the registration and election laws. The qualifications of voters and the offices to be filled were restated: the election for State and county officers is fixed on the first Monday in August, and that for members of Congress and presidential electors on the Tuesday following the first Monday in November. All qualified voters are required to be registered, the name and residence of each being entered on the register, and whether white or colored, together with his employer's name. When the votes are cast, a poll-list must be made of the names of those voting. If any vote is challenged, the person offering to vote is required to make a sign or oath as to his qualifications, and all such oaths must be filed and returned with the returns of votes. The inspectors of election count the ballots and make their returns to the county returning officers, and these returns are canvassed by the Probate Judge and clerk of the Circuit Court of the county in the presence of three reputable householders of the opposite political party. The returns from counties are made to the Secretary of State, except those of votes for Governor, Secretary of State, Auditor, Treasurer, and Attorney-General, which are made to the presiding officer of the Senate. An additional section provides that each elector for President and Vice-President shall receive eight dollars for each day's necessary attendance at the State capital in the performance of his duty, and twenty cents a mile for necessary travel. An act "to establish, organize, and regulate a system of public instruction for the State of Alabama," provides that after the first Monday in August, 1876, no more than four per cent. of the school-fund shall be expended for any other purpose than in payment of teachers of free public schools, and the State Superintendent must fix the compensation of all other school-officers accordingly. A separate census of white and colored children between the ages of seven and twenty-one is required, and poll-taxes collected from white citizens must be devoted to the support of schools for white children, and those collected from colored citizens must be devoted to the maintenance

of schools for colored children. An act making appropriations for the support of public schools provides that there shall be devoted to this purpose each year \$150,000 out of the general revenue of the State; the interest at four per cent. on the proceeds of lands granted by Congress, amounting this year to \$3,883.65; interest at four per cent. on the fund accruing from the sale of the sixteenth sections of townships; \$26,765.47, being interest at four per cent. on the surplus fund deposited with the State by the Government of the United States; all sums received from escheats and from unsold lands donated by Congress for the support of public schools; and all poll-taxes collected in each county. According to the report of a special joint committee appointed to investigate the subject, the amount due from the State to the school-fund on the 1st of October, 1875, was \$249,809.89. An act was passed "to carry into effect the intention of the Congress of the United States in its donation of a certain quantity of land" for the benefit of a seminary of learning in the State. This incorporates the Trustees of the University of Alabama, composed of the Governor of the State, Superintendent of Education, and one trustee for each congressional district, and confers upon them all the necessary powers and responsibilities for administering the affairs of the institution. Among other things they are authorized to dispose of all lands and property derived from the original grant, and to take charge of all other gifts, bequests, and donations to the university. It is declared that the "university fund" consists of \$300,000, on which the State is pledged to the payment of interest at the rate of eight per cent. The university is located at Tuscaloosa, and is represented to be in a flourishing condition.

A general incorporation law was enacted, authorizing the organization of "mining, manufacturing, immigration, or business companies," on compliance with various specified conditions. A general law for the incorporation of railroad companies was also passed. This requires the persons forming such companies to file a declaration with the Secretary of State and obtain a commission from him, and finally to receive a certificate after the organization is effected. All the powers and franchises necessary to carry out the purposes of a railroad company are expressly conferred, including that of taking the necessary property for a right of way on payment of damages determined by commissioners of award, appointed by the Judge of Probate of the county in which the property lies. The franchise lapses by five years' non-use. An act to induce immigration to the State of Alabama was passed, providing for the appointment by the Governor of a Commissioner of Immigration and two Assistant Commissioners, to collect and disseminate statistics and information regarding the resources and advantages of the State, and make an annual report to the Gov-

error. They are also required to receive applications for immigrants, and propositions for the sale or lease of lands and other property to immigrants from all persons and corporations in the State. The necessary funds for carrying out the purposes of the act are to be raised by the commissioner by subscriptions, donations and loans; but without creating any obligation or claim against the State.

Among the miscellaneous acts of the session was one making it a penal offense to sell, directly or indirectly, any public office of the State, or the fees or emoluments thereof; one prohibiting county officers from having any pecuniary interest in the contracts for work or service for the county, under a penalty of fine and imprisonment; one making it unlawful to confine white and colored prisoners before conviction in the same apartments; one organizing the militia of the State, consisting of one division made up of one brigade for each of the eight congressional districts; one to regulate the granting of licenses to retail wines and spirituous liquors, by Judges of Probate, on the recommendation of respectable freeholders and householders within five miles of the place of sale; and one prohibiting the sale of lottery and gift-enterprise tickets.

The Alabama & Chattanooga Railroad was sold at auction on the 4th of October, by special commissioners, under an order of the United States Circuit Court, for \$310,000, subject to the superior lien of the State acquired by the indorsement of the first-mortgage bonds, and to the right of the sinking-fund for the payment of State bonds, issued in 1870 to aid in the construction of the road. The purchaser was Adam P. Balch, understood to be acting in the interest of D. N. Stanton, the original projector of the road.

Owing to a division in the Republican State Central Committee, two conventions of that party were called, one of the "anti-Spencer" Republicans, to be held at Montgomery, on the 16th of May, and the other of the Spencer or Administration Republicans, to be held at the same place, on the 24th of May. The first of these was composed of delegates from fifty of the sixty-five counties, and about equally divided between the white and colored races. It nominated State officers, delegates to the National Convention of the party, and presidential electors. The following is the State ticket: For Governor, Thomas M. Peters; Secretary of State, J. J. McLemore; Attorney-General, J. S. Clark; State Treasurer, W. P. Harris; Auditor, O. C. Cadle, Jr.; Superintendents of Education, J. H. Hansley, Jere Haralson, colored; Congressmen, S. F. Rice, Willard Warner, and W. H. Smith.

The Committee on Platforms and Resolutions reported that, faithful to the principles of the Republican party, so often announced by their authorized exponents, they recommend the adoption of the principles contained in and disclosed by the address of the Republican

National Committee, and resolve that in his seven years' administration of the Government General Grant has guided the republic through the severest trials, and has shown our institutions capable of surviving equally the shock of armed conflict, partisan hate, and the great demoralization incident to all wars. The most searching inquiries, prompted by Democratic partisanship, have entirely failed to exhibit a single instance where President Grant has tarnished with his pen the splendid triumphs of his sword.

The Spencer convention nominated for Governor J. C. Bradley; for Secretary of State, J. T. Allington; for Treasurer, B. M. Long; for Auditor, G. P. Plowman; for Attorney-General, R. I. Heflin; for Superintendent of Public Education, P. J. Glover. Mr. Bradley declined the nomination, on account of infirm health. J. S. Clarke was nominated for Governor. A delegation to the National Convention at Cincinnati was appointed, headed by Senator George E. Spencer. The Committee on Resolutions reported resolutions recognizing civil and political equality of all men, free public and non-sectarian schools, protection and encouragement of labor, and the following:

Resolved, That we indorse and approve the Administration of President Grant as wise and just in its policy, patriotic in spirit and impartial and vigorous in execution. It has carried the nation through a period of unprecedented difficulties and trials with safety and success, and has won for the President renown as a statesman as solid and endearing as his name as a soldier.

Resolved, That we declare our earnest admiration for the entire career in public life of Hon. O. P. Morton, of Indiana, in his advocacy of the great and vital principles of the Republican party and of the measures destined to receive their practical application in the affairs of the Government. Mr. Morton stands prominent before the country for the ability, courage, and constancy he has displayed.

Resolved, That we commend the Hon. O. P. Morton to the favorable consideration of our delegation to the National Republican Convention.

These were adopted, that relating to Mr. Morton being the only one that caused any dissent. A resolution favoring the resumption act was also adopted, and one authorizing the Executive Committee of the two wings of the party to agree, if possible, on a State and electoral ticket. Subsequent consultations resulted in a compromise, and the following ticket was agreed to: For Governor, ——— Woodruff; for Secretary of State, Amos Moody; for Auditor, Lewis Owen; for Treasurer, B. W. Harris; for Attorney-General, E. H. Grandin.

The Democratic State Convention was held at Montgomery, May 31st and June 1st. There were 400 delegates representing sixty-two counties, and the proceedings were altogether harmonious. George S. Houston was renominated for Governor; R. K. Boyd, for Secretary of State; and Daniel Crawford, for Treasurer. The incumbents of the other executive offices were Republicans holding over from 1872, and new nominations were made. Colonel

Willis Brewer was made the candidate for Auditor; J. W. A. Sandford, for Attorney-General; and L. F. Box, for Superintendent of Education. Delegates at large to the National Convention at St. Louis and candidates for presidential electors were also named, and a long series of resolutions was adopted. The first of these declared:

1. That in the future as in the past the undeviating determination of this party is to faithfully do all in its power to secure, in every possible manner, the blessings of good government to all the people of this State; and that to secure these blessings to all the good people of this State and their posterity, it is absolutely necessary now, as it was in the great canvass of 1874, that the white people of Alabama, who are in large part the men and the descendants of the men who rescued its soil from the dominion of the savage Indian, together with such other good citizens of this race as have since then made their homes in this State, and who pay its taxes and bear the burdens of its government, and have inaugurated and upheld its religious, moral, and social institutions, carrying the State itself forward to its present high standard of civilization, progress, and renown, should stand united together as brethren in a common cause, without regard to previous or even present political differences; that this white people, whether residing in the mountains and valleys of North Alabama, or in the prairies of Middle Alabama, or among the pine-hills of South Alabama, and whether rich or poor, learned or unlearned, is one great family whose forefathers helped to bring American constitutional liberty into the world, and whose descendants, by the blessing of God, mean to keep it there.

Then followed a statement of what the Democratic party had accomplished in the State in two years by revising the constitution, improving legislation, and reforming the administration of the government. The career of the Republicans in the State was reviewed and condemned in the severest terms. It was then stated:

5. That the considerations which make patriotism at all times a duty of the citizen are illimitable, and that any man, or set of men, who from any cause whatever shall attempt, in any manner, to weaken the Democratic and Conservative party of Alabama in this canvass by dividing its strength in the election for any office, whether State, or county, or municipal, thereby jeopardizing its success and rendering it possible for any candidate in sympathy with the Republican party to be elected, is no friend to his country, but on the contrary is an enemy to the best interests of all the people of Alabama; and all such efforts should be frowned down by the people; and in view of the great interests at stake the people individually and collectively should harmonize all such differences, so that on the day of election the full strength of the Democratic and Conservative party may be voted for all its candidates.

6. That the issues which led to the disastrous war between the sections of our common country have long been settled, and any attempt to arouse sectional animosity on either side could only operate as an impediment to that higher progress and greater development of the American people which all good citizens look forward to as following this Centennial year of American Independence, and, leaving to the historian the divisions of the past, all patriotic citizens owing allegiance to and claiming the protection of a common Government should move forward into the next Centennial period, determined that the unparalleled progress of the first hundred

years of our existence as a free people shall be surpassed in the second.

An appeal was made for harmony and unity, and the adjustment of all local differences, and the platform ended with these declarations:

9. That the Democratic and Conservative party of Alabama is a party of law as well as of progress, and as in the past it has faithfully kept its pledges of protection to the colored citizens of this State, we now renew them and pledge to all the colored people of this State the protection and maintenance of all their rights to equality before the law, and we are glad to recognize that the more intelligent and better class of them are awakening to the fact that their best friends are the white people of Alabama.

10. That if in the adjustment and liquidation of the finances of the State, complicated and bankrupted as they were by radical frauds and incompetency, any of the just obligations of the State to its own citizens have been overlooked, such, for instance, as the payment of the teachers of public schools, we pledge the Democratic and Conservative party to provide for their payment at the earliest day compatible with the financial ability of the State, giving them that priority, if need be, which their merit and justice may demand.

11. The Democratic and Conservative party, representing the land-owners and tax-payers of the State, hereby invite immigration to the State, and extend a hearty and cordial welcome to all good people, of whatever clime or nationality, who will come among us as citizens.

An address to the people was issued by the Democratic State Committee in the latter part of June, calling for an earnest support of the State and national tickets, and setting forth the wrongs and abuses committed by the Republicans, and the reforms to be brought about through the ascendancy of the Democrats.

The State election took place on the 7th of August, and resulted in the success of the Democratic ticket. The total vote for Governor was 154,837, of which Houston received 99,255, and Woodruff 55,582, making the majority of the former 43,678.

Congressmen and presidential electors were chosen on the 7th of November. The Democratic candidates were successful without exception, and in the sixth and seventh congressional districts there was no opposition. The total vote for electors was 170,843, of which the Democratic ticket had 102,613, and the Republican 68,230, making the majority of the former 34,382.

The first regular biennial session of the Legislature under the new constitution began on the 15th of November, and was limited by law to sixty days. The various official reports represented the public institutions of the State as in a very promising condition. The penitentiary showed a balance of \$14,307.40 in receipts over and above expenses.

ALBRECHT, WILHELM EDUARD, a German jurist and scholar, born March 4, 1800, in Elbing; died May 22, 1876, in Leipsic. He studied in the Universities of Königsberg, Berlin, and Göttingen, and in 1827 was appointed Professor of Law in the University of Königsberg. In 1827 he published his work, "Die Gewere als Grundlage des älteren deutschen

Sachenrechts," which had been preceded by "Commentatio juris germanici antiqui, doctrinam de probationibus adumbrans" (1825). These works established his scientific reputation beyond a doubt. In 1830 he received a call to Göttingen, to fill the vacancy caused by Eichhorn's removal to Berlin. In this position he remained seven years without taking any part in the political questions of the day. But when in 1822 the King of Hanover decreed the revocation of the constitution of the country, Albrecht was one of the seven professors who protested against this act, and who were, in consequence, removed. His clear and just discrimination is not only visible in all the acts and documents of the seven professors, but he also published the most impassioned and most convincing account of the affair, the only one which was passed by the Government censors. After his removal from Göttingen he received a call to Leipsic, where from 1839 until his death he delivered lectures on German and church law, which were always attended by large numbers of students. In 1840 he was appointed ordinary professor, with the title of Court Councilor. He took part in drafting a constitution for Germany in 1848, and was elected from a district in Hanover to the German National Assembly, but soon resigned his seat. The *coup-d'état* of the Saxon Government in 1849 he denounced most severely. In 1868 he was pensioned, and at the same time created a member of the First Chamber by the King. In spite of his personal seclusion, he followed the political affairs of the day with great interest, and was far removed from the bitterness of his former colleagues and fellow-sufferers in Göttingen, Gerwinus and Ewald. His considerable property he bequeathed to the University of Leipsic.

ALGERIA, a French province in Northern Africa. The area and population, according to the census of 1872, were as follows :

PROVINCES.	Area in Square Miles.	French.	Foreigners.	Mohammedans.	In Government Institutions.	Total.
Algiers...	37,120	67,008	42,181	757,908	5,854	872,951
Oran....	111,781	51,729	47,488	411,874	2,456	518,492
Constantine...	107,266	45,493	25,902	958,268	8,172	1,029,782
Total.	258,817	164,175	115,516	2,128,045	11,482	2,416,225

The territory of Algeria is partly under military and partly under civil jurisdiction. The latter, which is increased every year, comprised in 1875 an area of 16,062 square miles, with 1,047,092 inhabitants, being an increase over 1874 of 680 square miles and 20,800 inhabitants, of whom 1,359 were Europeans. The imports amounted to 55,569,954 francs in 1874, against 54,153,945 in 1873; while the exports had fallen from 79,975,413 francs in 1873 to 52,225,663 francs in 1874. The special commerce in the same year was as follows: Im-

ports in 1874, 50,201,164 francs, against 47,486,076 francs in 1873; exports, 8,782,878 francs in 1874, against 70,617,997 francs in 1873. The vessels carrying on the trade between Algeria and other countries were as follows :

YEARS.	No. of Voyages made.	Tons.
1874.....	7,682	1,781,450
1873.....	6,814	1,619,984

The percentage of French and foreign vessels carrying on the trade with the principal countries in 1874 was as follows :

COUNTRIES.	French Vessels.	Foreign Vessels.
Barbary States.....	96.0	4.0
Spain.....	11.4	88.6
Great Britain.....	9.1	90.9
Italy.....	6.5	93.5

The tonnage of vessels sailing under a foreign flag which entered the Algerian ports in 1874 was as follows :

COUNTRIES.	Tonnage.
Great Britain.....	195,195
Spain.....	114,950
Italy.....	76,839
Norway.....	23,848
Austria.....	20,544

The commercial navy of Algeria on December 31, 1874, amounted to 141 vessels, of 4,982 tons. By a decree of August 15, 1875, the laws of France, governing public instruction, were applied to Algeria. The principal points of this decree provide for the composition and

the functions of the Academic Council sitting at Algiers, and the creation and composition of departmental councils. The Arabic colleges have been suppressed, and their pupils divided among the French institutions. Mixed schools have been established. The Arabic language has been introduced in the examination for

the baccalaureate, while the French language has been made a part of the course of instruction in those schools in which young natives prepare themselves for the public service.

Up to 1874, the land granted to colonists by the state was 565,000 hectares (1 hectare = 2.74 acres); the land ceded to the General Algerian Society and the Geneva Society, two colonization societies, was 130,000 hectares, and the land bought by Europeans from natives 260,000 hectares, making in all 955,000 hectares in the hands of Europeans. During the years 1876 and 1877, the Government intended to offer 763 village lots and 111 isolated farms to colonists. On December 31, 1875, there were three lines of railway in operation, of which the length and the receipts in 1875 were as follows:

LINE.	Length in Kilometres.*	Receipts in Francs.
From Algiers to Oran.....	428	8,970,280
From Philippeville to Constantine.....	57	2,210,664
From Bona to the mines of Ain and Mokra.....	30
Total.....	548

On February 10th the sherif El-Hadsh, a cousin of the Emperor of Morocco, arrived in Algeria on an extraordinary mission. The *Journal des Débats* gives the following account of it: He was received with all honors due to

so high a personage, and soon after left for the interior to treat with the rebellious tribe of the Uled-Sidi-Sheik. This tribe has for twelve years troubled the western and southwestern frontiers of Algeria, and has frequently involved the Algerian Government in difficulties with Morocco and the subjugated tribes. To prevent this, the Government has repeatedly negotiated with the Emperor of Morocco to have them transferred to the latter's dominions. This tribe originally belonged to Algeria, and for many years its chief ruled as caliph over that entire region, under French protectorate. The sherif, who is the head of the religious associations of the Moulay and Faiebh, and who is the highest church dignitary in Western Africa, went to them with a letter from the Emperor of Morocco, urging them to settle west of Fez, and assuring them of that welcome due to the position which they hold in the Mohammedan world. He did not treat with them as subjects of the Sultan, but simply made friendly proposals to them, placing himself in the position of the head of a religious community which is even more celebrated than their own. His mission was crowned with only a partial success. The Uled-Sidi-Sheik have two chiefs, both of whom have great influence. The one, Kaddoor-ul-Hamza, is the legal heir of the Grand Marabout Si-Hamza; while the other, Si-Soliman, is only a near relation to him, though, through his intelligence

ALGIERS, FROM THE PARADE GROUND.

and his courage, he has gained a prominent position. Kaddoor, without entering upon the proposals of the sherif, expressed his willingness to conclude peace with France, but only upon the footing of an independent sovereign,

* 1 kilometre = 0.62 mile.

demanding, as one of the conditions, that the French troops be withdrawn from the fortified town of Géryville. On the other hand, Soliman, seeing that a war with France would only end disastrously for his tribe, agreed to comply with the sherif's requests.

During the festival of Ramadan, dervishes and pilgrims from Mecca, and marabouts, went about among the native population preaching the holy war against the Christians.

During the month of March the tribe of the Uled-Bonasog, in the province of Constantine, were incited to rebellion by a fanatical priest, a marabout by the name of Bu Ayach. General Carteret was immediately dispatched to the scene of the disorder, and on his arrival found that the insurrection was confined to one tribe, the others hastening to assure him of their fidelity. On April 11th he attacked the natives, who numbered about 200 horse and 2,000 foot, and had taken position near the oasis El-Amri. After a severe struggle, the enemy was driven back, leaving 100 dead on the field, among whom was Mohammed Ben Yahia, the leader of the movement. The French loss was very small. The insurgents soon after made an attack upon the French, but were repulsed. The French succeeded in surrounding them by the end of April, and compelled them to surrender, thus ending the insurrection. The leaders were held as hostages for the further good conduct of the tribes.

In June their sentence was pronounced. Their entire property was confiscated, while they were themselves disarmed and driven from their oases, and in addition a heavy fine was imposed upon them. Nine of the leaders were tried by court-martial, and twenty-three were interned in Corsica.

ALSINA, ADOLFO, a statesman of the Argentine Republic, born in Buenos Ayres in 1829. His father was likewise an eminent statesman, and a jurist of considerable celebrity. The subject of the present notice first attracted public attention by a series of lectures, and by articles contributed to the periodical press of his native city. He afterward became deputy to the Provincial Chambers, and was, of the number of the members of the convention of 1872, most distinguished for facility and eloquence of address. From 1866 to 1868 he occupied the post of governor of the province of Buenos Ayres, and that of Vice-President of the Republic from 1868 to 1872 during the Sarmiento administration. He commanded a body of National Guards at the battles of Cepeda and Pavon. Dr. Alsina is a man of much prestige, is energetic and ambitious, and destined to play a conspicuous part in the political affairs of his country. He is now, for the second time, governor of his native province.

AMBROS, AUGUST WILHELM, a German composer and author, born November 17, 1816; died June 28, 1876. He attended the gymnasium in Prague and here commenced to study music under great difficulties. In accordance with the wish of his parents he devoted himself to the study of political science, graduated in 1839 as Doctor of Laws, and soon after received a Government appointment in Prague. During his leisure hours he devoted himself as-

siduously to his musical studies, finding much encouragement in the society of men like Robert Schumann, Kitte, and Veit. He was an active contributor to Schumann's *Neue Zeitschrift für Musik*, at first under the name of Flamin. Among his first works was the overture to "Genoveva," which was received with great enthusiasm in Prague. In 1846 he composed his overture to Shakespeare's "Othello," and after that played on the piano in several concerts, and thus soon gained considerable reputation. His first attempts as an author also appeared during this time, as he had taken the place for a short time of his friend Bernhard Gutt as musical critic of the *Bohemia*. He also added some *entr'acte* music to his overture to "Othello," which was exceedingly well received. In 1856 his fame as a musical author began to rise. His work, "Die Grenzen der Musik und Poesie," written in answer to Hauslik's "Vom Musikalisch-Schönen," attracted great attention, and soon appeared in a second edition. This work was severely attacked by various parties, but on the other hand gained for him the warm friendship of Liszt. A lecture, "Die Musik als Culturmoment in der Geschichte," attracted general attention, and caused the publication of his "Culturhistorische Bilder aus dem Musikleben der Gegenwart" (1860). In 1858 he published a memorial on the fiftieth anniversary of the Conservatory of Prague, of the Board of Directors of which he was a member. Attracted by his works, which gained for him considerable celebrity, the publishing-house of Leuckhardt, in Leipsic, proposed to him to write a history of music. This he made the work of his life. The first volume appeared 1862, and the second in 1864. In order to prepare the third and fourth volumes, he went repeatedly to Italy, receiving considerable aid from the Imperial Academy of Sciences in Vienna for this purpose. There, in the libraries of Bologna, Florence, and Rome, he sought diligently after old musical treasures. The third volume, which treated of the music of the Netherlands, appeared in 1868. The fourth volume was to treat of Palestrina, the musical Renaissance, the origin of the monody, of the opera, and of the modern system of sounds, and was to close with Johann Sebastian Bach. In the fall of the year 1876 he intended to undertake a trip to Italy to collect the last material for the fourth volume, but was interrupted in this by his death. In 1869 he was appointed Professor of the History of Art and Music in the University of Prague. In 1872 he went to Vienna as musical critic of the *Wiener Abendpost*, and as musical instructor of the crown-prince, at the same time receiving an appointment in the Ministry of Justice. Besides the larger works noticed before, he composed numerous smaller pieces for the piano, and songs. He also wrote "Bunte Blätter" (first series, 1871), and numerous traveling-sketches of Italian cities. An auto-

biography prepared by him goes only to the year 1848.

AMERICA. The great event of the year in North America was the Centennial Exhibition in the United States, of which extensive details will be found elsewhere in this volume. The presidential election was hotly contested, and the result very close; so that at the end of the year it was not evident, in consequence of disputed votes, which candidate would fill the office. A sharp battle was fought between a body of United States soldiers and an Indian force, in which the latter were successful. The commander of the soldiers, General Custer, with several officers, was killed. The depression in commercial affairs continued.

In the Canadian Dominion, some apprehensions of a Fenian raid were entertained, but they proved groundless.

In the several Spanish-American countries, war, either at home or abroad, has for the most part prevailed throughout the year 1876. Mexico has been the theatre of a protracted and violent struggle for power between Señor Lerdo de Tejada, the constitutional President of the Republic, and General Porfirio Diaz, the former having been driven from the seat of government, and ultimately captured by the latter, who entered the capital triumphantly early in the month of December. Peace had, however, not been entirely reestablished at the end of the year, owing to the existence of a new complication which supervened shortly before the downfall of the Lerdo Administration—namely, the *pronunciamento* of Iglesias, President of the Supreme Court, who established a new government, headed by himself, at Leon, State of Guanajuato.

A war between San Salvador and Guatemala ended in the overthrow of the Valle Administration, and the appointment of Señor Rafael Zaldivar as Provisional President of the first-named country.

A revolution in Honduras terminated in July, 1876, in the deposition of Señor Ponciano Leiva, and the establishment of a provisional government under Señor Marcelino Mejía, who was ultimately superseded by Señor Marco A. Soto.

The boundary questions between Costa Rica and Nicaragua, and between Chili and the Argentine Republic, still remained open, and furnished matter for warm altercation between the parties concerned.

Brazil continued in a state of enviable prosperity.

Colombia is still the scene of hostilities commenced by the Liberals against the Government toward the middle of the year. The most important encounters occurred in Cauca and Antioquia. Material prosperity has not, however, been altogether destroyed by these events, as attested by the opening of a new railway line in the second of the belligerent states referred to.

In the month of October, Nicolas Pierola

placed himself at the head of an inconsiderable force against the Government of General Prado, but was promptly defeated.

Most of the countries here enumerated were worthily represented at the Philadelphia Exhibition, where the extensive and varied display of their rich and curious products elicited no small degree of admiration.

ANASTASIUS GRÜN. (*See AUERSPERG.*)

ANDRAL, GABRIEL, a French physician and author, born November 6, 1797; died February 13, 1876. He was appointed, in 1827, Professor of Hygiene in the Faculty of Paris, and promoted, in 1839, to the chair of Internal Pathology. Previous to this he had obtained great fame by his work "*Clinique Médicale*," which was published in four volumes. In 1839 he succeeded Broussais as Professor of Pathology and General Therapeutics. He was a very diligent writer, and has, in conjunction with Gavanet and Delafond, published some most eminent works. Many of the productions of his own pen have been translated into foreign languages.

ANGLICAN CHURCHES. The two houses of the *Convocation of Canterbury* met at Westminster, February 15th. In the Upper House the Bishop of Winchester presented resolutions which had been adopted by the Anglo-Continental Society in November, 1875, inviting the attention of the Convocations to the resolutions which had been adopted at a conference of Old Catholics and adherents of the Greek, Anglican, and other communions, held at Bonn, on the subject of the Procession of the Holy Ghost. He moved:

That the resolutions lately adopted at Bonn by representatives of the Old Catholics, certain members of the Eastern Churches and English Church, and other Christian communities, concerning the Eternal Procession of the Holy Ghost, be referred to the Committee of the Lower House of Convocation on Intercommunion with Eastern Churches.

The Archbishop of Canterbury spoke on this resolution at length. He desired most heartily to see a spirit of real Christian unity throughout the world. He thought it, however, of more importance to look first at the divisions which existed near, which separated the Church from those who were allied in language, and in sympathy in regard to the same love of the Bible, rather than to those which existed in respect to people who were at a great distance locally. He could not help feeling that the first great desire of every Englishman should be that those who spoke the English tongue and believed in the same gospel should be, as far as possible, united in their efforts to promote their Redeemer's kingdom. Therefore, he should like to begin with those who were about their own doors. He regretted that important political questions separated the Church from those with whom it was anxious to act in harmony at home, and that, year by year, the difficulties which stood in the way of a reunion of the Nonconformist bodies with the

W. B. Hayes.

Church of England, instead of disappearing, seemed to be magnified. Then, across the Atlantic, anxious as he should be to unite with the three million persons who belonged to the Protestant Episcopal Church in America, still, as a Christian man who desired the diffusion of the Lord's word, he could not shut his eyes to the fact that there were some thirty million persons, speaking, too, the English tongue, and who were Christians, but not members of any Episcopal Church, with whom union might be sought. On the Continent of Europe, their forefathers had coöperated with vast numbers of persons who were now, from one circumstance or another, more or less estranged. The Swedish and Danish Churches were examples of these. And, if he could not understand why no union was sought with these churches, still less could he understand why the great church of Luther, to which England owed so much, was to be considered as less connected with England than it was considered possible for the English Church to be connected with the Eastern Church. He should be very sorry to have it supposed that, while the Church of England desired to coöperate with Christians of the far East, she was neglectful of her more intimate relations with her fellow-Christians of the West. The resolution of the Bishop of Winchester was adopted. His grace the President was requested by resolution to appoint a joint committee of both Houses "to consider what steps can be taken toward making provision for clergymen who, from age and infirmity, are desirous of resigning their benefices, and retiring from the active duties of the ministry." In the course of the debate on this resolution, the statement was made that the number of benefices in England and Wales was 13,000, and the number of clergymen, of all degrees, was 23,000. Estimating the number of clergymen having no cure of souls, as masters of schools, etc., at 2,000, there were left 21,000 clergymen proper, beneficed and unbeneficed; showing that 7,000 clergymen, or one-third of the whole, were unbeneficed. In the Lower House, the report of the committee on "The Law of Burials" was made. It suggested an outline of the procedure to be adopted in case Parliament should pass a law declaring the churchyards open for interment without religious services, or with services other than that of the Church of England.

The Convocation of Canterbury met again May 9th. A petition, numerously signed, was presented in the Upper House, asking that their lordships would take such measures as they deemed best to attest the soundness of the agreement or scheme of concord arrived at at the Bonn Conference in August, 1875, and, if possible, to promote further friendly relations and closer intercommunion with the Orthodox Churches of the East. The archbishop stated that he had received a letter from the presiding bishop of the Protestant Episcopal Church in the United States, asking that, in the event

of a gathering of bishops from all parts of the world, this subject should be brought before them. He had also received a letter from the Bishop of Pittsburg, suggesting that commendatory letters be given to emigrants to the United States, introducing them to the pastors of Episcopal churches in the towns where they might settle. By this means many would be prevented being drawn away from the influences of their church. The principal subject considered was that of providing a service of burial for those who died unbaptized. The Lower House adopted a resolution that it was not advisable to provide for such cases by any rubric in the Book of Common Prayer, but suggested that a service of consolation and instruction for the friends of the deceased might be used immediately after the interment, the service being selected from the Holy Scripture and the Book of Common Prayer. Both Houses finally agreed to a resolution providing that in the cases of persons who die unbaptized or excommunicate, or in the commission of any grievous crime, "it shall be lawful for the minister, at the request or with the consent of the kindred or friends of the deceased, to permit the corpse to be committed to the grave in the churchyard or chapel-yard of the parish without any services," and that "in such cases the incumbent may permit the use at the grave of such hymns as may be approved by him." A petition was received from 14,000 working-men, asking for liberty for the clergy to conduct the services of the church without obedience to the Privy Council. A committee was provided for to inquire into the law authorizing clergymen to repel persons from the Holy Communion on the ground of their holding false doctrines or leading immoral lives, and to report if any further legislation was necessary. A committee was also appointed to inquire into and report upon the ancient rites and ceremonies appertaining to the Christian burial of the dead, and the discipline attached to the use of them.

The Convocation of Canterbury met for the third time during the year, July 18th. The Lower House adopted a resolution to have the synodical declaration respecting the import of the "damnatory clauses" of the Athanasian Creed, which was passed at a previous session of the Convocation, appended to that creed in the Prayer Book. The following rubric in reference to the communion service was adopted: "When there is a communion a pause shall here be made, during which those who desire may withdraw, and the communicants may be conveniently placed for receiving the communion." It was left to the discretion of the minister whether the pause should be made before the offertory services or after the prayer for the Church militant. In the Lower House a resolution was passed in reference to the burial service, providing that "it shall be lawful for the minister, at the request or with the consent of the kindred or friends of the de-

ceased, to permit the corpse to be committed to the grave in the churchyard of the parish without hymn, anthem, or address of any kind." The Upper House had voted that hymns should be permitted at the grave. A conference of the two houses was held, with a view to the adjustment of the difference between them on this point, but without success. A *gravamen* was signed by members of both houses deploring the barbarities alleged to have been exercised by the Mohammedans toward the Christians in Bulgaria, and the asserted sale of Christian children into slavery, and praying "that effectual steps will be taken by the Government, in conjunction with the Porte and others, to prevent, as far as possible, such grievous scandal and offense to Christendom and the civilized world." The Committee on Intemperance presented a supplementary report to the effect that the time had come when Parliament might properly be urged to take into consideration the further regulation of the traffic in intoxicating drinks, and suggesting that new legislation ought to embrace some or all of the following points:

The extinction of grocers' excise licenses; the gradual suppression of houses for the sale of beer to be consumed on the premises; the gradual reduction of the number of public-houses until a limit shall have been reached which shall correspond to the wants of a temperate population; a large restriction of hours for Sunday traffic, together with some measure for country places for earlier closing at night and earlier opening in the morning; and the admission of the principle of local control so far as to give the inhabitants of any locality some voice in the question of granting new licenses, of reducing the number of houses, of Sunday closing, of earlier or later opening, and of earlier closing on weekdays.

The *Convocation of York* met in York Cathedral, February 15th. It considered the fourth report of the Ritual Commission. The Upper House rejected the addition to the Athanasian Creed in the form of a synodical declaration which had been agreed to in 1874 by the Convocation of Canterbury and the Lower House of the Convocation of York. (For the text of this declaration, see the ANNUAL CYCLOPEDIA for 1874.)

At the *Judicial Committee of the Privy Council*, January 19th, a special court was constituted for the hearing of an appeal from the Arches Court of Canterbury, in the case of *Jenkins vs. the Rev. Flavel Smith Cook*, rector of Christ Church, Clifton. In this case the question was raised whether a parishioner could be legally refused the Holy Communion because he did not believe in the personality of Satan and evil spirits, and the doctrine of eternal punishment. Mr. Jenkins had several years before compiled a book of selections from the Bible for devotional uses, from which were omitted all allusions to the doctrines of the existence of the devil and eternal punishment. On July 5, 1874, Mr. Cook preached a sermon on "Rationalism," to which Mr. Jenkins took exceptions, and against which he

wrote the minister a letter of protest. Mr. Cook then gave Mr. Jenkins warning that he would consider a depraver of the Book of Common Prayer a hinderer and slanderer of God's word, and "open and notorious evil liver," and would refuse to administer the communion to him. Mr. Jenkins, after having been refused the communion several times, brought suit against Mr. Cook in the ecclesiastical courts. The lower courts sustained the vicar, and Mr. Jenkins appealed to her Majesty in Privy Council. The judgment of the latter court was given February 15th, and reversed the decisions of the lower courts. Their lordships held that the evidence did not sustain the allegation that the appellant entertained the doctrines attributed to him, and expressly declared that they did not mean to decide that those doctrines were otherwise than inconsistent with the formularies of the Church of England.

The only cause, they said, which will warrant a minister under the rubric in repelling a parishioner from the Holy Communion is that he is an "open and notorious evil liver," who thereby gives offense to the congregation; and the only cause which will warrant his repulsion under the 27th canon is that he is a "common and notorious depraver of the Book of Common Prayer." It became necessary, therefore, to consider whether the appellant came under both or either of these descriptions. As to the first, there was absolutely no evidence whatever that the appellant was an evil liver, much less an open and notorious evil liver. The term "evil liver," according to the natural use of the words, was limited to moral conduct, and the distinction between conduct and belief was clearly recognized in the canons, especially in the contrast between the 109th and 110th. As to the charge against the appellant of being a depraver of the Book of Common Prayer, this was founded on the fact of his having published a book of selections from the Bible for reading at family prayer, from which certain parts were omitted, as was alleged, on the ground of the doctrine which they teach; and it was argued that, as some of the parts so omitted were either found in the Book of Common Prayer or were the support of doctrines found in that book, omission of them was equivalent to rejection, and rejection of them to deprivation of the Book of Common Prayer. In none of these propositions nor in their logical connection could their lordships concur. Omission was not rejection, otherwise the lectionary in the Prayer Book would be open to the grave charge. Nor was it possible to establish the charge of deprivation upon these omissions, even coupled with the letter written by the appellant to the respondent in justification of them. For even if there were anything in the letter which amounted to a deprivation of the Book of Common Prayer, which their lordships did not suggest or think there was, it would be still impossible to hold that the writing of such a letter in answer to one addressed to him by the respondent—in other words, not an open and spontaneous, but a private, friendly, and solicited communication—could make the appellant a "common and notorious depraver of the Book of Common Prayer." They would therefore advise her Majesty to reverse the sentence of the Dean of Arches, and in remitting the cause to admonish the respondent, the Rev. Flavel Smith Cook, for having without lawful cause refused to deliver to the appellant, or permit the appellant to receive, the elements of the Holy Communion; and further, to admonish him to refrain from committing the like offense in future.

In May, 1874, a daughter of the Rev. Henry Keet, a Wesleyan minister at Owston Ferry, county of Lincoln, died, and was buried in the parish churchyard. Mr. Keet ordered a tombstone set up over her grave, to bear an inscription, "In loving memory of Annie Augusta Keet, the younger daughter of the Rev. H. Keet, Wesleyan minister, who died at Owston Ferry, May 11, 1874, aged seven years and nine months. Safe sheltered from the storms of life." The vicar of the parish forbade the erection of the stone on the ground that in the inscription the term "Rev." was improperly assumed by Mr. Keet, a person not in the orders of the Church of England, and having therefore no right to bear it. Mr. Keet appealed to the Bishop of Lincoln. The bishop sustained the vicar. Mr. Keet then brought suit in the court of the chancellor of the diocese for a faculty for the erection of the tombstone. The chancellor gave a judgment refusing to issue the faculty, and sustaining the decision of the vicar, that Mr. Keet had no right to use the title Reverend. Mr. Keet then appealed to the Court of Arches. This court reaffirmed the decision of the diocesan court. The case was then carried by appeal to the Judicial Committee of the Privy Council. The judgment of this court was delivered by the Lord Chancellor, January 21, 1876. It reversed the decisions of the lower courts, and ordered a faculty issued for the erection of the tombstone. The case was remitted to the Court of Arches.

The first proceedings taken under the *Public Worship Regulation Act, 1874*, were had in the case of a complaint brought by three parishioners of St. Peter's, Folkestone, against the Rev. C. J. Ridsdale, incumbent of the parish. The complainants charged the defendant with violations of ecclesiastical order in the following points: Using lighted candles on the communion-table during the time of the celebration of the Holy Communion when their use was not necessary for giving light; the mixing of water with the wine for the service of the communion; the use of wafer bread in the communion; standing during the administration of the communion in the eastward position, with his back to the people; kneeling during the prayer of consecration, and singing the hymn *Agnus Dei*; walking in processions with ornaments and observances not sanctioned by the rubrics of the Book of Common Prayer; wearing illegal vestments, as the chasuble and the alb; the use of the crucifix; the adoption in the church of the representations called the "Stations of the Cross;" and administering the communion to only one person. Mr. Ridsdale made no defense to any of the charges except that of administering the communion to fewer than three or four persons. In regard to this, he said that he had entered upon the service "without any positive expectation one way or the other." Lord Penzance gave judgment in the

case, February 2d, against the defendant. He decided that the incumbent had offended against the law in officiating in the chasuble and alb; that he had also offended in administering the communion without having assured himself that the number of persons required by the rubric, "four, or three at least," would participate in it; that the so-called Stations of the Cross, which were described as consisting of fourteen groups of "figures in colored relief, a plastic figure attached to the walls of the church, purporting to represent scenes of our Lord's Passion, and such as are commonly used in Roman Catholic churches," were decorations forbidden by law; and that the erection of the crucifix, "or figure of the Saviour on the cross in full relief," was unlawful. The judgment of the court on the points as to the position at the communion-table, and as to the vestments, was modified by the admission that the decisions of the superior courts on these points were conflicting, and an appeal to the Judicial Committee of the Privy Council might be necessary. An appeal was taken by the defendant to the Judicial Committee of the Privy Council on the four points of the eastward position of the minister at the communion service, the vestments to be worn, the form of bread to be used, and the exhibition of the crucifix in the communion service.

The eighteenth annual session of the *Church Congress* was held at Plymouth, beginning October 8d. The opening sermons were preached by the Bishop of Winchester and the Rev. Canon Miller. The opening address was delivered by the Bishop of Winchester. He spoke of the character of the Congress, as in no sense representing the whole Church, but consisting rather to a disproportionate extent of men of extreme views; of the peculiar dangers to which it was exposed by reason of such men occupying its attention; and of the safeguards against such dangers, which lay in the Congress itself. If they were avoided, the meetings might be made productive of great benefit. Papers were read, and discussions had, during the meetings of the Congress, on the following topics: "The Bonn Conference and the Old Catholic Movement" (Bishop Perry, late of Melbourne, the Dean of Lichfield, and the Rev. Lord Plunkett); "The Formation and Management of Parochial Temperance Societies;" "The Causes and Influences of Unbelief in England" (Dean Cowie, of Manchester, Archdeacon Reichel, the Rev. G. Greenwood, Dean Lake, of Durham, Archdeacon Denison, the Bishop of Winchester); "Central Africa, in Relation to Mission-Work, the Slave-Trade, and Commerce" (Sir Bartle Frere, the Rev. W. S. Price, Lieutenant Cameron, Arthur Mills, M. P., Archdeacon Badnall, and others); "How to increase the Number and improve the Training of Candidates for Holy Orders" (the Rev. W. S. Smith, Archdeacon Earle, Archdeacon Emery); "The Best Means to be adopted for

recovering the Classes alienated from the Church" (Canon Murray, for Canon Ryle, J. G. Talbot, M. P., Lord Forbes, the Rev. T. Hugo, Dean Fremantle, the Rev. J. F. Kitto, Earl Nelson, Mr. Paterson, of Bradford); "Aids to Spiritual Life" (Prebendary Clark, Canon Bell, the Hon. Charles Wood, and others); "The Due Relations of Church and State" (the Earl of Devon; the Rev. J. Bardsley, on the special topic of "The Court of Final Appeal;," Dr. Phillimore, "The Supremacy of the Sovereign over the Church;," Arthur Mills, M. P.; the Rev. Bradmore Compton, and others). Papers were also read on "Church-Bells" (in which competitions for prizes and ringings on secular occasions were deprecated), the "Periodical and Daily Press of the Country" (in which ideal journals were delineated by which the Church was to attract all readers toward herself), and "Ministrations to the Sick." Resolutions were adopted declaring "that the promotion of the reunion of their Nonconformist brethren with the Church is a duty binding on all faithful churchmen," and commending to hearty sympathy and active support the "Home Reunion Society," an organization having for its object the promotion of unity without compromise of the faith or constitution of the Church.

The Archbishop of Canterbury in September, 1876, sent the following letter to the Colonial Bishops, in relation to the calling of a *Pan-Anglican Synod*, to meet in 1878:

RIGHT REVEREND BROTHER: A wish has been expressed by many bishops of the Protestant Episcopal Church in the United States of America, by the bishops of the Canadian Dominion, and by the West Indian bishops, that a second Conference of our brethren should be held at Lambeth. Before I decide upon the important step of inviting the bishops of our communion throughout the world to assemble at Lambeth, I have thought it right, after consultation with the bishops of England, to give all our brethren an opportunity of expressing their opinion upon the expediency of convening such a Conference at this time, and upon the choice of the subjects which ought to engage its attention if it be convened. I therefore beg leave to intimate to you our readiness to hold a Conference at Lambeth in or about the month of July, 1878, if it shall seem expedient after the opinions of all our brethren have been ascertained; and I need scarcely assure you that your advice is earnestly desired, and will be respectfully considered. May I ask for our guidance whether you are willing and are likely to be able to attend the Conference yourself? Those who were present at Lambeth in 1837 thankfully acknowledge that, through the blessing of Almighty God, the bishops of the various branches of the Anglican Communion were drawn together in closer bonds of brotherly love and sympathy. The help and comfort which are due from the branches of Christ's Church to each other are more readily rendered the more fully each is made acquainted with the wants of the rest. In this time of religious activity and increased intercourse between all parts of the world, there is greater need than ever of mutual counsels among the bishops of our widely-extended communion. The bishops of England, therefore, earnestly ask you to join with them in prayer that we may all be guided to a wise decision on this important matter, and if it should be resolved to hold the Conference, that its delibera-

tions may issue in greater peace and strength and energy to the whole Church of Christ. Anxiously awaiting your answer, I remain your faithful brother and servant in Christ,
A. C. CANTUAR.

The *General Synod of the Irish Church* met in Dublin, April 20th. The Rev. Lord Plunket offered a motion directing that an alternative form of the service for the ministration of baptism to infants, shorter than that now in use, be added to the present baptismal formularies. The motion was supported by nearly all the laity, but failed to receive the requisite majority among the clergy. The following declaration on the subject of baptism was inserted in the new preface to the Prayer Book:

In the formularies relating to baptism, we have made no substantial change, though some have desired to alter or omit certain expressions touching which diversities of opinion have prevailed among faithful members of our Church. At the same time, we desire fully to recognize the liberty of expounding these formularies hitherto allowed by the general practice of the Church, affirmed on occasion, by judicial interpretation of law. And as concerning those points whereupon such liberty has been allowed, we hereby further declare that no minister of this Church is required to hold or teach any doctrine which has not been clearly determined by the Articles of Religion.

The rubric which required the reading of the Athanasian Creed on certain occasions was removed, but, in connection with this act, a declaration was passed, that in removing the rubric the Church did not withdraw its witness to the truth of the articles of the Christian Faith contained in the creed.

The annual meeting of the *Church Missionary Society* was held in London, May 2d. The Earl of Chichester presided. The ordinary income of the society for the year, from associations, benefactions, legacies, and other sources, had amounted to £189,457 17s. 1d.; the society had also received funds for special objects, sufficient to make the total income £195,116 8s. 1d. The expenditures had been £191,237. The report of missionary operations showed that the society had at present 170 stations, 211 European clergymen, 181 native clergymen, 38 European schoolmasters and lay agents, 11 European women-teachers (exclusive of missionaries' wives), 2,411 native Christian catechists and teachers, and 24,550 communicants. The society had withdrawn from 78 stations, which had been added to parochial establishments in the West Indies, or transferred to the native Church in Sierra Leone, containing 10 native clergy, 4,356 communicants, and 12,866 scholars. New missions had been opened in Persia, and in the Nyanza district, Africa; and the missions in China, Japan, to certain classes of the population in India, on the west coast of Africa, in the trans-Jordanic districts of Palestine, and in the diocese of Saskatchewan, Northwest America, had been extended. At home a conference had been held on missions to Mohammedan people:

liberal gifts had been made for the establishment of new missions. The sum of £12,000 had been subscribed toward the establishment of a mission near the Nyanza Lake. The society had determined not to interfere with the American missions to Mohammedan countries, but to confine its operations in those regions to Palestine. A largely-increased number of candidates for the society's college at Islington was reported, and the institution was now quite full. Forty-six candidates had been accepted during the year, of whom eleven were prepared to go forth at once.

The one hundred and seventy-fifth anniversary of the *Society for the Propagation of the Gospel in Foreign Parts* was held in London, April 27th. The Archbishop of Canterbury presided. The report stated that the collections and subscriptions during the year had amounted to £125,294, and that 528 missionaries were engaged in various fields of missionary work. Among the speakers was Sir Bartle Frere, who spoke of the impressions which had been made upon him during a recent visit to India. He could give a great amount of encouragement to those who were interested in the spread of Christianity in India, for he had just traveled over parts of that country where, when he first went to India, it would have been dangerous to send a missionary or any white man at all; now, in these districts he had found teachers of all denominations of Christianity, busily employed in spreading the truths of the gospel. No doubt could be entertained of the glorious results which would follow this increase of missionary institutions, for wherever he had traveled in India he had found communities of Christian people living under the ægis of the British Government without exciting any feelings of jealousy or ill-will on the part of the native population. The great safeguard of missionary enterprise was, that there was no compulsion, or any use made of the temporal sword to enforce the observance of the principles of the religion disseminated. He found, everywhere, that the missions were in the most flourishing condition, although the cry was still for more hands to assist in the work. The Archbishop of Canterbury spoke of the appointment of two new bishops in the diocese of Madras, which had been made during the year, and said that steps were being taken with a view to the foundation of other bishoprics.

The annual meeting of the *South American Missionary Society* was held in London, April 24th, the Earl of Shaftesbury presiding. The society is constituted for the purpose of making known the gospel to the inhabitants of South America, and it is conducted in conformity with the doctrine and discipline of the Established Church of England. A mission was founded in Patagonia, in 1844, under Commander Allen Gardiner, R. N., but it did not succeed after the death of its founder. The society was reformed in 1852. The Rev. Al-

len W. Gardiner, son of Commander Gardiner, commenced in 1861 a mission at Lota, Chili, to the European population. The report gave accounts of the progress of the work in the Falkland Islands, Tierra del Fuego, Uruguay, Brazil, the Amazon River district, and Chili. An important branch of the work was that which addressed itself to Roman Catholics.

ANTONELLI, GIACOMO, cardinal deacon of the title of St. Agatha della Suburra, and subsequently of Santa Maria, in Via Lata (born at Sonnino, States of the Church, April 2, 1806; died at Rome, November 7, 1876). His family was an ancient one in the Romagna, and had produced many priests and historians. He was educated at the Roman Seminary and University, and at twenty-one took the degree of Doctor in the Canon and Civil Law. At twenty-four he passed the examinations and showed the patrimony requisite to enter the Prelature of Justice. After filling minor judicial offices, he was in turn delegate at Orvieto, Viterbo, and Macerata. After the accession of Gregory XVI. he baffled the insurrection in which the subsequent Napoleon III. and his brother took part. Antonelli was then made Secretary-General of the Department of the Interior, and subsequently Minister of the Treasury. He was made cardinal deacon by Pius IX., June 12, 1847, and immediately afterward President of the Consulta of State, and to his death was the master-spirit of the administration of the Pope. He ceased to be minister during the year 1848, being replaced by Mamiani and Rossi. After the fall of the latter, Cardinal Antonelli advised and carried out the flight of the Pope to Gaeta. As minister of Pius IX. he appealed to France, Spain, Austria, and Naples, and represented the Pope at the conference at Gaeta. When the Pope was restored to Rome, after the French conquest of the city, Cardinal Antonelli, as prime-minister, set to work to reform the civil administration, and encourage agriculture and industry. The revolutionary party was, however, active, and an attempt to assassinate the cardinal, in June, 1848, showed how obnoxious he was to them. When, in 1859, revolts began, and Piedmont evidently aimed at seizing the Papal States, the task of Cardinal Antonelli became one of great difficulty. All admit the consummate ability with which as a statesman and a diplomatist he endeavored to avert the blow. When, with the capture of Rome, the last of the temporal possessions of the papacy was wrested from Pius IX., Cardinal Antonelli remained as Secretary of State to the Pope, but, of course, chiefly engaged in the management of the difficult relations forced upon the Holy See by the new order of things. In these he manifested great ability and skill. His appeals to the various powers for a restoration of the Pope's authority failed to effect the result. He died after a brief illness. Though holding so high a position in the papal court, and a cardinal, he never was ordained a priest, or was named to

any bishopric. He was possessed of great wealth, derived entirely from his parents, as he solemnly declares in his will, and at his death left his property mainly to his family. He was a man of taste, had a fine gallery and a remarkable collection of gems, which he bequeathed to the Vatican Museum. He was interred in the cemetery of San Lorenzo, without the walls of Rome.

ARCHÆOLOGY. The excavations of Dr. Schliemann in Mycenæ and General di Cesnola upon Cyprus have brought to light monuments of ancient art and culture, affording a revelation of the early Greek world, as important and interesting as any archæological discoveries made in modern times. These discoveries were not in any manner accidental. The two explorers are zealous students of archæology, who pursued their investigations with an intelligent preconception of the results, amid many difficulties, and only achieved their great discoveries after long and arduous and expensive preliminary labors. Both explorers, with disinterested generosity, relinquished the pecuniary profits which they might have reaped from their long and difficult investigations, whose expense they had borne unaided, and in which they had embarked their private fortunes. Dr. Schliemann has presented his treasure outright to the Greek Government, and General di Cesnola has abated a considerable profit, in order that, in the interest of science, his collection might be preserved entire, and has delivered it by preference to the study of his fellow-citizens of America. Archæological research has been prosecuted with activity of late also at Pompeii, Rome, and elsewhere. The wealth of art which lies concealed under the soil of Cyprus is probably far from exhausted; and the treasures buried in the ruins of Mycenæ are still being unearthed by the energetic German Hellenist. These extraordinary discoveries will probably stimulate antiquarian investigation to new efforts, and further revelations of the life, art, and history of the great nations of antiquity may be yet sifted out of the secular dust of buried cities.

Dr. Heinrich Schliemann, whose archæological discoveries in Asia Minor, and much-doubted identification of the site of ancient Troy, brought to the enthusiastic explorer rather unmerited ridicule than the honor which belongs to an attempt so disinterested to clear up the history of those races whose splendid deeds were the burden of Homer's song, has made further archæological discoveries this last year in Argolis, which cannot fail to win the applause which his enthusiastic purpose has amply deserved. In excavating upon the site of Mycenæ, Dr. Schliemann has discovered the remains of a well-built city of prehistoric date, and in richly-furnished dwellings and tombs of the same has found relics of a fine art-culture. These discoveries, in confirming Homer's accounts of the culture and advancement of the Argives, go further to establish

the historic truth of the "Iliad" than would the recovery of an authentic record, or the location of all the places mentioned in the epic.

Heinrich Schliemann, whose parents were not wealthy, acquired the knowledge of the Greek language first when he was well advanced in years. Though always showing a love of study, he received no academic education, but entered the employ of a mercantile house at an early age, and in the progress of an industrious commercial career acquired a considerable fortune in St. Petersburg. In the mean time he had learned several modern languages, Greek among them, and gained a good store of general information, and, when at last he had leisure, he devoted himself to the study of ancient Greek, for which he had a long-cherished inclination. Impressed with the vivid narrative of the Homeric epos, he became fired with the purpose of restoring to the province of history the stories of the "Iliad," which over-critical modern scholarship had relegated to the land of fable. To this purpose he devoted his leisure and his means and energetic abilities, acquired in the school of practical affairs.

Seeking the ancient Iliion, he excavated in the hill of Hisarlik, which the mass of ancient testimony pointed out as the site of Troy. Here he indeed discovered the remains of a great city of high antiquity, which may very probably have been the Troy of Homer, though that can hardly be proved. His excavations were laboriously pursued on a large scale between 1870 and 1873, his method being to sink vertical shafts and then cut transverse galleries underground. There were found traces of two different cities. The upper one was Greek; and near the surface coins were found of the time of Constantine. From forty to fifty feet below the surface were found the remains of an older town, which the doctor too positively asserts to have been Troy, and which, in his much-criticised book, "Trojanische Alterthümer" (1874), he endeavors to prove. Among the objects disinterred were a rich store of pottery of Oriental form and ornamentation, articles of jewelry, etc. A treasure was found in the ruins of a palace which seemed to have been abandoned in haste; an abundance of red ashes bears witness to a conflagration; a large number of helmeted skeletons, found in what Schliemann identifies as the temple of Athene, the patron saint of Iliion, show that the city was captured and destroyed in war; but there is too little evidence, and the evidence is too inconsistent, to establish its identification with the Homeric Iliion. The inhabitants of this ancient city were of Aryan stock, as is proved by an abundance of Aryan symbols among the relics.

Dr. Schliemann next transferred his operations to Mycenæ, the capital of Argolis and seat of Agamemnon. Here again he has been rewarded during the past year, after extensive

and difficult excavations, with rich discoveries of much greater value and interest than his others.

Dr. Schliemann made his first visit to Mycenæ in 1867, but did not then undertake any extended investigations. He found the well-defined ruins of the ancient Acropolis, which the villagers call to-day the fort of Agamemnon, while they show the treasury of Atreus as Agamemnon's tomb. The citadel is of irregular triangular shape, about 1,000 feet long, and stands upon a small steep hill, between two mountains. The outside walls still exist, standing from sixteen to thirty-nine feet high, according to the nature of the ground, and having a thickness of from sixteen to twenty-three feet. They are built in some places of immense irregular blocks of stone, with the interstices filled up with smaller stones, but oftener of polygonal blocks, so hewn as to fit snugly together; and in the neighborhood of the great gate and in some other places they are of quadrangular dimensions, five to fifteen feet long, three to five high, and three to six in thickness. Within the walls there are terraces rising toward the centre, supported by the outside walls. A passage between the wall of the citadel and an external wall, built to guard the passage, leads up to the great gate, which is situated on the northwest side. The gate is constructed of two large slabs surmounted by another. The gateway is ten feet high and nine wide. Upon the cross-piece rests a triangular stone twelve feet long and nine high, upon which are carved in low-relief the images of two lions standing upon their hind-legs, with their fore-paws resting upon an altar, upon which stands a column, with a capital formed of four circles inclosed in parallel chaplets. This column is said to be the symbol of Apollo Aggeus, the protector of portals. These figures are executed with great finish and fine artistic feeling, in a manner more primitive, or rather more Oriental, than the sculptures of classic Greece. The pavement shows the ruts worn by chariot-wheels, and the stones of the gateway bear the marks of the bolts and hinges. Another gate on the northeast side, formed also of three stones, without sculptures, is seven feet high by four wide. The surface was covered with potsherds and tiles, and the soil below was full of these remains, as Dr. Schliemann had an opportunity to observe in the sides of a ditch dug by the peasants. The treasury of Atreus, shown by the inhabitants as the tomb of Agamemnon, is cut into the side of a hill about three-quarters of a mile from the Acropolis; it faces a deep ravine. A passage 147 feet long by thirty wide, between two walls of hewn stone about thirty feet high, leads to the grand entrance, which is thirteen feet high, with a width of six feet, and is covered with a neatly-dressed solid block of stone, above which is another opening of triangular shape twelve feet in height and the same in breadth, with traces at the base of the pedestals of little col-

umns or statues. There stood until modern times a column on either side of the entrance, covered with richly-sculptured ornaments, in a style similar to the sculptures at Persepolis. The marks of bolts and hinges are seen in this portal likewise. The interior consists of two compartments, the first cone-shaped of fifty feet diameter and fifty feet in height, the second quadrangular in form, twenty-one feet square. The walls consist of hewn stones joined without cement, which are pierced with many little holes, in some of which the bronze nails, which they were made to receive, are still remaining. These held the plates of polished metal, with which the chamber once was lined.

Dr. Schliemann carried on his excavations at the citadel rapidly, employing 125 laborers. Around the outer wall of the Acropolis he discovered a circular wall about twelve feet in height, topped with two rows of large slabs, which he supposed to be tombstones. Inside this circular wall the space had been filled up with rubbish. Within this circle and near the two rows of slabs were uncovered two parallel lines of upright slabs, of which seven only are still standing, being about three feet apart, three in one row and four in the other, the latter containing sculptures. One of these has below two circles with spiral ornamentations, and above a design representing a man drawn in a chariot by a horse in rapid motion; in front of the chariot is another design of a man with a long lance, near whose point is an object resembling an idol; and behind it is carved the head of a spear. Another slab contains representations of serpents whose coiled folds form regular designs of great beauty.

Pausanias speaks of the sepulchre of Atreus, and the tombs of the companions of Agamemnon who were slain treacherously by Ægisthos, and that of Agamemnon and his charioteer, Eurymedon, in which were also buried the twins, Teledamos and Pelops, children of Cassandra, which were destroyed by Ægisthos, and that of Cassandra, which was doubted by the Lacedæmonians. Ægisthos and Clytemnestra, he says, were buried without the wall, being deemed unworthy of resting within the sacred inclosure. Pausanias could not have seen these tombs, which had long before his day been buried from sight. There is every probability that these tombstones were erected on the spots indicated by tradition as the tombs of Agamemnon and his companions; the sculptures are apparently of the same style as the lions of the gate, and different from any other Greek remains.

Below the row of three tombstones he came upon a square tomb, 26½ feet by 11½ feet, at a depth of fifteen feet or more below the surface of the rock, and fifty-three feet at least below the Acropolis. The wall which supports the circular parallel rows of slabs traverses this tomb, and hence belongs to a later age. The

contents of the tomb were probably removed when the wall was built. Thirteen gold buttons only were found remaining, on which pretty spiral ornaments were engraved, and on some of them the sign sometimes called the Svastika or Arani, from its similarity to the Indian symbols of those names. Numbers of gold blades were also found scattered about in confusion, containing indented circular and spiral ornaments. Under the other row of tombstones was, beneath two of them, an oblong excavation, 11½ feet broad by 21 in length, and 14½ feet deep. Around its four sides is a cyclopean wall, five feet high and two feet thick. This contained bodies, surrounded by black ashes and covered by a layer of large stones, which shows that they had been burnt. One of the corpses was covered with five great leaves of gold, forty-seven to sixty-three centimetres long and some six and a half centimetres in breadth, upon which were crosses of gold-foil eighteen centimetres long and four broad. There were also four gold blades of a round shape, and numerous other ornaments.

About this spot he found twelve different sepulchres, and a cyclopean house which also had once served as a tomb. In this house he found ashes of wood and animal matter, some baked grain, a jasper weight, whorls of blue stone, and some archaic vases, one of which contained an interesting painting of two swans. He conjectures that each of the slabs in the double circular row marks the place of a tomb. The circumference of the circle is 555 feet. Of archaic sculptures he found two fragments of porphyry columns, one of them with a frieze of gray-stone, the former bearing a bass-relief representing a hall with seats and at each end a rose, and the latter covered with spiral ornamentation.

Near the gate of the lions he discovered a great treasury containing many precious articles. It is dome-shaped like the treasury of Atreus, with an entrance thirteen feet long, and a roof of four slabs eighteen and one-half feet in length. It was evidently covered up at an early period, and was probably a secret subterranean royal treasure-chamber. In the treasury there were many ancient Juno idols, a female shape, rudely made, with a head either round or oblong, and large eyes, some having a diadem, and some with, others without breasts. Other idols represent a female form with hands stretched out, with horns starting below the breast and meeting in the form of a semicircle. Male idols of Oriental type have bare heads with incised diadems and a star in front, a long aquiline nose, and an Assyrian beard. There were also very ancient Juno idols in the form of a cow, with painted red or black ornaments. The idols were mostly found about the treasury, except the Juno idols, of which several hundreds were collected in different parts of the Acropolis, and a bird-headed idol with a bowl-shaped protuberance, on which, sometimes, a cross was painted. There were other idols

with round bodies; and female forms with cow's-heads were found on vase-handles. A porphyry form-stone had upon it the patterns of fifteen different descriptions of ear-rings and other articles of jewelry. In bronze, five knives, two small wheels, two lances, two double-edged hatchets, two vases and four others mutilated, a tripod, and hairpins, were found together. A number of perforated agates showed figures of animals in intaglio, done in an archaic style, some of them quite artistically, which evidently belonged to necklaces. Vases were found in great numbers, and painted with the greatest variety of design. Most of them had both outside and inside paintings. Small balls of white glass and perforated pieces of a black kind of glass, which probably served as wall-ornaments, were found in numbers, as well as small cones with spiral lines upon them. Large, tall goblets with one and two handles recall the goblets mentioned by Homer. A disk and two idols were found containing inscriptions which have not yet been deciphered. Among the pottery were pieces with the forms of men, holding their horses' necks with both hands, modeled upon them, and horses rudely painted upon their bases. A portion of a necklace with three beads of different materials strung upon a copper wire was found in the treasury. The fragment of a white-marble frieze has spiral ornaments. Above the entrance to the treasury were the remains of a dwelling, apparently of the Macedonian epoch.

At the gate of the lions, beneath the ruins of a Greek dwelling, there was a series of ancient walls and corridors, one of which leads to the cyclopean house excavated near the tombs. Here Juno idols were found in abundance, and some interesting arrows, one copper-headed, and one with a head of iron. Next the circular rows of slabs, at another point, were found a wooden fish, a sceptre-head of green-stone carved in the form of a human countenance of Egyptian type, and numbers of Juno idols, some of them in the form of a cow, standing or sitting, hornless and with a female head-dress, and other idols of new forms. Two knives and two arrows of obsidian, many perforated glass beads, and a small glass disk with a finely-executed impressed image of a fly, were also found here.

To the south of the circle of tombstones a vast cyclopean house was excavated, of five or more chambers and four intersecting corridors, and a deep cistern and conduit. Traces of the clay coating still adhere to the walls in parts. This building, the doctor pronounces, was the royal palace. In this house many most interesting implements and articles of jewelry were discovered. A finger-ring of onyx has an intaglio of two figures of cows without horns, in an archaic but elaborate manner. Disks of serpentine and agate, which were evidently necklace-beads, contain incised spiral ornaments and the figures of horses and deer. An inter-

esting discovery was a jasper mould or form-stone with six sides covered with curious patterns for gold and silver ornaments, and among them the mould for the small glassy cone with spiral lines which was frequently found. Axes of jasper or green-stone and many whorls of blue-stone were found here, and a large number of fine vases in terra-cotta, covered with paintings of warriors in dark-red on a yellow ground. These warriors wear coats of mail, girdle-belts, sandals, greaves, and either shaggy helmets, which look like the skin of a porcupine, or helmets with long crests; a protuberance like a horn stands out from the front of the helmets; the warriors also carry large, round shields, with a crescent-shaped hole at the bottom, and lances with the object looking something like an idol, seen on the representation of a warrior upon one of the tombstones. The men have an Asiatic cast of features. Interesting also are the vases with three handles in the form of crocodiles. There are other vases with rows of circles and rows of signs which may be writing. In this house were also found a large brazen tripod and another vessel of brass.

General Count Luigi Palma di Cesnola, who has been engaged for the past ten years in extensive antiquarian explorations upon the island of Cyprus, is an Italian nobleman of Turin, of military education, who entered the service of the United States at the breaking out of the civil war, and, after serving with distinction, was, at its close, appointed American consul to Cyprus. His explorations have been prosecuted amid the greatest difficulties, and have been rewarded with discoveries of the highest historical and artistic value.

He commenced his investigations in 1865, in an amateur sort of a way, having obtained a firman from the Porte for the purpose; but he soon became so engrossed in the archæology of the island, and so convinced that valuable relics could be unearthed, which would shed a new light upon the early history, art, and culture of the classic races, upon this spot, which was the portal between the ancient world of the East and the ancient world of Europe, that, notwithstanding the slender success of his first excavations, he declares that his enthusiasm was aroused to such a point that he could not have brought himself to give up the pursuit.

He commenced his diggings at Kitium, the Chittim of the Bible, upon the burial-place of which stands the modern town Larnaca. At the end of a year he had identified the sites of four ancient cities, Idalium, Salamis, Golgos, and Kitium. At Kitium he opened, first and last, over 2,000 graves, but found most of them empty, they having been probably despoiled in some former age, perhaps by the Crusaders, as a rude painted figure, somewhat resembling a knight of the middle ages, which was found in one of the graves, would indicate. The tombs of Kitium belong for the most part to the period between 400 B. C. and the time

of Christ. Here he came upon the remains of a Greek temple, with inscriptions indicating that it was dedicated to the goddess Demeter Paralia, in which many small figures in terra-cotta, some of them belonging to a ripe period of Grecian art, were found, and, in a tomb outside, a bronze jar containing some six hundred gold staters of Philip and Alexander; and also discovered the ruins of a Phœnician temple containing broken marble bowls and pateræ with dedications to Melkart and another Phœnician divinity inscribed in Phœnician characters, besides a marble sarcophagus with a Phœnician head in high-relief, and two alabaster vases with an inscription on one in Phœnician. The Greek tombs were more richly furnished with funeral relics than the Phœnician, and yielded numerous lamps, bronze mirrors, and glass vessels, which were not iridescent like those found in other places. Going next to the site of Idalium, on which stands the modern Dali, Signor di Cesnola opened 15,000 graves, most of them Phœnician, containing thousands of terra-cotta vases of the most various sizes and shapes, but decorated in the earliest style of art with simple zigzag lines and concentric circles, but some of them Greek containing glass objects of a beautiful iridescence. Going next to Golgos, he met with a richer success than had yet attended his labors; the burial-place and two temples of the ancient city were explored, in the larger and more recent of which were nearly one thousand statues, some of them from the earliest and best period of Egyptian art, and some statues and bas-reliefs in Assyrian style, and a few examples of Greek and Roman art, but most of them belonging to a period of which few other examples are known, and illustrate the birth of classic art and the development of the Greek ideal from the rigid conventionalism of the Egyptian and Assyrian models. These statues are most of them in a remarkable state of preservation. They were evidently produced by native artists, being cut from the calcareous stone of Cyprus, which was quarried but a short distance from Golgos. These most interesting sculptures are contained in the Metropolitan Museum of Art in New York, where, when they shall be exposed to the public, they will afford a comparative view of the origin and early development of classic art such as cannot be found elsewhere.

It was at Golgos that Cesnola found the bulk of the collection which he carried to London for view in 1872. The reception to the treasures, of whose great historical value he was convinced, was at first cool and discouraging; but other archæologists soon recognized their importance. Efforts were made to secure the collection to the British Museum by purchase, but they were obtained by the more forehanded managers of the New York Museum at the price of \$61,866.22. Eighty-eight cases of the treasure had, however, been presented by General di Cesnola to the Ot-

toman Museum of Constantinople as an acknowledgment of the rights of the sovereign over the soil which had concealed this rich treasure trove.

After finishing the explorations at Golgos, he went to Salamis, but his excavations here were fruitless, and it is probable that the exploitation of the ruins of that famous city took place at an early period. In the vicinity of Cape Pedalium, the modern Cape Greco, he explored the ruins of Leucolla, where were found the *débris* of a temple with statues in Greek style; the tombs here contained each a coffin of terra-cotta covered with three tiles, and ornamented simply around the rim with a wreath of colored flowers; here he explored a strange burial-place, a rock cavern, whose only approach was from the sea, in which were petrified human bones in great numbers.

The succeeding explorations enabled him to identify the sites of Throni, Carpassia, Aphrodisium, Acte-Achæon, Lapethus, Soli, and Arsinoë, in which he found several temples and burial-places. Then crossing the mountains he made excavations on the sites of Neo-Paphos and Palæo-Paphos, and at Visuri and Amathus, and thence proceeded to Curium, the exploration of which completed his labors. At the latter place, in the treasure-chambers of an unknown temple, he came upon his richest discovery, this being votive offerings of the most diverse materials and styles of workmanship, comprising some of the finest specimens of antique gem-engraving and delicate metal-work ever recovered. He was led to the site of this city by a vague indication on the chart of Strabo, which author, with Pausanias, he used as uncertain guides in most of his explorations. The spot indicated was the summit of a rock 800 feet high and five hours' ride from the west coast, west of the ruins of Amathus, or Palæo-Limisso, as it is called. It was a strong position, inaccessible on three sides, two of which were artificially scarped, the marks of the chisel being still visible. About 40 feet above the base a terrace was found hollowed out in the form of a ditch, 100 feet wide and 25 feet deep, and this was the ancient burial-place of the city. Thousands of tombs were found cut into the rock, some of arched form and roughly hewn, and others rectangular and very regular, some of them containing sarcophagi chiseled out of the solid rock. The graves were found to contain skeletons, a number of earthen lamps, four Phœnician amphoræ, a copper mirror, some rings of gold, and ear-rings and bracelets of silver. General di Cesnola noticed in seventeen places the broken shafts of columns, and detected the steps to an ancient fountain; broken pottery and fragments of pavement with ruts worn by wheels lay scattered about the whole ground, and in hundreds of small mounds he detected the places of ancient dwellings. He located the great temple of Apollo, and struck the treasure-chambers of

a second unknown temple. He was attracted especially toward one spot where eight columns were imbedded in the soil, and upon excavating here he came to a mosaic pavement of Assyrian device, a large piece of which is preserved in his collection. There were marks of some former search for treasure, as the pavement was broken up and a space dug to the depth of six or seven feet below it. Cesnola dug deeper, encouraged by a hollow sound produced by stamping.

At the depth of twenty feet farther down Cesnola came upon an arched passage in the rock, four feet wide by five high, which he followed out till he reached a slab which was the door to a small chamber. He was gratified by the discovery here of objects of gold jewelry; the loose earth which was in the compartment was removed and carefully sifted. He then came to a second chamber opening into this, which led to a third and a fourth cell. In the first were found articles of gold almost exclusively; in the second, of silver; in the third, of terra-cotta, caskets, vases, and groups of statuary; and in the fourth, works in bronze. This secret depository he concluded was the hidden treasury of some unknown temple, where, as he inferred from the somewhat disorderly manner in which the objects were stowed, the priests had hastily conveyed the precious furniture of the temple upon the occasion of some Persian invasion. Each of the rooms measures about fourteen and a half feet in height, by eleven in width, and twenty-three in length; there were no inscriptions nor carvings upon the walls; the pavement was of blue pebbles, bedded in sand and plaster. In the gold vault there were sifted out of the mould 550 objects, embracing diadems, bracelets, necklaces, finger-rings, signet-rings, ear-rings, armlets, etc. The second room yielded only objects of silver, very imperfectly preserved, as are all specimens of ancient silver-work, some of them so eaten through by oxidation as to be almost ready to crumble at a touch; but still constituting the largest and finest collection of antique silver in the world. Two hundred and seventy articles were taken out, some of them remarkably well preserved, but most of them in a corroded and fragmentary condition. The third room disclosed a great variety of products of the fictile art, and the bronze chamber afforded 500 specimens of bronze-work.

Among the objects of historical interest in the collection is the official seal of Thothmosis III., the Egyptian king who conquered Cyprus about fourteen centuries before Christ, a finely-incised intaglio still resting on the bar which runs through its centre, with its gold mounting intact, and the movable silver handle seldom found preserved in ancient signets. Most interesting are the Babylonian cylinders of meteoric, calcedony, hematite, and carnelian, with incised inscriptions, said by Sayce and Rawlinson to refer to the dates 1600,

1200, and 809 B. C. Another seal has the effigy of the Egyptian divinity Anubis, and an inscription in Phœnician. Most of the seals still remain pierced by the bar on which they turned; those of gold are nearly perfect and highly ornamented, while the silver ones are black and much corroded; the majority are in the latter metal, which was probably in that age more precious than gold. Among the first objects brought to light in the gold-room were two massive gold rings, bands with overlapping ends, probably armlets, with the inscription in the ancient Cypriote dialect, "Ἐταανδρος του Παφου Βασιλευς," Eteander, King of Paphos, upon each of them. This king lived, it is supposed, in the sixth or seventh century before Christ, and as these were probably an offering made by him to the deity of the temple, they assist in fixing the date of the deposit. A large number of coiled rings were found, some of them with the asp's head at the ends, in gold, silver, and bronze, some of which were too small to fit on any finger; and hence General di Cesnola conjectures they were a kind of ring-money. Many richly-ornamented finger-rings display designs of exceeding beauty; some of them still retain their gems of stone or antique paste; remains of enamel are seen on others, both in the ancient method, with imposed bands, which is called *cloisonné*, and in the *champ-levé* method, with incised field. Numbers of the gold clasps and pendants are beautifully incrustated by the granulated process, familiar in Etruscan jewelry. Several necklaces are exceedingly elaborate and beautifully designed; one of them has clasps representing lion's-heads, of masterly execution. Thin diadems of gold, such as were found in some of the tombs clasped about the foreheads of skulls, were found in the first vault.

A calyx of thin gold, five and a half inches in diameter, is engraved within with circular bands, on which are traced in wavy lines figures of stags and huntsmen, with palm-trees and water, designed in the conventional Egyptian manner; it is a design of singular beauty and rare interest, and is in a perfect state of preservation. Many of the large rings and other articles were produced by overlaying silver or copper plates with coats of gold; but in the case of such specimens the oxidation and consequent distention of the inclosed metal have burst the outer coat and destroyed the ornament. This class of articles is still worse preserved than those made of solid silver, which, though blackened and wasted, are some of them still quite strong and heavy. A cornucopia, about fifteen inches in length, is made of thin silver overlaid in spots with gold plate. In the silver collection the most perfect specimen is a large bulb-shaped lecythus or unguent-flask, with the lip and handle preserved, seven and five-eighths inches in height, with parts of its surface still bright and smooth, but with most of its ornamentation gone. Very important and interesting is a large patera in

silver gilt, with engraved and *repoussé* patterns—the guilloche, fillets, and conventional Egyptian designs of trees, animals, deities, and cartouche patterns. A calyx, five inches in diameter, retains traces of a vine pattern. Another patera has a gold boss in the centre, and a circling band of honeysuckle and lotus ornament. Several others have *repoussé* fluting and engraved geometrical ornaments; and one finely-preserved specimen has a circle with star-points in the centre, and lines radiating from the points. The action of oxygen has caused a pile of pateras to cohere in one solid mass, so that they cannot be separated.

The most beautiful, interesting, and valuable portion of the treasure is the collection of engraved stones, some of which are perhaps superior to any specimens of the glyptic art in existence. The materials are carnelian, calcedony, sard, onyx, agate, and jasper, the usual stones employed by ancient engravers. The finest of these are: a sard, seven-eighths of an inch in its longest diameter, representing Boreas abducting Zephyr, a masterpiece of bold artistic treatment and fine moulding of the nude figure; a specimen of the archaic manner representing the rape of Proserpine, rendered with strikingly forcible naturalistic effect; a bathing Venus with streaming hair, and a Mercury, boldly-drawn figures of exquisite finish, in the most perfect Greek style. Several intagli in hard stones represent Egyptian deities and priests adoring the winged orb and serpent-head of the Egyptian triad. It would seem from the style, designs, and inscriptions, on many of the objects, that they were of Egyptian and Assyrian or Phœnician work, although it has always been supposed that those peoples, except the Babylonians, were ignorant of the art of cutting hard stones in intaglio. Alabaster in rock-crystal and alabaster very finely cut were also discovered; one in crystal, of handsome form, six and a half inches long, has finely-curved handles and a neck fitted with a gold cap and stopper, connected with a fine chain, and is finished inside with a high degree of polish. Some in alabaster bear Phœnician inscriptions. There are others in terra-cotta with inscriptions in the same language painted upon them. A fine sceptre head is carved out of onyx, as are also numbers of small amulets, representing the tortoise, an emblem of Venus, the patron goddess of the island. Of the bronze objects there were five hundred objects, consisting for the most part of lamps, lamp-stands, mirrors, and various other utensils. A magnificent vase, four feet in height and six in circumference, a wonderfully fine example of the archaic Greek style, was discovered in fragments, but has been very perfectly restored. A bronze sceptre-head is formed of three bull's-heads, with eyes of glass, and stones inserted in the foreheads. A finely-worked mirror-case is ornamented with concentric circles. Bronze mace-heads are ornamented with the lotus design. Among

the various articles of this large collection is a twisted snaffle-bit of bronze. There are four lion's-heads of powerful design and fine workmanship, which probably formed part of a fountain.

General di Cesnola has retired from the pursuit which he has followed so energetically and with such distinguished success. The results of the last three years' investigations have been much more fruitful than those of his first seven years. The field cannot be supposed to be yet entirely exhausted. His later investigations have been prosecuted with the proceeds of the sale of his first great find. Many of the surface diggings were purely experimental, on spots where there were no signs of human art above-ground. The city of New York has secured this most valuable collection. The objects represent a wide range of time, from the earliest beginnings of art to a period of late antiquity. The greater part of them may probably be referred to the transition period in which took place the birth of the true Greek art, the first departure from the conventional types of the Egyptians and Assyrians.

ARGENTINE REPUBLIC (REPÚBLICA ARGENTINA), an independent state of South America, lying between latitude 22° and 41° south, and longitude 53° and 71° 17' west. It is bounded north by Bolivia; east by Paraguay, Brazil, Uruguay, and the Atlantic Ocean; south by Patagonia, the dividing line with which is the Rio Negro; and west by Chili, from which country it is separated by the Andes.

The territory of the republic is divided into fourteen provinces, which, with their capitals, and their estimated population for 1875, are as follows:

PROVINCES.	Population in 1875.	Capitals.
Buenos Ayres	400,000	Buenos Ayres.
Santa Fé	95,000	Santa Fé.
Entre-Ríos	120,000	Concepcion del Uruguay
Corrientes	151,500	Corrientes.
La Rioja	46,250	La Rioja.
Catamarca	79,551	Catamarca.
San Juan	60,530	San Juan.
Mendoza	75,550	Mendoza.
Córdoba	248,800	Córdoba.
San Luis	61,500	San Luis.
Santiago del Estero	158,400	Santiago del Estero.
Tucuman	128,000	Tucuman.
Salta	102,000	Salta.
Jujuy	46,600	Jujuy.
Total	1,768,681	

The population of the capital, Buenos Ayres, set down in the official census of 1869 at 177,787, is calculated by Dr. G. Rawson to have been not less than 230,000 in 1875.

The question of boundaries with Chili, in regard to the disputed territory of Patagonia, still remains unsettled. Chili is reported as likely to propose a compromise, based upon the assigning to that republic the whole of Tierra del Fuego, and that portion of the Patagonian territory comprised between either ocean and a line drawn from east to west thir-

ty leagues north of Puntarenas, and the whole of the remainder to the Argentine Republic.

(For detailed statistics concerning area, population, etc., see previous volumes of the *ANNUAL CYCLOPEDIA*, and especially that for the year 1872.)

The President of the Republic is Dr. Don Nicolás Avellaneda (succeeded Señor Sarmiento in 1874); the Vice-President, Dr. Don Mariano Acosta (elected in the same year); Minister of the Interior, Dr. Don Simon de Iriondo; of Foreign Affairs, Dr. Don Bernardo de Irigóyen; of Finance, Señor Victorino de la Plaza; of Justice, Public Worship, and Public Instruction, Señor Don O. Leguizamon; of War and Marine, Señor Don Adolfo Alsina. Argentine minister to the United States, Señor Don Manuel R. García; secretary of legation, Señor Don G. Videla Dorna.

The following is the list of the governors of the fourteen provinces:

Buenos Ayres.....	Cárcos Casares (May, 1875).
Minister of the Interior.....	Dr. A. del Valle.
Minister of Finance.....	Rufino Varela.
Catamarca.....	M. Molina.
Córdoba.....	Dr. E. Rodriguez.
Corrientes.....	Dr. J. L. Madariaga
Entre-Ríos.....	Dr. B. Febre.
Jujuy.....	C. Aparicio.
La Rioja.....	B. Ocampo.
Mendoza.....	F. Civit.
Salta.....	M. F. Araoz.
San Juan.....	B. Doncel.
San Luis.....	R. Cortés.
Santa Fé.....	S. Bayo.
Santiago.....	G. Santillan.
Tucuman.....	T. Padilla.

The provincial governors are elected by the people, and their period of office is three years.

The amount and various branches of the national revenue and expenditure for 1875 are expressed in the subjoined tables:

REVENUE.	
Import duties.....	\$12,998,583 68
Export duties.....	2,616,610 89
Public warehouse fees.....	597,954 04
Stamped paper.....	392,529 19
Post-Office.....	214,907 70
Telegraphs.....	79,558 40
Lighthouses.....	85,578 98
Dividend of Central Argentine Railway Co...	183,290 00
Sundries.....	398,100 54
Total.....	\$17,206,746 84

EXPENDITURE.	
Ministry of the Interior.....	\$7,240,207 18
Ministry of Foreign Relations.....	175,218 98
Ministry of Finance.....	9,418,534 83
Ministry of Justice, etc.....	1,560,493 76
Ministry of War and Marine.....	10,181,116 46
Total.....	\$28,570,666 30

The Minister of Finance, in his report to Congress, in August, 1876, states:

The Government, under the most extreme pressure and surrounded by difficulties that almost threatened its existence, was compelled to employ funds of the public-works loan for purposes alien to those authorized, but I must also state that the Government has met, and will continue punctually to meet, the service of said loan with the ordinary national revenue, and the national creditors need have no alarm; notwithstanding the crisis, the Government will meet all its obligations. I recommend Congress to order all the surplus and unplaced public-works bonds to

be destroyed, as a measure calculated to diminish the service of the loan, and to improve our credit in the London market.

The total amount of the public-works loan was \$24,000,000, of which some six millions were still in the hands of the London bankers as late as September last.

The foregoing tables show the existence of an ever-growing deficit in the Argentine finances, as may be observed by comparing the amount of the deficit of 1875 with that of 1874, and previous years. Nevertheless, the aggregate revenue for the year 1875 is about one million in excess of that for 1874. On the other hand, the single department of War and Marine consumed in 1875 no less a sum than \$10,181,116, against \$8,006,801 in the year immediately preceding, or an increase of nearly two and one-fourth millions. It should also be noticed that the expenses of that department, even in 1874, were far above the normal standard, save in the case of such a war as that which was terminated at Aquidaban in 1870.

The general state of the Argentine finances has been exceedingly discouraging for the last three years; but there is a decided tendency to improvement. There is, however, reason to apprehend that the true condition of affairs will be found in the subjoined lines, under date of Buenos Ayres, August, 1876:

The crisis in Buenos Ayres continues; trade is so depressed that we believe twenty years ago there was more business done in this market than at present. Stocks and real estate show no signs of recovery. Gold is at a high premium, notwithstanding that it is hardly required for trade. We see no failures in this market caused by the premium on gold. Paper-money is dearer, scarcer, and tighter, than before the promulgation of the legal-tender act. Many think that the proposed loan to the national Government will cause a new emission and flood the market with paper, but they err; the Provincial Bank, which is admirably managed, has withdrawn from circulation close on five million hard dollars' worth of its specie notes, and thus is prepared, if the Chambers so order, to advance to the national Government without making a fresh emission. When the wool season begins, gold must be imported, owing to the few takers of exchange, and the probabilities are that paper-money will rapidly rise in value. Our produce is steadily increasing; our wool-clip last year shows fully 24,000 bales over the clip of 1874, and this year we look for a similar increase. The great depression in River Plate trade is entirely restricted to the branch of our imports, and our exchange and money transactions are reduced to legitimate business operations. We confess we see much to induce the greatest confidence in the country, and believe that the worst of the crisis is over; a crisis the like of which was never before witnessed in these countries, and the effects of which can be read in the four thousand tenantless houses in this city, and the almost innumerable evidences of badly-employed capital; we have splendid and costly stores in the city lying idle, strong rooms with nothing to lock up in them, barracas, custom-house stores, hotels, breweries, tramways, even railways, all lying idle, the flotsam and jetsam of the great crisis-wave that has swept over the Plate; but the waters are at last subsiding, and business will be sounder and better than before.

The following is the text of the contract of the national loan referred to by the writer just quoted:

FINANCE DEPARTMENT, *October 3, 1876.*

Dr. Victorino de la Plaza, Finance Minister, on the one part, and Don Rufino Varela, Provincial Finance Minister, on the other part, being duly authorized, have agreed on the following terms:

ARTICLE 1. The national Government authorizes the Provincial Bank of Buenos Ayres to emit for national account ten million hard dollars in the existing form of emission.

ART. 2. Said new notes, as well as twelve millions already emitted by the Provincial Bank, shall receive a special stamp from the national Treasury to guarantee the payment of said notes according to the law of September 23, 1876.

ART. 3. One of the national accountants shall register the number and amount of the various notes, as the officer of the Treasury stamps them.

ART. 4. All notes must be so stamped before issue, including those required by the bank to exchange for old torn notes.

ART. 5. Holders of present currency of specie-notes may apply at the bank within a certain period to change same for new issue.

ART. 6. If, at the expiration of said term, the number of notes does not reach twenty-two million hard dollars, the bank will proceed to emit up to that amount, to supply any lost or destroyed.

ART. 7. Any specie-notes presented afterward shall be taken charge of by the bank.

ART. 8. The above notes for twenty-two million hard dollars shall be legal tender throughout the republic, and be received in full payment of taxes, except in the custom-house, where they shall be receivable for half any amount of duties. Said notes shall not be legal tender for any contracts outside the province of Buenos Ayres previous to September 25th.

ART. 9. The Provincial Bank will hand over ten million hard dollars to the national Government, as follows:

\$2,000,000	in October, 1876.
2,000,000	" November, "
600,000	" December, "
600,000	" January, 1877.
600,000	" February, "
600,000	" March, "
600,000	" April, "
600,000	" May, "
600,000	" June, "
600,000	" July, "
600,000	" August, "
600,000	" September, "

In case of necessity the minister may arrange with the directors to draw two months in one. For all advances on this loan the Government will pay 4 per cent. per annum.

ART. 10. From November 1, 1876, the national Government will begin to pay the Provincial Bank one-twelfth of the custom-house receipts, or more, if convenient, until the complete payment of this loan with interest, as also of the balance due by Government to the bank, viz., \$75,294,103, with interest till paid. At the end of every quarter after November 1, 1876, the Provincial Bank will burn, in presence of the national accountant and treasurer, a sum of the new notes equal to the amount received from the custom-house, until all the ten millions be destroyed by fire.

ART. 11. As soon as the national Government shall have paid off the present loan and the balance due the bank, this contract shall be at an end.

ART. 12. The sums received from the custom-house each quarter shall be applied in the following order: 1. To redeem the ten-million loan now advanced; 2. To pay off the balance and interest already due to the bank; 3. To meet the agreed

interest of 4 per cent. per annum on the present loan.

V. DE LA PLAZA,
R. VARELA.

The above contract is hereby approved in every particular.

AVELLANEDA.

(For the amount of the national debt reference may be made to the ANNUAL CYCLOPEDIA for 1875, to which amount is to be added the \$10,000,000 of the new loan.)

The total value and the destination of the exports for 1875 are given in the following table:

EXPORTS.		Value.
TO		
Germany.....		\$1,237,291
West Indies.....		675,264
Belgium.....		15,497,273
Bolivia.....		267,209
Brazil.....		770,737
Chili.....		8,581,206
Spain.....		1,912,399
Uruguay.....		1,016,989
United States.....		8,055,205
France.....		9,266,643
Holland.....		268,969
India.....		8,460
Great Britain.....		7,619,049
Italy.....		1,746,698
Paraguay.....		498,066
Portugal.....		51,906
Peru.....		180,954
Other nations.....		251,558
Total.....		\$47,981,000
In transitu.....		2,850,400
Grand total.....		\$50,831,400

This table shows an increase of nearly eight millions as compared with 1874.

The total value of the imports for 1875 was \$55,765,627, against \$49,377,129 (according to the *Memoria* of the Minister of Finance, \$55,961,177); from which it is apparent that the balance of trade is still largely and progressively in favor of foreign countries and against the Argentine Republic.

Encouraging views are entertained that the existing state of adversity must ere long be modified, and we quote a recent writer on the subject, a resident of Buenos Ayres:

For the last two or three years the value of Argentine exports has been seriously depressed, and this has, of course, reacted on the general resources; but the quantity, far from diminishing, is rapidly increasing. Any improvement in prices of wool, hides, and tallow, in European markets, would soon be felt in renewed activity of trade at Buenos Ayres, and a larger national revenue. Another source of wealth, which has lately come into operation, consists of wheat and Indian-corn, both being now exported to Brazil and other countries, besides supplying food which formerly had to be imported. From Chili alone the supply of wheat amounted to five million dollars, which are now saved. There are other sources of traffic opening up for the export of Argentine products: a steamer, called the *Frigorifique*, built and fitted out at Rouen, sailed in October for the Plate, to bring back a cargo of meat preserved on a new principle, which promises to be a success. A large number of horses have recently been exported to France, and are likely to be followed by still larger droves, for the French cavalry. They were sold at very remunerative prices.

Railway enterprise, in which a very considerable amount of capital has already been embarked, is one of the means by which Argentine resources are becoming largely developed, and the result of their working traffic proves incontestably the profits de-

rived from this new source of locomotion. Some lines, constructed under Government guarantee, and only just completed, are for a time a charge upon the national revenue, but this will not long continue, while the lines successfully in operation are yielding large returns, even under the present depression of trade. The very depth of the financial and commercial crisis, which has so long existed in the Plate, is certain to produce a great reaction when once people are satisfied that the worst is over.

A postal treaty with England, and an extradition treaty with Belgium, were among the more important events in the foreign policy of the Argentine Government in 1876.

The following summary of the report of the Minister of the Interior will serve as a rapid review of the state of the various interests dependent upon that department:

Owing to the crisis, there has been such a decline of revenue as to oblige us to cut down the public expenditure in a remarkable manner.

As the Government railways now approach completion, we intend next to occupy the engineers in studies of the Upper Paraná and Uruguay, to improve navigation; also to examine the project of making a port for Buenos Ayres, and to draw a map of all the new railways we shall require when a healthy financial condition shall once more return.

Three new railways were opened to traffic last year (1875), the Mercedes, East Argentine, and Campana lines. The Tucuman line will be completed in 1876, and then we shall have 2,260 kilometres, or 1,413 miles English, as follows:

	Kilometres.
Central Argentine.....	397
Tucuman.....	549
Andine.....	255
East Argentine.....	153
Great Southern.....	435
Western.....	296
Ensenada.....	58
Northern.....	30
Campana.....	76
Port Ruiz.....	10
Total.....	2,260

As regards the Tucuman line, we have to recognize the perseverance, energy, and good-will of Messrs. Telfener, who have aided us in every manner, accepting whatever delays or postponements when the Treasury was unable to pay for the works executed; and carrying on the works in spite of war, crisis, and the adverse elements. The contractors have already opened to traffic 416 kilometres, and Mr. Telfener notifies us of another section now ready. The prompt completion of this great work is a matter of national honor. The rails are already within ten or twelve leagues of Tucuman, but the traveler finds more difficulty in this short interval than in the hundred leagues of the railway. We propose a saving of \$300,000 in the works not yet completed, especially in the stations. The certificate of the Department of Engineers shows the value of works already done by Messrs. Telfener to reach \$7,518,869, equal to £1,505,000. We have made a contract with Telfener to work the line for 80 per cent. of gross receipts, but he has sent in a request to cancel the agreement.

The Andine Railway was opened last October, and Mr. Rogers works it for four years at 80 per cent. of the gross receipts during three years, and 75 per cent. of those of the fourth year.

The Central Argentine line (which was opened in May, 1870) earned last year a surplus of £32,200 sterling over the guarantee of 7 per cent. Mr. W. Thompson, who succeeds Mr. Armstrong as director, has paid in the above surplus to the Government.

Last year we paid Messrs. Wanklyn and Lezios

\$25,500 on guarantee for the first section of the East Argentine Railway. As yet this line gives bad results, but it will improve with peace and industry.

The new Campana line is 47 miles long. The engineers wished to open it with the Governor's permission; but we insisted that, as the line was a national one, our certificate was indispensable.

The Port Ruiz line is in a ruinous condition, and requires to be constructed anew by the national Government.

Projected Lines.—Mr. Clarke's project is still before Congress. The San Roman opposition scheme was again prolonged in July, 1876, to the close of the year, and the period of extension has now ex-

pired. The Corrientes and Mercedes line is in abeyance, owing to the crisis. We ought to make this line five feet gauge, instead of forty-eight inches.

In the matter of highways, our chief attention is given to the northern road to Jujuy, and the western to Mendoza and San Juan.

We propose to improve the Gualeguaychú River for sea-going vessels. We have devoted \$10,000 to turn the course of the Dulce at Santiago, and made a loan to Rioja for a similar work.

We have accepted proposals of Messrs. Ferrari & Co., and Bustorff and Sackimann, to finish the new

post-office for \$50,000. We are also going to build post-offices at Tucuman and Córdoba; but the Lazareto at Martín García must for the present lie over.

Immigration we regard as the key to national progress, and the forerunner of trade. The number of French immigrants, and the amount of our import-trade from France, were as follows in the years below expressed:

YEARS.	Immigrants.	Imports.
1861.....	1,000	\$4,900,000
1868.....	4,000	6,600,000
1864.....	5,000	10,400,000
1875.....	7,000	12,200,000

The decline of immigration to Buenos Ayres is due to causes in Europe which have determined a like result in the United States, as, for instance:

	1872.	1875.
New York.....	866,818	84,650

Last year we forwarded to the various provinces 9,828 new immigrants. The Chubut (Patagonia) colony is thriving, having a population of 700. Some families, too much hampered at Chubut, have been sent up to the Chaco, where three new colonies have been founded. The East Argentine colony counts 880 settlers, from the Tyrol, brought here at a cost of \$50 each from Havre.

Stupendous has been the growth of the Santa Fé colonies in one year:

	1874.	1875.
Number of colonists.....	15,510	24,852
Tillage (acres).....	162,000	248,000
Crop (bushels).....	915,280	800,000
Cattle (head).....	81,901	111,912

The Government sends up passage-free all newcomers who wish to try their fortune at these colonies.

Congress voted last year \$80,000 for free passages to immigrants and supplies for food, etc. We only spent \$16,022, namely, in bringing out Tyrolean settlers for Entre-Rios, and sending supplies to the Chubut colony.

The homestead law is imperatively called for, as every dollar we spend on immigration gives 150 per cent. per annum in increase of revenue. Last year our Immigration Department cost altogether \$207,447, which, in relation to 42,000 new-comers, represents an outlay of \$4.93, which, for 42,000 new-comers, is equal to an increase of \$852,000 in import revenue. Moreover, it is impossible to estimate the increase of products to be obtained by the introduction of 100,000 agricultural settlers, which would cost the republic only a million dollars.*

Señor Olivera's report upon the Post-Office Department shows a saving of \$95,797 on the sum appropriated by Congress, and an improvement of \$52,000 in favor of the Treasury, as compared with 1874.

Some of the provinces want to tax the coaches we employ to carry the mails, and Congress must pass a law exempting the lines from local taxation. By abolishing Government mail-cars, and subsidizing private ones, we have effected a saving of \$50,000.

The Galles contract, for carrying mails to Patagonia, has been rescinded. As the European mail-steamers complained of the number of free passages granted, we have agreed to reduce them to one first and two steerage passages.

The number of telegraphic dispatches increased from 262,376 in 1874 to 277,254 in 1875.

The department is now annexed to the Post-Office. Mr. Rogers is making the telegraph-line from Rio Cuarto to Rio Quinto. Señor Carranza has received materials for the line from Jujuy to Bolivia, for

* This law has since been passed.

which we pay him £120 per mile. Mr. James Anderson is making a line from Córdoba to Salto, and Señor A. Santamaria one from Concepcion to Paysandú.

It is desirable to plant trees throughout the Pampas, from Buenos Ayres to San Luis, but this will be a work of years. Mr. Oldendorf distributed last year 32,300 collections of seeds among 1,326 persons. In future we propose to sell the seeds and plants, instead of giving them gratis. The Botanical Garden has \$20,000 worth. We have given \$1,440 for certain colonists at Tortugas, who have planted 18,000 mulberry-trees; and \$724 to colonists in Concepcion, for rearing silk-worms.

A subsidy of \$250,000 has been paid to the Bermejo Navigation Company.

ARIZONA. The Governor in his message to the biennial session of the Legislature, commencing January 4, 1875, states that the amount on hand and in the general fund, December 31, 1872, was \$16,466.83; receipts to December 31, 1874, \$19,721.58; making a total of \$36,187.86. The disbursements from the general fund were \$27,827.38; balance, \$8,360.53. At no period had the Indian affairs been so satisfactory; comparative peace reigned throughout the Territory. The subject of obtaining water by means of artesian wells was engaging attention, and it was recommended that a reward of \$5,000 be offered for the first flowing water obtained by means of an artesian well in the Territory. "The advantages that would be derived from developing flowing water by artesian wells can hardly be estimated. We have millions of acres of grazing and agricultural lands, and many valuable mines, unserviceable unless water be developed upon them." With reference to mining, agriculture, and grazing, the Governor says:

There has been a marked increase in mining enterprises during the past year. Many new and valuable discoveries have been made, and considerable gold, silver, copper, and lead, is being extracted. There is but little capital among us to develop and work mines; but in a small way, and with rude machinery, our hardy miners have started and are successfully operating a large number of mines. Agricultural interests are not prosperous, in consequence of the low price of grain. Farmers have supplied the citizens, military, and Indians, with produce, and have had a surplus left. No greater encomium could be paid the productiveness of the Territory. The market being limited, the low prices have seriously embarrassed the farmers, but, with the development of the mines, a more extended market will be opened for produce. Our unequalled grazing facilities are beginning to be appreciated. Large numbers of horses, cattle, and sheep, have already been brought here from the adjoining States and Territories, and many thousands are now *en route*. The time is not far distant when Arizona will be one of the first wool-producing Territories of the Union.

The condition of the public schools for the year ending December 31, 1875, was as follows: Total receipts from all sources, \$28,759.92, an increase over the previous year of \$16,986.77; total disbursements, \$24,151.96, an increase over the previous year of \$14,999.82; balance, \$4,607.96. Says the report:

A tax of 15 cents on each \$100 worth of taxable property is levied and collected annually for a Territorial school-fund, and is divided between the sev-

eral counties in proportion to the average daily attendance at the various public schools. A tax of 35 cents on each \$100 worth of taxable property is levied and collected by each county in its own confines, for a county school-fund, and is divided between the public schools of the county on the same basis as is the Territorial school-fund. This makes a total tax of 50 cents on each \$100 worth of taxable property in the Territory, for the maintenance of public schools, and I believe is the largest direct public-school tax paid by any State or Territory in the Union.

The total number of children in the Territory, between the ages of six and twenty-one years, reported up to December 31, 1875, was as follows, by counties :

Yavapai County.....	438
Yuma County.....	598
Mariopca County.....	814
Pinal County.....	119
Mohave County.....	88
Pima County.....	1,006
Total number.....	2,508

Of these 2,508 children, 1,265 were boys and 1,243 girls, and 908 could read and write, leaving 1,600 who could not read and write. There were eleven public schools in operation during the year, with 560 pupils enrolled, and an average daily attendance of 412. A schoolhouse was erected in Tucson during the year, at a cost of \$9,781.96, and paid by donations from the people. In this school three teachers are employed. There are three rooms in the building, one occupied by girls, one by boys of higher grade in studies, and the third by boys in primary studies. The boys in the primary room are taught Spanish and English. In the other rooms English only is taught.

ARKANSAS. There was a very quiet state of affairs in Arkansas during the year, general acquiescence in the supremacy of the constitution of 1874, and the administration established under it. Peace was preserved and the laws executed throughout the State, and a fair degree of progress made toward a condition of prosperity. The political canvass of the year was remarkably free from excitement.

The Republicans met in convention at Little Rock on the 27th of April. After the organization had been effected and delegates appointed to the National Convention of the party at Cincinnati, the following resolutions were adopted :

Resolved, That the Republicans of Arkansas renew their allegiance to the Republican party of the nation, and reaffirm its principles of free government as proclaimed and defended by the Father of the Republic one hundred years ago.

Resolved, That the citizens of the several States are also citizens of the nation, equal under the Constitution and the law, without regard to place of birth, color, race, or previous condition, and it is the duty of the General Government to enforce free and equal protection in their enjoyment and exercise.

Resolved, That we favor an honest and economical administration of the State and national Governments; that integrity and fidelity should be required of all officials, and, if found dishonest or corrupt, should be promptly prosecuted and punished.

Resolved, That we favor an efficient system of free schools, wherein the youth of the State may receive such education as will fit them for all the duties of citizenship; and we hold the Democratic party responsible for robbing the State of its school-funds to pay the *per diem* and salaries of officials, whereby the public schools were closed by reason of the theft.

Resolved, That to the soldiers and sailors, who fought to preserve the Union, the nation owes a debt of gratitude, and they, as well as the widows and orphans of those who have fallen, are justly entitled to a liberal provision for their support.

Resolved, That we hereby declare Hon. Oliver P. Morton to be the choice of the Republicans of the State for President.

With regard to the nomination of a State ticket, the following was adopted on motion of Judge McClure :

Whereas, The Democratic party at the election held in September of 1874, for the adoption of the present constitution, and the election of State and county officers in twenty-nine counties, cast nine thousand and more votes than there were male persons over the age of twenty-one years resident therein, according to the census; and—

Whereas, The Democratic Legislature, at its last session, changed the time of holding all State and county elections from the first Monday in September to the first Tuesday after the first Monday in November, but refused to make any change as to the next election for State and county officers; and—

Whereas, The refusal aforesaid could not have been based upon any other theory or idea than to repeat the frauds which were perpetrated in 1874, which could not be done, if held where a United States supervisor was present; and—

Whereas, It would be worse than folly for the Republican party to put a State ticket in nomination, with hope of electing the same, at an election held by Democratic judges and clerks of election, at which a Republican would not be allowed to be present: therefore—

Be it resolved, That in view of the facts stated, and in view of our personal but bitter experience, we deem it advisable not to put a State ticket in nomination.

A State Central Committee was appointed, to whom was left the duty of nominating candidates for presidential electors.

The Democratic State Convention was held at Little Rock on the 14th of June. Presidential electors were nominated, together with the following State ticket: For Governor, William R. Miller, of Independence; for Secretary of State, Benton B. Beavers, of Saline; for Auditor of State, John Crawford, of Howard; for Treasurer of State, Thomas J. Churchill, of Pulaski; for Attorney-General, William F. Henderson, of Randolph; for Commissioner of State Lands, James N. Smithee, of Pulaski; for Superintendent of Public Instruction, George W. Hill, of Calhoun. The following resolutions were unanimously adopted :

Resolved, That the present State administration has realized the hopes and expectations of the Democracy of the State, and its course is most cordially and fully indorsed.

Resolved, That the present Executive of this State having been recommended almost unanimously for the position of United States Senator by the different county conventions recently held, he is most heartily indorsed for such position by this convention as the reflection of the will of the people.

Delegates to the National Convention at St. Louis were appointed who were instructed to "cast the vote of the State of Arkansas as a unit upon all questions which might arise in accordance with the will of the majority of all the delegates present." A resolution favoring

STATE SEAL OF ARKANSAS.

S. J. Tilden as the candidate for President was defeated by the adoption of a substitute declaring the choice of the St. Louis Convention to be the choice of this convention. The State election occurred on the 4th of September, and resulted in the choice of the Democratic candidates. The vote was as follows:

At the presidential election in November, 97,029 votes were cast, of which 58,071 were for the Democratic electors, and 38,669 for the Republican; majority for the former, 19,402.

The total vote for Governor was 108,007, of which the Democratic candidate, Miller, received 71,298, and the Republican candidate, Bishop, 37,806; Democratic majority, 33,992. The Legislature consists of 29 Democrats and two Republicans in the Senate, and 76 Democrats and 17 Republicans in the House. Four Democrats were elected to Congress.

An act of the Legislature approved November 16, 1875, created a Board of Finance, and authorized it to borrow money for State expenses, etc. Two loans were contracted by the board, one of \$250,000, at ten per cent. interest, which has been repaid. The other was of the same amount, at eight per cent. interest, and payable in July, 1877.

The Board of Finance has caused a statement to be made of the State debt, from which it appears that it amounts, with interest to September 30, 1876, to \$17,620,862. This includes the whole nominal debt.

The board has had an extensive correspondence with persons holding evidences of the State's indebtedness, with a view to ascertain what could be done toward making such a settlement of it as would be fair and just, and within the ability of the State to meet. While in a general way the holders of the paper of the State have expressed a desire to settle the debt on such terms as might be equitable, and within the probable resources of the State, there has not been, as far as the board has been advised, any such concert of action among

the creditors of the State as could result in any definite offer. The creditors have delayed any such step, saying that, on account of the embarrassments growing out of the outstanding floating debt of the State, they did not find that the State could at present assume the payment of the interest on any new bonds which might be issued on the basis of such a settlement. They therefore express themselves as preferring to let the matter stand until the ability and resources of the State can be more clearly ascertained.

The present amount of the outstanding Treasurer's warrants is about \$1,400,000. The amount of such warrants paid into the State Treasury from other sources than that of direct taxation is \$154,321.47. This sum includes all payments made into the Treasury from the first quarter in 1874 up to the close of the third quarter in 1876.

Two hundred and forty thousand dollars of Treasurer's warrants have been funded in the six per cent. bonds of the State.

From the estimates that have been made, it will appear that it will require the taxes of between two and three more years to retire all the outstanding Treasurer's warrants, provided that the present rate of taxation is continued, and that no further issue of said warrants is made. It is the deliberate opinion of the members of the board that it will be better for the State to continue the policy that has been pursued since its organization, of borrowing money to pay current expenses until all the outstanding Treasurer's warrants are taken up and canceled, rather than to renew the system of issuing more warrants, and thus bringing about a further and constantly-increasing depreciation of such paper. The result of that depreciation would be, that the public institutions of charity would perish for want of support; official salaries would be reduced so low that good men of fair abilities would be compelled to decline the public service, and the State would have to pay enhanced prices for everything purchased by it. In the end the State would have to adopt, under augmented difficulties, the same policy which is now being successfully acted upon; or otherwise the State government would become so clogged with irredeemable and uncurrent paper as to render all its operations difficult if not hopelessly impracticable. The board say that they have every reason to believe that the six per cent. bonds of the State could be disposed of at as much as seventy-five cents on the dollar; but it may easily be shown that such a method of raising money is far less economical to the State than that of yearly loans at a rate of interest even much higher than that paid for the loan negotiated in 1875. There will be no necessity for continuing these loans beyond the term of the next two years; and at the end of that time it will certainly be a satisfaction to the people of the State to reflect that, amid all the difficulties of the situation

caused by a reckless issue of bonds and Treasury warrants, the permanent debt of the State has not been increased.

With regard to the payment of the State debt the board say:

In regard to the settlement of the mass of the debt of the State, the board, after the most thorough consideration that they have been competent to give to the subject, are of the opinion that no final action should be taken at this time. It admits of a mathematical demonstration that the State is not in a condition to pay the interest on the nominal outstanding debt; and no creditor, as far as the board is advised, entertains any opinion different from that which is here expressed. As to what offer they will finally make is unknown even to themselves, from the want of due deliberation, and such consultation as could result in any concerted and definite offer. It is known that the legality of many of the bonds of the State admits of grave question; and bonds of the classes affected by this consideration have fallen on the market, and are now selling at prices far below the other bonds which labor under no such imputation.

The board has felt itself precluded from expressing any decided opinion on the subject of the validity of these bonds. The constitution contemplates the payment of the just debts of the State, but fails to provide any tribunal to decide what debts are just and what are not; nor has it prescribed any criterion by which these two classes of debts may be distinguished.

Cases may be conceived in which bonds would be so wholly destitute of all legality and merit as to amount to no more than waste-paper. Other cases may be conceived where bonds might be technically invalid, and where the State would still be bound in justice and fair dealing to pay to the holders of such bonds the equivalent of any benefit actually purchased by the State with them. In any event, the State must always be the final arbiter in the matter; and as no inferior tribunal can decide in the premises, the duty of making any final adjudication must devolve on the Legislature as the supreme power of the State.

As the subject must then come before a body that cannot claim to be wholly impartial, we would recommend such an investigation as should fitly stand in the place of a judicial inquiry, so that no one could say that he had been condemned unheard, in defiance of the principles of natural justice. We are convinced that by proceeding with circumspection, and giving to the holders of the bonds of the State an opportunity of perceiving the whole situation, in all its details of calamity and hardship; by evincing a frank, fair, and manly purpose in every step, the public debt can be more satisfactorily settled for the people of the State, and the honor of the State more perfectly sustained, than by any hasty expedient which might suggest that the State precluded inquiry because it might be productive of unfavorable results in some moral point of view.

An efficient law for common schools has been in force in the State for a short time; its operation is such as to give the friends of the system strong hopes of its success. The only embarrassment met with arises from the financial condition of the State. Full reports have been received from all the counties but fifteen. There is an Industrial University supported by the State, and intended for the direct benefit of the colored population, which promises to accomplish its object. A proposition is also made to connect with St. John's College a Normal School and a Geological Department.

The Blind Institute is established on a solid foundation, and in successful operation. The appropriation required is \$7,000. A Deaf-Mute Institute is also in operation, with every promise of future permanency. An appropriation of \$50,000 was made for the erection of an asylum for the insane; the ground has been obtained, and plans of the building proposed. There are about two hundred insane persons in the State. A new building has been erected for the State penitentiary, which with the old one furnishes 406 cells for prisoners. The number of prisoners is about 385. An act of the Legislature allows to every convict two days for every month that he has, during his confinement, conducted himself in an exemplary manner.

The total number of enlisted men enrolled in the militia is 13,057, and the estimated total of effective militia in the State is estimated at 93,000 men.

On the subject of immigration, the recently-inaugurated Governor Miller says:

Perhaps our one greatest need is that of capital and labor, to bring out the great and undeveloped resources of the State. With a mild and healthy climate, a soil of fertility unsurpassed, and capable of producing grains, grasses, fruits, vegetables, and textile growths in almost endless variety; with forests of timber, adapted to purposes of manufacture, such as have no parallel in any other State on the Atlantic slope; with ample mines of coal, lead, iron, and other valuable metals; with a greater length of navigable streams than any other State in the Union; with railroads traversing her territory from east to west and from north to south; with water-power in great abundance, and with absolute peace and tranquillity within her borders, Arkansas offers to the immigrant inducements such as are afforded by no other portion of the West. Every means within the resources of the State should be employed to set before the world our true condition. Let the country know, as we know, that the immigrant, from whatever realm of Europe, from whatever section of our own land, he may come, will meet, here, a cordial welcome, and will be protected in every right of person, of opinion, and of property. The diffusion of reliable information upon these subjects by our highest official authorities cannot fail to be one of the very best methods of bringing our State into notice, and demands the patronage and support of the representatives of the people.

ARMY OF THE UNITED STATES. The subject of the reform and reorganization of the Army was referred by the act of July 24, 1876, to a commission consisting of two members from each House of Congress, the Secretary of War, and two officers of the Army. This commission met on the 11th of August, and subsequently collected for transmission to Congress a large mass of valuable statistics and opinions bearing upon the questions before it.

At the close of the year the Chief of Engineers submitted estimates as follows:

Fortifications and other works of defense.....	\$1,228,000
Rivers and harbor improvements.....	18,220,100
Buildings and grounds in and around Washington	229,050
Washington Aqueduct.....	348,500
Surveys.....	882,000
Total.....	14,408,650

"I submit this," said Secretary Cameron, "without further comment than to remark that this is not an 'estimate' in the sense of the estimates asked for other purposes; it is not approved nor disapproved, but it is forwarded in response to various acts of Congress calling for surveys and estimates for improvement at various localities."

For all purposes except those above named, the estimates for 1877-'78 amount to \$37,583,555. The appropriations for 1876-'77 were \$30,610,851; for 1875-'76, \$31,325,822; and 1874-'75, \$30,915,265. The increase in the present estimates over the appropriations for the current year is made up as follows:

Civil establishment.....	\$43,437 86
Military establishment.....	4,073,655 40
Public works.....	2,301,903 70
Miscellaneous.....	644,203 81
Total.....	\$6,973,206 77

The public works are the new building for the War, State, and Navy Departments, the Rock Island Hospital, and the hospital and other works at West Point, all of which are in course of construction. The increase in miscellaneous estimates is made up of \$350,000 for refunding to States the expenses incurred in raising volunteers; \$98,000 for furnishing artificial limbs under existing laws; \$50,000 for the Signal Service; \$77,850 for printing and binding; and the remainder, \$88,358, for various minor objects. The increase asked for the military service is made up of \$1,385,000 for armament of fortifications, manufacture of small-arms, and the purchase of a site for a powder-depot, and nearly \$3,000,000 for quartermasters' and subsistence supplies. "The appropriations for the current year," says the Secretary, "furnish no criterion of what is required for the support of the Department. It is probable that a deficiency will be necessary in order to meet the expenses during the latter months of the year, although no efforts will be spared to avoid it."

The report of the Inspector-General shows that the desertions have decreased from about 30 per cent. of the entire force in 1871 to about 7 per cent. in 1876. That officer recommends that Congress pass a law making desertion a felony cognizable by the ordinary courts of the country invested with jurisdiction over criminal cases.

Nearly 30,000 claims of loyal citizens, amounting to \$8,000,000, are pending in the Quartermaster-General's office, under the act of July 4, 1864. It is stated that the only difference between this class of claims and those before the Southern Claims Commission is in the residence of the claimants, the Quartermaster-General investigating those in Northern States and the Southern Claims Commission those in States proclaimed as in insurrection against the United States.

There are now seventy-eight national cemeteries, which were maintained during the past

year at a cost of \$146,960. The number of interments June 30, 1876, was 310,356, of which 164,655 were of unknown persons. The work of erecting head-stones over the graves has been completed at fifty-seven of the cemeteries, and 92,046 known and 87,242 unknown graves have been marked. There are about 17,000 graves of Union soldiers who fell during the war and were buried by the War Department in various public and private incorporated cemeteries not known as national military cemeteries.

The health of the Army during the year has been good, and the mortality from disease (8 per 1,000 of mean strength) unusually small. The number of deaths from wounds has been exceptionally large (15 per 1,000).

The Signal-Service organization comprises 145 stations, from which telegraphic reports of observations are received in addition to the reports from the Dominion of Canada. From these reports tri-daily forecasts or "probabilities" are made in the Central Office, and furnished to the press throughout the country. Of these probabilities 88 per cent. are verified. Cautionary signals, of which 77 per cent. have been justified, are displayed when necessary by day and night at forty-eight of the principal ports of the sea and lake coasts. Farmers' bulletins, containing much information valuable to agriculturists, are posted daily in several thousand post-offices. River reports, giving the depth of certain rivers at certain points, are published daily.

The small force of effective troops in the Army has been actively employed during the past year. Their employment has been mainly directed to two objects: First, to compel the Sioux Indians to acknowledge the authority of the Government; and, second, to preserve order at the South. To be prepared for any disturbance that might arise during the excitement of the presidential election, Lieutenant-General Sheridan was instructed to concentrate a sufficient number of troops in New Orleans under Brigadier-General Augur, commanding the Department of the Gulf; and Major-General Hancock was directed to detach a sufficient number of companies from the garrisons on the sea-coast and send them to South Carolina for duty, under the orders of Colonel Ruger, who had lately been assigned to the command of the Department of the South, and ordered to make his headquarters temporarily at Columbia.

In the early part of the year W. W. Belknap was charged with official corruption, and resigned his position as Secretary of War. He was succeeded by Judge Alonzo B. Taft, of Ohio, who after a short term of service in the War Department was made Attorney-General; and in May J. Donald Cameron, of Pennsylvania, son of Senator Simon Cameron, became Secretary of War.

In the early part of the year military operations were begun against the hostile Sioux

Indians in Dakota, Montana, and Wyoming. These, to the number of about 8,000, under Sitting Bull, Crazy Horse, and other chiefs, had made war on the friendly Indians, and had refused to settle upon a reservation. In March an unsatisfactory expedition was made by General Crook toward Powder River. General Sheridan now ordered three columns to move simultaneously to a common centre, where the Indians were supposed to be, from Montana, from Dakota, and from the Platte. The two former were under command of General Terry, and the latter under General Crook. General Crook started from Fort Fetterman, May 29th, with about 1,000 men. This expedition marched to a point on Goose Creek, which is the head of Tongue River, a tributary of the Yellowstone. On June 17th General Crook was attacked by the Indians on the Rosebud, also a tributary of the Yellowstone. The Indians left 13 dead warriors on the field; General Crook's loss was nine dead and 21 wounded. Meantime, Colonel John Gibbons, with about 450 men, had marched from Fort Ellis, in Montana, down the valley of the Yellowstone, to meet General Terry, who was ascending the same valley. General Terry, with the Seventh Cavalry, under its lieutenant-colonel, Custer, containing about 600 men and horses, and about 400 infantry, had started from Fort Abraham Lincoln on the 17th of May, and reached the Yellowstone, at the mouth of Powder River, June 9th, where he established a supply-camp. Resuming his march along the south bank, he reached the mouth of the Rosebud on the 21st. Near this point he came in communication with Colonel Gibbons, whose command was left at the mouth of the Big Horn, and determined in person to continue to the same place, but to detach the Seventh Cavalry by a circuit to the Upper Rosebud (a tributary of the Big Horn), where all his command, embracing that of Colonel Gibbons, was to meet on a day appointed.

On the 22d General Custer started, with his whole regiment and a strong detachment of scouts and guides, from the mouth of the Rosebud. Proceeding up that river about twenty miles, he struck a heavy Indian trail, which he followed to the Little Big Horn River. Here he found a village of almost unlimited extent, and at once attacked it with that portion of his command which was immediately at hand. Major Reno, with three companies, was sent into the valley of the stream at the point where the trail struck it. General Custer, with five companies, attempted to enter about three miles lower down. Reno forded the river, but was completely overwhelmed by the Indians, and was forced to recross. In a short time he was joined on the bluffs by Captain Benteen with three companies, and by Captain McDougall with one company. Soon after, this united force was nearly surrounded by Indians. The fighting continued from about half-past two o'clock of the 25th till six o'clock of the

26th. General Terry's command arrived on the morning of the 27th, and the Indians withdrew from the valley, taking with them their village.

Of the movements of General Custer, and the five companies under his immediate command, scarcely anything is known. He was killed, and his entire command was obliterated. The remaining seven companies of the Seventh Cavalry were saved by the brave and prudent conduct of Major Reno, and the timely arrival of General Terry. The loss was 12 officers, 247 enlisted men, five civilians, and three Indian scouts killed, and two officers and 51 men wounded. The Indian force was estimated at from 2,500 to 8,000 warriors.

General Terry, after burying the dead and caring for the wounded, regained his position at the mouth of the Big Horn, and called for reinforcements. General Crook also awaited reinforcements at his camp on Goose Creek, and the hostile Indians meantime remained between them, near the base of the Big Horn Mountains. These commands, having been reinforced, effected a junction, August 10th, on the Rosebud, at a point 35 miles above its mouth. The march was now begun in pursuit of the retreating Indians. The followers of Sitting Bull seemed to have retreated north, near or beyond the Yellowstone, and those of Crazy Horse to the south, near Slim Butte and Owl Creek, in the direction of the Black Hills.

In October Colonel Miles received hostages, on the Yellowstone, opposite the mouth of Cabin Creek, for the surrender of about 2,000 Indians.

In his annual report, Lieutenant-General Sheridan says:

The surrender of the Indians from the Missouri River agencies to Colonel Miles, on the 27th of October, numbering, in men, women, and children, at least 2,000, and the escape of Sitting Bull with his small band to the north, leave now out and hostile only the northern Cheyennes and the band of Crazy Horse and his allies from the Red Cloud agency, and it is against these Indians that General Crook is now operating; and when these are killed, captured, or surrendered, the Sioux war will be at an end, and I think all future trouble with them, as it is intended to put most of them on foot, and a Sioux on foot is a Sioux warrior no longer. . . . I recommend that the whole Sioux nation be established on the Missouri River, between Standing Rock and Fort Randall. They can be cheaply fed there, and can be sufficiently isolated to be controlled. To take so many wild Indians to the Indian Territory would be a difficult undertaking at this time, and would, in my opinion, be attended with the worst results to those now there, as well as to the Sioux. They should go gradually, from time to time, and when the Indians there are ready to receive them.

In April, 1876, the headquarters of the Army were transferred from St. Louis to Washington. During the year the number of grand military divisions was reduced from four to three, viz., Missouri, Atlantic, and Pacific. The aggregate force of the army is 28,571, including 2,151 officers and 26,420 enlisted men.

ASIA. According to the latest accounts the area of Asia was 17,300,000 square miles, and the population about 798,900,000.*

The conquest of Khokan by the Russians, which had been begun in 1875, was completed in 1876 (*see KHOKAN*). This added another large tract of land to the Russian dominions, and brought it another step nearer to British India, its great rival in Asiatic politics. The progress of Russia made Afghanistan to a higher degree than ever before the battle-field between its own and British diplomacy. The results of the special embassies which both powers in the course of the year sent to Afghanistan were not known in December (*see AFGHANISTAN*). In another country of Central Asia, Beloochistan, the English Government, by a successful intervention, greatly strengthened its influence, and reopened the Bolan Pass, one of the chief roads of communication between British India and its western neighbors (*see BELOOCHISTAN*). Throughout Central Asia the excitement visibly increased, and the final result of the rival policies of Russia and England is awaited with intense suspense. The aggressive attitude which Russia pursued in regard to Turkey disposed the Mohammedan population throughout Asia favorably toward England.

The Prince of Wales continued his journey through India during the early part of the year, returning home in March. The Viceroy of India, Lord Northbrook, resigned in the early part of the year, and was succeeded by Lord Lytton. The difficulty with the natives on the Malay Peninsula continued during the early part of the year. Disturbances and native rebellions were also reported from various parts of the country (*see INDIA*).

The relations of England to China appeared at one time to assume threatening dimensions, as Chinese authorities in every possible way endeavored to obstruct the investigation of the Margary murder; but, at last, the Government agreed to the British demand, to pay Mrs. Margary a sum of money, and to open three new ports to foreign trade. The operations of China against the ruler of Kashgaria were renewed, but, so far as is known, without success. The opening of the island of Hainan to the foreign trade, promised in the treaty of 1862, was finally brought about on April 1, 1876. The name of the new port is Kiungchow. An important step forward in the course of civilization was made in China during the past year, by the opening of the first railroad. A difference arose between the Chinese and German Governments, on account of the mutiny on board of the German vessel *Anna*, and the murder of the captain and mate by the mutineers, with the consent of the Chinese authorities. The full demands of the German Government were granted (*see CHINA*).

* For a detailed account of the area and population of the political and geographical divisions of Asia, *see ANNUAL CYCLOPEDIA* for 1875.

In Japan considerable progress was again made in the work of civilization during the year. A permanent exhibition-building was established in Tokio. The work on the railroads on the principal islands was actively pushed forward. The difficulties with Corea were settled by a favorable treaty. The exercise of torture was forever abolished (*see JAPAN*).

In Persia several expeditions were undertaken against the Kurds and against the Turkomans of Merv, the latter having committed large depredations on Persian territory (*see PERSIA*).

In Siam the King introduced many innovations destined to civilize the country (*see SIAM*).

In Acheen the war continued during the year, being generally favorable to the Dutch. The abolition of slavery on the west coast of Sumatra completed the extinction of that institution in the Asiatic colonies of European countries (*see NETHERLANDS*).

The Spanish Government, in the early part of the year, found itself compelled to fit out an expedition against the pirates of the Sooloo Islands, which was successful (*see SOOLOO*).

The Turkish provinces in Asia, and parts of Persia, India, and Muscat, were visited by the cholera, which was particularly severe in the neighborhood of Bagdad.

The eastern coast of Bengal was swept by a severe cyclone on October 31st, during which 125,000 persons were reported to have perished.

ASTRONOMICAL PHENOMENA AND PROGRESS. *Veiled Solar Spots.*—A valuable memoir on "veiled solar spots," by Mr. L. Trouvelot, of Cambridge, Mass., was published in the *American Journal of Science* for March, 1876. The author adopts the view, now generally accepted, that the sun's visible surface—the chromosphere—is a gaseous envelope, composed chiefly of incandescent hydrogen. The depth of this stratum is found to be ordinarily from 4,000 to 6,000 miles; the thickness varying, however, from day to day. The *minimum* thickness hitherto observed occurred in the summer of 1875. The principal results of Mr. Trouvelot's observations are summed up as follows:

1. During the year 1875, and especially during the interval from June 10th to August 18th, and to a less degree to September 14th, the chromosphere was notably thinner than usual upon the entire surface of the sun.

2. The granulations were smaller and less numerous.

3. The light-gray colored background seen between the granules was more conspicuous and occupied more space than usual.

4. There are spots, which the author has named "veiled spots," which are seen through the chromosphere which is spread over them like a veil.

5. These veiled spots are true openings of the photosphere, like those of the ordinary spots.

6. During this period these spots were larger, darker, and more numerous, than the observer had before seen them.

7. The veiled spots are scattered throughout all latitudes, though more complicated in the regions where the ordinary spots make their appearance.

8. Mr. Trouvelot has observed spots at least within 10° of the north-pole of the sun.

9. The flocculent objects sometimes seen projected upon the umbra and penumbra of spots are the remaining portion of the granulations composing the chromosphere, more or less dissolved by the forces emanating from the interior of the photosphere.

Temperature of the Sun's Surface.—It is well known that eminent authorities have differed very widely in their estimates of the intensity of solar heat. The calculations of Sir John Herschel and Father Secchi give about 10,000,000° as the temperature at the surface; while other physicists, by applying the law of Dulong and Petit, obtain a degree of heat not greatly superior to that of a blast-furnace. Prof. Langley, of the Allegheny Observatory, who has for several years been devoting special attention to solar physics, read a paper on this subject at the October meeting of the National Academy of Sciences. These recent researches leave little room to doubt the approximate correctness of Herschel's estimate.

The Sun's Atmosphere.—A memoir on the atmospheres of the sun and planets was recently communicated to the American Philosophical Society, at Philadelphia, by Mr. David Trowbridge, of Waterburg, N. Y. Assuming the temperature of the sun's surface to be 9,800,000° Fabr., and that a given volume of the solar atmosphere at 32° becomes doubled at 522° , the analysis of Mr. Trowbridge leads to the conclusion that at the height of about 2,500 miles above the sun's surface its atmosphere has decreased in density to one-half of what it is at the surface; at a little more than 5,000 miles, to one-fourth, and so on for greater heights. Assuming further that the density of the solar atmosphere at the surface is 855,000,000,000 times what it is at the outer limit, the height of the atmosphere is found to be 121,000 miles, or more than one-fourth of the sun's radius. This ratio is less than that which actually exists in the earth's atmosphere. If we now suppose the masses of the terrestrial and solar atmospheres to have the same ratio as the masses of the earth and the sun, the density of the solar atmosphere at the sun's surface will be only $\frac{1}{10}$ of the density of the earth's atmosphere at the earth's surface. The resistance offered to motion in such an atmosphere is much less than it would be in one of low temperature. Were the heat of the sun's surface reduced to 32° , the height of the atmosphere under the conditions above supposed would be only five miles, and at the height of 665 feet the density would be reduced one-half. The pressure on a square inch of surface would be $5\frac{1}{2}$ tons, and the density at the surface would be 740 times as great as at the surface of the earth—in other words, about equal to the density of water.

The Late Sun-spot Minimum.—The observations of Prof. R. Wolf, Director of the Zürich Observatory, indicate a minimum of solar spots about the end of the year 1875. The last preceding minimum occurred in 1867, and the

maximum in 1870. The mean period, according to Dr. Wolf, is 11.11 years. The last epoch of least disturbance took place, therefore, nearly two years before the predicted time.

Probable Existence of an Intra-Mercurial Planet.—It is well known that dark circular spots have been seen at widely-distant intervals passing rapidly across the solar disk. These phenomena have been regarded by some astronomers as transits of an unknown interior planet. The fact, on the other hand, that no such body has been seen during total eclipses of the sun, is claimed by others as presumptive evidence that the so-called transits have been due to some other cause. But this negative testimony is by no means conclusive. When it is remembered, moreover, that an unexplained motion of Mercury's perihelion has been referred by Leverrier to the disturbing influence either of a planet or a zone of minute asteroids within Mercury's orbit, the question is certainly still open to discussion.

The theory that this outstanding disturbance of Mercury's motion is due, at least in part, to an interior planet, has been recently revived by the distinguished Director of the Paris Observatory. The attention of astronomers was called to the subject by the announcement that on the afternoon of April 4, 1876, Herr Weber, of Peckeloh, had seen a small round sun-spot, which had disappeared before the following morning. It was found, however, that the observers at Madrid and Greenwich had witnessed the same appearance, and that their observations proved it to have been a true sun-spot, not a planet. But Leverrier, who had thus been led to undertake a discussion of the subject, found sufficient evidence in former observations to render the existence of the planet highly probable. The spots seen at the five following dates are regarded by the French astronomer as transits of the same body:

1802,	October 10,	observed by	Fritsch.
1839,	" 2,	" "	Decuppis.
1849,	March 13,	" "	Sidebotham.
1859,	" 26,	" "	Lescarbault.
1862,	" 19,	" "	Lummis.

These dates are approximately satisfied by a period of $33^d 0^h 32^m 24^s$, corresponding to a mean distance of 0.201. It is remarked, however, by a writer in *Nature* (November 2, 1876), that a period of $27 23^h 8^m 10^s$ not only represents the observations selected by Leverrier, but also that of Stark, October 9, 1819, one of the most definite on record. The question is one of much interest, and as another transit may not occur for several years, diligent search will be made for the body along its calculated path. If a planet of the size indicated by the supposed transits really exist, it ought certainly to be visible off the sun's disk.

New Minor Planets.—The number of known asteroids at the close of 1875 was 157. Eleven

more were detected in 1876, making the present number 168. Coronis, No. 158, was discovered by Dr. Knorre, of the Berlin Observatory, on the 5th of January. Its distance from the sun is 2.99, and it shines with the light of a star of the 11th or 12th magnitude. No. 159, *Æmilia*, was detected by Paul Henry, of the Paris Observatory, January 26th. *Una*, the 160th of the group, was found by Dr. Peters, of Hamilton College, Clinton, N. Y., February 20th. It is of the 11th magnitude. No. 161 was first seen on the 19th of April, by Prof. Watson, of Ann Arbor, Mich. The 162d was discovered on the 22d of April, by Prof. Henry, of Paris. M. Perrotin, of Toulouse, detected No. 163 on the 26th of April. Its light is not greater than that of a star of the 12th magnitude. The 164th of the cluster was discovered by M. Paul Henry, at Paris, July 12th. It is of the 12th or 13th magnitude. Nos. 165, 166, and 167, which have received the names of *Loreley*, *Rhodope*, and *Urda*, were discovered on the 9th, 15th, and 28th of August, by Dr. Peters, of Clinton, N. Y. The first two are of the 11th magnitude; the last, of the 12th. *Urda* is the 26th member of the group first seen by the Director of the Clinton Observatory. No. 168 was discovered by Prof. Watson, at Ann Arbor, Mich., on the 28th of September. This planet is of the 11th magnitude, and is the 19th detected by Prof. Watson. The supposed discovery of another member of the group on the 28th of September by Prof. Henry, of Paris, proved to be a rediscovery of *Maia*, No. 66, which had been wholly lost sight of for several years.

The name of No. 139, discovered by Prof. Watson while at Peking, was erroneously given in a former volume. The Chinese name selected by the discoverer is *Juewa*. Most members of the group discovered in 1875 are of the 11th or 12th magnitude, and belong to the exterior portion of the ring. No. 153, detected by Palisa, November 2, 1875, and which was named *Hilda* by Dr. Oppolzer, has a much longer period than any other yet discovered. Its mean daily motion, according to Dr. Schmidt, is $452''$, which corresponds to a period of 2.865 days, or seven years and ten months. This is more than double the period of many asteroids in the inner portion of the zone. The mean distance—that of the earth being unity—is 3.95. The eccentricity of the orbit being 0.1487, and the inclination $7^{\circ} 45'$, the least distance between Jupiter and *Hilda* will be less than one-fifth of *Hilda's* greatest distance from the sun. At times, therefore, the motion of the asteroid must be greatly disturbed.

The elements of several recently-discovered members of the group have not yet been computed. The mean distance, eccentricity, inclination, and longitude of perihelion, of those detected since October 1, 1875, are given, so far as known, in the following table:

No.	NAME.	Mean Dist.	Angle of Eccent.	Incl.	Long. Per.
150		2.9807	$7^{\circ} 30'$	$3^{\circ} 9'$	$352^{\circ} 45'$
151	<i>Abundantia</i>	2.5841	5 44	7 52	215 57
152	<i>Atala</i>	3.1820	4 48	12 10	80 0
153	<i>Hilda</i>	3.9504	9 28	7 51	254 43
154	<i>Bertha</i>	3.2285	5 45	20 49	163 41
155	<i>Xantippe</i>	3.0875	15 17	7 29	155 57
157	<i>Dejanira</i>	2.5867	12 42	11 50	109 12
158	<i>Coronis</i>	2.9901	16 59	1 22	355 10
160	<i>Una</i>	2.7884	8 28	8 51	56 49

Saturn and his Rings.—The *American Journal of Science* for June, 1876, contains an interesting paper by L. Trouvelot on some physical observations of the planet Saturn. The observations of Mr. Trouvelot were continued through several years, and were made with the fifteen-inch refractor of the Harvard College Observatory, the twenty-six-inch refractor of the Washington Observatory, and the six-inch refractor of his own observatory at Cambridge. The ring exterior to the principal division has been always seen under favorable circumstances to be divided into two sections by a narrow, grayish line, called "the pencil-line." The dusky ring, discovered by Bond, does not appear to be separated from the old interior ring by any break or chasm. Designating the annulus exterior to the pencil line by A, that between the pencil line and the principal division by B, and the outer portion of the interior ring by C, Mr. Trouvelot's observations show—

1. That the inner margin of the ring B, limiting the outer border of the principal division, has shown, on the ansæ, some singular dark angular forms, which may be attributed to an irregular and jagged conformation of the inner border of the ring B, either permanent or temporary.
2. That the surface of the rings A, B, and C, has shown a mottled or clouded appearance on the ansæ during the last four years.
3. That the thickness of the system of rings is increasing from the inner margin of the dusky ring to the outer border of the ring C, as proved by the form of the shadow of the planet thrown upon the rings.
4. That the cloud-forms seen near the outer border of the ring C attain different heights, and change their relative position, either by the rotation of the rings upon an axis, or by some local cause, as indicated by the rapid changes in the indentation of the shadow of the planet.
5. That the inner portion of the dusky ring disappears in the light of the planet at that part which is projected upon its disk.
6. That the planet is less luminous near its limb than in the more central parts, the light diminishing gradually in approaching the border.
7. That the dusky ring is not transparent throughout, contrary to all the observations made hitherto; and that it grows more dense as it recedes from the planet, so that, at about the middle of its width, the limb of the planet ceases entirely to be seen through it.
8. And, finally, that the matter composing the dusky ring is agglomerated here and there into small masses, which almost totally prevent the light of the planet from reaching the eye of the observer.

Comets.—It is remarkable that no *new* telescopic comet has been discovered since 1874. This is the longest barren interval in the last forty years. Some interesting researches, how-

ever, have been published during the past year, in regard to the periodic comets of D'Arrest and De Vico, both of which will return to perihelion in 1877. The observations on the former, together with the perturbations produced by Venus, the earth, Mars, Jupiter, and Saturn, have been discussed by M. Levean, of the Paris Observatory. Leverrier's *Bulletin International*, of March 18, 1876, gives the elements obtained by M. Levean for the next return of the comet, as follows:

Time of perihelion passage.....	May 10, 1877.
Longitude of perihelion.....	819° 9'
Longitude of ascending node.....	146° 9'
Inclination.....	15 48
Eccentricity.....	0.6378
Perihelion distance.....	1.8181
Semi-axis major.....	8.5415
Sidereal period.....	2484.2d

De Vico's comet of short period has not been seen since 1844. This body is regarded by Leverrier as identical with the comet discovered by Lahire in 1678. It is situated most favorably for observation when the perihelion passage occurs about September 4th, and it is remarkable that those of 1878 and 1844 took place within a few days of the most favorable date. A possible reason for the non-recovery of the comet at any recent return was given in *Nature* for July 27, 1876. The orbit of De Vico's comet approaches very near to the orbit of Mars at two points falling near 42° and 287° heliocentric longitude. At the former point the distance between the two orbits is about 2,000,000 miles, and at the latter somewhat less than 1,000,000; "and it is to be borne in mind that these distances, small as they are, may have been diminished very sensibly by the effect of accumulated perturbation since 1855, beyond which we have no calculation of the effects of planetary attraction. If the mean diurnal motion in 1855 were as large as 652.05", a value considerably within Brünnow's suggested limits, the comet might have come into extremely close proximity to Mars at the end of August, 1866, in about 42.3° heliocentric longitude."

Meteors.—Between ten and twelve o'clock on the night of April 18, 1876, meteors were seen in unusual numbers near Ellettsville, Ind. A large majority of those whose tracks were well observed were conformable to the radiant in Lyra. Several were remarkably brilliant, apparently equal to stars of the first or second magnitude. The meteors of this epoch are supposed to be derived from the first comet of 1861, and to move in the same orbit.

Watch was kept for meteors at York, England, on the nights of August 10th, 11th, 12th, and 14th. Several nights preceding the 10th were cloudy, and the 11th was very hazy. The brightness of the moonlight also interfered with the observations, except on the 14th, which may be regarded as the close of the August epoch. The hourly numbers radiating from Perseus, seen by a single observer,

on the four nights were 18, 6, 9, 7. There was, therefore, a regular decrease from the 10th, the apparent exception on the 11th being due to the haze. Making all allowance for unfavorable circumstances, Prof. Herschel thinks the shower of 1876 indicates a minimum.

On the evening of October 18, 1876, from about half-past seven to nine o'clock, meteors were seen in greater numbers than usual at Bloomington, Ind. The maximum number for one observer was eleven per hour. They all diverged from the vicinity of a point between Taurus and Auriga. Most of the meteors were small, though two were seen of extraordinary magnitude. At Newburyport, Mass., on the same night, at two o'clock A. M., a bolide was observed to start from the same part of the heavens.

It was half the apparent size of the moon, which it rivaled in brightness, the smallest objects being visible in the intense white light of about two seconds' duration. It left a train 10° long and one-fourth of a degree wide, which remained visible over a quarter of an hour. While the train was being observed a large number of smaller meteors passed, as often as one a minute, over the same field, one or two of them leaving a slight train.

The meteors of November 14th move in the orbit of Tempel's comet (1866), and are the *débris* resulting from its disintegration. The comet, together with the principal swarm of meteors which immediately follow it, is now approaching its aphelion near the orbit of Uranus. As the existence, however, of more than one cluster in the same orbit has been clearly indicated, a yearly watch will be necessary, while passing the node, in order to discover the law of meteoric distribution. "On the morning of November 14th" (according to Prof. Newton), "between twelve and one o'clock, the sky at New Haven was partly clear. Out of about twelve meteors seen, three might be called conformable to the radiant in Leo. Shortly after one o'clock the sky became wholly overcast."

Aérolites and Meteoric Fire-balls.—In the *American Journal of Science* for June, 1876, Prof. J. Lawrence Smith, of Louisville, Ky., describes a fire-ball seen by himself and many other observers to pass Louisville on the evening of January 31st, at half-past five o'clock. The meteor was first seen about 60° above the horizon: its direction was from northwest to southeast; duration of flight, two or three seconds; apparent size, one-sixteenth that of the moon's disk. The bolide exploded about 10° above the horizon, when all the fragments disappeared, except the largest, which continued its course very nearly to the horizon.

A fall of aérolites took place near Stålldalen, in Sweden, June 28, 1876, between the hours of eleven and twelve A. M. The fall of the stones was accompanied by a brilliant light, though the day was cloudless. Two or three loud detonations were heard, after which the

meteorites were seen to fall by eight or ten persons. Twelve fragments were found, the largest of which weighed four and a half pounds.

On the 25th of June, between nine and ten o'clock a. m., a small meteorite fell in Kansas City, Mo.

A large fire-ball, moving in a westerly direction, passed over the States of Michigan and Wisconsin, on Saturday evening, July 8th, about fifteen minutes before nine o'clock (Chicago time). It was seen by Mr. E. L. Linsley, at Stratford, Conn.; Mr. Benjamin Vail, at Henryville, Clarke County, Ind.; Mr. William L. Taylor, at Wolcottville, La Grange County, Ind.; Rev. Robert Beer, at Valparaiso, Ind., and by many others in various parts of the Western and Northwestern States. From the observations of the persons named, with those of others who witnessed the phenomenon, it has been found that the course of the meteor was a few degrees north of west; that its height when first observed was certainly over 100 miles; that it passed vertically over the counties of Branch, St. Joseph, Cass, and Berrien, Mich.; that it did not reach the earth's surface, but passed out of the atmosphere in its cometary orbit about the sun; and that its nearest approach to the earth could not have been less than 70 miles.

The meteor was apparently one of great magnitude, as its brilliancy was compared by observers to "the glare of a calcium-light." The body left a luminous track in the atmosphere, which continued visible at least thirty minutes.

On Saturday morning, December 16th, at 12^h 45^m, an immense ball of fire was seen from San Francisco, Cal. When first observed it was descending rapidly, and, a few moments afterward, it fell into the sea at apparently no great distance from the shore. The fall was followed by a loud explosion.

On Thursday evening, December 21st, at 8^h 45^m, Cincinnati time, a meteor of extraordinary magnitude passed over the States of Kansas, Missouri, Illinois, Indiana, Ohio, and Pennsylvania. Its course was 17° or 18° north of east, and it passed almost vertically over Fort Riley, Kan.; Weston, Mo.; Peoria, Ill.; Rochester, Ind.; Toledo, Ohio, and Erie, Pa., somewhat south, however, of the place last named. At Bloomington, Ind., the meteor was first seen at a point about 10° south of west, and less than 5° above the horizon. It appeared as a single globe of light, surpassing the moon in magnitude and brightness. When northwest of Bloomington, Ind., or soon after it had passed the zenith of Peoria, Ill., the body was seen to separate into numerous fragments. The apparent size, however, of the principal mass, was not sensibly diminished. The explosion was followed by a violent detonation, resembling a heavy clap of thunder. The height of the meteor when the explosion occurred was estimated at from 45 to 49 miles.

The fragments thrown off by the explosion were more retarded than the principal mass by the resistance of the atmosphere, so that, in the last part of the course, the appearance was that of an elongated cluster about 8° in breadth and 20° in length. The height of the meteor when first seen was probably 70 or 75 miles; length of the visible track, 1,000 miles; time of flight, two minutes; velocity with reference to the earth's surface, 8 miles per second; true orbital velocity, between 23 and 25 miles per second. The interval between the disappearance of the meteor and the violent detonation as observed at Bloomington, Ind., was fifteen minutes, indicating a distance of about 180 miles. A fragment of the meteoric mass, weighing about a pound, was found three miles northwest of Rochester, Fulton County, Ind., on the following morning, December 22d.

Star Systems.—Polaris has long been known as a double star, its companion being of the ninth magnitude, and at a distance of eighteen seconds from the larger component. In 1869, M. de Boë, at Antwerp, detected two other companions, much nearer and fainter than that previously known. The observer sought, subsequently, to confirm his discovery, but his efforts, until recently, were without success. In 1876, using a six-inch equatorial, he rediscovered the two new stars, and the observation has been lately confirmed by that of Baron von Eithorn. The light of the new members of the system is probably variable.

The Binary Star Omega Leonis.—In the "Transactions" of the Royal Irish Academy, vol. xxvi., Dr. Doberck, of Markree Observatory, Ireland, has given the details of his elaborate determination of the elements of this binary system. The period is 111 years—considerably greater than that of Uranus; the eccentricity, 0.536.

Gamma Corona Australis.—Prof. Schiaparelli has recently measured this binary star with the eight-inch Merz equatorial of the Observatory of Brera, Milan, and, by comparing his own observations with those of Powell, Sir John Herschel, and Jacob, has calculated its orbit. The periastron passage will take place in 1882; the orbital eccentricity is 0.6989, and the period of revolution 55,582 years—somewhat greater than that of Sirius.

Eta Cassiopeia.—During the past year, Dr. Doberck has rediscussed the observations of this star and obtained new elements differing considerably from those previously computed. The periastron passage will occur in the spring of 1909; the eccentricity is 0.5763; the period, 222.4 years; and the semi-axis major, 9.83". The parallax of Eta Cassiopeia, according to Struve, is $\frac{1}{1500}$ of a second. It results from these data that the mean distance of the companion from the principal star is about 64 times the radius of the earth's orbit, and the mass of the system 5.25 times that of the sun. The distance and apparent magnitude of this binary

system are very nearly identical with those of 70 Ophiuchi, while the mass of the latter is less than that of the former in the ratio of three to five.

Sirius.—From a discussion of the observations of the companion of Sirius, Dr. Auwers has found the period of revolution to be 49 years and 146 days; the semi-axis of the orbit, 37 times the distance of the earth from the sun; and the eccentricity, 0.6148—somewhat greater than that of Faye's comet. The mass of the companion is half that of the principal star; or, more exactly, the mass of Sirius is 18.76, and that of the telescopic star 6.71, the mass of the sun being unity. As the light of Sirius, according to Sir John Herschel, is 324 times that of an average star of the sixth magnitude, and as the satellite discovered by Clarke is of the ninth or tenth magnitude, the light of the latter must be much less than one-thousandth part of that received from the principal star. The facts seem to indicate a remarkable difference between the physical constitution of Sirius and its satellite.

Procyon.—It was stated, in our volume for 1874, that M. Otto Struve had discovered a small companion of Procyon, by which it was believed the anomalous motion of that star might be satisfactorily explained. Strangely enough, however, the most diligent search for this new star with the twenty-six-inch refractor of the Washington Observatory has been hitherto unsuccessful, although *three other companions* have been distinctly recognized by Profs. Newcomb and Holden; their distances from Procyon being 6", 9", and 10", respectively. The difference of atmospheric circumstances could scarcely explain the contradictory character of the observations at Pulkowa and Washington. We must conclude, therefore, that the observations of Struve were somehow erroneous, or that the light of the new star is variable.

Cincinnati Catalogue of New Double Stars.

—The search for new double stars has been recently prosecuted with eminent success at the Cincinnati Observatory. As a first result of these labors, the director, Mr. Ormond Stone, has distributed a catalogue of fifty, all included in the zone between 8° and 40° south declination. They vary in distance between 0.8" and 8". The estimated magnitudes of the components are given, together with their distances asunder, and their angles of position.

Variable Stars.—Dr. Gould, Director of the Cordova Observatory, has found the period of a variable star in Musca to be less than that of any other variable hitherto determined. This star, at minimum, is entirely beyond the reach of unassisted vision even in the sky of Cordova, though at maximum it is distinctly visible. The period of variation is about thirty hours.

In February, 1876, M. Tisserand, Director of the Observatory of Toulouse, undertook a series of observations on the small stars near

the trapezium in Orion. The instrument used was the Foucault telescope of 81 inches aperture, then recently mounted. Especial attention was given to those stars which M. O. Struve had designated as variable, and not only were the suspicions of the Pulkowa observer for the most part confirmed, but in the case of several other stars in which he had detected no change variations of magnitude were clearly indicated. The existence of so many variable stars in this remarkable nebula will be regarded by astronomers as a fact of no ordinary interest and significance.

The Pleiades.—The report of the Council of the Royal Astronomical Society to the fifty-sixth annual meeting (1876) contains the following statements in regard to the Pleiades group, several members of which are found to be variable:

M. Wolf, of the Paris Observatory, has made a series of measurements of this interesting group of stars, including all visible through an object-glass of 0.81 millimetre aperture. The exact positions of the 53 stars observed by Bessel, referred to Eta Tauri by differences of right ascension and polar distance, are given in a table containing the measurements of M. Wolf, compared with those of Bessel reduced to January 1, 1874. The relative magnitudes of these 53 principal stars have been determined with very great care, in order to detect any possible variation of brightness since Bessel's observations. M. Wolf has been able to detect no less than 499 stars around Eta Tauri, contained within a rectangle of 185 minutes of arc in length and 90 minutes' breadth. These vary from the third to the fourteenth magnitude. The observed magnitudes have been compared with those in the catalogues of Jeuret, Lalande, Piazzi, Bessel, and Argelander; from which M. Wolf concludes that among the eight principal stars of the group, Merope and Atlas are decidedly variable, and Maia appears also to have increased in magnitude since the observations of Piazzi and Bessel. The five others show no evidence of variability, but some of the smaller stars have certainly changed their relative brightness since the former observations.

He concludes, from a comparison of the differences between his and Bessel's measurements of the 53 principal stars, that the Pleiades form a group whose members are physically connected one with the other; and, moreover, there appears to exist in the group a relative displacement of the stars, which carries the greater number of them in a contrary direction to the diurnal motion, slightly diminishing their polar distances. M. Wolf hopes that his two years' observations may serve as a certain basis, at a future period, for the determination of the proper motion of the separate components forming the Pleiades group.

Spectroscopic Observations.—Sir George B. Airy, the astronomer royal, has recently published the results of spectroscopic observations made at Greenwich for determining the motions of stars in the line of sight. The velocity of approach or recession of the stars observed is found by the displacements of the lines of known elements in their spectra; the estimated rates of motion being corrected for the earth's velocity resolved in the direction of the star. The rate of recession assigned to Sirius by these observations is 27 miles per second, or about 852,000,000 miles per annum

—a velocity considerably greater than that of the earth in its orbit. At this rate of motion the star will describe a distance equal to that which now separates it from the solar system in less than 140,000 years. The velocities with which certain other stars are receding from the solar system are as follows :

Beta Ursæ Majoris.....	15 miles per second.
Castor.....	24 " " "
Rigel.....	27 " " "
Regulus.....	33 " " "
Procyon.....	39 " " "
Spica.....	50 " " "

The following, on the other hand, are approaching the sun :

Alpha Pegasi.....	32 miles per second.
Arcturus.....	34 " " "
Vega.....	35 " " "
Alpha Andromedæ.....	39 " " "
Alpha Ursæ Majoris.....	40 " " "
Gamma Leonis.....	66 " " "

It will be noticed that Alpha and Beta of the Great Bear (the two stars known as "the pointers") are moving in different directions. The former, which is nearer the pole, is approaching the sun; the latter is receding from it.

Nebula.—M. Stephan, Director of the Marseilles Observatory, has been recently devoting special attention to the search for new nebulae. The result has been the discovery of 400 of these bodies, all of which had escaped the notice of former observers. The fact that they are generally small is favorable to the accurate determination of their positions—a point of great importance for the future investigation of their proper motions.

Supposed Changes in Messier's Nebula No. 17.—This nebula, which was discovered by Messier nearly a century since, has lately been the subject of critical study by Prof. Edward S. Holden, of the Washington Observatory. It was the object of these researches to determine whether the nebula has undergone any sensible changes since the date of the earliest trustworthy descriptions. The conclusion derived from an elaborate discussion is that, while the stars in and about the nebula have retained their relative positions, the part of the nebula known as the "Horseshoe" has moved with reference to the stars, and that, therefore, "*we have evidence of a change going on in this nebula.*" This may be a change in the nebula's internal structure, or it may be "the bodily shifting of the whole nebula in space in some plane inclined to the line of sight."

Variable Nebula in the Pleiades.—Of this interesting object the "Monthly Notices" of the Royal Astronomical Society for February, 1876, says :

The most remarkable object of the group is the nebula around Merope. Discovered by M. Tempel in 1859, it has also been seen by Profs. D'Arrest and Schmidt, who were of opinion that the nebulosity must be variable. On March 7, 1874, it consisted of two portions, one of which was nearly concentric

with Merope, but extending slightly toward the east; the other, more luminous, was about seven seconds of arc from the star, on the same parallel, the diameter being about one second. From the month of November, 1874, to the end of February, 1875, the nebula was invisible, although it was looked for on many occasions when the sky was very favorable for the purpose. M. Wolf, therefore, considers that this nebula is certainly variable, with a moderately short period.

Knobel's Reference Catalogue of Astronomical Papers and Researches.—The thirty-sixth volume of the "Monthly Notices" of the Royal Astronomical Society contains, in its supplementary number, an elaborate and exhaustive catalogue of the literature of sidereal astronomy. This catalogue, prepared by E. B. Knobel, Esq., consists of a list of references to all books, papers, and notes, relating to the following subjects :

1. Double Stars, including the Mathematical Investigation of the Orbits of Binary Systems.
2. Variable Stars.
3. Red Stars.
4. Nebulae and Clusters.
5. Proper Motions of Stars.
6. Parallax and Distance of Stars.
7. Star Spectra.

The list of references is derived mainly from a systematic examination of the libraries of the Royal Society and the Royal Astronomical Society, the first of which is said to be peculiarly rich and complete in the transactions of scientific societies. The work was prepared, the compiler informs us, "in the hope that these references may be found useful to astronomers in guiding them to the particular literature giving information on the above-mentioned branches of stellar astronomy, and thereby reducing their labors in reading up the subject to a minimum."

Gold Medal of the Royal Astronomical Society.—The gold medal of the Royal Astronomical Society was awarded, in 1876, to M. Leverrier, Director of the Paris Observatory, for his theories of the four great planets, Jupiter, Saturn, Uranus, and Neptune. Leverrier's theoretical investigations of the motions of all the principal planets have now been presented to the Académie des Sciences. His theories of the four inner planets were completed several years since, and for these, it will be remembered, the medal of the society was awarded him in 1868. At the annual meeting in February, 1876, the president, Prof. Adams, reviewed the labors of the distinguished mathematician, upon whom the highest honor of the association had been a second time conferred; explained the grounds on which the council had based their decision; and, in concluding, expressed to M. Leverrier the deep interest with which astronomers had followed him in his unwearied researches, and the admiration which they had felt "for the skill and perseverance by which he had succeeded in binding all the principal planets of our system, from Mercury to Neptune, in the chains of his analysis."

AUERSPERG, ANTON ALEXANDER, Count von, also well known by his *nom de plume*, Anastasius Grün, an Austrian statesman and poet, born April 11, 1806; died September 12, 1876. He received his first education at home, was sent to the Theresianum in Vienna, in 1813, from there he went to the Engineering Academy. Upon the death of his father he was placed in a private institution to prepare himself for the university. After having studied law and philosophy in the Universities of Vienna and Gratz, he traveled through Italy, France, England, and Germany; took charge of his estates in 1831, and in 1839 married the Countess Maria von Attems, living after that partly on his estates and partly in Gratz and Vienna. Every office in the service of the Government or of the court he decidedly refused, being bitterly opposed to the policy of Prince Metternich. He began early to gain a reputation as a poet. Even while a student in Vienna he had contributed numerous small poems to the *Philomèle* and the *Theaterzeitung*, and in 1830 published a small volume under the title of "Blätter der Liebe, von Anastasius Grün." Under the same *nom de plume* he published, during the same year, "Der letzte Ritter" (eighth edition, 1860), a romance, in which he intended to show to the effeminate administration of that period the manly picture of the last knight, Maximilian, in the form of Theuerdank. This was followed by "Spaziergänge eines Wiener Poeten" (1831; sixth edition, 1861), which appeared anonymously in 1831 in Hamburg. This volume, a collection of thirty patriotic poems, produced great excitement throughout Germany. The authorities employed every means to discover the author, and when they finally found that the "Viennese poet," Anastasius Grün, and Count Auersperg, were one and the same person, the latter was fined fifty ducats. In 1835 he published another collection of patriotic poems, under the title of "Schutt" (twelfth edition, 1869), which is generally considered as his best production. He then collected his smaller poems, sketches, etc., into one volume, "Gedichte" (1837; fourteenth edition, 1868). In 1848 he was elected a member of the German "Vorparlament," and afterward of the National Assembly in Frankfurt. In this body he always voted with the Left Centre, but left it in September, 1848, because the murders of Lychnowski and Auerswald had utterly disgusted him. For some years he lived in entire seclusion on his estates, publishing in 1852 the poetical works of his friend Nikolaus Lenau. After the change of affairs in Austria in 1859, he again took an active part in public life. In that year he was appointed by the Government a member of a commission to draw up a communal law for Carniola. In 1860 he was called by the Emperor to the "Verstärkter Reichsrath" for Carniola, and in 1861 was created a life-member of the Austrian Herrenhaus. Here he was the regular reporter and author of addresses to the throne,

with the exception of one session. In all questions of legislation he voted with the Liberals, while in the constitutional debates he was with those who advocated centralization and afterward dualism, rejecting the federal idea decidedly. The address of January, 1870, was an able argument for the preservation of the constitution, and against the impending federalistic experiments of the minority; that of November, 1870, culminated in a most decisive vote against the vacillating policy of the ministry, and was adopted even in the Herrenhaus by an almost unanimous vote. He spoke repeatedly for a peaceful and constitutional settlement of the difficulties with Hungary, and for a closer connection of Austria and Germany. In the Diet of Carniola, from 1861 to 1867, and afterward in that of Styria, he was an active supporter of German ideas and of the Liberals. In 1868 he was unanimously elected president of the delegation of the Austrian crown-lands. But, with the exception of his seat in the Herrenhaus, he resigned all his positions. In this body he continued to take an active interest up to his death. Among his speeches those delivered during the confessional debates of 1868 and 1874 have gained particular celebrity. His last poetical work of any importance was a German version of "Robin Hood" (1864).

AUSTRALIA AND POLYNESIA. The area and population of Australia and Polynesia were, according to the latest accounts, as follows:

COUNTRIES.	Sq. Miles of Sub-divisions.	Sq. Miles of Divisions.	Population of Sub-divisions.	Population of Divisions.
New South Wales.....	908,560		564,278	
Victoria.....	88,451		808,487	
South Australia.....	380,603		204,623	
Queensland.....	668,259		168,517	
Western Australia.....	975,824		26,209	
Northern Territory.....	523,581		640	
Native population.....			50,000	
CONTINENT OF AUSTRALIA.....		2,045,927		1,841,700
Tasmania.....	26,215		104,176	
New Zealand.....	106,259		887,580	
Other islands.....	1,777		1,260	
ISLANDS SOUTH OF THE TROPIC OF CAPRICORN.....		134,251		492,800
New Guinea.....	274,780		1,000,000	
New Hebrides.....	5,719		184,500	
New Caledonia.....	6,697		45,000	
Feejee Islands.....	8,084		148,040	
Friendly Islands.....	404		25,000	
Samoa Islands.....	1,138		88,000	
Tahiti.....	458		18,847	
Marquess Islands.....	469		4,200	
Other islands.....	84,288		804,500	
ISLANDS BETWEEN THE EQUATOR AND THE TROPIC OF CAPRICORN.....		833,952		2,207,000
Sandwich Islands.....	7,618		56,697	
Caroline Islands.....	585		18,800	
Pelew Islands.....	846		10,000	
Gilbert Islands.....	255		40,000	
Other islands.....	2,928		16,200	
ISLANDS NORTH OF THE EQUATOR.....		11,672		140,900
Total.....		3,485,102		4,682,400

According to the enumerations of the years 1869-'71, there were 1,300,452 Protestants,

443,442 Catholics, 8,248 Hebrews, 15,521 of other denominations, and 46,839 not known. In New Zealand there were, in 1874, 241,082 Protestants, 40,871 Catholics, 1,215 Hebrews, 4,764 pagans, 4,367 of other denominations, and 7,715 whose religion was unknown. Of the inhabitants of Australia in 1871, 1,817,187 were born on British territory; of these, 993,862 were born in Australia, and 807,786 in Great Britain. There were also 35,506 persons born in Germany, 5,475 in the United States, 3,046 in France, 31,086 in China, and 23,525 were born in other countries.

The movement of population in 1874 was as follows:

COLONIES.	Marriages.	Births.	Deaths.
New South Wales.....	4,943	22,178	8,652
Victoria.....	4,925	26,390	12,222
South Australia.....	1,611	7,596	3,434
Queensland.....	1,240	6,838	2,794
West Australia.....	181	576	457
Tasmania.....	719	3,097	1,639
New Zealand.....	2,923	12,844	4,161
Total.....	15,940	79,874	33,439

The following table shows the rate of taxation per head of population, the revenue, the imports and the exports for 1874, and the public debt on December 31, 1874, for each of the Australian colonies:

NAME OF COLONY.	Rate of Taxation.	Revenue.	Debt.	Imports	Exports.
Victoria.....	£3 8½s.	£4,106,790	£18,990,558	£16,954,000	£15,441,000
New South Wales.....	2 08	3,509,966	10,516,371	10,387,000	8,987,000
South Australia.....	1 81	1,008,890	2,989,750	3,938,000	4,408,000
Queensland.....	3 88	1,180,947	5,253,286	2,824,000	3,750,000
Tasmania.....	2 07	327,925	1,476,700	1,258,000	925,000
West Australia.....	3 14	32,273	119,000	864,000	439,000
New Zealand.....	3 87	3,024,843	13,364,936	8,132,000	5,251,000
Total.....	£3 46s.	£13,315,869	£47,712,596	£44,352,000	£39,156,000

Education in the different colonies is provided for by primary schools, grammar-schools, colleges, and universities. The latest statistics of the primary schools were as follows:

COLONIES.	Schools.	Teachers.	PUPILS.		
			Boys.	Girls.	Total.
New South Wales...	1,508	2,334	57,917	52,370	110,287
Victoria.....	1,048	2,416	73,826	62,136	135,962
South Australia (1874)	820	815	13,774
West " (1874)	85	3,000
Tasmania (1874).....	147	238	7,970
Queensland (1874)...	208	590	12,890	16,112	29,002
New Zealand (1874)*	680	1,272	31,774	19,238	41,012

The railroad statistics for 1874 were as follows:

COLONIES.	Miles in Operation.	Miles in Building.
New South Wales.....	401.5	298
Victoria.....	605	65
South Australia.....	183	142
West Australia.....	88	35
Tasmania.....	45	121
Queensland.....	249	106
New Zealand.....	209	631
Total.....	1,680.5	1,376

The length of telegraph-lines at the close of the year 1874, the length of wires at the close of 1875, and the number of stations in 1875, were as follows:

COLONIES.	Lines.	Wires.	Stations.
New South Wales.....	7,449	7,904	187
Victoria.....	3,338	4,613	163
South Australia.....	3,900	3,904	105
West Australia.....	768	1,600	20
Tasmania.....	291	547	33
Queensland.....	3,616	3,617	90
New Zealand.....	2,623	5,234	111
Total.....	23,069	37,469	658

* Inclusive of grammar-schools and colleges.

The postal statistics for the different colonies were as follows:

COLONIES.	Post Offices.	Letters sent and received.	Newspapers and Book-packets.	Money-Order Offices.	Money-Order sent.
N. South Wales (1873)	654	9,602,000	5,463,300	217	92,744
Victoria (1873).....	800	14,475,085	3,787,228	310	113,183
South Australia (1875)	844	4,324,581	2,774,008
West Australia (1874)	44
Tasmania (1875).....	140	29	7,181
Queensland (1873)...	185	2,459,434	1,638,332	42	38,506
New Zealand (1873)...	598	7,915,985	5,349,195	52,351

The population of the four principal cities of New Zealand was estimated as follows on May 1, 1876: Dunedin, 19,657; Auckland, 13,186; Wellington, 11,298; Christchurch, 10,772.

The agricultural statistics of New Zealand show Canterbury, standing at the head of all provinces, with 550,759 acres in cultivation; Otago coming next, with 451,669; Wellington third, with 432,802; and Auckland fourth, with 356,988 acres; the total for the whole colony being 2,230,988 acres, showing an increase of 442,221 over 1875. Canterbury has the largest area in every kind of crop, with the single exception of oats, in which the Scottish province of Otago takes first place. The area sown with wheat shows a decrease for the whole colony of 14,868 acres as compared with the previous year.

A census of South Australia, taken on March 26, 1876, gave a population of 213,721, of whom 110,941 were males, and 102,780 females. Adelaide had 31,573 inhabitants, of whom 15,104 were males and 16,469 females. The next largest cities were Norwood and Kensington with 6,576, Hindmarsh with 4,120, Port Adelaide with 2,835, and Glenely with 2,028 inhabitants.

Gold-mining continued to be carried on successfully in the various colonies. New mines were discovered early in the year at the head of the Palmer River, in the colony of Queensland, and large numbers flocked thither. The crops were generally poor. In New South Wales a heavy drought was reported, while in Victoria the crops were seriously damaged by successive heavy rainfalls.

The plan to unite all the Australian colonies into one confederacy continued to be strongly urged during the year. A considerable impulse was given to it by the Intercolonial Exhibition held at Melbourne in the early part of the year.

The laying of the submarine cable between Sydney and New Zealand was successfully completed in the beginning of the year, and it was opened in February.

The exploration of the interior of the Australian Continent continued to be carried on with unabated energy. News was received in August from Mr. Wilshire, in the Northern Territory, announcing the discovery of good land on the Victoria and Daly Rivers, with grassy plains and soil fit for all tropical productions.

The last surviving native of Tasmania died during the year. It was the Queen, Lidgwidgi Tancaninni, called Lalla Rookh by the white population. Tasmania, or the island of Van Diemen, which became in 1808 an English colony, had in 1815 a native population of 5,000; in 1847 there were only 45 left, and now the last of the race is dead. Lalla Rookh had been married five times, and each time to a king. She lived at Hobart Town, in the house of the Government inspector, and received a small pension from the British Government. She was seventy-three years old, and died of paralysis.

A sanguinary affair took place among the natives of Feejee in the early part of the year. A number of tribes not yet converted to Christianity made an attack upon the colony. They were aided by a number of natives who, once converted, had reverted to their heathen state in consequence of the measles, which had raged so terribly in the colony in 1875. They destroyed entire villages, and celebrated their victory by eating eighteen women and children. In consequence of these atrocities the Governor, Sir Arthur Gordon, marched against them, and succeeded in completely defeating them. Thirty-five of the leaders were tried and sentenced to death, but only fourteen were executed.

During the middle of the year the vessel *Dancing Wave* was captured by the natives of the Solomon Islands, who devoured the entire crew. Only one escaped and reported the affair. The man-of-war *Sanafly* was sent out to punish the murderers.

Mr. R. Abbay, in an article on the periodicity of fresh-water lakes of Australia, in No. 342 of *Nature*, makes the following interesting statements: Lake George, in New South Wales,

which is from 23 to 24 miles long, and in its widest part seven miles wide, did not exist twenty-four years ago. In 1852 the deepest part of the lake was covered by a morass, while all the rest was rich alluvial ground. The depth of the present lake is only 25 to 30 feet, which, considering its great extent, is a strong argument in favor of the supposition that the lake has existed at some previous time, and was at least just as extensive as at present. This supposition is strengthened by the old alluvial terraces of the creeks, which lie 10 or 12 feet above the present level of the lake. But this could not be the case one or even several centuries ago, as the present lake is surrounded by a wide belt of forest-trees, which must have grown at a period which dates farther back than a century from the

BOTTLE-TREE OF AUSTRALIA.

date of the present inundation. The chief reason for the present growth of the lake, Abbay thinks, may be found in the destruction of the forests in the cavity, the southern end of which is at present occupied by the lake. The consequence of the disappearance of the forests was a more rapid drainage of the entire basin, the water could flow off quickly and accumulate in the deepest part of the basin, while the loss by evaporizing was greatly diminished, as the water now reaches the lake in a few hours, even from the most distant part of the basin. Lake Bathurst, a few miles distant, also shows a considerable increase in its volume of water.

During the month of March meetings were held in Sydney to discuss a new journey of exploration of D'Albertis in New Guinea. D'Albertis proposed to travel up the Fly River to the centre of the island, where he expected to find its source, and then to return overland to Yule Island or Port Morley. He expected to perform the journey in from six to eight months. This plan was very favorably re-

ceived by the colonial authorities. The Government placed the steamer Neva at the disposition of D'Albertis, and a subscription was opened to secure the necessary expenses.

The annual report of the sub-Protector of Aborigines in South Australia for 1875 contains some interesting statements showing how rapidly the native Australians are disappearing even in that colony, where more is done for their protection than in any other. As an example may be cited the Narringerie tribe, which in 1842 numbered 3,200 persons, against 511 in 1875. This diminution cannot be ac-

BANDED BANDICOOT.

counted for by wars with other tribes, or with the whites, for the Narringerie have been affected more by civilization than any other tribe, and live at peace with the whites. It seems that the natives die out all the quicker the more they assume the mode of living of the European settlers. It has been determined that the largest ratio of deaths and the smallest of births are to be found among those blacks who have definitely settled. In the entire native population of South Australia, as far as could be determined, 140 deaths and 52 births were counted in 1875, making an excess of deaths of 88. The measles and the small-pox, which they have received from the whites, constitute a great danger to them. But their greatest scourge is consumption, to which more than one-half of their deaths must be attributed. On the other hand, fevers are entirely unknown to them; although, in contact with the whites, they are often exposed to scarlet fever, no such case has ever been reported among them. Over the whole territory of the colony numerous depots have been established, which furnish the sick natives medicine and other assistance. The medicine, however, helps them but little, for they either refuse to take it, or after its use they do not observe the necessary care.

AUSTRO-HUNGARIAN MONARCHY, an empire in Central Europe. Emperor, Francis Joseph I., born August 18, 1830; succeeded his uncle, the Emperor Ferdinand I., on December 2, 1848. Heir-apparent to the throne, Archduke Rudolphus, born August 21, 1858.

The ministry for the common affairs of the empire consisted, toward the close of the year 1876, of Count Andrassy, Minister of Foreign

Affairs and of the Imperial House (appointed 1871); Baron Leopold Friedrich von Hofmann, Minister of the Finances of the Empire (appointed 1876); and Count Arthur Bylandt-Rheidt, Minister of War (appointed 1876).

The ministry of cis-Leithan Austria was in 1876 composed of Prince Adolf von Auersperg, President (appointed November, 1871); J. Lasser Baron von Bollheims, Interior (November, 1871); O. von Stremasz, Public Works and Instruction (November, 1871); Glaser, Justice (November, 1871); J. Ritter von Chlumeccky, Commerce and Political Economy (appointed in November, 1871, Minister of Agriculture; transferred to the Ministry of Commerce in May, 1875); Baron von Pretis-Cagnois, Finances (January, 1872); Colonel Horst, Defense of the Country (appointed *pro tem.* November, 1871, definitely March, 1871); Count Mannsfeld, Agriculture (May, 1875); J. Unger (November, 1871) and Florian Ziemialkowski (April, 1873), ministers without portfolio.

Area of the monarchy, 240,348 square miles; population, according to the census of 1860, 35,901,435. The area of cis-Leithan Austria (the land represented in the Reichsrath) is 115,908 square miles; population, at the end of 1874, officially estimated at 21,169,341. The estimate is based upon the census of December 31, 1869, by adding the average percentage of increase. It was distributed among the different crown-lands as follows:

COUNTRIES.	Inhabitants in 1871.
Austria below the Enns.....	2,067,930
Austria above the Enns.....	741,918
Salzburg.....	158,856
Styria.....	1,164,513
Carinthia.....	388,045
Carniola.....	463,065
Trieste.....	132,374
Görz and Gradisca.....	212,849
Istria.....	266,808
Tyrol.....	737,494
Vorarlberg.....	108,341
Bohemia.....	5,287,244
Moravia.....	2,056,051
Silesia.....	544,450
Gallicia.....	5,827,798
Bukowina.....	537,515
Dalmatia.....	460,827
Total.....	21,169,311

The civil population of Vienna, according to the enumeration of April 17, 1875, was 1,001,999 persons.

Dr. A. Ficker estimates the distribution of the different nationalities for 1876 as follows:

NATIONALITIES.	Austria.	Hungary.	Total.
Germans.....	7,800,000	1,800,000	9,600,000
Czechs, Moravians, and Slovaks.....	5,000,000	2,000,000	7,000,000
Ruthenians.....	2,600,000	600,000	3,200,000
Poles.....	2,500,000		2,500,000
Croats and Servians.....	580,000	2,570,000	3,150,000
Slovens.....	1,190,000	60,000	1,250,000
Magyars.....	20,000	5,680,000	5,700,000
Roumanians.....	200,000	2,500,000	3,000,000
Italians.....	690,000	3,000	693,000
Jews.....	660,000	590,000	1,440,000
Gypsies.....	1,000	159,000	160,000
Bulgarians.....		80,000	80,000
Armenians.....	4,000	5,000	9,000
Albanians.....	1,500	2,100	3,600
Greeks.....	2,300	1,000	3,300
Others.....	15,000	7,100	22,100

The movements of population in Austria proper, from 1870 to 1874, was as follows :

YEAR.	Marriages.	Births.	Deaths.	Excess of Births.
1870.....	199,085	826,882	617,132	209,750
1871.....	194,591	820,849	636,068	184,786
1872.....	192,406	829,250	696,125	133,125
1873.....	194,815	848,206	681,826	16,880
1874.....	189,017	848,678	692,929	155,749

The following are the statistics for 1875 of the Austrian schools :

CLASSES OF SCHOOLS.	Number of Schools.	Teachers.	Pupils.
Universities.....	6	689	8,664
Technical institutions.....	7	287	8,570
Agricultural and mining high-schools.....	4	61	948
Commercial academies.....	4	78	1,845
Art high-schools.....	1	22	916
Technical schools.....	45	240	1,849
Superior schools.....	67	1,877	15,892
Gymnasias, sub-gymnasias, real-gymnasias, real-schools, and sub-real-schools.....	229	8,999	55,689
Training-schools for male teachers.....	42	544	4,958
Training-schools for female teachers.....	29	382	2,948
Secondary schools.....	299	4,705	68,490
Schools of midwifery.....	14	14	781
Nautical schools.....	4	30	74
Commercial schools.....	47	288	4,428
Industrial schools.....	158	668	16,405
Schools of art and music.....	171	469	8,457
Schools of agriculture and forestry.....	69	395	1,701
Mining schools.....	6	12	140
Philological schools.....	68	68	1,578
Schools for gymnastics.....	20	86	2,516
Female work-schools.....	169	279	6,550
Other special schools.....	385	1,765	20,950
Special schools.....	1,089	4,099	65,668
Burgher and people's schools (Bürger- und Volksschulen)....	15,166	81,196	2,184,688

The number of professors and students (inclusive of non-immatriculated hearers) at the universities of Austria proper was, in 1876, as follows :

UNIVERSITIES.	Professors.	Students and Hearers.
Carnovitz.....	29	209
Cracow.....	587
Gratz.....	73	851
Innsbruck.....	71	614
Lemberg.....	918
Prague.....	123	1,885
Vienna.....	288	3,810
Total.....	8,904

Of the total number of students, 7,620 were ordinary and 1,281 extraordinary; 7,432 were Austrians, and 1,469 foreigners. Of the latter, 1,065 were from Hungary, 144 from Germany, 35 from Switzerland, 53 from Italy, 2 from Belgium, 1 from the Netherlands, 8 from Great Britain, 66 from Russia, 12 from Turkey, 16 from Servia, 8 from Greece, 54 from Roumania, 3 from Asia, 13 from America, and 1 from Australia. According to the language, 4,162 were Germans, 1,540 Czechs, 1,338 Poles, 454 Ruthenians, 194 Slovenians, 223 Servians and

Croats, 354 Italians, 129 Roumanians, 396 Magyars, and 111 spoke other languages.

The periodical press of Austria, in 1874, was divided as follows :

1. ACCORDING TO THE CONTENTS.	2. ACCORDING TO LANGUAGES.		
Political papers.....	279	In German.....	544
Journals for political economy.....	81	In Czechic.....	108
Agricultural journals.....	58	In Polish.....	47
Industrial and technical journals.....	47	In Ruthenian.....	8
Military and nautical journals.....	10	In Slovenian.....	18
Journals for medicine and the natural sciences.....	28	In Servo-Croatian.....	8
Law journals.....	11	In Italian.....	57
Theological and religious journals.....	26	In German and Czechic.....	6
Journals for pedagogy, stenography, and for the young.....	68	In Italian and Servo-Croatian.....	4
Historical and literary journals.....	16	In French.....	2
Journals for theatre, music, art, fashion, sport, etc.....	87	In Greek.....	2
Journals of fiction and humor.....	59	In Hebrew (or with Hebrew type).....	11
Non-political local papers.....	62	Total.....	810
Commercial and other advertising papers.....	88		
Total.....	810		
		3. ACCORDING TO THE MODE OF PUBLICATION.	
		Dailies.....	85
		Four times a week.....	3
		Tri-weeklies.....	20

Total 1874.....			585

BRAUNAU, BOHEMIA.

According to the common budget of the whole empire for the year 1877, the amount required for the ordinary branches of administration was 117,091,389 florins. The receipts for the same branches were estimated at 5,779,780 florins, the receipts from customs at 11,000,000 florins, leaving 100,311,659 florins to be distributed among Austria and Hungary. Of this amount, 2,006,233 florins were to come from the Treasury of Hungary, as a part of the Military Frontier had been placed under civil government during the year; and of the balance Austria contributed seventy per cent. and Hungary thirty per cent. The common debt of the empire on January 1, 1876, amounted to 411,999,941 florins. The budget of Austria proper, for 1876, was as follows (in florins) :

RECEIPTS.	Cost of Collec- tion.		EXPENDITURES.	Ordinary.	Extraordinary.
	Total Receipts.				
1. Ministry of Finance	816,699,657	52,869,950	1. Civil list	4,650,000	
2. Ministry of Commerce	18,563,000	19,308,000	2. Imperial Cabinet Chancery..	74,745	
3. Ministry of Agriculture	10,942,070	8,269,100	3. Belchgrath	679,290	1,000,000
			4. Imperial Court	92,000	
Total for 1, 2, 3.....	846,204,727	80,899,850	5. Council of Ministers	702,860	25,000
Or	844,984,906	Extraordinary, 1,851,821	6. Ministry of the Interior.....	16,950,000	2,780,800
4. Council of Ministers	481,900		7. Ministry of Public Defense..	7,776,800	660,000
5. Ministry of the Interior.....	1,108,800		8. Ministry of Education	13,899,900	3,954,000
6. Ministry of Public Defense	84,128		9. Ministry of Finances	69,949,150	1,568,100
7. Ministry of Education	5,009,298	1,768,448	10. Ministry of Commerce	20,895,000	3,854,800
8. Ministry of Justice	887,400		11. Ministry of Agriculture.....	10,996,950	1,968,530
9. Miscellaneous	155,600	18,293,756	12. Ministry of Justice	19,669,900	1,788,125
Total.....	852,201,822	21,851,020	13. Board of Control	157,500	1,000
Total receipts.....	878,552,848		14. Pensions	18,168,000	
Net receipts	298,212,992		15. Donations	582,000	26,190,918
			16. Public debt	101,056,051	1,852,961
			17. Administration of public debt	759,800	
			18. Cis-Leithan portion of the common expenditure.....	81,518,897	
			Total.....	861,881,258	42,825,227
			Total expenditure.....	404,156,480	

The public debt of Austria proper on January 1, 1876, was as follows (in florins):

TITLE OF DEBT.	Bearing Interest.	Bearing no Interest.	Total.
1. Consolidated debt, old ..	589,582	734,698	1,314,280
Consolidated debt, new ..	2,546,658,975	181,920,515	2,678,649,490
2. Floating debt	29,187,981	781,592	29,919,573
3. Rentes for damages	12,556,808		12,556,808
4. Rentes to Bavaria	1,750,000		1,750,000
T ^o l Jan. 1, 1876.	2,590,698,841	198,498,905	2,784,192,146
" Jan. 1, 1875.	2,569,107,804	184,600,841	2,785,703,645

The navy was commanded in October, 1875, by the following staff of officers:

OFFICERS.	In Peace.	In War.
Admiral	1	1
Vice-admirals	1	2
Rear-admirals	5	6
Captains { of ships-of-the-line	16	18
{ of frigates	17	19
{ of corvettes	18	20
Lieutenants	120	135
Ensigns	150	170
Cadets	110	135

The number of sailors was to be 5,836 in peace, and 11,532 in war.

The total commerce, exclusive of precious metals, within the imperial line of customs, for 1873 and 1874, was as follows:

COUNTRIES.	IMPORTS.		EXPORTS.	
	1873.	1874.	1873.	1874.
German Customs Union.....	427,800,000	395,400,000	262,600,000	265,800,000
Switzerland.....	2,200,000	2,200,000	1,400,000	1,400,000
Italy	20,500,000	19,700,000	23,800,000	24,100,000
Turkey	84,000,000	87,400,000	46,100,000	52,600,000
Russia	17,000,000	27,600,000	27,000,000	34,100,000
Total by land	501,500,000	482,800,000	380,400,000	378,000,000
Total by sea	81,600,000	84,400,000	63,200,000	71,300,000
Total.....	583,100,000	567,200,000	443,600,000	449,300,000

The army in August, 1876, was composed as follows:

ARMY.	PEACE-FOOTING.			WAR-FOOTING.		
	Officers.	Men.	Horses.	Officers.	Men.	Horses.
Regular army.....	14,666	257,091	46,185	28,504	758,992	146,286
Imperial Landwehr	572	1,999	94	2,916	118,626	6,070
Royal Hungarian Landwehr	461	7,818	1,830	8,028	127,284	16,749
Others	148	18,908		148	18,908	
Total.....	15,847	280,811	47,539	29,596	1,018,755	171,048

The navy in August, 1876, was as follows:

VESSELS.	Tons.	Horse-Power.	Guns.
12 Iron-clads	58,480	9,850	188
3 Frigates	9,510	1,700	63
3 Corvettes	18,520	2,850	65
5 Gunboats	3,880	1,010	18
5 Screw-sloops	2,590	405	10
3 Side-wheel steamers ..	1,690	400	7
9 Other steamers	11,890	2,850	19
2 Monitors	620	160	4
9 School-ships	8,290		50
6 Hulks	4,590		10
5 Tenders	1,060	286	
1 Towboat	200	90	
68 vessels	117,070	18,101	404

The commerce of Trieste in 1874 and 1875 was as follows:

PORTS.	IMPORTS.		EXPORTS.	
	1874.	1875.	1874.	1875.
European ports	91,525,000	94,202,000	62,885,000	70,686,000
Transatlantic	26,588,000	29,018,000	5,127,000	4,287,000
Austrian ports	10,255,000	13,848,000	25,198,000	27,488,000
Total.....	128,368,000	137,068,000	92,658,000	102,461,000

The movement of shipping in the port of Trieste was as follows in 1875:

VESSELS.	ENTERED.		CLEARED.		
	No.	Tons.	No.	Tons.	
Sailing-vessels	laden	5,708	269,880	4,992	828,559
	in ballast..	918	94,107	1,668	46,872
Steamers	laden	1,295	606,561	1,442	595,246
	in ballast..	241	88,426	99	48,628
Total	8,162	1,008,914	8,201	1,009,885	

The commercial navy on January 1, 1876, was as follows:

VESSELS.	No.	Tons.
Sea-going vessels	577	280,502
Coasting-vessels	1,974	85,407
Fishing-barks and lighters	4,889	18,811
Or		
Steamers { long voyage (16,450 horse-power)	78	54,880
{ short voyage (767 horse-power) ..	95	1,391
Sailing-vessels	7,843	372,949
Total	7,440	899,220

The railroads in operation in Austria proper on January 1, 1876, comprised 10,397 kilometres (1 kilometre = 0.62 mile).

The work of the Post-Office in Austria proper in 1875 was as follows:

Letters on which postage was due	169,276,000
Postal-cards	21,428,000
Free letters	26,255,000
Samples	5,578,000
Printed matter	19,794,000

The number of post-offices was 4,126.

The telegraph lines and wires in operation in 1875 were as follows:

	Kilometres.
Lines	82,868.4
Wires	54,884

The number of telegraph-stations was 2,212. The number of dispatches sent and received was 4,547,830.

The new armament of the Austrian artillery with the Uchatius gun was completed during the year. The Uchatius gun like the Krupp, is a breech-loader, and has given, in comparison with the Prussian weapon, the most satisfactory results. The alloy of which it is made is a simple mixture of copper and tin, but the peculiar plan adopted for suddenly cooling the mass after casting is maintained a close secret. Analysis of the metal gives no clew to the nature of this operation, the result of which is to secure an even and crystalline alloy free from "honey-comb" and "tin-pitting," which are the usual defects met with in bronze-work. After casting the cannon, and suddenly cooling it, General von Uchatius dilates the bore by introducing a steel wedge, which increases the calibre considerably, and places the weapon in a state of tension that is said to add much to its capacity to withstand the effects of continued firing. The expense of the bronze weapon is far less than that of the steel cannon of Krupp, for while a field-piece of the latter construction costs no less than £114, if fashioned of crucible steel, the value of the Uchatius gun is not more than £85. As it is, the new weapons are to cost the Austrian Gov-

ernment upward of £1,500,000, so that, had the Austro-Hungarian army been fitted out with Krupp guns instead, more than three times as much money would have been required.

The two Houses of the Reichsrath resumed their labors in January. The Herrenhaus on January 14th took up the discussion of the monastic association bill, which had been brought in by the Government in 1874.* Cardinal Schwarzenberg and all the bishops and abbots had taken their seats on this occasion. It was bitterly attacked by the cardinal and other Catholic speakers. The former stated that whoever attacked the convents attacked Christianity. The convents were the bulwarks of the Church, and were the first points to be attacked by those who opposed the Catholic Church. Minister Stremayr, speaking for the Government, stated that no hostile act against these corporations was intended by the law. It could never be the object of the state to meddle with the inner relations of the Church. On the 17th the entire law was finally passed to a second and third reading. On the other hand, the law regulating the legal status of the Old Catholics was rejected.† The monastic association law was passed in the Chamber of Deputies in February, after considerable debate. In November, Minister Stremayr informed the confessional committee of the House of Deputies that the Emperor had refused to sign the law as framed by the two Houses of the Reichsrath, but that he had authorized the ministry to bring in a new law. On February 9th the Chamber of Deputies adopted the new marriage law, according to the majority report of the committee. The discussion turned chiefly on the question in what manner the impediment to marriage was to be removed in the case of clerics. The majority report as adopted by the House made a distinction between those who had received the higher and the lower orders, and proposed that, in the case of the former, the impediment to marriage should only be removed by a change of religion, while the latter would merely be required to leave the clergy. The minority was opposed to this distinction, and proposed that the vow of celibacy should no longer be valid after the cleric had renounced his profession, no matter whether he had received higher or lower orders, and without leaving the religious community which regarded the vow of celibacy as an impediment to marriage. A third proposition, by Freiherr von Händel, which was sanctioned by the Minister of Justice, also wished to see no distinction made between the higher and the lower clergy, but demanded that a change of religion should in all cases precede the legalization of marriage. The other propositions of the committee regarding mixed marriages, and the remarriage of persons who had left the Catholic Church, were adopted without change. The Reichsrath adjourned on March

4th. It met again on October 4th. The Government sent in the budget, and several plans for an intended revenue reform were submitted to the House. The Czechic deputies early in the session repeated their old tactics of having an address read refusing to take part in the proceedings. The President, Dr. Rechbauer, thereupon declared their seats vacant.

The Eastern question kept the Austrian diplomatists very busy during the year, Austria being, by its position and the composition of its population, one of the nations of Europe most interested in the struggle. Even during the rebellion in the Herzegovina, the Slavic population of the Austrian Empire very plainly expressed their sympathies for their struggling brethren in Turkey. After Servia and Montenegro had taken up arms in the movement for a union of all the Slavic tribes, the situation became critical for Austria, as her Slavic population appeared to be eager to join in the war. On the other hand, the Government endeavored to preserve the strictest neutrality,

Russia, and Bosnia and the Herzegovina by Austria—in order to secure in this manner proper guarantees for the reforms to be proposed. The Emperor of Austria, in his answer to this letter, which also remained a secret, is supposed to have stated that every step taken in this matter must be characterized by the same unity which had marked the previous steps of the great powers, and that it therefore depended upon the consent of all the powers whether the Porte should be proceeded against in such a manner, and to whom the execution of this plan should be committed. In October the Czar sent another letter to the Emperor, which was believed to renew his former propositions. A strong party, led by the Archduke Albert, was working for the same end in Austria. Immediately after the assembling of the Reichstag in October two interpellations were addressed to the Government, one from the Germans and one from the Slavi. On October 27th Prince Auersperg, the president of the ministry, replied to both. In answer to the Germans, he stated that, although the Constitution contained no clause regarding the interference of the cis-Leithan Government with the Ministry of Foreign Affairs, still such interference was warranted by the reaction of the foreign policy upon home affairs. The Government had always fulfilled its duties in this respect, and received most willing information from the Minister of Foreign Affairs on every phase of the political situation. A more direct interference had not been warranted, as the ministerial programme, repeatedly approved by the cis-Leithan Government and the delegations, had been strictly carried out. The cis-Leithan Government would also state in the present phase of the Oriental question that the Minister of Foreign Affairs had, by a firm peace policy, done much to preserve the peace of the empire and of Europe in general. The policy of the empire was, above all, the preservation of peace, which in itself excluded the idea of annexation of new territory. No one could appreciate the blessings of peace more than the Government. The entire foreign policy of Austria was a proof of the consistency of this desire. The Government, therefore, was in a position to declare that the Minister of Foreign Affairs, in full accord with the Government, would also, under the circumstances mentioned in the interpellation, strive in the first place to secure peace, and would use every means to preserve it for the empire. At the same time no doubt need be entertained but that these attempts would find their natural limit in the duty to guard the safety and the interests of the empire at all times and under all circumstances. A programme which would demand peace without this natural limitation would expose the interests of the monarchy in advance, and would be least adapted to secure peace. This was the idea on which the foreign policy of

BOHEMIAN PEASANTS.

completely blockading the Turkish border. In the negotiations which ensued between the Turkish Government and the great powers of Europe, Austria took a prominent part. In the middle of September it declared its concurrence in the Anglo-Russian peace proposals to be submitted to Turkey. At the close of September the Czar Alexander of Russia addressed a long autograph letter to the Emperor, after having previously (in June) had a conference with him at Prague. Both the contents of the letter and the proceedings of the conference remained a secret, although it was generally surmised that in his letter the Czar proposed the joint occupation of the Christian provinces by the two powers—Bulgaria by

the empire had been and still was based, and which the Government approved. In conclusion, he (Prince Auersperg) wished to add that the Minister of Foreign Affairs was determined not to let himself be deterred from the course once taken by any warlike demonstrations, or any manifestations which might injure the authority of the empire. In answer to the Slavic interpellation, he stated that it was not the business of the Minister of Foreign Affairs to consider the interests of different races, but to keep in view the interests of the whole monarchy, particularly as the interests of the whole were also the interests of each member of the monarchy. From the beginning of the Oriental difficulties the Ministry of Foreign Affairs had had, in full accord with the Government, two objects constantly in view: the preservation of European peace, and the improvement of the condition of the Christian population of Turkey. This policy, which sought to give to the Christians of the East peace and civilization, was in the interest of the entire monarchy. The Government had heretofore pursued this policy, and would continue it in future. This speech created great excitement in the House, as many of the deputies thought that the Government also considered the interpellation of the deputies as one of those manifestations by which it would not let its policy be influenced. Prince Auersperg in consequence made the declaration, on October 30th, that he had only referred to demonstrations like those of the students of Hungary (*see HUNGARY*). A spirited debate followed from November 4th to November 7th in the House, in which the policy of the Government was defended by two speakers only, the deputy Plener, of the Constitutional party, and the most bitter opponent of the entire Constitution, Count Hohenwart, formerly president of the ministry. The opposition had a host of speakers, most of whom, however, differed in the policy they wished to see pursued. Some proposed to join Russia against Turkey, some wished to aid Turkey against Russia, and others advocated peace at any cost. M. Fanderlik, the leader of the Slavi, demanded of the Government that it should take the part of the oppressed Slavi in Turkey, and even went so far as to say that the Austrian Slavi would never fight against Russia. Count Hohenwart in his speech declared himself satisfied with the declaration of the Government that it would protect the interests and honor of Austria with the entire force of the Government if necessary, and laid particular stress upon the fact that the Government must consider the interests of the entire monarchy only, and not of any particular race.

In June the Minister of War, Baron von Koller, resigned his office. The Emperor, on accepting his resignation, conferred upon him the grand cross of St. Stephen in recognition of his eminent services. The Emperor appointed in his place Count Bylandt-Rheidt.

The Minister of Finance, Baron von Holzguthan, died June 20th, and was replaced by Baron von Hofmann, who had occupied the position of chief of a section in the Ministry of Foreign Affairs.

The seventeen provincial Diets of cis-Leithan Austria met on March 1st. In none of them was any business of importance transacted, with the exception of the Tyrol. This Diet, in which the Catholics have a decided majority, protested against the encroachment upon the religion of the province on the part of the Government, by authorizing the organization of Protestant congregations. This demonstration was immediately answered by the Government by the closing of the Diet. The Liberal members of the Diet also drew up a document protesting against the clerical demonstration. At the elections for the Diet in Galicia, held in October, the Ruthenians, forming the Constitutional party in that province, were completely defeated by the Poles.

BREGENZ.

During the month of February the provinces of Upper Austria and Moravia were visited by most disastrous floods, in which a large number of houses were destroyed. A severe shock of earthquake was felt on January 17th, through a large part of the empire, affecting the Danube basin from Passau in Bavaria to Presburg in Hungary. The shock was felt at Wittingau in Bohemia, Scheletau in Moravia, Budweis, Trebitsch, Tischnowitz, and Prerau, and elsewhere to the north, while the southern limits were marked by Odenburg, Kindberg, and the Noric Alps. Rents were visible in many houses in Vienna. Several chimneys had fallen. The river Danube receded from the right bank and passed in a great wave to the other side.

The negotiations with Hungary continued during the year. On January 24th the House resolved to request the Government "to protect with firmness and decision the interests of Austria proper in the negotiations;" while the Herrenhaus, on two different occasions during the same month, resolved "not to sanction any further loosening of the union of the two

parts of the monarchy, nor anything that would cause a further taxation of cis-Leithania, or an injury to the credit system.

A new commercial treaty with Roumania was passed on February 27th.

In the beginning of October the Emperor created the following new life-members of the Herrenhaus: The former Minister of War, Baron von Koller; ex-Governor Mamula, of Dalmatia; M. Moser, the Governor of the "Boden-Credit-Anstalt;" the Prelate Charles, of the Stift Molk; two chiefs of sections, Wehli, of the Ministry of the Interior, and Vesque von Püttingen, of the Foreign Office; Stählin, the President of the Court of Administration; Napadievitch, the Ruthenian President of the Senate of the Supreme Court; and Apfaltern, Count Thun, and the Italian Pace, to represent the large real-estate owners.

The delegations of the two parts of the empire met on May 15th, in Pesth. The Government introduced the budget for the entire monarchy for 1877. On the 18th the Emperor received the delegations in Pesth, and in his answer to the addresses of the two presidents stated that the events in the East had shown him clearly the necessity of strengthening the bonds of union between the two parts of the empire. He also expressed the hope that the efforts of the Northern powers for peace would be crowned with success. The Government had proposed an additional item of 7,000,000 florins in the budget of the Ministry of War. This latter proposition met with considerable opposition, but the entire budget as proposed by the Government was finally passed. The delegations adjourned on the 2d of June.

B

BAER, KARL ERNST VON, a Russian naturalist, born in Esthonia, February 17 (29), 1792; died November 29, 1876. His father wished him to prepare himself for a military career, but in 1810 he went to the University of Dorpat, where he studied medicine, and graduated in 1814. He soon after set out on a scientific journey through Germany, and in Würzburg devoted himself to the study of zoöatomy. In 1819 he was appointed Extraordinary and in 1822 Ordinary Professor of Zoöatomy in Königsberg, where he also formed the Zoölogical Museum. In 1829 he went to St. Petersburg as member of the Imperial Academy and Professor of Zoöatomy, but returned to Königsberg in 1830, where he remained until 1834, when he again went to St. Petersburg. In 1837 he was commissioned by the Imperial Academy to make a voyage of exploration to Lapland and Nova Zembla. From this journey he brought home a large number of plants, but owing to various causes he was unable to execute his original project of visiting the icebergs on the northern coast of Nova Zembla. The results of this journey he described in the *Bulletin Scientifique* of the Imperial Academy. In 1851-'56 he was commissioned by the Government to examine the fisheries in Peipus Lake, in the Baltic and in the Caspian Sea, on which examination he published a work of four volumes. In 1861 he and Rudolf Wagner called a meeting of anthropologists in Göttingen. In 1862 he resigned as a member of the Academy, but was immediately elected an honorary member. He was the author of a large number of works, of which the following are the most important: "De ovi mammalium et hominis genesi" (1827); "Untersuchungen über die Gefässverbindung zwischen Mutter und Frucht in den Säugethieren" (1828); "Ueber die Ent-

wickelungsgeschichte der Thiere, Beobachtungen und Reflexionen" (2 vols., 1828-'37; this work remained unfinished; Baer received for it, in 1831, the golden medal of the Academy of Sciences in Paris); "Historische Fragen mit Hilfe der Naturwissenschaften beantwortet" (1874); and "Studien auf dem Gebiet der Naturwissenschaften" (1874). He also contributed a large number of articles to Pander's *Beiträge zur Naturkunde*, Burdach's *Physiologie*, Meckel and Müller's *Archiv für Physiologie*, and to the publications of the Academy of St. Petersburg. The "Kaspische Studien," which appeared in the latter, were published separately, and are particularly remarkable as the best description of the Caspian Sea. He published, together with Helmersen, "Beiträge zur Kunde des Russischen Reichs" (vols. i.-xvi., 1839-'73). See his "Autobiography" (1866).

BAKUNIN, MICHAEL, a Russian politician and agitator, born in 1814; died July 1, 1876. He was educated in the School for Cadets in St. Petersburg, and, having passed his examination, received an appointment as ensign in the artillery. He soon resigned this position, in order to devote himself to philosophical studies. In 1841 he went to Berlin, where he became a pupil of Hegel. The following year he went to Dresden, where he continued his studies under Arnold Ruge, and contributed a philosophical essay under the *nom de plume* of Jules Elisard to the *Deutsche Jahrbücher*. In 1843 he went to Paris, where he kept up intimate relations with the Polish refugees. He then passed to Switzerland, where he came into connection with the communist and socialist societies. This caused the Russian Government to order him to return home, but he declined to obey. In 1847 he delivered in the Polish banquet in Paris a speech, in which he proposed

the simultaneous rising of the Russians and the Poles against the authority of the Emperor. In consequence of this speech the Russian Government succeeded in obtaining his expulsion from France. Having fled to Brussels, he found himself in great danger in consequence of a reward of 10,000 rubles offered for him by the Russian Government. He returned to Paris after the Revolution of February, 1848, and in June of the same year took part in the Slavic Congress at Prague, and the revolutionary movements succeeding it. He then went to Berlin, but soon was ordered to leave the Prussian dominions. In March, 1849, he went to Dresden, where he became one of the organizers and leaders of the riots of that year. After their suppression he was compelled to flee, and on May 10th was captured in Chemnitz, together with Heubner. He was brought to the fortress of Königstein, and in May, 1850, was sentenced to death. His sentence was, however, commuted to imprisonment for life, and in June of the same year he was delivered to Austria. Here he was also sentenced to death, which was again changed to imprisonment for life, and he was then handed over to Russia, there to be again tried for political offenses. After having spent several years in the fortress at St. Petersburg, he was transported to Eastern Siberia. Here he spent several years as a penal colonist, and then received permission from the Governor-General Korsakoff to settle in the Russian territory of the Amoor. From there he succeeded in escaping to Japan on an American vessel, and thence he went by way of California to London. He immediately resumed his political activity, inciting the Russians and the Poles in numerous addresses and pamphlets to rise against the Government and the nobility, and to form a large Slavic federal republic. He entered into communication with Alexander Herzen and Ogarev, and took part in the publication of the journal *Kolokol*; but in the end even fell out with his own party by the excess of his radicalism. In 1863 he went to Stockholm, to aid the expeditions against the Baltic provinces, fitted out by Russians and Poles. After the failure of this plan he went to Switzerland, where he for some time took part in the work of the "International." His attempt to create in this union of working-men a secret society with the object of bringing about a general anarchy brought him into conflict with the other leaders of the union, and in the Congress of Hague, in 1872, he was with a large number of his friends formally expelled from the "International," since which time he has been bitterly attacked in the radical press. His influence on the young men of Russia continued for some time, but was also gone at the time of his death. In 1873 a difficulty arose between him and Marx, and since then he ceased entirely to labor for the "International," and retired to private life.

BALARD, АНТОИНА ЖЕРОМЪ, a French

chemist, born September 30, 1802; died at the close of March, 1876. He was successively professor at the Royal College, at the School of Pharmacy, and finally at the Faculty of Sciences, in Montpellier. The discovery of bromine, in 1826, gained for him great reputation. He was soon after called to Paris to take the place of Thénard as Professor of Chemistry in the Faculty of Sciences. In 1844 he was elected a member of the Academy of Sciences. He was soon after appointed Master of Conferences in the Normal School, and in 1861 succeeded M. Pérouze as Professor of Chemistry in the College of France. Besides his discovery of bromine, he made other useful and interesting discoveries, as extracting the sulphate of soda directly from the sea-water. He did not write any books, but furnished a large number of articles to the *Annales de Physique et de Chimie* and to the *Mémoires* of the Academy of Sciences. He exhibited chemical products at the Universal Exhibition of London in 1851, and was one of the jurors in the Exhibition of Paris in 1855, and at London in 1862. In 1868 he was appointed Inspector-General of Superior Instruction, and Honorary Professor in the Faculty of Sciences in Paris. He was decorated with the cross of the Legion of Honor in 1837, was created an officer in 1855, and a commander in 1863.

BALDASSERONI, GIOVANNI, an Italian statesman, born in Leghorn in 1790; died October 19, 1876. After holding several offices in the customs service in the grand-duchy of Tuscany, he was appointed administrator of finances. In this position he gained the confidence of the grand-duke to such a degree that in 1845 he was appointed counselor of state, and was intrusted with the actual direction of the finances of the country, although he was not created director of the finances until 1847. In the ministerial crises of 1847 and 1848 he retained his position under all the varying governments. After having been appointed senator, he was compelled to retire with the ministry of Ridolfi by the republican demonstration of July 30, 1848. For a time he did not take part in public affairs, but on May 24, 1849, Leopold II. appointed him president of the new conservative ministry, while at the same time he took charge of the ministry of finance. In this position he remained until the overthrow of the grand-duke in 1859. He wrote a biography of the Grand-duke Leopold II. (1871).

BANDEL, JOSEPH ERNST VON, a German sculptor, born May 17, 1800; died September 25, 1876. He received his first instruction in art in Nuremberg, and subsequently attended the Art Academy in Munich. As early as 1820 he began to furnish for the Art Academy of Munich well-executed works, among which a statue of Charitas in marble attracted special attention by its delicacy and artistic beauty. Among the marble busts made by him, that of King Maximilian of Bavaria was notice-

able. But the great work of his life was the colossal statue of Arminius, or Hermann, the Deliverer of Germany, on the Grotenburg, near Detmold. It was begun as early as 1835, but suspended in 1841, in consequence of the exhaustion of his funds. In spite of frequent and bitter disappointment, Bandel never lost the hope of completing a work which he looked on as the first national monument of the great battle in the Teutoburg Forest. After sacrificing his entire private property in the prosecution of his labors, he saw at length, in 1871, his work nearly finished. Then the Imperial Government of Germany made an appropriation of 10,000 thalers for its entire completion, and on August 17, 1875, the statue was unveiled in the presence of the German Emperor, a number of German princes, and a vast concourse of people from all parts of the empire. Simultaneously with the unveiling of the statue on the Grotenburg, enthusiastic meetings in commemoration of the event which this statue was to celebrate took place in all the large cities of Germany. Even in foreign countries, as in the United States, the German population took part in the celebration by sending telegrams to the Emperor and Bandel, and by appropriate addresses. The whole statue weighs 76,570 kilogrammes (one kilogramme = 2.20 lbs.), of which 10,588 kilogrammes are copper, 63,076 wrought-iron, and 2,906 cast-iron. The height of the statue is 17.3 metres up to the top of the helmet, 19 metres to the end of the extended right hand, and 26 metres to the end of the uplifted sword. The entire monument, therefore, inclusive of the foundation, 31.4 metres high, will attain the extraordinary height of 57.4 metres, or 183 feet. (For a full account of the statue, and the ceremony of unveiling it, see ANNUAL CYCLOPEDIA for 1875, page 355.) Among the other works of Bandel, the following are particularly noteworthy: "Amor and Psyche," "Venus," and the monument on the grave of Herr von Langer, the Director of the Royal Art Academy in Munich. Bandel was peculiarly noted for his works in marble, in the artistic finish of which he is ranked by critics among the best sculptors of modern times. In 1846 he published, with Massmann, "Der Exsterstein in Westfalen."

BAPTISTS. I. REGULAR BAPTISTS IN THE UNITED STATES.—In the following table is given a summary of the statistics of the Baptist churches in the United States for 1875, as they appeared in the *American Baptist Year-Book* for 1876 (published in January, 1876). The decrease from the previous year which is apparent in some of the items is explained by the fact that the anti-mission Baptists, included in the tables of the previous years, were omitted in the present one. They number 41,454 members. Had they been included, the table would have shown an increase of 95,583 members. The number of additions by baptism during the year was 32,515:

The annual meeting of the *American Baptist Publication Society* was held at Buffalo, N. Y., May 25th. The report stated that the total receipts of the society for the year ending March 1, 1876, had been \$564,064.05. Of this, \$73,699.42 were received in the Benevolent Department, leaving \$490,364.63 as the amount received in the Business Department. Of the latter sum, \$180,203.57 had been given specifically for the publication building, leaving the actual ordinary business receipts of the year, \$310,161.06. The new building for the publication-house in Philadelphia had been finished, at a total cost for ground, building, and furniture, of \$258,586.68, all of which was either paid or provided for, and was formally opened February 29, 1876. Eighteen new publications had been added to the list of the society, of which 57,300 copies had been printed. The total number of publications on the catalogue of the society, March 1, 1876, was 1,174. The Missionary Department of the society had continued the Bible and Sunday-school work at Rome, Italy, and had sustained a general Sunday-school secretary and State Sunday-school missionaries and colporteurs in different States and Territories.

The anniversary of the *American Baptist Home Mission Society* was held in Buffalo, N. Y., May 26th. The Hon. Samuel A. Crozer presided. The report showed that the receipts of the society for the year ending April 1st for missions and educational purposes had been \$175,584.38, or about \$25,000 less than the receipts of the previous year. Report was made of the seven freedmen schools: Wayland Seminary, Washington, D. C., 92 pupils; Richmond Institute, Richmond, Va., 79 pupils; Shaw University, Raleigh, N. C., 236 pupils; Benedict Institute, Columbia, S. C., 115 pupils; Augusta Institute, Augusta, Ga., 95 pupils; Nashville Institute, Nashville, Tenn., 112 pupils; Leland University, New Orleans, La., 119 pupils. A report was presented on Indian missions, showing that among the tribes of the Indian Territory there were three Baptist associations, 84 churches, and nearly 5,000 members. A delegate was present from the Consolidated American Baptist Missionary Convention (colored), who presented resolutions which had been adopted by that convention in acknowledgment of the value of the work of the society among the colored people, and expressing readiness to cooperate with it. In return a resolution was adopted, "That this society extend to the American Baptist Consolidated Convention our expression of fraternal fellowship, and desire to cooperate as far as practicable in their most laudable attempt to conduct missionary and educational work under their own management and support." A resolution was also adopted, "That we cordially and urgently invite our brethren of the entire South, and particularly the ministers and members of Southern Baptist churches, to cooperate with our teachers and our board, even more earnestly than ever before, in the building up and strengthening of these schools for educating colored preachers and teachers."

The anniversary of the *American Baptist Educational Commission* was held in Buffalo, N. Y., May 24th. The report discussed the relations of the Baptist denomination to education.

The fortieth annual meeting of the *American and Foreign Bible Society* was held in New York City, May 16th. The treasurer reported that there was a balance in the treasury May 1, 1875, of \$4,506.33; that the receipts during the year had been \$8,725.77, and the expenditures had been \$10,466.16, leaving a balance of \$2,765.94.

The anniversary of the *American Baptist Missionary Union* was held in Buffalo, N. Y., May 23d. The Rev. Barnas Sears, D. D., LL. D., presided. According to the financial statement in the report, the total receipts of the Union for the fiscal year ending March 31st, applicable to the work in hand, were \$245,997.23. The total of liabilities for the missionary year in the foreign field, ending September 30, 1876, were \$223,176.68. This left a balance

of \$22,850.55 applicable to the deficiency of the previous year, reducing it to \$30,136.17. In addition to the receipts reported above, gifts have been made to the Union to be founded, and gifts in the nature of annuities, sufficient to swell the total of receipts to \$258,678.08. Fourteen new missionaries had been sent out under the auspices of the Union and the two Woman's Baptist Missionary Societies. The Rev. San-Pan Kau-too, a Karen, educated in this country, had been sent back to labor for his people. One other missionary was under appointment of the Woman's Society for Burmah. Six missionaries, now in the United States, were expecting to return to their posts within the year, and several missionaries had retired from their posts for a vacation.

A correspondence was recommended with the Baptist Missionary Board of the South, and with the Colored Baptist Conventions of the United States, for the purpose of agreeing upon some policy of agency in which all the Baptists of the United States may unite in the support of missions to Africa. A delegation was received from the Southern Baptist Convention.

The following is a summary of the statistical reports of the mission-fields:

ASIATIC MISSIONS.

MISSIONS.	Missionaries.	Native Preachers.	Churches.	Members.
Burmah (nine stations).	75	438	404	19,471

Total.....	6	410	350	31,247
Total for all the missions	140	958	779	56,329

The missions in Sweden, France, and Germany are carried on entirely by native agencies.

The fifth annual meeting of the *Woman's Baptist Missionary Society of the East* was held in Boston, Mass., April 18th and 19th. The treasurer reported that the total receipts of the society for the year had been \$35,301.-91, and the total expenditures, \$34,157.62. Five new missionaries had been appointed, two of whom had gone to Burmah, two to Japan, and one was under appointment to Maulmain. More than 800 auxiliary circles, 90 children's bands and young ladies' societies, and 90 associational secretaries were reported as connected with the society. In the foreign work the society supported 18 missionaries,

besides a Karen assistant at Rangoon and a Eurasian at Nellore. These missionaries were laboring among the Burmans, the Karens, the Eurasians, and in Japan. Twenty schools were aided or supported, of which four had been begun during the year. In them were 51 native teachers and 1,420 pupils.

The fifth annual meeting of the *Woman's Baptist Missionary Society of the West* was held in Chicago, Ill., April 11th and 12th. The treasurer reported that the total receipts for the year had been \$13,744.02. The sum of \$11,816.93 had been spent in the foreign work, and \$1,467.43 had been applied to the "home expenses" of the society. The joint annual meeting of the two societies was held in Buffalo, N. Y., May 24th.

The annual meeting of the *American Baptist Historical Society* was held in Philadelphia, May 28th. The Rev. Dr. Malcolm, who had long served the society as president, having retired in consequence of age and infirmity, was chosen honorary president for life. The Rev. Dr. Cathcart was chosen president. The report stated that the society had now in its collection 4,264 bound volumes, besides a large body of valuable pamphlets and manuscripts.

Social unions have been organized in many of the Baptist churches of the United States, as voluntary societies for social and literary intercourse. A general convention of these *social unions* was held in Philadelphia, May 29th. Mr. J. P. Townsend, of New York, presided.

The *Southern Baptist Convention* met at Richmond, Va., May 11th. The Rev. J. P. Boyce, D. D., of Kentucky, was chosen president. The treasurer of the Foreign Mission Board reported that his receipts had been about \$45,000. This sum was stated to be about \$13,000 above the average collections—exclusive of the Rome chapel-fund—of the three past years; and some \$23,000, or 100 per cent., above the average of the six years previous. The women of Georgia and Virginia had contributed \$2,491.60 for the Moon house (so called after the Misses Moon, missionaries), in Fung-Chow, China, and the women of South Carolina \$1,343.41 for the missionary-house at Canton. Women in other States had also helped these objects. The total amount of \$8,726.27 had been raised for the house at Canton, and the expenditure for this purpose was limited to \$10,000. Reports were made of missionary operations, of which the following is a summary:

African Missions.—Foreign missionaries, 2; native assistants, 3; churches, 8; baptized, 26; total membership, 58. The Rev. W. J. David had visited the Vey people, north of Liberia, and had been impressed with the favorable opening for missionary effort. He afterward decided to establish himself at Tonchea. The convention recommended that approved colored ministers be advised to go to this field.

China Missions.—Foreign missionaries, 15;

ordained native pastors, 2; native assistants, 15; out-stations, 6; churches, 5; baptisms, 87; memberships, 350. The missions were at Fung-Chow, Shanghai, and Canton, that at Chefoo having been closed. At Canton an average attendance of 91 pupils was reported for all the schools, and a highest attendance of 121.

Italian Missions.—Stations at Rome, La Tour, Milan, Modena, San Capri, and Porsidonio, Lodi, Civitá Vecchia, and Bari, with the Rev. G. B. Taylor as American missionary superintendent, and seven Italian ministers. The Vatican adult school, under the care of the Rev. Mr. Van Meter, of 75 or 100 pupils, was addressed weekly by the Italian minister in Rome. Twenty-one thousand dollars had been secured toward the projected fund of \$40,000 for the church in Rome. The Northern Baptists had undertaken to raise \$20,000 of this sum, but had as yet failed to do so. The convention decided that the publication of the *Foreign Mission Journal* should be resumed as soon as practicable, and that the Home Mission Board should enjoy equal privileges and responsibilities. The treasurer of the Home Mission Board reported that the board was in debt to the amount of \$6,488.44. On account of this incumbrance, it had not enlarged its work. Its work among the Indian tribes was of a very interesting and profitable nature. It gave much attention to the colored people of the South, with results of great promise. Twenty-six missionaries had labored under its direction during the year, who reported 284 baptisms. The board was requested by the convention to employ to the fullest extent practicable any voluntary agents to collect money, and, as soon as it may be done without violation of present contracts, to dispense with paid agents, except in States where it shall be found impracticable to do without them.

The report on the missions among the Indian tribes spoke of the importance of this work, and declared that it had reached a crisis. Special efforts were recommended to provide the Indians with educational facilities. The Creek nation had made provision to give land for schools and for farms connected with them, \$70 *per capita* for scholars, to those who would go and establish schools among them. The Delawares and Shawnees were calling for religious and educational advantages. The convention resolved "that the agency of the Home Mission Board is an imperative necessity to meet the pressing wants of our own people and of the Indian tribes."

The president, Dr. Boyce, who is also president of that institution, reported of the Southern Baptist Theological Seminary that during the next year the contribution of the Baptists of Kentucky of \$300,000 to its endowment would be completed. The \$200,000 which were to be raised in the other States must be secured within the next two years, else the funds for the support of the professors would

be exhausted, and the seminary would have to be closed. A resolution was passed, expressing the interest of the convention in the seminary, and recommending efforts among the people to complete the endowment before the end of 1876. Eight visitors were appointed to attend the Northern Baptist anniversaries to be held in Buffalo, N. Y. New Orleans was appointed the place for the next meeting of the convention.

The twenty-seventh anniversary of the *American Bible Union* was held in Brooklyn, N. Y., November 16th. The report showed that the expenditures for the year had been \$3,084.69, this sum including donations amounting to \$3,232.17. The whole amount had been met by receipts during the same period. The following books of the Old Testament were revised and ready for the press, awaiting the means to publish them: the books of Joshua, Judges, Samuel, Kings, Chronicles, and Isaiah.

II. FREE-WILL BAPTIST CHURCH.—The following is a summary of the statistics of the Free-Will Baptist Church, as they are given in *The Free-Will Baptist Register* for 1877:

YEARLY MEETINGS.	No. of Quarters by Meetings.	No. of Churches.	No. of Ordained Preachers.	No. of Communicants.

preceding year of four quarterly meetings, 118 ministers, 2,528 members, and 65 churches. The *Register* accompanies its statistical reports with the statement that "there are a number of associations of Baptists in America which, in doctrine and polity, are in general agreement with the Free-Will Baptists. No specific reports have been received from these associations, but, from the best information received, the inference is that they number in the aggregate not less than 25,000." At the Free-Will Baptist Printing Establishment, Dover, N. H., are published the *Morning Star*, the weekly newspaper organ of the denomination; the *Little Star* and the *Myrtle*, semi-monthly Sunday-school papers; *Lessons* for Sunday-schools, and a variety of denominational books. Among the *Benevolent Institutions* of the Free-Will Baptists, the *Register* names the Foreign Mission Society, the Home Mission Society, the Education Society, the Sabbath-School Union, the Temperance Society, the Central Association, the Kansas Free-Will Baptist Home Mission Society, the Free Baptist Woman's Mission Society, and the New Hampshire Charitable Society.—The *Register* gives the following list of Free-Will Baptist literary institutions: Bates College, Lewiston, Me., Rev. Oren B. Cheney, D. D., president, and ten professors; Nicholas Latin School, Lewiston, Me., four teachers; Hillsdale College, Hillsdale, Mich., Rev. D. W. C. Durgin, D. D., president, and eighteen professors and instructors; New Hampton Institution, New Hampton, N. H., eight teachers; Austin Academy, Centre Strafford, N. H.; Lapham Institute, North Scituate, R. I., four teachers; Whitestown Seminary, Whitestown, N. Y., nine teachers; Pike Seminary, Pike, Wyoming County, N. Y., eight teachers; Atwood Institute, Albany, Athens County, Ohio; West Virginia College, Flemington, West Va., Rev. W. Colegrove, A. M., president, and four teachers in the literary department; Ridgeville College, Ridgeville Ind.; Rochester Seminary, Rochester, Wis.; Wilton Collegiate Institute, Wilton, Iowa, four teachers; Stover College, Harper's Ferry, West Va., normal and academic departments in operation, seven teachers; Maine Central Institute, Pittsfield, Me., six teachers; Parsonsfield Seminary, North Parsonsfield, Me.; Green Mountain Seminary, Waterbury Centre, Vt.; Randall Academy, Berlin Cross-Roads, Ohio; Evansville Seminary, Evansville, Wis.; Lyndon Literary and Biblical Institution, Lyndon Centre, Vt.; Wallace College, Peach Grove, Tenn.

The anniversaries of the *Free-Will Baptist Benevolent Societies* were held in Saco, Me., beginning October 9th. A plan was adopted for retrenchment of the expenses of collecting the funds for the several societies. It provided that the Home Missionary, Foreign Missionary, and Educational Societies should employ one and the same agent for collecting funds. The corresponding secretary of the Sunday-School

The number of licensed preachers is given at 126. The tables show an increase from the

Union reported that there had been during the year an increase of 8,000 scholars and 2,000 teachers, and that about 2,000 conversions had taken place among the children.

III. SEVENTH-DAY BAPTISTS.—The Executive Board of the *Seventh-day Baptist Education Society*, in their thirty-first annual report, for 1876, made the following statements of the condition of the several literary institutions of the denomination—Alfred University, Alfred Centre, N. Y.: endowment fund, \$95,746.10; grounds, buildings, library, cabinets, and apparatus fund, income from 1836 to 1876, \$145,076; teaching and incidental fund, income from 1836 to 1876, \$211,574.38; revenue and expenditure account for the year ending July 5, 1876, \$9,088.46; number of teachers, 19; whole number of students during the year, 388. Wilton College, Wilton, Wis.: value of lands and buildings \$34,450; amount of endowment fund and notes, \$6,000; value of cabinets, apparatus, furniture, paintings, and libraries, \$5,600; value of other articles, estimated, \$300; total assets, \$46,350; number of students during the year—in the college classes, 67; in the academic classes, 175: total, 242; whole number of graduates from the beginning, 181, 98 of whom were in the academic classes and 83 in the college. Albion Academy: value of property, \$50,000; indebtedness, between \$2,000 and \$3,000; number of teachers, 10; whole number of students during the year, 263.

At the thirty-third session of the *Seventh-day Baptist Tract Society*, held at Walworth, Wis., October 1st, the Executive Board were instructed to pass over the work of the society to the General Conference as soon as it could be safely and legally done. The board were advised, also, to take "early and efficient" measures to procure the publication of tracts in large quantities, "bearing on every aspect of the Sabbath controversy, together with larger works containing more elaborate and extensive treatises on the same general topics, and a good commentary on all the passages of Scripture bearing, or supposed to bear, on the Sabbath."

The sixty-second session of the *Seventh-day Baptist General Conference* was held at Walworth, Wis., beginning September 27th. Letters were read from thirty-nine churches, representing the Eastern, Central, Western, and Northwestern Associations. D. E. Maxson was chosen president. Report was made by the Executive Board that, in accordance with instructions received at the previous session, a charter had been procured for the General Conference, bearing date July 4, 1876. The various societies were invited to become constituent members of the General Conference, without loss of their legal rights or prerogatives as societies. The report on the state of the Church represented that the educational work of the Church was in a prosperous condition at every point; that the missionary work was in good condition, but that its field of

operations should be enlarged; that the "Sabbath reform" work had been greatly extended during the year; and that the Sabbath-school work had everywhere become greatly strengthened. One hundred dollars, contributed for that purpose, had been received, and bestowed by the committee having the matter in charge upon young men preparing for the ministry at schools of the Church. The trustees of the "Seventh-day Baptist Memorial Fund" reported that they had just received the deed of a valuable property in Cattaraugus County, N. Y., the gift of Mr. Delos C. Burdick and his wife, of Pardee, Kan., constituting the largest gift yet made to the fund. The income of the fund had been considerably larger than during any previous year, so that a balance of \$251.89 was left after paying all appropriations and expenses. The Executive Committee of the Sabbath-School Department reported that there were under their care 58 schools, with 489 teachers and 4,519 pupils. One hundred and eighty-two baptisms had taken place in the Sunday-schools. A normal institute had been held at Westery, R. I., in November, 1875, with good results. The interchange of courtesies with the Seventh-day Adventists was commended, and its continuance advised, but a resolution was adopted in connection with this subject to the effect that "while the Seventh-day Adventists and Seventh-day Baptists cherish in common a sacred regard for the Sabbath of the Lord, and will still continue kindly Christian intercourse, nothing good to the cause of Christ would come of any measure looking to a consolidation of the two bodies, while holding such diverse and opposing views on important Christian doctrine." Varnum Hull was appointed to prepare a paper or tract on "the difference now existing between the Seventh-day Baptists and the Seventh-day Adventists," to be presented to the next session of the Conference for action upon it.

IV. BAPTISTS IN THE DOMINION OF CANADA.—The first *Baptist Conference of Ontario and Quebec* was held at Toronto, Ont., October 15th. Papers were read on subjects pertaining to the interests of Baptist Churches in the Provinces. The twenty-fifth annual meeting of the *Baptist Missionary Convention of Ontario* was held in Toronto, Ont., October 16th. The report of the secretary showed that the income for the year had been \$6,100. Forty-six missionaries had labored in the mission-fields, who had conducted services at 103 stations, and administered baptism to 584 converts. Ten associations, of which the convention is composed, reported an increase in membership of the churches of 2,391 by baptism.

The *Baptist Convention of Nova Scotia, New Brunswick, and Prince Edward Island*, met at Sackville, N. B., August 26th. Avard Longley, Esq., of Paradise, N. S., was chosen president for the year. The convention has charge of Acadia College and the foreign mission in-

terests of the Baptist churches of the three Provinces. The most important business of the present meeting was the consideration of a proposition to incorporate Acadia College in the scheme of the university at Halifax, which had been established by the Government of Nova Scotia as an examining university. Most of the other denominational institutions of the Province had associated themselves with this university, and the Government had appointed five gentlemen to represent the Baptist denomination in its senate. The convention unanimously decided that Acadia College should not comply with the enactments of the bill establishing the University of Halifax. It also resolved that, in order to enable the college to maintain an independent position under the circumstances, an appeal should be made to the members of the churches to give it a new endowment of \$100,000. A resolution was passed expressing confidence in the fidelity of the Baptist brethren who had been appointed on the senate of the university, but declaring that while no infringement was intended on their individual rights, it must be distinctly understood that their acceptance of office "must not be interpreted to indicate affiliation, direct or indirect, of Acadia College with the University of Halifax."

A report was adopted protesting against the desecration of the Christian Sabbath by the running of railway-trains and the consequent employment of men in connection therewith, and calling the attention of the Government to the subject.

V. BAPTISTS IN ENGLAND AND SCOTLAND.—The anniversaries of the *British Baptist Societies* began in London, on the 20th of April, when the fifty-first annual meeting of the *Baptist Building Fund* was held. The reports showed that the annual contributions had increased, and several legacies had been left the fund, the contributions of the year amounting to £1,700. The annual meeting of the *Baptist Union* was held April 24th. The report stated that during the year 20 new churches had been formed, 30 new chapels had been built, 3,371 new members and 20,318 new Sunday-schoolers had been received. The sum of £53,804 had been spent in building chapels. Ninety-three brethren had entered the ministry, and 55 ministers had died. The following amounts had been received for benevolent schemes: For the Home Mission Fund, £15,435; for the augmentation of ministers' incomes, £2,670; for ministers' widows and children, £15,161. For foreign missions, the Particular Baptists had raised £52,871, and the General Baptists, £9,471: altogether, £62,342; for the nine colleges, £15,655. Adding to these contributions the amounts raised for ministerial support (estimated at £170,000), the offertories at the communion (estimated at £20,000), the contributions for Sunday-schools, Dorcas societies, and incidental objects, it was thought that between £600,000 and £700,000 were an-

nually raised by Baptists for denominational purposes.

The anniversary of the *Baptist Missionary Society* was held April 27th. It was reported that the entire receipts for the year had been £44,762 1s. 10d.; but there had been a falling off of more than £2,000 in the contributions, and an increase of £2,081 18s. 4d. in expenditures: there was, therefore, a balance due to the treasurer of £4,354 12s. Five new missionaries had been engaged in the service of the society; six missionaries had returned home for their health, and three had died. About 99,000 copies of parts of the Scripture had been published from the mission press in Calcutta, in the Bengali, Hindi, and Geno languages. Selections from the Scriptures had also been prepared for popular use, in attractive forms, with engravings. In Rome the work of the missionaries had been prosecuted with vigor and success. Many thousand copies of the New Testament and of religious tracts had been circulated.

The thirty-sixth annual meeting of the *Bible Translation Society* was held April 24th. The income for the year had been £3,165. The work of translating, printing, and distributing the Bible was actively carried on in the various mission-fields.

The autumnal meetings of the *English Baptist Union* were held at Birmingham, beginning October 2d. About 950 ministers and delegates from all parts of the kingdom attended its deliberations. A resolution was adopted condemning the Elementary Education act of 1876 as unjust to nonconformists, and prejudicial to the interests of national education, "inasmuch as it shows great favor to denominational schools, which are almost wholly in the hands and under the control of the clergy of the Established Church; tends to demoralize parents by encouraging them to seek pecuniary help, even at the sacrifice of their conscientious convictions, for the education of their children; gives the management of schools, with power to compel attendance, to the guardians of the poor and others not elected with reference to such duties, and not properly responsible for the discharge of them; prepares the way for the dissolution of existing school boards; and, generally, is calculated to retard instead of advancing the establishment of a sound system of national elementary education. . . . For these reasons," the resolutions continue, "the assembly cannot accept the act of 1876 as a satisfactory settlement of the principles on which the elementary education of this country shall be permanently based; and, having little confidence in the effectual working of any conscience clause, anticipates the continual recurrence of cases of oppression toward the nonconformists, and recommends the immediate formation of vigilance committees in connection with every county association."

The annual meetings of the *Baptist Union* and

Home or Highland Mission of Scotland were held at Edinburgh, beginning October 25th. Three new churches, at Berwick, Dumbarton, and St. Fergus, Aberdeenshire, were received into the Union. The statistics for the year showed that there were connected with the Union 73 churches, 64 ministers (an increase in the year of fourteen ministers), 84 Bible-classes with 1,470 students, 62 Sunday-schools with 5,890 scholars and 690 teachers, 210 preaching-stations, and 7,361 members. Eight hundred and thirty-seven persons had been added to the communion during the year.

The Baptist Home Missionary Society for Scotland, chiefly for the Highlands and Islands, according to its report for 1875, employed nearly thirty agents, who occupied about 150 stations in the Shetland and Orkney Islands, the islands of the west coast, the northern and western Highlands, and one or two Lowland counties.

The annual meeting of the *New Connection of General Baptists* was held in Derby, beginning June 19th. The Rev. Dr. Buckley, of Orissa, India, was chosen president. The report of the secretary showed the following facts respecting the condition of the connection: Number of members in the home churches, 23,408; total number of members at home and in Orissa, 24,262; number of baptisms during the year by the home churches, 1,535; number of baptisms by the mission churches, 63. Six new churches were applying for admission, and when these were received, there would be 170 independent churches in the association. The condition of the denomination was represented as sound in doctrine and practice. A resolution was adopted against Lord Sanders's educational bill, which gave as reasons for opposing that measure, that it gives undue advantage to national schools (so called); that it tends to perpetuate denominational education; and that any measure which fails to provide for the universal establishment of board schools, while enforcing compulsory attendance either direct or indirect, inflicts an injustice upon all nonconformists.

VI. BAPTISTS IN GERMANY AND ADJACENT COUNTRIES.—The Triennial Conference of the *German Baptist Union* was held at Hamburg, beginning July 18th. The statistical reports showed that the Union numbered 110 churches, with 22,504 members, and 1,296 preaching-stations. The churches had raised during 1875, for religious purposes, the sum of 188,891 marks. During the three years since the last meeting of the Union, 4,874 believers had been baptized. It was decided to give increased attention to home missions, particularly in the Russian department. The Russian (Slavonic) Baptists employed seven of their number as missionaries among the people, and the Government no longer persecuted them. The meeting was attended by 151 deputies, of whom 57 were from the northwest, 53 from Prussia, one from Poland, 34 from the south, five from

Denmark, and one from Russia. Seven new churches were received into the Union—five from Germany and two from Russia.

BARILI, ANTONIO, an Italian composer and Professor of Music, born in Rome in 1824; died in Naples, July 12, 1876. From six years of age till thirteen, when he received the diploma of professor at the Congregation of St. Cecilia, being then the youngest member of that body, he was a pupil of his father. About this period his father died, when he entered upon the study of composition with Giuseppe Baini. At eighteen he left Italy for a short time, and, joining his mother in Spain, continued his studies under Carniser. Returning to Milan, he studied for a time under Mandanici, and afterward graduated as Maestro Composer in the Philharmonic Academy of that city at the age of twenty-one. The year following he was leader and director of the Italian Opera in Algiers, and the same year was serving in the same capacity in New York City. In 1850 he held a like position in the city of Mexico; and in 1854, returning to New York, organized the Sontag opera-troupe, with which he returned to Mexico. He remained in that city until 1861, and during that time composed his Spanish opera, "Un Pasio á Santa Anita." In 1856, under the patronage of President Comonfort of Mexico, he organized and established a conservatory, which is now a flourishing national institution. After this he returned to New York and lived there eleven years, devoting himself to the duties of his art, and giving to the stage a number of artists. From the end of that time until 1874 he resided and labored in Baltimore and Washington. In August, 1874, he went to Naples, where he opened an "Academy of pure Italian singing," especially for foreign ladies finishing their studies in Italy. Thirty years of unremitting toil had much impaired his health, which he hoped to recover in the salubrious climate of that city. But in this he was disappointed. Barili came from an eminent musical family. His father was a composer of distinction; his mother, Madame Barili Patti, a famous prima-donna, who once gained renown in the United States. His sister, Clotilda, was equally successful on the operatic boards; his brother, Nicolai, achieved popularity as a basso; his second brother, Ettore, was an excellent barytone; his half-sisters, Adelina, Carlotta, and Amelia Patti, have made a world-wide reputation; and his half-brother, Carlo Patti, gained many laurels as a violinist and orchestral director.

BAUER, OLARA, a German authoress, well known under the *nom de plume* of Karl Detlef, born June 23, 1836; died June 29, 1876. At an early age she lost her father, and being thus forced to provide for herself, she devoted her whole energy to develop her musical talents. She went to St. Petersburg, where she was a frequent visitor at the house of the Prussian ambassador, Herr von Bismarck, who ever

after took a great interest in her success. The impressions received on a journey through the Russian steppe caused her to devote herself to a literary career. Upon her return to Germany she settled in Dresden, and here, in 1869, published her first novel. Her last novel, "Ein Document," was not finished, one volume only having appeared at the time of her death. Her novels are chiefly descriptions of Russian life.

BAYER, HIERONYMUS JOHANN PAUL VON, a German jurist and scholar, born September 21, 1792; died June 18, 1876. After studying law at the Universities of Salzburg, Landshut, and Göttingen, he became in 1816 Privatdocent in the law faculty of the University of Landshut; in 1819 he was appointed extraordinary and in 1820 ordinary professor. After the removal of the University of Landshut to Munich, he five times occupied the position of rector. In 1853 he was appointed a life-member of the Upper Chamber of the Bavarian Diet. He is the author of a number of highly valuable works on law, among which are: "Vorträge über den deutschen gemeinen ordentlichen Civilprocess" (tenth edition, 1869); "Theorie der summarischen Prozesse" (seventh edition, 1859); "Theorie des Concursprocesses nach gemeinem Rechte" (fourth edition, 1868).

BELGIUM, a kingdom of Europe. Leopold II., King of the Belgians, was born April 9, 1835, son of King Leopold I., former Duke of Saxe-Coburg; ascended the throne at the death of his father, December 10, 1865; was married August 22, 1858, to Marie Henriette, daughter of the late Archduke Joseph of Austria, born August 23, 1836. Offspring of this union are three daughters. Heir-apparent to the throne is the brother of the King, Philip, Count of Flanders, born March 24, 1827, lieutenant-general in the service of Belgium, married April 26, 1867, to Princess Marie of Hohenzollern-Sigmaringen, born November 17, 1845; offspring of the union is a son, Baldwin, born July 8, 1869.

The area of the kingdom is 11,378 square miles; population, according to the last census, taken in 1866, 4,737,883; according to an official calculation of December, 1874, 5,336,634. Of this population, 54 per cent. belong to the Flemish and 44 to the Walloon-French nationality. The following table exhibits the population of each province of the kingdom on December 31, 1874, as well as the number of arrondissements and communes into which each province is divided:

PROVINCES-	Number of Arrondissements.	Number of Communes.	Population on Dec. 31, 1874.
Antwerp	3	150	521,735
Brabant	3	840	942,347
Flanders, East	6	250	691,190
" West	8	295	863,696
Hainaut	6	435	949,348
Liège	4	335	685,078
Limburg	3	206	204,619
Luxemburg	5	295	202,839
Namur	3	351	319,336
Total	41	2,567	5,336,634

The movement of population was as follows in 1874:

PROVINCES-	BIRTHS.		DEATHS.		Marriages.
	Males.	Females.	Males.	Females.	
Antwerp	9,710	9,347	6,139	5,678	4,302
Brabant	16,906	15,586	10,514	9,731	7,693
Flanders, East	11,771	11,908	7,866	7,396	4,571
" West	14,401	13,695	9,392	8,951	5,549
Hainaut	15,221	14,375	9,138	8,107	7,782
Liège	10,569	10,281	7,086	6,952	5,149
Limburg	3,250	3,044	2,214	1,972	1,447
Luxemburg	2,976	2,914	1,884	1,831	1,456
Namur	4,721	4,303	2,706	2,598	2,249
Total	89,225	84,758	56,939	52,656	40,328

From these tables we derive the following facts: The number of boys born for 100 girls was 105.3, the number of inhabitants for one birth 30.2, the number of births per 100 deaths 158.7, and the number of inhabitants for one death 47.9. In the same year the number of still-born amounted to 7,750, 4,451 males and 3,299 females, and the number of divorces to 120. Of the births, 161,882 were legitimate and 12,096 illegitimate, and of the still-born 6,974 were legitimate and 776 illegitimate, making in all 168,856 legitimate and 12,872 illegitimate births.

In 1874 there were four communes with over 100,000 inhabitants, twelve communes with from 25,000 to 100,000 inhabitants, thirty-eight communes with from 10,000 to 25,000, ninety-eight communes with from 5,000 to 10,000, 1,207 with from 1,000 to 5,000, and 1,213 with less than 1,000 inhabitants.

Instruction is well cared for in all grades. In 1872 there were 5,678 primary schools with 618,937 pupils. Schools for adults have been established in most communes. Their number in 1872 was 2,351, with 199,957 pupils. The number of normal schools for primary teachers was, in 1874, 37, with 2,336 students, of which 22 schools, with 1,182 students, were for females. The number of secondary schools in 1874-'75 was 168, with 17,763 pupils. Superior instruction is imparted in the two state Universities of Ghent and Liège, and the two free Universities of Brussels and Louvain. The number of students in each of these in 1874 was as follows:

UNIVERSITIES.	Students.
Ghent	221
Liège	541
Brussels	555
Louvain	955
Total	2,273

The Royal Academy of Fine Arts in Antwerp had, in 1874, 1,601 students. There were, besides the Antwerp Academy, 80 other academies of design and drawing-schools, with 10,191 pupils; a Conservatory of Music at Brussels with 594, another at Liège with 609 pupils, and 46 other conservatories of music, with 8,932 pupils. The expenses for primary instruction in 1878 amounted to 18,076,635 francs, and the expenses of the two government universities in 1874 were 949,990 francs.

Nearly the entire population of Belgium is nominally connected with the Roman Catholic Church, at the head of which are the Archbishop of Malines, and five bishops. The other ecclesiastical benefices consisted, December 31, 1874, of 184 deaneries, 230 *cures* (parishes of the first class), 2,779 *succursales* (parishes of the second class), 180 chapels, 1,839 vicariates, 114 coadjutors, 26 annexes, 695 oratories and chapels of hospitals, colleges, etc. The number of religious communities of men, in 1866, was 178, with 2,991 inmates; that of religious communities of women, 1,144, with 15,205 inmates. The number of mutual-aid societies recognized by the state was, in 1873, 117; their aggregate revenue, 207,918 francs; expenditures, 194,923 francs; capital, December 31, 1873, 612,882 francs; number of mutual-aid societies not recognized by the state, 89; receipts, 447,809 francs; expenses, 403,785 francs; capital on December 31, 1873, 480,110 francs. The number of saving-societies for buying winter provisions recognized by the state was four; expenditures, 28,806 francs; capital on December 31, 1873, 13,879 francs. The number of saving-societies not recognized by the state was eight; expenditures, 86,019 francs; capital on December 31, 1873, 3,840 francs.

The receipts and expenditures for 1873 were as follows:

RECEIPTS.		Francs.
I. Ordinary Receipts:		
1. Taxes		142,739,895
2. Tolls		7,596,197
3. Stocks and Rentes.....		74,713,153
4. Reimbursements.....		1,978,428
5. Extraordinary resources applied to the general needs of the state.....		973,208
II. Special Receipts.....		113,034,446
Total receipts.....		341,038,822
EXPENDITURES.		
I. Ordinary Expenditures:		
1. Public debt.....		47,061,392
2. Dotations.....		4,455,207
3. Justice.....		15,860,895
4. Foreign Affairs.....		1,603,433
5. Interior.....		16,869,412
6. Public Works.....		75,175,858
7. War.....		89,866,076
8. Finances.....		15,572,312
9. Outstanding debts and reimbursements.....		1,236,622
II. Extraordinary Expenditures.....		189,141,616
Total expenditures.....		350,398,373
Deficit.....		9,809,556

The public debt at the close of 1874 was as follows:

LOANS.		Francs.
Two and one-half per cents.....		219,959,633
Four and one-half per cents:		
1st series, conversion of 1844.....		65,864,189
2d series, emission of 1844.....		67,433,000
3d series (1853).....		141,284,900
4th series (1857 and 1860).....		65,846,400
5th series (1865).....		53,541,000
6th series (1867, 1869, 1870, 1871).....		77,578,200
Four per cents (1871).....		50,608,300
Three per cents (1873).....		243,250,000
Floating debt.....		314,585,000
Total.....		994,541,114

The standing army is formed by conscription, to which every able-bodied man who has com-

pleted his nineteenth year is liable. Substitution is allowed. The legal term of service is eight years, but two-thirds of this time are generally spent on furlough. The strength of the army is to be 100,000 men on the war footing, and 40,000 in times of peace. In 1874 the army was composed as follows:

ARMY.	En Solde.	Sans Solde.	Total.
Infantry.....	21,954	44,331	66,285
Cavalry.....	4,807	4,867	9,174
Artillery.....	6,523	7,856	13,908
Engineers.....	933	1,231	2,164
Total.....	34,216	57,385	91,561

The civic militia or National Guard numbers 125,000 men without and 400,000 with the reserve. Its duty is to preserve liberty and order in times of peace, and the independence of the country in times of war. A royal decree, dated October 20, 1874, divided the kingdom into two military circumscriptions, one embracing the provinces of Antwerp and West and East Flanders, and the second the others.

The imports in 1873 amounted to 1,422,700,000 and the exports to 1,158,600,000 francs. (For a detailed statement of the commerce with each country, see ANNUAL CYCLOPEDIA for 1875.) The commercial navy in 1873 was composed of 69 sailing-vessels with 46,439 tons, and 28 steamers with 30,005 tons.

The aggregate length of the railroads in operation on December 31, 1874, was 3,870 kilometres (1 kilometre = 0.62 mile), of which 664 were state railroads, and 2,706 belonged to private companies. The aggregate length of the lines of electric telegraph was, in 1872, 4,430 miles; that of wires, 15,802; the number of telegraph-offices was, in 1871, 478; the number of telegrams sent in 1874 was 2,750,223, of which 1,849,973 were inland, 698,506 foreign, and 206,744 transit telegrams.

On March 22d the House passed the bill of the Minister of Finance, by which the 12,000,000 francs which the state owed the Railroad Building Association were to be paid immediately instead of the time agreed upon. The purpose of the bill was to assist the Bank of Belgium, which had lost heavily by the defalcation of its cashier, the bank being a creditor of the association.

On April 8th the new law respecting academic degrees was passed by a vote of 78 to 26, all the Catholics and 19 Liberals voting for it, while 26 Liberals voted against it, and two did not vote. This law provides that in future the universities shall confer the degrees upon their own judgment, while the state will only guarantee their legality after an examination by a special commission. The state, however, reserves the right to subject to a special examination all persons who desire to obtain a government office. The winter session of the Chambers began on November 14th. In the Chamber of Deputies M. Bara brought up the election riots, which had occurred in several

places in June, but at the same time proposed the postponement of the debate.

The elections for provincial councils, held on May 22d, resulted in favor of the Liberal party in Antwerp, Liège, Tournay, and Ghent, while the Catholic party was successful in Namur, Bruges, and Louvain. The elections for the House of Representatives took place on June 13th. The Liberals had hoped to obtain a majority in the new House, but were disappointed in this, the political situation remaining virtually unchanged. At Brussels and Liège the Liberals carried the day without a contest. At Ostend, Philippeville, and Arlon, they defeated their opponents; and at Malines, Turnhout, Louvain, Courtrai, Dixmude, Roulers, Thielt, Dinant, and Bastogne, they were beaten. The Catholics, in spite of opposition,

maintained their positions at Bruges—where, however, they had only a majority of eight—at Furnes, Namur, Marchin, Neufchâteau, Vinton, and Antwerp. The Catholic party gained a seat at Ypres by the defeat of M. Alphonse Vandepereboom, a Liberal, and formerly Minister of the Interior. On the other hand, it lost two seats at Nivelles, where its candidates were replaced by Liberals who were returned by a large majority. The Catholic ministry had a majority of fourteen in the previous Chamber. The Liberals having gained two seats at Nivelles and lost one at Ypres, the Catholic loss was reduced to one seat, or a displacement of two votes, still leaving the Catholics a majority of twelve. Great excitement prevailed in many of the larger towns on election-day. In Antwerp the people thronged

BOUILLON, BELGIUM.

the streets singing and hooting; blows with walking-sticks were exchanged, and some windows broken. The same scenes took place at Brussels, but on a smaller scale. Later in the evening the disturbances became more serious. A house was demolished, and more than fifty shots were fired by the troops of the line. At Ghent a monster demonstration was made in front of the Catholic Club, and the windows were broken by the mob. The disturbances continued for several days. Crowds continued to hoot and hiss in front of Catholic institutes, so that the authorities were forced to protect them by the civic guards. In Brussels the rioters, to the number of many thousands, marched through the streets shouting, "Down with the ministry!" and attacked and wrecked a Catholic institution. The police charged upon the mob, wounding several and arresting a large number. One result of the electoral defeat of the Liberals is, that Antwerp has taken the initiative of an agitation which is to be extended to all the large towns. This agitation is to be for the purpose of ob-

taining a change in the existing electoral law. The vote is now given by arrondissement, and the consequence is, that in four large towns—Ghent, Antwerp, Bruges, and Namur—where the great majority of the electors are Liberals, they are swamped by the rural electors, who are completely under the sway of the Catholic clergy. The reform proposed by the Liberals would completely do away with this state of affairs, and would secure to the large cities a Liberal representation.

On February 13th the Catholic party arranged a large demonstration in Malines for the purpose of celebrating the election of a city council, and to offset similar demonstrations arranged by the Liberals in Antwerp and Ghent. The Catholic associations in the kingdom had generally been invited, and numerous delegations, with many of the prominent leaders of the party, took part in the festivities. The meeting was followed by a banquet, at which the first toast was the Pope, and the second the King. Upon the departure of the guests, disturbances occurred at the depot, which

formed the subject of an interpellation in the House. The Minister of the Interior promised a thorough investigation and the punishment of the guilty. In the animated debate which ensued in the House, the Catholics held the entire Liberal party responsible for the disturbances.

BELFRY OF BRUGES.

Brussels was the seat of several important international conferences during the year. The Health Congress, held in September, was preceded by an international exhibition of objects relating to public health and safety. The exhibition was opened by the King on June 26th. Upon arriving at the entrance the King was received by the Count of Flanders and the chief members of the executive and the various committees, including M. Warocque, the President of the Chamber of Representatives, General Renard, Lord Alfred S. Churchill, and Major Burgess, chairman and secretary of the British Committee. The opening ceremony was of a very simple character. An address to the King and Queen was read by M. Warocque, who dwelt on the difference between this and other exhibitions, explaining its objects and intentions, and expressing the gratification of the executive at the aid they had received from other countries. The address concluded with a few words especially addressed to the Queen, and referring to the interest she is known to take in the Belgian Red-Cross Society. The King responded very

briefly, merely expressing his gratification at the excellent prospects of the exhibition, and the pleasure he felt in opening it. The members of the different committees were then presented to him in a reception-room which had been prepared for the purpose, and afterward proceeded to their different galleries, where they attended the King in his inspection of each in turn. The exhibition building, which was in the park, was of rather a singular character. In order to interfere as little as possible with the ordinary condition of the park, it was made to follow the lines of the walks, and therefore consisted of a number of long buildings of different widths, meeting at the points of junction of the paths, but otherwise separate. Each country had a whole building or part of one, and was thus compelled to make the best appearance it could, without much reference to the general effect. Of the countries exhibiting, Belgium had the most space, with England following closely, these two being the largest exhibitors. France, Germany, and Russia, were well represented, while Austria, Hungary, Italy, Norway and Sweden, Holland, Denmark, and Switzerland, the other contributing countries, were not so largely, and the United States was not at all, represented.

The Health Congress, which was held as an appendix to the exhibition, was in session from September 27th to October 4th, and was attended by delegates from all European countries. The Congress divided itself into five sections, which held their sessions in the mornings, while in the afternoons all the sections united to a common session. Of the common sessions, six were held. In the first the important question of laborers' dwellings was discussed. The debate limited itself to the question

INTERIOR OF TOWN-HALL, BRUGES.

whether it was preferable for the laborer to possess his own cottage, or to be a tenant. Most of the speakers advocated the former proposition, while among the few who advocated the opposite side M. Rolin-Jacquemyns, of Ghent, made some telling arguments. The two following sessions of September 29th and

80th were devoted to a consideration of the question of the safety of the emigrants, the establishment of the cause of death and proper modes of interment. In its last three sessions the Health Congress considered the question of the best manner to check the excessive use of liquor by the laboring classes, the measures to be employed for the organization of aid societies for sick and wounded in war, and the best system of cleaning large cities.

A Geographical Congress was opened in Brussels on September 12th by the King in person. In his opening address he pointed to the growing interest taken in the civilization and exploration of Africa. He stated that for some time past the persons engaged in this task had recognized the necessity of a closer union between all explorers for the furtherance of their common efforts, and that for this reason the Congress had been called. He then emphasized the necessity of organizing stations for scientific purposes at the boundaries of the unexplored parts of Africa, and for the execution of this work proposed the establishment of an international committee. The Congress then elected the King its president, who thereupon took the chair, this being the first time that a king presided at another than a political congress. The Congress was addressed by the African explorers Nachtigal, Schweinfurth, Rohlf, Lieutenant Lux, Commander Cameron, and Colonel Grant, on the results of their explorations. Commander Negri, of Italy, reported on the misfortunes of the Italian expedition to Central Africa, and Minister Baron Hofmann, of Austria, on Gessi's and Piaggia's latest journeys in the territory between the Albert Nyanza and the Victoria Nyanza. The question of establishing stations for scientific purposes in the interior of Africa was then discussed. Sir H. Rawlinson made particular reference to the military stations of Colonel Gordon on the Upper Nile, and Sir Fowell-Buxton to the stations of the English Missionary Society, which penetrated farther into the interior every year. Sir Rutherford Alcock particularly proposed the erection of a strong station on the east coast opposite Zanzibar. After resolving to advocate the erection of such stations, the Congress adjourned on September 14th. On October 5th the permanent commission for the measurement of a degree assembled in the Royal Academy. The conference was opened by the Minister of the Interior, and adjourned to meet in Stuttgart in September, 1877.

BELOOCHISTAN, a country of Asia, bounded north by Afghanistan, east by British India, south by the Indian Ocean, and west by Persia. The government is under several rulers, of whom the Khan of Kelat is the most important. After deducting the territory in the west, which has been ceded to Persia, the area amounts, according to the latest calculations, to 106,750 square miles. The population was estimated by Dieterici in 1859, under the sup-

position of a density of twelve inhabitants to the square mile, and an area of 165,800 square miles, at about 2,000,000. At an area of 106,750 square miles the same density would give a population of only 1,250,000. Major-General Obruches, however, estimates the total population in 1868 at only 1,000,000, which gives a density of about nine to the square mile.*

The Bolan Pass, a defile in the mountains of Northwestern Beloochistan, on the route between the Lower Indus and the table-land of Afghanistan, is not only one of the most remarkable mountain-passes of the world, but has of late gained a considerable political importance for the British rule in India.

BOLAN PASS.

A rebellion against the Khan of Kelat, which had broken out in 1875, and continued during a part of the year 1876, led to a British diplomatic mission to Kelat. Emil Schlagintweit (in the *Augsburg Gazette*, No. 58, 1876) gives the following report on the disturbances: "According to the British scouts, the sovereign is the sole cause of the civil war now raging in Kelat, on the western border of India. His oppressions had caused the high dignitaries of the country to forget their old feuds, and to unite against the Khan. Nasr'ed-din and Tadah Mohammed, Princes of Las, the southern province of Beloochistan, became the leaders of the rebels. As the Khan did not succeed in conquering his enemies in the open field, he pretended friendship, enticed them to his capital in the fall of 1875, and there had them murdered. But the cause of order was but little aided by this deed, and the Khan and his chiefs were much farther from an understanding than before. Disorders increased, as the

* For a more detailed account of the population of Beloochistan, see ANNUAL CYCLOPEDIA for 1875.

trade with India was completely at a standstill. The Indian Government now resolved to send off a commissioner to establish peace, and secure safe escorts for caravans. The commissioner, Major Sandeman, left British territory in December, and was received with great attentions by the Khan. The latter also promised safe escorts for the caravans from India, and showed himself inclined to treat with the rebels. But the murder of his chief opponents had irritated the people against him to such a degree that the British commissioner saw but little prospect of bringing about the desired result. In the mean while the commissioner of Sinde, Sir William Merewether, was ordered to proceed to the border, that he might be nearer to the scene of action. He accordingly made his headquarters in the border fortress of Jacobabad, whose garrison, consisting in part of 1,410 men, was considerably increased."

Major Sandeman, with his escort of 1,000 men, met the Khan and his rebellious chiefs at Mastung, and succeeded in bringing about a peace. In August the Khan signed a treaty, the principal provision of which is the security of the Bolan Pass. The Sirdar Alladina Kurd is intrusted with guarding the pass and keeping it open. For this he receives from the Indian Government 1,000 rupees per month. The Khan is to receive a certain sum for every camel that crosses the pass, while the tribes living in the pass are also to receive a certain sum. These dues are to be collected by a person to be appointed by the Indian Government. Emil Schlagintweit speaks as follows of the results of Major Sandeman's mission (*Augsburg Gazette*, No. 284): "After a stay of five months at the most important point of the Bolan Pass, the English expedition, consisting of five companies of infantry, 850 cavalry, and two mountain-cannon, returned from Kelat, whither it had been sent by the Indian Government, under the command of Major Sandeman, in order to give the necessary force to the propositions of this officer. Without firing a shot Sandeman succeeded in reconciling the different tribes which had been at war with each other for several years, and to bring them back under the sovereignty of the Khan of Kelat. This military promenade forms a turning-point in the British policy. For years the officers on the border had recommended this step, but it had been considered impossible for armed men to cross the border without being attacked, and being involved in a new war with tribes of Beloochistan and Afghanistan, which could only end with the further extension of British rule over an unfertile country, with a population decidedly reduced in wealth and intellectual qualities. Instead of these consequences ensuing, the troops were welcomed everywhere as peace-makers. Without any great exertion England has gained considerable renown among these border tribes."

A second expedition set out in October for Kelat from Simla, the residence of the Viceroy, bearing dispatches for the Khan. The object of this mission was to prepare the Khan for the visit of the Viceroy, who expected to make a trip through Sinde, and wished to have a meeting with the Khan.

BERTRAND, FÉLIX, a Senator of France, born in 1808; died May 27, 1876. After holding different offices in the tribunals of Saint-Flour, and Ambert, and in the courts of appeal of Riom, Grenoble, and Bastia, he succeeded, in 1858, his uncle, as president of the Tribunal of Saint-Flour, his native town. He resigned this position a short time before the senatorial elections of 1876, in order to be eligible as senator, and was elected conjointly with M. Parieu from the department of Cantal. He called himself a liberal conservative.

BLAIR, FRANCIS PRESTON, an American journalist, born at Abingdon, Washington County, Va., April 12, 1791; died at Silver Springs, Md., October 18, 1876. He was educated at Transylvania University, Kentucky, and studied law, but never entered upon the practice. He early took part in politics, and in 1824 supported Henry Clay for the presidency, but dissented from his views, especially in relation to the United States Bank. When in 1829 the nullification movement was developed in South Carolina, Mr. Blair published an article against it in a Kentucky newspaper, which attracted the attention of General Jackson, who invited the writer to become the editor of the *Globe*, a Democratic journal about to be established in Washington. The journal was commenced in November, 1830, and became the organ of the successive Democratic administrations, Mr. Blair retaining the control of it till 1845, when President Polk thought it necessary for the harmony of the party that the organ should be placed in other hands, offering Mr. Blair the position of minister to Spain, which was declined. He then retired to his estate of Silver Springs, Montgomery County, Md. In 1848 he withdrew from the regular Democratic party, and supported Mr. Van Buren for the presidency. After the repeal of the Missouri Compromise he took an active part in the organization of the Republican party. He was the father of Montgomery and of the late General Francis P. Blair, Jr.

BOSIO, ASTYANAX SEVOLA, a French sculptor, born about 1798; died July 5, 1876. He was a son of Jean Bosio, a well-known historical painter, and a pupil of the celebrated sculptor Baron Bosio, his uncle. His first works were exhibited in 1831, and at once gained for him considerable celebrity. Among his best-known works are a bust of Admiral Bougainville (1831), a young huntress nursing her wounded dog (1835), a statue of Flora (1840), and a large number of busts and bas-reliefs. He obtained a second medal in 1838, and the decoration of the Legion of Honor in 1857.

BOSWORTH, JOSEPH, an English scholar, born about 1790; died in June, 1876. He was educated at Repton Grammar-School, received the degrees of Master of Arts and Doctor of Laws at Aberdeen, and the honorary degree of Doctor of Philosophy from the University of Leyden in 1831. He subsequently studied at Cambridge, where he received the degree of Doctor of Divinity in 1839. He was ordained deacon in 1814, and after holding several livings in England he was British chaplain in Rotterdam and Amsterdam between 1829 and 1841, where he translated the Common Prayer-Book into Dutch. In 1857 he was elected a member of Christchurch College, and was soon after appointed Professor of Anglo-Saxon in Oxford. In this position, and by his writings on the Anglo-Saxon language and kindred subjects, he gained great renown, being considered a high authority on this subject. He wrote: "The Elements of Anglo-Saxon Grammar" (1828); "A Compendious Grammar of the Primitive English or Anglo-Saxon"; "A Dictionary of the Anglo-Saxon Language" (1838); "The Origin of the Danish Language"; "Abstract of Scandinavian Literature"; "Origin of the English, Germanic, and Scandinavian Languages and Nations"; and "A Compendious Anglo-Saxon Dictionary" (1848). He published "King Alfred's Anglo-Saxon Version of the Historian Orosius" (1855), and "The Description of Europe and the Voyages of Othhere and Wulfstan," by the same author, both with English translations. He also published "The Gospels in Gothic of 860, and in Anglo-Saxon of 995, in Parallel Columns with Wycliffe's Version of 1389 and Tyndale's of 1526" (1865; second edition, 1878). He was a member of the Royal Institute of the Netherlands, and fellow of numerous foreign literary societies.

BOWLES, Sir GEORGE, a British general, born in 1787; died in May, 1876. He received his commission as ensign in 1804, and served with Lord Cathcart in the north of Germany in 1805-'6. He took part in the capture of Copenhagen in 1807; served in the Peninsula from 1809 to 1814; was present at the passage of the Douro; at the battles of Salamanca, Talavera, and Vittoria; at the sieges of Ciudad Rodrigo, Badajoz, Burgos, and San Sebastian; at the capture of Madrid; at the passages of the Bidassoa, Nivelles, Nive, and Adour, and the investment of Bayonne. He was also present at the battles of Quatre-Bras and Waterloo, and at the capture of Paris. He was created a lieutenant and captain in 1810, major in 1815, lieutenant-colonel in 1821, colonel in 1837, major-general in 1846, lieutenant-general in 1854, and general in 1862. He was military secretary to the Duke of Richmond in Canada from 1818 to 1820; was deputy adjutant-general in the West Indies from 1820 to 1825, and was stationed in Canada from 1837 to 1843, having command of Lower Canada during the rebellion of 1838.

From 1845 to 1851 he was Master of the Household to the Queen. Upon retiring from this office he was appointed Lieutenant of the Tower of London, and was created a K. C. B. and a G. C. B. in 1873.

BOYD, Sir HARLEY HUGH, fifth baronet of Ballycastle, county of Antrim, born November 2, 1853; died in July, 1876, on board the mail-steamer Trenton, off St. Helena. He was the only son of Sir John Augustus Hugh Boyd, Bart., R. N., by his wife Honora Mary, third daughter of the late Charles Biggs Calmady, Esq., of Longdon Hall, Devon. He succeeded to the title on the death of his father, August 7, 1857. Dying unmarried, the title reverted to his uncle, the Rev. Frederick Boyd, M. A., rector of Holwell, Bedfordshire.

BRAGG, BRAXTON, an American general in the Confederate service, born in Warren County, N. C., about 1815; died in Galveston, Texas, September 27, 1876. He graduated at West Point in 1837, was appointed lieutenant of artillery, and served mainly in Florida till 1843, during the war with the Seminoles; from 1843 to 1845 he was stationed at Fort Moultrie, in Charleston harbor, and, just before the breaking out of the war with Mexico, was ordered to Texas. In May, 1846, he was made captain by brevet for gallant conduct in the defense of Fort Brown, Texas, and in June was made captain of artillery. He was present at the battle of Monterey, September 21st-23d, and was brevetted as major for gallant conduct there; and in 1847 he was brevetted as lieutenant-colonel for gallant conduct in the battle of Buena Vista. From 1848 to 1855 he was engaged in frontier service at Jefferson Barracks, Mo., Fort Gibson, and Washita. In March, 1855, he was appointed major of cavalry, but declined, and received leave of absence. In January, 1856, he resigned his commission in the army, and retired to his plantation at Thibodeaux, La. In 1859-'61 he was Commissioner of the Board of Public Works of the State of Louisiana. When the civil war broke out he joined the Confederate side, was appointed brigadier-general, and placed in command at Pensacola. In February, 1862, he was made major-general, and ordered to join the Army of the Mississippi. He took part in the battle of Shiloh, April 6th and 7th; was raised to the full rank of general in place of General A. S. Johnston, killed at Shiloh; and after the evacuation of Corinth succeeded General Beauregard in command of the department. In August he left Tennessee at the head of a strong force, and entered Kentucky, but, after the battle of Perryville, October 8th, was forced to retreat, carrying with him a vast amount of supplies and many recruits from Kentucky. He was removed from his command and placed under arrest, but was soon restored, and resumed command of the force opposed to the Federal army under Rosecrans. He was checked by Rosecrans in the protracted contest of Stone River or Murfreesboro, December 26,

1862, to January 2, 1863; again encountered and defeated him at Chickamanga, September 19 and 20, 1863; but was decisively defeated by General Grant at Chattanooga, November 28d-25th. Shortly afterward he was relieved from command and called to Richmond, where for a time he acted as military adviser to President Davis, with whom he was a favorite. In the autumn of 1864 he led a small force from North Carolina to Georgia to operate against Sherman, but without success.

BRAZIL (**IMPERIO DO BRAZIL**), an empire of South America, and the only monarchy in the Western Hemisphere. It extends from latitude 5° 10' north to 33° 46' south, and from longitude 34° 47' to 74° 7' west.* It is bounded on the north by the United States of Colombia, Venezuela, the Guianas, and the Atlantic; on the east by the same ocean; on the south by Uruguay, the Argentine Republic, and Paraguay; and on the west by Bolivia, Peru, Ecuador, and Colombia.

The boundary-lines with Bolivia, Colombia, the Guianas, and the Argentine Republic, have not yet been officially defined.

The territory of the empire is divided into twenty provinces and one neutral municipality (*município neutro*), which, with their populations in 1876, and their capitals, are as follows:

PROVINCES.	Population.		Capitals.
	Frees.	Slaves.	
AMAZONAS*	56,681	979	Manáos.
Pará	232,629	27,199	Belem, or Pará.
Maranhão	234,101	74,980	São Luiz.
Piauhý	173,437	23,795	Therézina.
Ceará*	689,778	81,918	Fortaleza.
Rio Grande do Norte*	230,959	13,020	Natal.
Parahyba	841,648	90,914	Parahyba.
Pernambuco*	752,511	89,098	Recife.
Alagoas*	812,968	85,741	Maceió.
Sergipe	189,812	91,495	Araçajú.
Bahia	1,120,846	162,295	São Salvador, or Bahia.
Espirito Santo*	59,478	22,659	Victoria.
Rio de Janeiro	456,350	970,736	Niteroy.
Município Neutro*	226,088	43,989	Rio de Janeiro.
São Paulo*	650,743	156,612	São Paulo.
Paraná*	116,163	10,560	Curitiba.
Santa Catharina*	144,818	14,984	Desterro.
Grande do Sul	864,002	66,876	Porto Alegre.
Minas Geraes	1,612,419	866,574	Ouro Preto.
Goyaz*	149,743	10,652	Goyaz.
Matto Grosso	58,750	6,667	Cuyabá.
Totals	8,223,620	1,476,567	
Uncivilized Indians	1,000,000		
General total	10,700,187		

The area of Brazil has recently been estimated at 8,337,218 square kilometres, or 3,219,001 square miles. The areas of the three largest provinces—Amazonas, Matto Grosso, and Pará—are 732,054, 532,683, and 443,132 square miles, respectively; and that of Sergipe, the smallest province, is 15,093 square miles; and that of the neutral municipality, 538 square miles.

* The statistics given in this article are, save where otherwise expressed, taken from official returns for 1876.

In the table above given, the figures corresponding to the provinces marked thus, *, are according to the recent census; those for the other provinces are merely estimated. It is presumed with reason that, as soon as the census-returns shall have been completed, the total population of the empire will be found to exceed 12,000,000.

The number of uncivilized Indians, leading a nomadic life in the wilds and virgin forests of the interior, is reckoned to be about 1,000,000. The Government has constantly encouraged the efforts made to reclaim these savages to civilization and Christianity; and, despite the vast extent of territory over which they are disseminated, and the difficulty of obtaining an adequate corps of missionaries (there are but sixty-three at present engaged in the service), the results so far achieved are comparatively satisfactory. Many encampments have been established, particularly in the valleys of the Araguaya and the Amazon proper, for the performance of religious exercises, and for the education of the young, who readily acquire proficiency in reading, writing, and other elementary branches. The encampments, formerly under the exclusive control of the missionaries who founded them, are now, for the most part, subject to secular directors. The indigenous inhabitants, with the exception of a few small tribes, are of pacific habits and proverbial sobriety; they are endowed with great physical strength, are exceedingly agile and adroit, and easily trained to till the ground, work in the mines, and man the craft navigating the immense rivers of the interior. Yet their native proneness to wandering proves a serious obstacle to their fairly settling down to sedentary occupations.

The children are enticed to the encampments by presents of useful tools and instruments of iron, and there, simultaneously with the moral and intellectual instruction of both sexes, the males are prepared for carpenters, smiths, or other trades, while the females are usually employed as domestics.

There is a project on foot for the formation of a regular corps of official interpreters, speaking the principal Indian languages, and destined to be attached to the various military colonies situated mainly in the great centres of the aboriginal population. Several colleges have already been organized for the education of the Indians, the most important being those of Santa Isabel, in the valley of the Araguaya, and Manáos, capital of the province of Amazonas, and the Government intends to establish one at Mucury, on the banks of the river Doce, in the midst of the region mainly inhabited by the Botocudos.

The system of slavery, rendered necessary by force of circumstances, from the time of the foundation of the first European colonies on Brazilian soil, will, in the course of a few years, have altogether disappeared. By virtue of the law of September, 1871, no child of any

color or degree is any longer born to slavery. The slaves belonging to or employed by the Government, or in the service of the imperial household, were declared free on the day on which the abolition law was promulgated. The rural establishment of São Pedro de Alcântara, in the province of Piahy, was prepared as a place of refuge for a portion of the slaves, who entered immediately upon the enjoyment of freedom, and they are there employed as laborers in the national demesne, and their children, born since the proclamation of the law, are reared in an institute specially devoted to that purpose and in charge of a director, a female teacher for the primary branches of education, and a priest for their moral and religious instruction. For the slaves owned by private individuals a special emancipation fund has been formed, to be applied yearly for the purchase of their freedom, agreeably to the regulations published in 1871.* The sums appropriated for that fund in the fiscal years 1871 and 1875 amounted to \$2,804,213; to which should be added the special appropriations in the several provinces, and donations from private philanthropists, from whom a large number of slaves receive their freedom every year.

The number of emancipated slaves from the end of 1871 to the commencement of 1876 was 6,000; and that of the children born of slave mothers since the law of abolition was issued, 64,000.

Naturalization is at present easily obtainable in Brazil, the only qualification required being a residence of two years within the empire, or of a like period abroad in the service of the Brazilian Government, and the evident intention of the applicant to remain in the country, or in its service, after he has become a citizen.

One of the chief necessities of the country being an increased population, special efforts are made by the Government for the accomplishment of that end. Among other inducements and privileges offered to immigrants † are the following :

The payment by the Government of the difference in the amount of passage-money from the port of departure to the United States and that to Brazil; the advancement of the full passage-money to families intending to settle in the government colonies; exemption from import duty on all effects the property of and brought into the country by the immigrants; a hunting-gun given to each adult; etc., etc.

There were in 1875 fifteen colonies immediately dependent upon the central Government, with a population of 28,018, against 16,412 in 1873; about a dozen others founded under the auspices of provincial governments, and a number belonging to private companies, some of whom, however, receive subsidies from the na-

tional Government. Though many of the colonies are in a prosperous condition, the Brazilian system of immigration has not hitherto been attended with so good results as that of the Argentine Republic. It would appear that the immigrants who fare worst in Brazil are those

BALSAM COPAIBA.

proceeding from the United Kingdom. In the second half of 1876, the British Emigration Commissioners were desired, by the Secretary for the Colonies, to give publicity to the following further caution to persons desiring to emigrate to Brazil :

In February, 1875, and again in June of the present year, the Emigration Commissioners were directed by her Majesty's Government to caution emigrants against proceeding to Brazil. It appears, however, by dispatches from her Majesty's minister at Rio de Janeiro, that emigrants have recently arrived from this country for the settlement known as Kittoland, in the province of Paraná, in Southern Brazil, and that accounts have been received at Rio that those emigrants are in a lamentable condition. Under these circumstances, the Emigration Commissioners have been directed to repeat their caution to persons invited to emigrate to Kittoland or any other settlement in Brazil, to consider well before they do so. Her Majesty's minister at Rio has sent home a statement made by a respectable emigrant, who proceeded to Kittoland in June last, to the effect that, on his arrival at the settlement, he found that it comprised very little table-land, but that there were heavy woods, and that, generally speaking, the spot was unfit for habitation. He added that not a single house had been erected, and that there was no road within twenty miles; that there were at that time in the settlement but three Englishmen, who were living under tents, and that the English emigrants whom he met at Curitiba, on his way to Kittoland, appeared to be in a deplorable condition. This statement was made on oath before her Majesty's minister at Rio, and is confirmed by two other British subjects, one of whom states that he had resided at Curitiba for eight years. In the end the emigrant returned to Rio, on his way to this country, having lost by his emigration no less than £175 in money, besides the value of tools and other articles he had taken with him. The Emigration Commissioners recommend persons invited to emi-

† See ANNUAL CYCLOPEDIA for 1873, 1873, 1874, and 1875.

grate seriously to consider the above statement and to compare it with the expectation held out to them by the promoters of the emigration. If they do so, they cannot fail to see that it contradicts those expectations in several of the most important points. This is especially the case in regard to the promised erection of a "reception-house" for the accommodation of settlers on their first arrival, the provision of employment on public works for such as required it, the early construction of the tramway between the settlement and Curitiba, and the establishment of stores at which settlers might both purchase what they require and sell their surplus produce at fair prices. If, however, notwithstanding this caution, emigrants decide to proceed to the Kittoland settlement, the responsibility for any disappointment they may meet with will be their own.

(For the Constitution and Government of Brazil, reference may be made to the ANNUAL CYCLOPÆDIA for 1875.)

The Emperor, Dom Pedro II. de Alcântara, John Charles Leopold Salvador Bibiano Francis Xavier de Paule Leocadio Michael Gabriel Raphael Gonzague, born December 2, 1825, son of Dom Pedro I. de Alcântara (King of Portugal and Emperor of Brazil), is the present sovereign. He reigned under tutelage, by virtue of the act of abdication of his father, from April 7, 1831, until July 23, 1840, when he was declared by law to have attained his majority; was crowned on July 18, 1841; and married on September 4, 1848, to Theresa Christina Maria, born March 14, 1822, daughter of the late King Francis I. of the two Sicilies.

BOTOCUDO INDIANS.

The new cabinet, formed June 25, 1875, is composed as follows: Interior, Councilor J. B. da Cunha Figueiredo, Senator; Justice, Councilor Diogo Velho, Deputy; Foreign Affairs, Baron de Cotegipe, Senator; War, Duke de Caxias, Senator, and President of the Council of State; Navy, Councilor L. A. Pereira Franco; Finance, Baron de Cotegipe (*ad interim*); and Public Works, Commerce, and Agriculture, T. J. Coelho de Almeida, Deputy.

The Council of State is made up of the following members in ordinary: Princess Imperial Donna Izabel; Prince Gaston d'Or-

léans, Count d'Eu; Senators—Viscount d'Abaeté; Marquis de São Vicente; Viscount do Rio Branco; J. T. Nabuco d'Aranjo; Viscounts de Muritiba, de Bom Retiro, de Jaguary, de Carvelhas, and de Nitheroy; and of the six members extraordinary: Senators—Viscount de Araxá; Duke de Caxias (President); J. P. Dias de Carvacho; J. J. Teixeira; Vice-Admiral J. R. de Lamare; and Dr. P. J. Loares de Souza.

ANACONDA.

The President of the Senate, which is composed of eight members elected for life, is Viscount de Jaguary; Vice-President, Viscount de Camaragibe.

The Chamber of Deputies, with 122 members elected for four years, has now for President Councilor M. F. Corrêa; Councilor A. J. Henriques; J. P. M. Portella; A. G. de Paula Fonseca.

The Archbishop of Bahia, J. G. de Azevedo (elevated in 1875), is Primate of all Brazil, and there are eleven bishops: those of Pará, São Luiz, Fortaleza, Olinda, Rio de Janeiro, São Paulo, Porto Alegre, Marianna, Diamantina, Goyaz, and Cuyabá.

The regular army (peace footing) comprises a special corps (staff, 29 men; engineers, 56; states, 118; almoners, 79; sanitary corps, 145) of 427 men; twenty-one battalions of infantry, 9,864 men; five regiments, two detachments, one squadron, and four garrison companies of horse, 2,484; and three regiments and four battalions of artillery, with one battalion of engineers, 3,280: total, 16,055 men.

The strength of the army in time of war is fixed at 32,000 men.

The police force consists of 9,662 men, of whom 800 are in Rio de Janeiro.

The National Guard has been disbanded, to be reorganized in accordance with the results of a new census.

The Brazilian Government still maintains, in Paraguay, an occupation-brigade 1,500 strong—horse, foot, and artillery.

According to the terms of the law of February 27, 1875, governing military conscription, every Brazilian is in duty bound to take up arms to maintain the independence and integrity of the empire.

No army or navy officer can be deprived of his rank without trial.

The navy of the empire consists of 19 iron-clad steamers, 1 steam-frigate, 8 steam-corvettes, 23 steam-gunboats, 7 steam-transport, and 3 sail-of-the-line; the total armament is 230 guns, and the aggregate horse-power of the steamers 12,027. There were, besides, one school-ship, and one brig for midshipmen, both without armament; in process of construction, 1 steam iron-clad, and 4 steam-corvettes. There were in the navy 15 general staff officers, 338 first-class and 159 second-class officers, a sanitary corps 65 strong, 24 almoners, 215 accountants, 78 guardians, 33 engineers, 3,000 imperial marines, a naval battalion 913 strong, and 8,400 apprentices—total, 7,813.

Brazil is one of the few nations whose revenue persistently increases, it might be said, spite of all circumstances. The subjoined tables show the branches and amounts of the national revenue and expenditures for the fiscal year commencing July 1, 1873, and ending June 30, 1874:

REVENUE.	
Custom-house.....	\$36,826,066
Shipping duties.....	289,987
Railways.....	3,087,991
Post-Office.....	448,873
Telegraphs.....	61,459
Stamp duties.....	2,094,745
Mutation duties.....	3,304,818
Taxes on industries, trade, etc.....	1,585,819
Income-tax.....	89,819
Real-estate tax.....	1,304,564
Licenses.....	253,924
Lottery-tax.....	826,080
Mines.....	21,652
Receipts extraordinary.....	890,818
Deposits.....	1,173,709
Slave liberation fund.....	681,125
Sandries.....	763,877
Total.....	\$52,504,639
From the provinces.....	11,756,078
Municipal receipts.....	2,375,959
Total revenue.....	\$66,636,676
Estimated revenue for same year.....	51,566,944
Surplus.....	\$14,869,732
EXPENDITURE.	
Ministry of the Interior.....	\$3,782,219
Ministry of Justice.....	2,434,563
Ministry of Foreign Affairs.....	562,555
Ministry of the Navy.....	9,994,147
Ministry of War.....	9,699,015
Ministry of Finance.....	21,248,901
Ministry of Commerce.....	13,049,207
Total.....	\$60,748,919
Estimated expenditure for same year.....	45,881,370
Deficit.....	\$15,411,549
In the estimated budget for 1875-'76, the revenue figures at.....	\$64,775,405
The expenditure at.....	60,511,158
Surplus.....	\$4,264,247

The budget for the year 1875-'76 exhibits the estimated revenue at \$64,775,405, and the expenditure at \$60,511,158, leaving a surplus of \$4,264,247.

The entire national debt amounted, in June, 1876, to \$360,067,170, in the following manner:

Foreign debt.....	\$219,815,400
Home funded.....	29,000,000
Floating debt.....	23,198,084
Total.....	\$272,013,484
	or \$360,067,170

Brazil has seven loans (all at Rothschild's) in London, which amounted in January, 1876, to the following sums:

1852 4½ per cents.....	£1,210,000	emitted at 95
1859 5 ".....	270,000	" 98
1860 4½ ".....	775,000	" 90
1868 4½ ".....	2,690,000	" 88
1865 5 ".....	6,184,200	" 94
1871 5 ".....	8,385,000	" 89
1875 5 ".....	5,801,200	" 98
Total.....	£19,815,400	
	or \$990,077,000	

The original amount of the above seven loans reached £28,222,000 (\$116,110,000), showing that £8,406,600 (\$17,088,000) has already been redeemed.

The home debt is made up as follows:

Government stocks, fours, fives, and sixes.....	£26,000,000
Gold bonds, 6 per cent.....	2,000,000
Government notes and Treasury bills.....	20,000,000
Orphan-fund, etc.....	3,200,000
Total.....	£52,200,000
	or \$261,000,000

The six per cents are always above par, and these include almost the whole funded debt; 5 per cents only amount to £220,000 (\$1,100,000), and 4 per cents to £12,000 (\$60,000). About 84 per cent. of the home debt is held in Rio Janeiro, 8 per cent. in Bahia, and 12 per cent. in foreign countries—say:

In Brazil (Rio and Bahia).....	£25,200,000
In England.....	2,100,000
In other countries.....	1,700,000
Total.....	£29,000,000
	or \$145,000,000

The credit of Brazil on the London market ranks almost on a level with that of France, her 5 per cent. stock being usually near par. The home paper-money debt and Treasury bills do not include quite \$20,000,000 of bank-notes not guaranteed by the state.

The Government paper-money of Brazil was only \$85,000,000 before the Paraguayan War; but it rose to \$110,000,000 in 1869; since then it has been reduced every year, being, in June, 1876, about \$99,000,000, including Treasury bills. Besides the Government paper-money, three banks have the right of emission, viz.: the Bank of Brazil \$16,500,000, including \$3,350,000 at the branches of Pernambuco, Bahia, São Paulo, Minas, Maranhão, Pará, and Rio Grande do Sul.

The Bank of Bahia emits \$800,000, and that of Maranhão \$135,000; which, added to the sum for the Bank of Brazil, make up a total of \$1,933,500 in bank emission.

No more recent returns of the commerce of Brazil have been published than those given in the ANNUAL CYCLOPEDIA for 1875; but, in the absence of new general tables, it may not be uninteresting to insert here a few statistical details relative to the chief articles of export from the empire.

Coffee.—This staple alone, which is cultivated from the Amazon southward to the province of São Paulo, and from the shores of the Atlantic westward to the most westerly limits of

the province of Matto Grosso, or throughout an area of nearly 1,200,000 square miles, has represented during the three quinquennial periods 1859-'74 almost one-half of the total value of the exports. Much care and attention are bestowed upon the culture and preparation for market of this article, the demand for which, in foreign countries, is constantly increasing, as may be seen in the subjoined tables for the five-year period of 1889-'44 and that of 1869-'74 :

PERIODS.	Quantities.	Value.
1889-'44.....	184,118,261 lbs.	\$10,877,928
1869-'74.....	868,261,290 "	51,748,664
Increase.....	179,138,029 lbs.	\$41,865,736

Here is observed a mean annual increase of 2.86 per cent. in the quantity and of 11.72 per cent. in the value of the coffee sent out of the country during the periods mentioned.

But the rate of increase grew sensibly larger in the second of the two periods just mentioned, as attested by the subjoined comparative table of the quantities and values of the exports for the biennial periods of 1870-'72 and 1872-'74 :

PERIODS.	Quantities.	Value.
1870-'72.....	299,091,838 lbs.	\$48,405,999
1872-'74.....	418,778,944 "	64,080,072
Increase.....	124,682,111 lbs.	\$20,624,050

The total quantity of coffee now produced in the empire is estimated at 572,000,000 lbs. per annum, of which one-fifth, approximately, is reserved for home consumption; and the total number of coffee-shrubs is stated, by competent authority, to be not under 600,000,000.

Cotton.—This staple has been constantly cultivated, from the early colonial times down to the present.

The following comparative table serves to exhibit the increase in the quantities and value of the cotton exported in the five-year periods 1839-'44 and 1869-'74 :

PERIODS.	Quantities.	Value.
1839-'44.....	22,824,542 lbs.	\$2,070,923
1869-'74.....	119,753,589 "	15,751,884
Increase.....	96,934,297 lbs.	\$116,650,456

Sugar.—Sugar-culture, formerly very extensively carried on in Brazil, was somewhat neglected after the introduction of the coffee-shrub; but the production of sugar has been once more extended, and that, too, in a considerable degree, as is shown in the following comparative tables of the exports in the quinquennial periods 1839-'44 and 1869-'74 :

PERIODS.	Quantities.	Value.
1839-'44.....	180,773,848 lbs.	\$5,566,424
1869-'74.....	337,228,172 "	13,692,208
Increase.....	156,454,324 lbs.	\$7,845,784

Hides—dry and salted—manifest in like manner a constant increase in quantity and value of exports. There were 61,451,872 lbs. of these commodities sent out of the country in the five years 1869-'74, at a value of \$5,829,576, being more than double the quantity and nearly four times the value of the exports of the same articles in the quinquennial period 1839-'44.

It is calculated that there are at the present time 20,000,000 head of bovine cattle in Brazil, representing a value of \$118,600,000.

India-rubber.—This important commodity, extracted from the *Siphonia elastica*, which grows spontaneously in great abundance in the provinces of Pará and Amazonas, from the sea-shore to a distance of some 2,000 miles westward, has become of late years the object of an immense trade, and is steadily advancing in value. Here follows a table of the exports of India-rubber for the same periods given in the foregoing tabular statistics :

PERIODS.	Quantities.	Value.
1839-'44.....	861,581 lbs.	\$119,290
1869-'74.....	12,282,187 "	5,861,760
Increase.....	11,420,626 lbs.	\$5,742,480

Tobacco, in the periods hitherto referred to, increased threefold in quantity exported, and more than eightfold in value. The exports do not, however, yet exceed 6,500,000 lbs. per annum, at a value of about \$742,000.

At the beginning of 1876 there were, in Brazil, twenty-two lines of railway, with an aggregate length of 1,143 miles; sixteen lines in course of building, with an aggregate length of 830 miles; and some twenty-eight projected, to have a total length of 4,080 miles.

BRONGNIART, ADOLPHE THÉODORE, a French botanist, born January 14, 1801; died February 18, 1876. He was the son of Alexandre Brongniart, an eminent French naturalist. At an early age he devoted himself to the study of the natural sciences, particularly to that of botany, making the history of the cryptogams a special study. Before 1825 he published his "Classification des Champignons," and in 1828 he presented to the French Institute the first two volumes of his "Histoire des Végétaux Fossiles, ou Recherches Botaniques et Géologiques sur les Végétaux renfermés dans les Diverses Couches du Globe." The progress of this last-named work was interrupted by his feeble health. He was appointed, in 1833, Professor of Botany in the Museum of Natural History, and in 1852 Inspector-General of the University for the Natural Sciences. In 1834 he was elected a member of the Academy of Sciences in the place of Desfontaines, and in 1866 he was created a member of the Council for Secondary Special Instruction, and a member of the Imperial Council of Public Instruction. He was one of the founders of the "Annales des Sciences Naturelles," and contributed to this, as well as to other scientific

works, a large number of articles on botanical and physiological subjects. He also wrote the botanical part of the "Voyage de la Coquille" (1831), and "Énumération des Genres des Plantes cultivées au Muséum d'Histoire Naturelle" (1843).

BROWNSON, ORESTES AUGUSTUS, LL. D., an American author, born at Stockbridge, Vt., September 16, 1803; died in Detroit, Mich., April 17, 1876. In his nineteenth year he joined the Presbyterian Church at Ballston, N. Y., where he was at the time attending an academy; but he afterward changed his views, and he became in 1825 a Universalist minister. He preached in different villages in Vermont and New York, and wrote for various religious periodicals in support of his new belief. His ecclesiastical position had grown into disfavor with him, when, making the acquaintance of Robert Owen, he was fascinated by schemes of social reform, and in 1828 he was prominent in the formation of the Working-men's party in New York, the design of which was to relieve the poorer classes by political organization; but he presently despaired of the effectiveness of this movement. Afterward the writings of Dr. Channing drew his attention to the Unitarians, and in 1832 he became pastor of a congregation of that denomination. In 1836 he organized in Boston the "Society for Christian Union and Progress," of which he retained the pastorate till he ceased preaching in 1843. Immediately after removing to Boston he published his "New Views of Christianity, Society, and the Church," remarkable for its protest against Protestantism. In 1838 he established the *Boston Quarterly Review*, of which he was proprietor, and almost sole writer, during the five years of its separate existence, and to which he contributed largely during the first year after it was merged in the *Democratic Review*, of New York. It was designed not to support any definite doctrine, but to awaken thought on great subjects, with reference to speedy and radical changes. To this end also he published in 1840 "Charles Elwood, or the Infidel converted," a philosophico-religious treatise, in the form of a novel. In 1844 he entered the Roman Catholic communion, to which he afterward remained attached. The method which he adopted in his philosophical system is the distinction between intuition (direct perception) and reflection (indirect or reflex knowledge). The mind is unconsciously intuitive; it does not, in intuition, know that it has intuition of this or that truth, because as soon as it knows or is conscious of the intuition it has reflex knowledge. Reflection can contain nothing which is not first in intuition. In order to reflect on that which we know intuitively, we must have some sensible sign by which the mind may apprehend or take hold of it. Such a sign is language, both in the ordinary and figurative sense of the word, which thus holds in his metaphysics a place

corresponding to that which tradition holds in his religious system. The knowledge of God, he maintained, is intuitive. The ideal element of every intellectual act is God creating creatures, *ens creat existentias*. The later publications of Mr. Brownson are "The Spirit-Rapper" (1854), "The Convert, or Leaves from my Experience" (1857), and "The American Republic" (1865). From 1844 he conducted almost single-handed, in Boston and New York, *Brownson's Quarterly Review*, devoted especially to the defense of Roman Catholic doctrines, but also discussing politics and literature. This periodical was suspended in 1864, and revived in 1873, and continued to the close of 1875. He was invited by Dr. John H. Newman and others to accept a chair in the new university in Dublin, but he preferred to continue his labors in his native country. Translations of several of his works and essays have been published in Europe, where he is probably better known and appreciated than in this country.

BUCHHOLTZ, REINHOLD, a German naturalist, born in 1836; died April 17, 1876. He received his early education in the Gymnasium of Königsberg, and afterward in the Joachimsthal Gymnasium in Berlin. He then studied medicine as his profession, and natural history, in the Universities of Berlin and Greifswalde, but zoölogy was his favorite study. After graduating at Greifswalde, he settled there as practising physician, but soon went to Italy in order to make in Genoa and Naples thorough studies on the different animals inhabiting the sea. Although he had to struggle with great embarrassments, he was entirely successful, bringing home with him some valuable specimens of the animals of the Mediterranean. He then took part in the North Pole Expedition of the Hansa, sharing all the adventures and privations of that ill-fated vessel. The loss of his collections and instruments on board of the Hansa affected him so much that in a fit of insanity he left his companions on the coast of Greenland. He was found among the icebergs, almost frozen, and was brought home by the mate of the Hansa. He was placed in an asylum, where he was cured in a comparatively short time, so that he soon again resumed his studies. He now wrote several articles about the expedition of the Hansa, and was soon after appointed professor in the University of Greifswalde. In 1872, in company with two young physicians, he went to the west coast of Africa to explore the mouths of the Niger. One of his companions died of yellow fever, while Buchholtz returned to Greifswalde in 1875, after having passed through a shipwreck on the Madeira Islands, and various other dangers. In 1876 he was appointed ordinary professor at Greifswalde, in recognition of his services. But the dangers and privations of his travels had been too much for him, and had completely undermined his health.

BURRELL, Sir PERCY, Bart., M. P., was born in 1812; died July 20, 1876. He was educated at Westminster and at Christchurch, Oxford. He was a deputy-lieutenant and justice of the peace for the county of Sussex, and a captain in the Eighteenth Sussex Rifle Volunteers. In 1862 he was elected for the borough of Shoreham, and kept this seat up to his death. In politics he was a moderate Conservative, declaring himself in favor of "national education being based on religion." The ancestors of the family were the Burrells of Brooke Park, near Alnwick, one of whom married a daughter of Sir Walter de Wodland, equeerly to the Black Prince.

BUSHNELL, HORACE, D. D., an American clergyman, born at New Preston, Conn., in 1802; died at Hartford, February 17, 1876. He graduated at Yale-College in 1827, was teacher in an academy at Norwich, Conn., and in 1829 became tutor in Yale College, and at the same time studied law, and afterward theology. In 1833 he became pastor of the North Congregational Church in Hartford, where he continued with eminent ability until 1859, when ill health compelled him to resign. In 1837 he delivered at Yale College the Phi Beta Kappa oration on the "Principles of National Greatness," and in 1847 published "Christian Nurture," in which he discussed the subject of religious education, and treated of the family as a religious institution. In 1849 appeared "God in Christ," three discourses previously delivered, with a preliminary "Dissertation on Language as related to Thought." The views herein expressed respecting the doctrine of the Trinity were questioned, and the author was called upon to answer a charge of heresy before the Clerical Association, of which he was a member. The charge was not sustained. In

further explanation and defense of his views, he published in 1851 a work entitled "Christ in Theology," in which he argued that systematic orthodoxy is not attainable, and that human language is incapable of expressing with any exactness theological science. His other principal works are: "Sermons for the New Life" (1858); "Nature and the Supernatural" (1858); "Work and Play" (1864); "Christ and His Salvation" (1864); "The Vicarious Sacrifice" (1865); "Moral Uses of Dark Things" (1868); and "Woman's Suffrage, the Reform against Nature" (1869). He also published many addresses, and was a frequent contributor to religious periodicals.

BUTCHER, SAMUEL, Bishop of Meath, born in 1811; died July 22, 1876. He was the second son of Vice-Admiral Butcher, R. N. He received his education in Trinity College, Dublin, of which he was elected a Fellow in 1837. In 1850 he was appointed Professor of Ecclesiastical History, in 1852 Regius Professor of Divinity, and in 1866 Bishop of Meath. He was a member of her Majesty's Privy Council in Ireland, a member of the Royal Irish Academy, and enjoyed precedence, in right of his see, as premier bishop in that kingdom. He was the ninetyeth holder of the see in succession since its foundation in the sixth century. He wrote "An Introductory Lecture on the Study of Ecclesiastical Literature" (1851), "Sermons on the Crimean War" (1854), "On the Present State of the Romish Controversy in Ireland" (1855), "On the Relative Value of Human and Divine Knowledge" (1857), "On the Conservative Character of the English Reformation" (1862), "Some Thoughts on the Supreme Authority of the Scriptures" (1864), and "Two Sermons on Dr. Pusey's 'Eirenicon'" (1866).

C

CABALLERO, FERNAN, the *nom de plume* of the Spanish novelist Cecilia de Arrom, born in 1797; died in July, 1876. She was born in Switzerland, and was the daughter of Böhl von Faber, a German merchant. Having been educated in Germany, she went to Spain with her father in 1818, where the latter had a large business. Having become a widow after a short period of married life, she married the Marquis de Arco-Hermoso, and, when the latter had died in 1835, the lawyer Arrom. As his widow she has lived in Seville since 1863. In 1849 she published her first novel, "La Gaviota," which was followed by a number of others, among which may be particularly mentioned "La Familia de Alvareda," "Clemencia," "Lágrimas," and "Ella." She also published several collections of smaller tales. Her works from the beginning attracted general attention in Spain, which soon spread to France, Ger-

many, and other European countries. She was the founder of modern realistic romance in Spain, whose people she described with wonderful truth and accuracy. But in all her works she showed herself an ardent Spaniard, and her writings are of a national character, like those of few other writers of fiction. Her object was to encourage the Spaniards to hold on to their old customs, their old faith, and to return to the old monarchy. In this way she expected to see a regeneration of Spain brought about. Her "Ouentas Poesias Populares Andaluces" (1859) were the first collection of Spanish popular tales and songs. Her principal works were translated into English, German, French, and Italian.

CABRERA, DON RAMON, Count of Morella, a Carlist general, born August 31, 1810; died August 29, 1876. He studied theology in his youth, but, as the life of a priest did not suit

him, he entered the ranks of the Carlists, among whom he soon became known for his bravery and his cruelty, particularly for the latter. In 1837 he took part in the expedition of Don Carlos against Madrid, on which he received the title of Count of Morella, in consequence of a successful battle at Morella. Espartero, who had command of the Christinos, repulsed the Carlists, whose cause from that time gradually declined. Maroto, the Carlist commander-in-chief, concluded the convention of Vergara, España was murdered, and only Cabrera succeeded in maintaining himself in the mountains of Aragonia. In 1840 he was defeated by O'Donnell, driven to Catalonia, and finally forced on July 6, 1840, to cross the French border. For one year he was a prisoner in the fortress of Ham, then went to Lyons, and from there protested against the resignation of Don Carlos. In 1848 he again tried to carry the standard of revolt into Spain, but was defeated and forced to flee. After the battle of Pastoral, on January 17, 1849, he was driven to France, remained there for a short time, and then went to England, where he married Miss Richards, a very rich lady. In 1850 he sought in vain to bring about complications between the kingdom of Naples and Spain, and, having been expelled from the former country, he retired entirely from the political field, taking no part in the Carlist rising in 1854 against the rule of Espartero and O'Donnell. In the last Carlist war, which came to an end in 1876, he openly took the part of Don Alfonso XII., who confirmed all his titles and dignities which he had received from Don Carlos. The address which he issued to the Carlists, calling upon them to lay down arms, produced but little effect, while Don Carlos had him tried by court-martial, which sentenced him to death *in contumaciam*.

CALIFORNIA. The twenty-first session of the Legislature of California began on the 6th of December, 1875, and continued until April 3, 1876. The number of acts approved by the Governor was 585; but scarcely any of these were of special importance. The leading subjects of consideration and discussion were finally left without any practical action. Among these was a general plan of irrigation for the State, reform of the educational system, prevention of what was known as the "land monopoly," the regulation of agricultural and mining interests, reform in the penal system, and other matters, which occupied a large share of attention, and were the subjects of reports and bills, but of no enactments. The subject of retrenchment in government expenses was referred to a special committee, which made an elaborate report, pointing out where in the expenditures were extravagant, and could be reduced, but nothing was done either in the appropriations or tax-levy to diminish materially the cost of administration.

The question of calling a convention for the revision of the constitution of the State occu-

ped considerable attention. The Legislature of 1873-'74 had provided for submitting the question to a vote of the people, declaring in the act for that purpose that "a majority of the aggregate vote of the State cast for members of the Legislature being in favor of a convention, said convention shall be deemed to have been called." The provision of the constitution which relates to calling a convention for its revision uses this language: "If it shall appear that a majority of the electors voting at such election have voted in favor of calling a convention, the Legislature shall, at its next

STATE SEAL OF CALIFORNIA.

session, provide by law for calling a convention, to be holden within six months after the passage of such law." At the election of 1875 a majority of the votes cast upon the proposition for a Constitutional Convention were in favor of it, but the number was much less than a majority of all the votes cast at the same election for other purposes. The question, therefore, arose whether the vote of the people authorized the calling of a convention. A bill for the purpose was introduced in the Senate and referred to the Judiciary Committee. Two reports were made, a minority of the committee recommending that the bill pass, and the majority recommending its indefinite postponement. The minority took the ground that it was the intent of the constitution that a majority of the electors voting on the proposition for a convention should determine whether it was to be held, and the majority maintained that a majority of the persons voting at the election for any purpose was necessary. The majority report was finally adopted. A bill originating in the Assembly for the same purpose was passed by that body, but defeated in the Senate. An act was passed recommending the electors of the State to vote at the next election on the amendments of the constitution, proposed by the Legislature of 1873-'74.

The subject of regulating railroads occupied a very large share of attention during the session. No fewer than four bills were introduced and debated at considerable length. They were all referred to a committee, which made an

elaborate report on the general subject of railroad legislation, and recommended the passage of an act, originating in the Senate, known as the "O'Connor bill." This was passed, and received the approval of the Governor on the 3d of April. It provides that the Governor shall, on or before the 15th of May, 1876, appoint three competent persons as Commissioners of Transportation, who shall be in no way connected with or interested in railroad business, and who shall serve two years, or until their successors are appointed. They must qualify by taking an appropriate oath, and entering into bonds of \$10,000 each for the faithful performance of their duties. Each commissioner is to be paid \$3,000 per annum, and a secretary may be employed, at a salary of \$1,800. It is made the duty of the commissioners to inspect railroads and require them to be kept in a safe condition. All companies are required to file with the commissioners copies of their tariffs of charges, their rules, regulations, and instructions to employés in force on the 1st of January, 1876, and to make no changes in them. The president, or other executive officer in charge of each railroad company, is required to furnish detailed information of its affairs, sixty-three items being designated of the information to be given, covering the amount of stock and debts of the road, cost and equipment, characteristics, operations of the last year, earnings, and expenses. Neglect to furnish this information is made punishable by fine of \$100 to \$1,000. Authority is given to the commissioners to examine the books and papers and the officers and employés of any railroad company in order to ascertain its condition and management. In case of dispute the commissioners may fix the route of any new line, determine the compensation to be made by one railroad to another for transportation, and determine the time-tables, accommodations, etc., required by the public. Awards by the commissioners are subject to revision in the county courts, with the right of appeal to the Supreme Court. Extortion and discrimination are defined and prohibited under penalties, to be exacted by the commissioners. The substance of the definition of extortion is demanding or receiving more than the regular specified rates for fare, freight, storage, or delivery, and discrimination is demanding or receiving more or less of one person than another for a like service. The issue of free passes is restricted to the directors, officers, and employés of the railroads, with their families, the officers and agents of other railroads, and of telegraph companies, destitute persons, the State Commissioners, and their employés traveling on official business, public messengers, troops and persons entitled by existing laws or contracts to free transportation. There is a penalty of \$100 for issuing free passes to others than those designated. It is made the duty of the commissioners to investigate violations of the law and prosecute suits therefor.

Among the bills which were prominent in the deliberations, but which failed to pass, was one to simplify the school system, one repealing the compulsory education law, one compelling publishers of libels to make retraction, and one requiring the signature of the writer to be appended to all newspaper articles. Among the other acts passed was one to regulate the practice of medicine, requiring all practitioners to have a diploma, either from some medical institution or from a board of examiners authorized and established by the act; one abolishing the Board of Tide Land Commissioners; one repealing the act to permit the voters of every town or city to vote on the question of granting licenses for the sale of liquor; and one establishing a Society for the Prevention of Cruelty to Children.

A committee of the Assembly, appointed to examine into the affairs of the State Land-Office, having reported unfavorably on its administration, a commission was provided to inquire more thoroughly into all matters relating to the sales and disposal of the public lands of the State. Its report was made to the Governor on the 14th of October. This showed that the fees of the office of Surveyor-General and Register of the Land-Office from December 4, 1871, to December 6, 1875, amounted to \$74,713.36, of which \$42,499.97 was unaccounted for. The Surveyor-General during that period claimed to have expended \$31,004.07 for extra clerk-hire, maps, certificates, postage, expressage, and traveling-expenses. Allowing these items, there was still \$11,211.32 unaccounted for. Besides the fees of the office, there had been expended by it \$65,565.60 drawn from the State Treasury. The commission concluded that "lamentable extravagance (to use the mildest possible language)" had "characterized the official conduct of the ex-Surveyor-General."

The subject of Chinese immigration was taken up by the Legislature and an investigation by a commission of the Senate ordered to take place during the recess. The following resolutions were also adopted:

Whereas, It is the duty of the General Government to promote the welfare of its citizens by the enactment of wise laws, and to advance their material interests by treaties of friendship and commerce with foreign nations, by conceding to their subjects such rights as they allow our citizens to enjoy in their territories; and—

Whereas, Our present treaty with China grants to her subjects privileges for which in return we receive no corresponding advantages, but which bring to our shores large numbers of her people, many of whom come among us to pursue an immoral vocation, which has made certain quarters of our towns and cities localities where human degradation is seen in its most abhorrent forms; and—

Whereas, The laboring element that is brought among us from China by organized companies of capitalists is not of a desirable character as residents, because, owing to the low standard of living on which it can subsist, it deprives our own working-people of employment in industries which they have learned only by a long apprenticeship; and—

Whereas, Pauper wages for our own working-

classes, who have wives and children depending on them for support, result from the maintenance of the treaty with China, which largely contributes to fill our poor-houses and hospitals with unwilling inmates as the only shelter they can obtain from poverty and sickness caused by loss of work; and—

Whereas, It is against public policy that under any present pretext whatever encouragement should be given by treaty stipulations, or otherwise, to the immigration of a servile laboring element among us: therefore, be it

Resolved, by the Senate, the Assembly concurring, That our Senators be instructed, and our Representatives requested, to use their influence to have Articles V. and VI. of our treaty with China modified, so as to discourage the further immigration of Chinese to our shores, by appropriate action on the part of the Federal Government.

Resolved, That his Excellency the Governor be requested to forward a copy of the foregoing preamble and resolutions to our Senators and Representatives in Congress at as early a day as possible.

Before the Senate commission entered upon its inquiry, a public meeting was held in San Francisco for the expression of the sentiment of the people on the subject. Governor Irwin addressed the meeting, declaring that the influx of the Chinese threatened a subversion of our civilization and the degradation of American labor. An address was adopted setting forth the extent of Chinese immigration, its effect upon industry, morals, and health, and the necessity of some action to put a check upon it. Among the statements of the address were the following:

Altogether they cannot be made more than in a partial degree amenable to the laws of the several States they have invaded; they, in effect, constitute a vast secret society, governed by laws and controlled by officials of their own; beyond the reach of the legally constituted authorities of the land, they are for the most part so singularly regardless of the laws of health in their mode of living and so difficult to be brought within sanitary regulations, especially as to proper ventilation in their crowded abodes, as to constitute wherever they are found in numbers a startling menace to public health.

They will never acquire our language except for the purpose of perfecting themselves for certain employment. Their civilization is not in accordance with ours. Their numbers make them as formidable, and their habits as destructive, as the locusts of Egypt or the grasshoppers of Kansas.

We look upon them with fear and alarm. No superiority of race or intelligence can resist such superiority of numbers. They are not of us, and we invoke the protection of the General Government against the invasion now upon us and with which we are threatened.

The committee give their denial to the sentimental error that the Chinese are distinguished for the peculiar possession of the virtues of industry and are a law-abiding and inoffensive population. The truth is, that in the city of San Francisco there are not less than ten thousand Chinese belonging to the criminal classes, and number among them the most abandoned and dangerous of criminals; that they are more difficult to manage by the police authorities than the same class among the white people, and are entirely out of the pale of any possible reformation.

The committee are informed, upon intelligent Chinese authority, that this class is dangerous, and a constant source of terror to their own people, embracing as it does gamblers, opium-eaters, hangers-on upon dens of prostitution, and men of abandoned

and violent character who live upon their countrymen by levying black-mail, and exacting tributes from all classes of Chinese society.

The address closed with the following resolutions, which were adopted by the meeting:

Resolved, That the sentiments embodied in the foregoing address are expressions of the opinion of this assemblage, and in view of the facts therein set forth we earnestly recommend the Congress of the United States to give this matter of Chinese immigration its immediate and earnest attention.

Resolved, That the people of California, in their perfect loyalty to the Government and the law, recognize their duty to the Chinese now among us, promising them protection and all their rights, and a guarantee of all the privileges to which they are entitled under existing laws.

Resolved, That in relation to the continuing immigration of Chinese, we claim the right, from our superior knowledge of the results of this immigration and our observation of its practical workings, and as an intelligent part of the American people, to declare our unalterable hostility to it, to say that the bulk of this immigration is pure and simple peonage.

Resolved, That the majority of the immigrants are coolies, in bondage to secret organizations more powerful than our courts, and held in servitude for debt—a slavery only terminable at the will of masters over whom our laws have no control.

Resolved, That this system is immoral and brutalizing—worse than African slavery. It involves systematic violation of our State and municipal laws, and is attended by murder, false and forcible imprisonment, perjury, subornation, kidnapping, and the sale of women for the purpose of prostitution.

Resolved, That the presence of these people in our midst has a tendency to demoralize society and minister to its worst vices; it aids to corrupt and debauch our youth, and the labor of this servile class comes in direct competition with the labor of American citizens. It degrades industrial occupations, drives white labor from the market, multiplies idlers and paupers, and is a menace to Christian civilization. If these things be true—and we challenge their successful denial—then we have a right to demand of Congress that it shall investigate, and the legislature for the abatement of this evil: therefore—

Resolved, That the general committee having this meeting in charge shall appoint, the mayor of the city approving, not to exceed five reputable citizens of San Francisco, intelligent upon this Chinese question, who shall proceed to Washington, and, having submitted this address and these resolutions to the Houses of Congress, shall earnestly urge such legislation as may be necessary to meet the requirements of this occasion.

The Senate commission pursued its investigation for several weeks during the months of April and May, and took a large mass of testimony concerning the character and effects of Chinese immigration. In the latter part of the year a committee of the Federal Senate visited the State for the purpose of inquiring into the same subject. The official reports have not yet been made public.

There was no State election this year, but conventions of the political parties were held for the purpose of appointing delegates to the national conventions. That of the Republicans took place at Sacramento, on the 27th of April. The following resolutions were unanimously adopted:

Resolved, That we have undiminished faith in the integrity of the Republican party of the nation; that

in its principles is the only security of national existence, prosperity, and honor.

Resolved, That in suppressing the great rebellion, begun and prosecuted by one wing of the Democratic party, countenanced and aided by the other, and in destroying slavery and preserving the nation, the Republican party justly earned the gratitude of the lovers of liberty and good government everywhere; yet as a political party it cannot long endure and receive popular support solely on renown already achieved, however brilliant, but must go forward and courageously deal with other questions now demanding consideration, and that among such questions there is none more pressing or important than reform in the civil service of the Government, and the complete extirpation of the *spoils system*, inaugurated by the Democratic party.

Resolved, That we both admire and approve the action of those who have been, and are still, engaged in the prosecution and punishment of official dishonesty; that we are in favor of an economical administration of the Government by honest, faithful, and capable officers.

Resolved, That the Republican party of California deprecates now, as it has done at all times in the past, the presence among us of hordes of servile Chinese, inimical to our advancement as a nation; that, while the Democratic party has repeatedly resolved against the introduction of these people, it has never taken action to prevent it; that we fully indorse the course of our representatives, to whom is due the credit of the only laws of reform upon this subject; that we are in favor of such a modification of the existing treaty with China as will effectually prevent any further influx of these people into our State.

Resolved, That we favor a return to metallic currency, and the restoration of the silver coin of the United States to its constitutional equality with gold as a legal tender.

Resolved, That the funded debt of the nation, the principal and interest of which was by law made payable in gold, should be so paid, and that any and every scheme of repudiation, direct or indirect, meets the hearty condemnation of the Republicans of California.

Resolved, That the Democracy of this State is not to be trusted as a national party with the possession of the presidential office or of Congress, because of its purpose to add hundreds of millions to the national debt, for pensions to Confederate soldiers, claims for cotton, legally and justly confiscated, and, in the end, over a thousand millions as compensation for the loss of slaves of the South; the allowance of which would most surely result in another war, since loyal Union men will never peaceably consent to be taxed to pay treason for its losses.

After the delegates had been appointed, the following additional resolutions were adopted:

Resolved, That while the Republican party contains many men who, by their recognized ability and devotion to the principles of the party, have proved themselves worthy of public support and confidence, and capable of filling honorably the highest office in the gift of the people, the Republican party of California especially recognizes in the Hon. James G. Blaine an eminently able and tried exponent of the principles of the party, of large experience in public life, of the purest public and private character, and possessing in a marked degree those personal qualities which would do honor to the office of President of the United States.

Resolved, That while thus expressing our preference for the Hon. James G. Blaine, yet, having confidence in the intelligence and patriotism of our delegates to the National Convention, we leave them unembarrassed by instructions, and free to exercise their own deliberate choice in the convention, as the interests of the country may in their judgment seem to demand.

The Democratic Convention was held in San Francisco, on the 24th and 25th of May. A State Central Committee and delegates to the St. Louis Convention were chosen. The platform enunciated the following principles:

1. Fidelity to all the provisions of the Constitution of the United States.
2. The perpetual union of all the States, with local self-government in every section.
3. Civil-service reform and the restoration of the tests of honesty, fidelity, and capacity, in the qualification of public officers.
4. Retrenchment and economy in the Federal, State, and municipal administration, lessening the burdens on labor by the reduction of offices and taxation.
5. The exposure and speedy punishment by penal laws of the corruption and speculation in the administration of public affairs.
6. The private use and appropriation of public funds by official custodians means embezzlement and robbery. Official accountability exacted and enforced by a better administration of the civil and criminal laws.
7. State corporations supervisable by and subordinate to State legislation in the interests of the people.
8. Free schools, exempt from all sectarian control, and a free press, accountable for abuses to the civil and criminal laws.
9. The preservation of the public faith and credit, and the honest payment of the public debt.
10. The money of the Constitution, gold and silver, the only legal tender.
11. A tariff for purposes of revenue only.
12. No Chinese immigration. It is so thoroughly obnoxious to our people and institutions that its prohibition is imperatively demanded, and all the powers of the Government should be exerted to that end.

A resolution was adopted, declaring that the vote of the State in the National Convention should be cast by a majority of the delegates. Then the following was adopted by acclamation, under a suspension of rules:

Whereas, The Hon. Samuel J. Tilden, Governor of the State of New York, by his manly defense of the people against the corrupt schemes of political tricksters, has proved himself to be a true reformer and a fit champion of the people in conflict with official corruption, and by his bold advocacy of the hard-money circulating medium of our country he has made himself an unobjectionable leader of the Democratic party; therefore, be it

Resolved, That his nomination as President of the United States by the National Democratic Convention would be acceptable to the Democratic party of California as a glorious victory in the cause of honest government.

A decision was rendered by the Supreme Court of the State on the 11th of February, in the case of the People *vs.* the Hibernia Savings and Loan Society, to the effect that mortgages and credits are not subject to taxation. The constitution of the State provides that "taxation shall be equal and uniform throughout the State. All property in this State shall be taxed in proportion to its value, to be ascertained as directed by law; but assessors and collectors of town, county, and State taxes shall be elected by the qualified electors of the district, county, or town in which the property taxed for State, county, or town purposes is situated." The political code of the State re-

quires that all property shall be taxed, and declares that personal property includes "money, goods, chattels, evidences of debt, and things in action." Judge McKinstry, in delivering the opinion of the court, maintained that "evidences of debt and things in action" could not be regarded as property within the meaning of the constitution. He said:

That causes of action are dependent on too many contingencies to be capable of appraisal which shall accord with any rule of equality or uniformity of value, is too plain for argument. Yet the constitution requires that all property shall be assessed on the *ad valorem* principle by local assessors. All property which is visible and tangible is capable of such assessment; choses in action are not. The word "property" has been used in our language in several senses; but in the case in hand we cannot be limited to the meaning given it by the code, but may also—and such is our duty—look for its meaning in the constitution. The constitution provides that no property, as property, shall be taxed, except such as is capable of a valuation by the assessors, which shall be ratably equal and uniform with that affixed to all other property. . . .

It is property in possession or enjoyment, and not merely in right, which must ultimately pay every tax. The Legislature may declare that a cause of action shall be taxed, but a cause of action cannot pay the tax; and this because it has, and can have, no value independent of the tangible wealth out of which it may be satisfied. . . .

He who has the property in possession must be taxed on its value, and the value once taxed cannot be retaxed without a violation of the constitutional provision that each value shall be taxed proportionately to the sum of all the values.

The sovereign power of the people employing the prerogative of taxation regards not the claims of individuals on individuals, but deals with the aggregate wealth of all; that which is supposed to be unlimited is here limited by an inexorable law which parliaments cannot set aside, for it is only to the actual wealth that governments can resort, and, that exhausted, they have no other property resource. This is as certain as that a paper promise to pay money is not money. . . .

The facts of the present case do not present any question as to the power of the Legislature to require the payment of a specific sum by way of license for the transaction of a practical business, or the performance of particular acts. The views above expressed remove the objection heretofore resorted to, that the creditor cannot complain if the debtor shall pay a double tax. The creditor can always complain, because the credit should not be taxed at all, inasmuch as it has no independent value, and therefore cannot be taxed in proportion to such value (as part of the aggregate of value) in the manner required by the constitution.

Judge Miles concurred fully in Judge McKinstry's views. Chief-Justice Wallace and Judge Crockett submitted separate but concurrent opinions. Chief-Justice Wallace said:

This provision of the constitution established the cardinal rule that property taxation in this State should always be imposed upon an *ad valorem*, as contradistinguished from a specific basis, and may be paraphrased thus: "All the actual wealth within this State shall be equally burdened with the support of the government." That "property" as here employed in the constitution, and "actual wealth" as used in the paraphrase, are synonymous, and that each of them alike excludes mere credits, is believed to be demonstrable. In the nature of things, both the scale of public expenditure indulged and the

consequent degree of taxation necessary for its supply have reference to the actual aggregate wealth of the political community to which government looks for support. These habitually vary as the State is popularly said to be comparatively rich or comparatively poor.

The Legislature, in making up the budget, must necessarily, therefore, look to the aggregate amount of actual wealth in the hands of the people, and borne upon the tax-rolls. This constitutes the capacity to pay, which it is always indispensable for the statesman to consider. And in considering it, how, it may be asked, can it be supposed that the aggregate wealth of the people—their actual capacity to pay taxes—is at all made up of credits—the mere indebtedness owing by individual members of the body politic to others of its members?

An answer would perhaps most readily be found in supposing, were such a thing possible, that the entire tax-rolls exhibited nothing but such indebtedness. Taxation attempted under such circumstances would of course be wholly fanciful, as having no actual basis for its exercise.

It must result, therefore, that mere credits are a false quantity in ascertaining the sum of wealth which is subject to taxation as property, and that, in so far as that sum is attempted to be increased by the addition of those credits, property taxation, based thereon, is not only merely fanciful, but necessarily the unconstitutional imposition of an additional tax upon a portion of the property already once taxed.

Mr. Justice Crockett, speaking of former decisions, said:

I am satisfied, upon more mature deliberation, and in the light of the later and more exhaustive arguments of the questions, that the former rulings on this point cannot be supported. The constitution being the fundamental law, it is of the utmost consequence to the people that its provisions should be properly construed. This is peculiarly true of those provisions relating to the power of taxation—a power more subject to abuse than any other, and which directly affects the interest of every citizen. Whatever weight may be due to the rule of *stare decisis*, as applied to other subjects, it ought not, in my opinion, to prevent a return to a proper construction of those provisions of the constitution which affect the vital question of taxation. No great property rights have grown up under the former construction, which can be injuriously affected by the change in the rule, and I discover no sufficient reason for persisting in a construction, the only effect of which, in a large majority of cases, is to inflict upon the borrowers of money an unjust and oppressive system of double taxation. That this is the necessary result of a tax on debts secured by mortgage for money loaned is, in my opinion, too plain to admit of debate.

Mr. Justice Rhodes dissented from these opinions and from the judgment of the court, which reversed the decision of the lower court and remanded the case.

The following industrial and commercial statistics of California, for 1875, were received too late for the last volume of this work:

PRODUCTS.	Quantity.
Wheat.....	20,000,000 centals.
Wheat and flour exports.....	9,000,000 "
Gold and silver.....	\$90,000,000
Coinage of San Francisco Mint.....	\$82,069,000
Lumber.....	\$62,000,000 feet.
Wool.....	48,500,000 pounds.
Wine.....	9,000,000 gallons.
Quicksilver.....	44,000 flasks.
Exports of merchandise by sea.....	\$80,455,000
Tonnage movement of Central Pacific Railroad.....	1,065,781,068 pounds.

PRODUCTS.	Quantity.
Tonnage movement of Southern Pacific Railroad.....	451,854,741 pounds.
Deposits in savings-banks.....	\$72,500,000
Banking capital.....	\$150,000,000
Corporation dividends disbursed.....	\$28,000,000

The total acreage of wheat in 1876 was 2,169,000 acres, and the yield 24,776,000 centals; barley, 613,000 acres, 10,066,000 centals. The gold yield for 1876 was estimated in November at \$20,000,000.

The census of school-children, for the years 1874 and 1875, was as follows:

PUPILS.	1874.	1875.
Whites, five to seventeen years.....	157,511	169,888
Increase over 1873.....		139,596
Negroes, same age.....	1,064	1,067
Increase over 1873.....		123
Indians, same age.....	1,142	1,118
Increase over 1873.....		48
Totals.....	159,717	171,568
Increase over 1873.....		22,958
Total children under five years.....	74,676	73,650
Increase over 1873.....		8,664

ATTENDANCE.

PUPILS.	1874.	1875.
Census children attending school at any time of the year.....	106,890	114,896
Average daily attendance of census children.....	63,651	69,658
Average census children belonging to public schools.....	70,279	77,850
At private schools at any time in the year—census children.....	14,149	15,021
Percentage of census children who have attended only public schools.....	8.86	8.75
Ditto who have attended only private schools in 1873.....		8.04
At no school during the year—census children.....	39,678	39,646

NATIVITIES.

Of 224,633 children in 1874 and 252,301 in 1875, the nativities were:

PUPILS.	1874.	1875.
Native born, both parents native born.....	109,743	125,119
Native born, one parent foreign born.....	24,207	36,982
Native born, both parents foreign born.....	85,987	93,776
Foreign born, children.....	4,797	6,444

SCHOOL STATISTICS.

SCHOOLS.	1873.	1874.	1875.
School-districts in California.....	1,462	1,519	1,579
First-grade schools.....	465	718	875
Second-grade schools.....	761	737	770
Third-grade schools.....	642	550	545
Total schools.....	1,868	2,005	2,190

The value of school property in 1875 was \$5,068,678.30; receipts from all sources for school purposes, \$3,390,359.30; apportionment per child, \$19.76.

CAMERON, J. DONALD, Secretary of War, is the eldest son of Senator Simon Cameron, of Pennsylvania, and was born in Harrisburg, about 1830. Until the present year, he has never held public office, but for ten years past has taken a prominent part in Pennsylva-

nia politics. For a number of years he was President of the Northern Central Railroad of Pennsylvania, in which position he was succeeded by Colonel Thomas A. Scott, when the Pennsylvania Railroad Company obtained a controlling interest in the Northern Central. Mr. Cameron was a prominent member of the Republican State Convention which met at Harrisburg in March, 1876, and by it was chosen as the head of the Pennsylvania delegation to the National Convention which assembled in Cincinnati in June. May 22, 1876, Mr. Cameron was nominated by President Grant as Secretary of War, and was promptly confirmed by the Senate. The new Secretary is regarded as a man having administrative abilities of a high order.

CAPERTON, ALLEN T., was born near Union, Monroe County, Va. (now West Va.), November 21, 1810; died in Washington, July 26, 1876. He graduated at Yale College in 1832, and studied law at Staunton, Va. He was for several years a member of the Virginia Legislature, his last term in the Senate being in 1859-'60. He was a member of the Constitutional Convention of 1861, and opposed secession until the beginning of hostilities. He was elected to the Confederate States Senate, and served till the fall of the Confederacy. He was chosen to represent West Virginia in the Senate of the United States for the full term beginning March 4, 1875. He was a member of the Committees on Claims, Railroads, and the Revision of the Laws of the United States.

CAPPONI, Marquis GRISO, the last representative of an illustrious Florentine family, born September 14, 1792; died February 3, 1876. In 1847 he was created Senator of Tuscany, and after the proclamation of the Constitution of 1848 he became Minister of State and President of the Council. In the following years he resolved to give up public life, but afterward accepted a position as a member of the commission governing Tuscany in the absence of the grand-duke. His contributions to Italian literature are numerous. He wrote a number of articles for the "Italian Anthology" on Florence, which were suppressed in 1832. In addition to these various publications he dictated, after he became blind, an important work under the title of "Fragments on the Subject of Education." He was also one of the principal editors of the "Historical Archives," published in Florence. His biography was written by Montazio (1872).

CARNÉ, LOUIS MARCERN, Count DE, an eminent French publicist, born February 17, 1804; died February 13, 1876. He entered the diplomatic service at an early age. In 1839 he was elected to the Chamber of Deputies, where he was a follower of Lamartine. He opposed many of the points of M. Guizot's foreign policy, but in the year 1847 accepted the presidency of the Commercial Department of Foreign Affairs. From this he retired after

the Revolution of February 24, 1848. He was elected a member of the Academy in 1863. Appearing as a candidate for a seat in the Legislature in 1869, he was defeated. He received the decoration of the Legion of Honor in 1837. He was the author of numerous works, among which are "Vues sur l'Histoire Contemporaine" (1833), "Du Gouvernement Représentatif en France et en Angleterre" (1841), and "L'Europe et le Second Empire" (1865). He also furnished numerous contributions to the *Revue Européenne*, the *Encyclopédie du XIXme Siècle*, the *Dictionnaire de la Conversation*, the *Revue des Deux Mondes*, and numerous journals. His son Louis accompanied the French Scientific Expedition to Indo-China in 1866 to 1868, and gained considerable reputation by his contributions to the *Revue des Deux Mondes*, on that country.

CENTRAL AMERICA (AMÉRICA CENTRAL), the isthmian territory comprised between Mexico and Colombia, and the Atlantic and Pacific Oceans, and serving to unite the northern and southern continents of America.

It comprises the five independent states of Guatemala, Honduras, San Salvador, Nicaragua, and Costa Rica, formerly united under a single Government, known as the Republic of Central America.

On February 22, 1876, the plenipotentiaries for the reestablishment of the Central American Confederation retired "to their respective homes," leaving the prospects of reconstruction as meagre as at the time of their assembling. The spirit of union, nevertheless, still exists in the breasts of the people, though it is manifested with greatest earnestness in Guatemala, by far the most progressive of the five states.

On September 15, 1876, the anniversary of Central American independence was celebrated in all of them with unabated patriotism, and in the midst of enthusiastic rejoicings. In the national palace of Guatemala, Señor T. Martín Barrundia, of the War Department, delivered an oration, the concluding remarks of which reflect the prevailing policy at the present time in that country respecting Central American reunification: "It is on this day that we ought all to strive to join in the prayer that these five sections of the same territory may soon form one family, united under one and the same flag, and so present to the world the grand spectacle of another republic founded by them, like that of Washington or William Tell."

Through the mediation of the British Government, the consent of the Government of San Salvador to a satisfactory settlement of the outstanding bonds for the Salvadorian portion of the original Central American debt was obtained. New difficulties, created by the minister of the republic in London, appear, however, to offer an obstacle to the immediate surrender of the bonds. A memorial has been sent to the San Salvador Government, through

the Foreign Office, appealing against further delay.

CHAIX D'EST ANGE, GUSTAVE LOUIS VICTOR ADOLPHE CHARLES, a French lawyer and politician, born April 11, 1800; died December 14, 1876. He took an active part in the exciting events of 1830 and 1848, and was engaged in numerous celebrated trials. At the end of 1857 he was appointed *procureur général* at the Imperial Court in Paris. He was appointed shortly after Councillor of State, and in 1862 was created a Senator of the Empire. In 1863 he was appointed Vice-President of the Council of State, and in 1864 was assigned to preside over the section of Public Works and Fine Arts. He took an active part in the Corps Législatif as commissioner of the Government, and in 1868 presented to the Senate a report on the celebrated petition of the Catholics demanding free superior instruction. He was created a Commander of the Legion of Honor in 1858, and a Grand Officer in 1861.

CHELIUS, MAXIMILIAN JOSEPH, an eminent German surgeon, born in 1794; died August 17, 1876. He studied at Mannheim and Heidelberg, receiving at the age of eighteen the diploma of Doctor of Medicine. He practised medicine in several cities, was physician to the hospital at Ingolstadt, Bavaria, and accompanied the Baden troops in the invasion of France after the overthrow of Napoleon I. He subsequently increased his knowledge of surgery and medicine by attending a course of lectures at the hospitals and universities of Vienna, Göttingen, Berlin, and Paris. In 1817 he was appointed Extraordinary and in 1819 Ordinary Professor of Medicine at Heidelberg. In 1826 he was created a ducal councillor of Baden. His best-known work is his "Handbuch der Chirurgie" (2 vols., seventh edition, 1851), which has been translated into several languages, and is considered a standard work on surgery. He was also the author of "Ueber die Heilung der Blasenscheidenfisteln durch Cauterisation" (1844), and "Zur Lehre von den Staphylophen des Auges" (1858).

CHEMISTRY. *Chemistry of the Brain*.—Mr. Charles T. Kingsett, assistant of Dr. Thudichum, in his researches into the chemical constitution of the brain, in a lecture before the Liverpool Chemists' Association, stated as follows the constituents of brain-substance:

TABLE SHOWING CONSTITUENTS OF THE BRAIN.

GROUP OF SULPHURIZED PRINCIPLES.	
Albumen.....	C ₁₃ H ₁₁₅ N ₁₃ SO ₂₃
GROUP OF PHOSPHORIZED PRINCIPLES.	
<i>Sub-Group of Kephallins.</i>	
Kephallin.....	C ₄₂ H ₇₀ N PO ₁₃
Kephaloïdin.....	C ₄₂ H ₇₀ N PO ₁₃
Oxy-kephallin.....	C ₄₂ H ₇₀ N PO ₁₄
Peroxy-kephallin.....	C ₄₂ H ₇₀ N PO ₁₅
Amido-kephallin.....	C ₄₂ H ₇₀ N ₂ PO ₁₃
Giving compounds with PtCl ₄ ; CdCl ₂ ; Pb; acids, bases, and salts.	
<i>Sub-Group of Myelins.</i>	
Myelin.....	C ₄₀ H ₆₅ N PO ₁₀
Oxy-myelin.....	C ₄₀ H ₆₅ N PO ₁₁
Amido-myelin.....	C ₄₀ H ₆₅ N ₂ PO ₁₀
Compounds as with kephallin.	

Sub-Group of Lecithins.

Lecithin $C_{43}H_{83}N PO_4$
 Compounds as kephalins.

GROUP OF NITROGENIZED PRINCIPLES.

Cerebrin $C_{34}H_{46}N_2O_6$
 Stearoonote $C_{34}H_{46}N_2O_4$
 Phrenosin $C_{34}H_{47}N_2O_4$
 Kerasin $C_{46}H_{81}N O_5$
 Extractive and secretory acids.
 Uric acids and congeners.
 New acids.
 Extractive alkaloids (several new ones).
 Urea and amido-acids.

GROUP OF OXYGENATED PRINCIPLES.

Cholesterin $C_{26}H_{44}O$
 Inosite $C_6H_{12}O_6$
 Lactic acid, etc.
 Fats and fatty acids.

GROUP OF INORGANIC PRINCIPLES.

H_2SO_4 ; HCl ; P_2O_5 ; CO_2 ; H_2O ; K ; Na ; NH_3 ; Ca ;
 Mg ; Cu ; Fe ; Mn .

The albuminous matters from the brain, he observed, do not differ specifically from similar matter derived from other parts of the body, and are mainly insoluble in water. The kephalins possess a great affinity for oxygen, and also exhibit a wonderful power of combination. The first member of this group was discovered by Thudichum.

Lecithin has been obtained mainly in combination with platinum chloride as hydrochloride, but this salt proves so unstable as to defy in great measure all attempts which have been made to elucidate its nature. But it has proved at least to possess characters different in some respects from those attributed to the lecithin described by Strecker and Goble, although it appears to yield similar products of decomposition.

Cerebrin, stearoonote, phrenosin, and kerasin, are all well-characterized substances: the first two are isomeric, stearoonote being formed from cerebrin, when the latter is heated in alcohol, more rapidly than it can be dissolved, when it fuses and becomes insoluble. But the product is readily soluble in benzine, while cerebrin is absolutely insoluble in cold benzine; from the benzine solution the stearoonote is precipitated by alcohol.

Cerebrin seems to be the di-amidated form of a fatty acid, while phrenosin appears to constitute the mono-amidated form.

Kerasin has a microscopical character extremely easy to recognize, and of such form as to readily enable one to discover the presence of foreign matters.

Inosite is a sort of sugar; it is probably present in human brain-matter, while in the brain of the ox it exists in very decided amount.

In certain cases of softening of the brain, Dr. Thudichum has observed the presence of glycerophosphoric and fatty acids in the free state. As these matters are *never normally* present, and as they constitute the decomposition products of some of the phosphorized principles, it is probable that softening of the brain may be expressed chemically as the decomposition of one or more of the phosphorized principles into proximate nuclei.

All the principles of which brain-matter is composed are, *en masse* (with the exception of the albuminous framework), soluble in warm alcohol, although the individual principles are not all soluble under these conditions. The question occurs here: Can a man consume so much alcohol in the form of stimulants, and retain enough in his blood in the unoxidized condition, to dissolve traces of matter from his brain? Actual experiments made by Mr. Kingzett appear to favor the hypothesis of a solvent action exerted by alcohol on the brain of the living individual.

Influence of Chemical Works on Public Health.—With a view to determine statisti-

cally the effects upon human life of the vapors and gases emanating from chemical works, a series of questions was sent to the members of the Northwestern (England) Association of Medical Officers of Health. Upon the basis of the facts brought out in the replies, Dr. Francis Vacher has written a report, the substance of which is here given. Five questions were submitted to the officers of health, the first being whether the gases and vapors from chemical works are productive of any excessive mortality. To this question twenty-six medical officers made reply. Of these, six distinctly state that they do consider noxious vapors a cause of the mortality in their respective districts, and one of these six gave an opinion that the irritant as well as the poisonous gases increase the death-rate. Three other medical officers refrain from answering positively, either in the affirmative or in the negative. Of these, the officer for the city of Glasgow is of the opinion that noxious vapors do affect the local death-rate, but asserts that the subject "cannot be studied in its purity," as "the larger factors of house over-crowding and building, dirt, and poverty, obscure the action of all other agencies." The other two do not answer the question. But the remaining seventeen medical officers answer the question, positively or indirectly, in the negative. Thus, the officer for Bristol finds "the population exposed to these gases as healthy as that of any part of the city." The medical officer of Blaydon-on-Tyne, where there are considerable chemical works, states that the average health condition of the place is singularly good, and has been for the last thirty years. The medical officer for Liverpool is "acquainted with no facts which would support a belief that the excessive mortality of the district is due to the vapors of chemical works."

In thirteen of the twenty-six returns no reply is made to the second question, in which information is sought as to the forms of disease, if any, produced or aggravated by noxious vapors. The medical officers of the remaining thirteen towns and districts are of opinion that diseases are produced or aggravated by gases and vapors from chemical works, and many of them instance specific diseases, which they believe to be traceable to this cause. In one return it is stated that "every disease of the respiratory organs seems to be aggravated, and vomiting sometimes produced," by the noxious vapors. Other returns note injurious effects produced on patients suffering from bronchitis, asthma, pneumonia, and, in some instances, these and allied complaints are said to be primarily caused by the vapors from chemical works. Lastly, the medical officers for three districts charge gases and vapors from chemical works with the production of phthisis. There is also some evidence that these gases and vapors, in some districts, cause loss of appetite, sick headache, diarrhoea, nausea, and indigestion.

Question number three is in this form: Have you noticed any signs of general ill-health or weakness that could properly be attributed to this pollution of the air? In seven of the twenty-six returns tabulated, the question is not specifically answered. The medical officers for ten districts say they have not noticed any signs of general ill-health or weakness attributable to this cause; the medical officer for Bristol adding, "Although St. Philip's, Bristol, stinks from one end to the other of gases from different manufactories, the people are very healthy—the children *remarkably plump and healthy*." The answers from the remaining nine districts are all in the affirmative. Thus, one medical officer reports "cases of temporary uneasiness of the respiratory organs," which he ascribes to this cause; and another says: "I could not fairly attribute the general signs of ill-health I observe to this pollution of the air alone, but it appears to me, in some cases, to be the chief cause of ill-health." The medical officer for St. Helens remarks: "The aspect of the people, especially those who dwell in the immediate neighborhood of the works, is sallow and anæmic, presenting a marked contrast to those who live in healthy towns." Thus, we have the evidence of several medical officers in charge of polluted districts that the vapors and gases emitted by chemical works are a cause of general ill-health and weakness, sometimes producing specific diseases of an asthenic type, or even premature old age.

Question number four refers to a matter on which it is particularly difficult to obtain positive information; it is as follows:

Have you observed whether the atmosphere is especially injurious to those newly settled in the district, and whether a prolonged stay seems to secure comparative immunity from suffering?

The evidence under this head may be briefly summed up. It is not very strong either way, but what there is appears to amount to this: The medical officers who have had experience of the more serious effects of noxious vapors do not find that immunity from these is secured by a prolonged stay in a polluted district, and those medical officers who can charge the vapors with producing nothing graver than headache, chest constriction, and indigestion, find the sufferers from such complaints become acclimatized. There is also some evidence supporting the belief that, except in the case of those actually employed in the works, the newly settled in a polluted district suffer most.

The fifth question, which asks for practical or legislative suggestions toward amending the evils observed, has elicited suggestions from six medical officers.

These suggestions are briefly as follows:

1. The removal of the works from the vicinity of inhabited houses.

2. The reduction of the legal maximum of noxious vapors allowed to be discharged.

3. Emitting the vapors, for the most part, when the wind will carry them in a safe direction.

4. The more stringent application by sanitary authorities of the legislative provisions already existing.

5. The adoption by manufacturers of the most approved scientific processes.

6. Requiring the removal of all sulphur from alkali waste before deposit.

Bartlett's Ozone-Generator.—Dr. F. W. Bartlett's ozone-generator, which was exhibited at the Buffalo meeting of the American Association for the Advancement of Science, consists of three parts, each having a share in the process. The base, or generator, is a glass vessel eight inches high, with a projecting rim at either end; the interior space, four and a half inches in diameter, being divided into eight compartments by projections from the inner wall, extending one and a quarter inch toward the centre. This unoccupied centre has a movable cylinder which, when in position, completes the walls of the separate cavities. In each of these a tablet of phosphorus, one by two inches, and one-eighth of an inch thick, is suspended in water by a fusible wire—the fusible wire being used so that, in cases of ignition, which sometimes occurs, the phosphorus may be completely submerged and the flame extinguished. Resting upon the base is a conical cylinder, eight inches high, and with a diameter at the top of five inches, composed of double walls of wire-cloth, between which lies some porous material saturated with a strong alkaline solution. This presents an effectual bar to the passage of phosphoric acids, while it permits the free transit of the ozone. Above this eliminating-chamber is a second glass cylinder about eight inches in height, with an aperture at the top through which passes a glass rod carrying a plunger for displacing the water in the base, and by means of which the tablets of phosphorus may be raised or lowered. The space thus provided above the phosphorus is about eighteen inches, and is considered by the inventor indispensable to the full utilization of the phosphoric vapor in the production of ozone.

In its present form the machine is employed chiefly for disinfecting purposes, and performs such work not only thoroughly but very cheaply. For ozonizing the atmosphere of a house, the slow oxidation of 100 to 150 grains of phosphorus daily will suffice. It is entirely manageable and without any disagreeable odor.

Dr. Bartlett claims that ozone possesses very important curative properties, has employed it successfully in numerous cases of asthma, hay-fever, typhoid fever, scarlatina, diphtheria, puerperal fever, erysipelas, etc. He predicts that its introduction will work great changes in the medical treatment of zymotic or malarial diseases.

An Improved Gas-Jet.—The flame from a Bunsen burner is not solid, but, like the flame of

a candle, has a central hollow space about half its own length, the "zone of no combustion." Mr. J. Wallace, of Newcastle-on-Tyne, has discovered a method of obliterating this hollow space, and of producing a solid flame. While experimenting with a view to ascertain the conditions of safety in the mixture of air with coal-gas, Mr. Wallace observed that as the proportion of air was increased the hollow space became smaller, the whole flame contracted, and the heat became more intense. The surface of the space changed from a leaden color to a brilliant emerald green, and finally, as the proportion of air was increased, the "zone of no combustion" disappeared altogether and the gas and air exploded in the Bunsen burner. The form of the burner was such as to allow of an intimate mixture of the air and gas. It was thus apparent that the hollow space or "zone of no combustion" depended entirely on the amount of air which was mixed with the gas previous to combustion, and it only remained to construct a burner in which the gas-jet should be able to induce the extra quantity of air, and the burner itself be so arranged that the tendency to explode or light within should be prevented. It may here be noted that a much greater proportion of air must be pre-admixed to obtain a good flame from a large burner than from a small one, because the area of the flame increases at a much greater rate than its circumference. The remainder of the air, which makes up the total combining quantity, is combined with the gas *during* combustion, and appears only to unite at the lower part of the flame; the upper part being enveloped and cut off, so to speak, by its own products.

The following account of some of Mr. Wallace's experiments is from the *Engineering and Mining Journal*:

A cylindrical cap of finely perforated iron plate was fitted on to a burner tube 1 inch in diameter, and made adjustable to various heights. When raised to $\frac{1}{2}$ inch, gas was burned above it at the rate of 20 feet per hour, with a flame which was solid to the centre, each hole in the cap being covered by a bright-green bead showing where combustion began. A 2-inch tube was next fitted up with 8 jets at the bottom, capable of passing 40 feet per hour at 1½-inch pressure. When lighted and adjusted the flame proved to be as complete as the previous ones, and the proportion of air pre-admixed, when measured from a test-holder, was $\frac{4}{5}$ volumes. A platinum wire stretched across the flame $\frac{1}{2}$ inch above the cap became instantly white-hot for a distance of 4 inches, and the color gave no indication of any difference of temperature in any part enveloped in the flames. When the air was interrupted at the base of the burner a large hollow space immediately appeared above the cap, and the wire cooled to blackness. On again admitting the air the wire was once more incandescent. The green beads when examined by the spectroscope give the spectrum of carbonic oxide, and they only appear in a flame which burns in the most complete manner.

Absorption of Nitrogen by Plants.—Berthelot has published the results of a series of experiments which prove that, under the in-

fluence of atmospheric electricity, free nitrogen is absorbed at the ordinary temperatures by the proximate principles of plants. The apparatus used in these experiments consists of a system of tubes in which the organic substances come into contact either with pure nitrogen or with atmospheric air, the whole communicating with a source of electricity at a tension precisely the same as that of atmospheric electricity. Under these conditions pure nitrogen, or the nitrogen of the atmosphere, is invariably fixed by different organic matters, as moist cellulose and dextrin. The amount of nitrogen that is thus fixed is considerable. These experiments demonstrate the influence of a natural cause, hitherto scarcely suspected, and nevertheless of great importance for vegetation. Hitherto, when the effects of atmospheric electricity have been studied, its luminous and violent manifestations, such as thunder and lightning, have been chiefly regarded. Upon whatsoever hypothesis, the formation of nitric and nitrous acids or of nitrate of ammonia has been exclusively taken into account. But the author's experiments show a new and hitherto unknown action, which works unceasingly under the most serene sky, and which determines a direct fixation of nitrogen in the principles of the tissues of plants.

New Oxide of Manganese.—Frémy has obtained a new oxide of manganese, Mn_2O_7 , arising from the reaction of the sulphate of the sesquioxide of manganese on the sulphate of the protoxide. It is obtained by decomposing permanganate of potassium with an excess of trihydrated sulphuric acid. On mixing the two sulphates of manganese, the liquor takes on a wine-red color, and deposits hexagonal tablets formed by the combination of sulphuric acid with the oxide Mn_2O_7 . This salt is very unstable, water decomposing it with a precipitate of hydrated sesquioxide of manganese. The liquor retains in solution a mixture of sulphuric acid and sulphate of protoxide of manganese. The rose-colored liquid known to chemists, obtained in the preparation of oxygen by treating the peroxide of manganese with concentrated sulphuric acid, owes its coloration to the presence of the new compound discovered by M. Frémy. The new oxide, Mn_2O_7 , takes its place in the following series of oxides, sometimes called manganites, true saline oxides: Sesquioxide, $Mn_2O_3 = MnO_2$, MnO ; red oxide, $Mn_2O_4 = MnO_2$, $2MnO$; new oxide, $Mn_2O_7 = MnO_2$, $3MnO$. The newly-discovered salt is decomposed by potash, and gives a black precipitate, which easily dissolves in sulphuric acid, and which reproduces the primitive salt. Certain specimens of peroxide of manganese, it is thought, contain a certain quantity of the oxide Mn_2O_7 ; those, probably, which give a rose-colored liquor under the action of concentrated sulphuric acid.

The Oxides of Manganese Sources of Ozone.—Experiments made by Valmagini indicate that ozone is not only abundantly present in bi-

noxide of manganese, and many other natural oxides of manganese, but also that these substances are remarkably well adapted for use in all cases where ozone would be effective as an agent of disinfection. The following reactions have been determined by Valmagini: 1. Ozone test-paper, prepared with starch and iodide of potassium, is immediately rendered blue without the addition of an acid. 2. A solution of chemically-pure iodide of potassium is immediately decomposed by fragments of the mineral, and the separated iodine can be detected by starch or bisulphide of carbon, or by volatilization. 3. Artificially-prepared, chemically-pure binoxide manifests precisely the same reactions. 4. The powdered mineral strewn upon chemically-pure silver, and moistened, immediately produces a brown stain of oxide of silver, as is shown by its disappearance on ignition. 5. Air becomes ozonized by passing over the mineral, or surfaces coated with its powder. 6. Tincture of guaiacum is turned a deep blue by these manganese minerals. 7. Gases resulting from putrefaction are also rapidly destroyed by them. A number of possible sanitary applications of these minerals are suggested, among them the coating or plastering of sewers, or smoke and gas flues, the treatment of waste-water pipes, and use in manufactories, stables, cellars, etc.

New Disinfectant.—A new disinfecting compound, known as the "Universal Disinfecting Powder," is highly commended in the chemical journals. It consists of Cooper's salts and sulphate of zinc. It has been analyzed by Prof. Wanklyn, who reports upon it as follows: "This powder contains 70 per cent. of mixed chloride of sodium and chloride of calcium, and about 6 per cent. of anhydrous sulphate of zinc (equal to about 12 per cent. of hydrated sulphate), a little insoluble matter, and 15 per cent. of moisture.

Spontaneous Combustion of Coal.—The British Government commission appointed to inquire into the spontaneous combustion of coal in ships has made its report—a document of very considerable practical interest. In this report the development of heat in coal-cargoes is attributed to chemical changes which certain substances undergo through the agency of atmospheric oxygen.

The best known of these substances are combinations of sulphur and iron, known as iron pyrites. The presence of moisture in the air promotes the oxidation of pyrites; it does so apparently by bringing the atmospheric oxygen into more intimate contact with the surfaces of the oxidizable material. The oxidation of pyrites is accompanied by the development of heat, which may accumulate to such an extent as to lead to ignition.

But there is another cause of ignition. Coal varies considerably, not only in chemical composition, but in structure, some varieties being comparatively open and porous, others compact or laminated, very friable and readily broken up. Carbon in a finely-divided or porous condition has the property of absorbing and condensing within its pores large volumes of certain gases, among which is oxygen. The condensation of a gas by a porous body is at-

tended by the development of heat. Moreover, the tendency to oxidation, which carbon and certain compounds of carbon possess, is favored by the condensation of oxygen within their pores, whereby the very intimate contact between the carbon and oxygen particles is promoted. Hence the development of heat by absorption and the establishment of oxidation occur simultaneously. Oxidation is accelerated as heat accumulates; chemical action proceeds so energetically that the carbon may be heated to igniting point. The breaking up of the coal before and during shipment by the rough usage to which, for the sake of speedy loading, it is often subjected, obviously favors the absorption of oxygen and increases the tendency to heating by this process. The second process is not, like the first, facilitated by moisture. On the contrary, the wet fills up the pores and diminishes the power of absorbing oxygen.

In a tropical voyage, coal, confined in the close hold of a ship, will accumulate an amount of heat which no practicable ventilation will suffice to remove. "Such circulation of air as may be established, even in the less compact portion of the cargo, is not likely to have any valuable cooling effect, and the circulation, if there be any, must be very feeble among the more closely-lying masses of small coal; so that heat, if developed in these, will accumulate undisturbed." Indeed, its development would be favored by the fresh supply of oxygen which a gradual replacement of the air surrounding those parts would convey, "so that a period would be reached sooner or later when the development of heat would be most seriously promoted by ventilation." Thus the commissioners found that the calamities occurred chiefly in tropical voyages. They also ascertained that the percentage of loss increased with the amount of the cargo.

The commissioners found it generally recognized in the trade that the breakage of coal was an evil to be guarded against. Their conclusion is that the machines known as "tips" and "spouts" conduce most to the breakage of the coal. In the system of loading by hoist or by crane the fall from the bottom or end of the wagon into the ship's hold is as great as from the mouth of the shoot or spout; but the coal, until released from the wagon, is literally undisturbed, and the fall from the bottom or end of the wagon, as the case may be, into the spout, together with the concussion of the coal in its passage down the spout, is avoided. Even in this system, however, the fall of the coal first put on board is in deep ships very considerable. To obviate the breakage consequent on this fall, anti-breakage boxes were introduced. The Peninsular and Oriental Company among others use the box or barrow system. It had been noticed by witnesses examined that the burnings of ships often commenced under the main hatch; but the principal objection of ship-owners to the breaking of coal was that it diminished the value of the cargo. It is now found that the breakage is unprofitable and dangerous.

The commissioners observe that there is a very common confusion between explosions and spontaneous ignition. Explosions are never spontaneous. The gas which causes explosions in mines or on ships is marsh-gas—light carbureted hydrogen. When mixed with a considerable volume of air, it forms a compound which will explode on contact with flame. If coal, from seams which are charged with marsh-gas, is placed on board ship shortly after being raised from the pit, there is obviously great liability to the formation of an explosive atmosphere in the hold or bunkers. Dr. Percy and Prof. Abel observe in their paper appended to the report: "Every possible means should in such cases be had recourse to for facilitating the escape of gas from coal into the open air. But, as the gas requires a large admixture of air to render it violently explosive, it is obvious that any attempt to

ventilate the coal by passing or drawing air into the body of the freight would be most likely to favor the production of a highly explosive mixture of gas and air. The only useful application which might be made of any special means of ventilation with a view to diminish the risk of explosions would be to pass a current of air *over* the coal and immediately into the open air, so as to accelerate the escape and removal of the inflammable gas."

The commissioners briefly discuss the means of extinguishing fire by generating carbonic-acid gas and applying it to the ignited portions of a coal-cargo; but are of opinion that, as this gas has no cooling effect, it will not be useful in the case of a considerable mass of ignited coal—then water and steam are the only agents available.

Influence of Fertilizers in Beet-Culture.—In the course of their experiments on beet-culture, Dehérain and Frémy planted some beets in absolutely sterile soils, to which were added from time to time such substances as were thought to be essential for the development of the plant. It was found that the beets continued in the rudimentary state when they received in such soils only distilled water; they increased slightly in weight when common water took the place of distilled; their development was greater still when the water contained soluble phosphates, or salts of potash; but yet the roots never attained the weight of 100 grammes. When for these mineral substances were substituted ammoniacal salts or nitrates, the yield was much better. Normal beets, however, cannot be grown unless to these nitrogenous fertilizers are added phosphates and potash-salts. It is worthy of note that, when the beet finds in the soil nitrogen, phosphorus, potash, and lime, it develops as well as in a soil containing humus. To establish this point Messrs. Dehérain and Frémy compared the produce of two such soils, and found that the beets grown in sterile soil were heavier than those grown in rich soil.

On examining the beets grown in plots in the experimental garden of the museum, the authors found them to be very poor in sugar, though the soil was very rich. From this it follows that deficiency of sugar in the beet is not due to exhaustion of the soil. In seeking the true cause, it occurred to Messrs. Dehérain and Frémy to ascertain how much nitrogen the beets contained, and found the amount to be very large. Hence it appeared that a soil rich in nitrogenous matters is unfavorable to the production of sugar. This conclusion was confirmed by sundry analyses of beets grown at the museum, at the school of Grignon, and in the departments of Aisne, Nord, and Eure. All the results positively confirm the observations made by the authors, and their conclusion is, that, if beets are now less rich in sugar than formerly in those departments which have long produced them, that fact is not owing to the exhaustion of the soil and its deprivation of principles necessary for the development of the beet; on the contrary, the reason of the phenomenon is, that the soil is too rich in nitrogenous matters, in consequence of the liberal use of manures.

Influence of Sewage on the Ground-Atmosphere.—Experiments similar to those of Pettenkofer, of Munich, have been made in Boston by Prof. William Ripley Nichols, to determine whether well-constructed sewers have any deleterious effect on the surrounding ground-atmosphere. For this investigation, the old Roxbury sewer on Dearborn Street was chosen. This sewer was built in 1860, and the bottom is not impervious to water. A pipe was driven into the ground in the neighborhood of the sewer, and the opening of the pipe was calculated to be about one and one-half foot from the sewer, and on a level with the spring of the arch. This would be ten feet from the surface of the street. Examination failed to detect sulphureted hydrogen or marsh-gas. Carbonic-acid determinations were made as follows:

		Number of Volumes of Carbonic Acid in 1,000 Volumes of Air.
October	6th	85.31
"	18th	84.68
November	12th	23.46

The following more complete examinations were made:

	Oct. 18th.	Nov. 10th.
Oxygen	17.21	19.41
Carbonic acid	8.86	1.59
Nitrogen	79.43	79.90
	100.00	100.00

An examination was also made of the air in the ground near the Berkely Street sewer (at the corner of Newbury Street). In this place it was impossible, on account of the water in the ground, to draw the air from a point as close to the sewer as in the previous case. The air was actually taken about nine feet six inches from the surface of the street, and the spring of the arch of this sewer is twelve feet below the level of the street.

The examination showed:

	Nov. 11th.	Nov. 15th.
Oxygen	19.54	19.57
Carbonic acid	1.15	1.97
Nitrogen	79.81	79.16
	100.00	100.00

These examinations would seem to indicate that, with the exception of an increased amount of carbonic acid, there is no evidence of the contamination of the ground-atmosphere by the sewers, and it would seem highly improbable that injurious emanations from underground sewers should ever reach the air above by passing through the soil.

Wearing of Platinum Retorts by Sulphuric Acid.—In communicating to the Paris Academy of Science the results of his protracted observations on the deterioration of platinum alembics used in concentrating sulphuric acid, Scheurer-Kestner (*American Chemist* for February) states that the degree

of deterioration varies with the purity, and, above all, with the concentration of the acid produced in the alembics. The presence of nitrous compounds in the acid considerably augments its action on the platinum; and, by increasing the strength of the acid, a greater amount of platinum dissolves, becoming ten times greater than when concentrating 94 per cent. or monohydrated acid.

The question arises whether the observed deterioration is due to a simple mechanical action, or whether the platinum is really dissolved.

The following experiences reply to the question:

The presence of the lower acid compounds of nitrogen in the liquids, coming from the lead chambers, greatly increases the dissolution of the platinum.

An alembic, which had been in use for two years in the chemical works at Thann, lost 12,295 kilogrammes in concentrating 4,309,000 kilogrammes of 66° B. acid of ordinary concentration—that is to say, of monohydrated acid, from 98 to 94 per cent.

There has then disappeared, during this operation, 2,859 grammes of platinum to each 1,000 kilogrammes of acid.

The acid introduced into the alembic was contaminated with nitrous oxides.

In order to destroy these compounds, M. Scheurer-Kestner employed sulphate of ammonia for purifying the acid.

The dissolution of the platinum immediately decreased, and the next year the amount dissolved was 2,490 kilogrammes for a production of 1,843,000 kilogrammes of acid, being 1,220 grammes of platinum for 1,000 kilogrammes of acid.

During the following years the acid used in the alembic contained sulphurous acid. It was free from nitrous compounds.

The dissolution of platinum fell to 0.925 grammes to the 1,000 kilogrammes of concentrated acid, for a total production of 17,518,000 kilogrammes of acid. The loss in weight of platinum *boiler* had been but 16.173 kilogrammes.

It does not appear that the small amount of chlorhydric acid in the acids from the chambers, which remained constant, influenced in a sensible manner the solution of the platinum, whatever may have been the degree of impurity of the nitrate of soda or of the nitric acid used for the preparation of the sulphuric acid. But, when the degree of concentration exceeded 94 per cent.—i. e., ordinary commercial acid—a much greater action was produced by the acid on the platinum.

As we have seen, the preparation of 94 per cent. acid carried away from the distilling vessel a quantity of platinum equal to near 1 gramme per 1,000 kilogrammes of acid.

When the concentration is increased in order to obtain 97 to 98 per cent. monohydrated acid, more than 6 grammes of platinum is dissolved to the 1,000 kilogrammes of acid.

In a platinum alembic, whose boiler weighed, when new, 30 kilogrammes, in which was evaporated 180,000 kilogrammes of acid, brought to 97 to 98 per cent., the loss of weight of the metal was 6,070 grammes per 1,000 kilogrammes of acid.

When acid holding 99½ to 99¾ per cent. of monohydrated acid was prepared, the platinum dissolved reached from 8 to 9 grammes per 1,000 kilogrammes of acid; for a production of 102,000 kilogrammes of acid of 99½ per cent., the boiler lost 861 grammes of platinum, being 8.444 grammes per 1,000 kilogrammes.

This quantity of metal being large enough to make it possible to recover by quantitative analysis, the

author endeavored to corroborate the above figures by weighing the platinum obtained from a certain quantity of sulphuric acid of 99½ per cent.; 78,600 kilogrammes of this acid was diluted with water, a current of sulphureted hydrogen gas passed through the solution, the precipitated sulphides, containing lead and platinum, were dissolved in *aqua-regia*, the lead was all removed by precipitating it twice with sulphuric acid, the solution having the characteristic color of the salts of platinum as well as their properties.

The platinum was finally precipitated in the state of sulphide and weighed after calcination. There was obtained 0.617 grammes of metallic platinum, being 8.380 grammes per 1,000 kilogrammes of acid, a number which accords completely with the results obtained from the industrial observations.

Thymol as an Anti-Ferment.—Thymol, obtained by distillation from oil of thyme, occurs in white, highly-aromatic crystals; when dissolved in hot water in the proportion of 1 part per 1,000 it forms a fully-saturated solution possessing a neutral reaction. More concentrated watery solutions cannot be obtained, for, when dissolved in greater proportions than 1 in 1,000, the thymol evaporates. From experiments made by L. Lewin it appears that 0.1 per cent. of this solution is sufficient to prevent fermentation in sugary liquids, no matter what the proportion of sugar and yeast. Milk, to which a small quantity of the thymol solution was added, did not begin to show signs of coagulation till twenty days later than milk with which an equal quantity of water had been mixed. Filtered white of egg in contact with the air was found to grow putrid in three or four days, whereas white of egg with which thymol-water had been mixed gave not the slightest indication of putridity after eleven weeks. The same results were obtained in treating pus with water and thymol: pus so treated at once lost its putrid odor, and continued to be odorless for five weeks, or until it had become dry.

Estimation of the Strength of Astringents.—It has been observed by F. Jean that astringents mixed with an alkaline carbonate absorb a solution of iodine with a readiness like that of the arsenite of soda. This absorption is found to be directly proportioned to the quantity of astringent matter present, 1 part of dry tannic acid taking up 4 parts of iodine. The solution of iodine required for the titration of tannin is obtained by dissolving 4 grammes of iodine in iodide of potassium, and making up the solution to 1,000 c.c. with distilled water. To standardize this solution, place in a precipitating glass 10 c.c. of a solution of tannin containing 0.1 gramme per cent., add 2 c.c. of an alkaline solution containing 25 per cent. of crystalline carbonate of soda, and then with a graduated burette drop the solution of iodine into this mixed liquid till a drop of the mixture, taken up with the stirring-rod, and placed upon a leaf of starch-paper, produces a very slight violet spot, which indicates the presence of free iodine and the end of the operation. The value thus obtained must be corrected, that is to say, from the number of c.c. of

solution of iodine corresponding to 0.1 gramme of tannin must be deducted the volume of the solution required to produce the colored reaction upon starched paper. For this purpose 10 c.c. of distilled water are measured out, mixed with 2 c.c. of alkaline solution, and the solution of iodine is then added, drop by drop, till a spot is obtained upon the starched paper. With a solution containing 4 grammes iodine per litre the correction is generally 0.1 c.c. for a volume of 10 to 12 c.c., but the greater or less purity of the carbonate of soda may make a slight variation in this correction. To 0.01 gramme of tannin dissolved in 10 c.c. of water it is generally necessary to take 10.5 c.c. of a solution at 4 per 1,000. The paper used is white filter-paper, covered by friction with a slight layer of powdered starch. For ordinary determinations tannic acid may be taken as the type of the active principle of astringent bodies. But, if a high degree of accuracy is required, the solution should be standardized with a pure sample of the astringent body under examination, catechuic acid being used in case of catechu, morintannic acid for fustic, etc. Crystalline gallic acid decomposes the solution of iodine in the same proportion as tannic acid. If it is desired to determine these acids separately, we first find the joint amount of tannic and gallic acids, and then, operating on a fresh portion, remove the tannic acid by means of rasped hide or gelatine and alcohol, and determine afresh the gallic acid remaining. The tannic acid is then found by subtracting the second result from the first. The extractive matters found in astringents do not interfere.

Coffee Adulteration.—Prof. G. O. Wittstein, in an article contributed to *Dingler's Polytechnisches Journal*, and translated by Carl Bauer for the *American Chemist*, discusses the subject of detecting adulterations in coffee. According to the author, masses of dough, moulded after the true bean, are sometimes sold for coffee. Unlike the genuine, these fictitious beans always have sharp edges, and may be very easily ground to a grayish-yellow powder. Boiling in water reduces them to a pasty mass, which, on addition of iodine, assumes a deep-blue color. The poorer classes of genuine coffee-beans are variously treated, so as more or less to resemble the better grades. Thus, the coffee is placed, with a quantity of shot, in a barrel, which is rolled about until enough lead has been rubbed on the beans to give them a glossy appearance. This adulteration can be detected by the use of a lens; but, when absolute certainty is desired, the beans should be digested in dilute nitric acid; then the liquid should be decanted after one hour, diluted with three times its volume of water, and the lead precipitated with sulphureted hydrogen.

Another substance for coloring coffee is a greenish powder, 100 parts of which are composed of 15 parts Prussian blue, 85 parts chromate of lead, 85 parts of a mixture of clay and gypsum, 15 parts water.

The microscope alone is frequently sufficient to discover this adulteration. For more accurate examination, however, it is better to put a considerable quantity of the beans in a suitable vessel, and to pour distilled water upon them. After two hours or so, the beans are removed and the turbid liquid allowed to settle. In presence of gypsum the supernatant clear liquor will become densely turbid on addition of baric chloride and ammoniac oxalate. Prussian blue may be detected in the sediment by giving rise to a brown coloration on addition of KHO. If this change of color should not occur, the mixture will not contain Prussian blue, but probably indigo. The color of the latter may be destroyed by nitric acid. The potassic hydrate will likewise decompose the plumbic chromate, to a greater or less extent, causing it to dissolve partially or wholly in the alkali. Turmeric, if present, would merely turn dark brown. If, upon slightly moistening the sediment with sulphide of ammonium, a black color is produced, no further doubt need be entertained as to the presence of chrome-yellow in the mixture.

By the process of roasting, coffee is put into a condition which renders adulteration almost impossible, so long as the beans remain unground. Ground coffee is one of the easiest substances to adulterate. The most usual adulterants are chicocory, beans, peas, as also beets, carrots, and other roots resembling the turnip in properties.

As all these preparations undergo the same treatment as pure coffee, namely, of roasting to a deep-brown color, in many particulars they resemble the genuine article very closely. They cannot, however, be used as a true substitute for the latter, as all are without the most important constituent of pure coffee, namely, caffeine.

The following is a very convenient test: The suspected coffee is poured out on water. If pure, the particles will float and remain in a state of suspension for hours; whereas chicocory will sink immediately. A better method is as follows: If to 30 drops of the coffee decoction, in a test-tube, 2 drops of concentrated hydrochloric acid be added, and then, after a few seconds' boiling, the liquid be treated with 15 drops of a solution of 1 part red prussiate of potash, and 8 parts of water, and again boiled as before, the liquid will first turn green, finally blackish green. Upon now adding to the mixture 6 drops KHO, the liquid, after 4 minute's further ebullition, will become brown, and shortly after, with the deposition of a dirty-yellow precipitate, clear, pale yellow. If the chicocory decoction is subjected to the same treatment, the last liquid will be brown and turbid, and only after long standing will a precipitate be deposited while the supernatant fluid retains its brown color. By testing in the same manner a mixture of 6 drops of chicocory and 24 of coffee, the brown turbidness will also be obtained. It is thus easily possible to discover adulterations of chicocory in coffee.

The quantity of coffee actually dissolved in a decoction is perhaps always overrated. A good, by no means weak, infusion, left upon evaporation a residue of 1 per cent., and a very strong infusion scarcely 2 per cent. This residue has the appearance of a dark-brown shining varnish, which is scarcely hygroscopic, at least remains dry after two days' exposure. If, however, the coffee contains one of the artificial preparations above referred to, the residue will become sticky to the fingers within 2 hours, and will, after 24 hours, be decidedly moist. This simple process may likewise be used as a test upon suspected coffee. Even the impurity in coffee, chicocory, is subject to various adulterations; among others with bog-turf. According to Prof. Th. Schwartz, of Ghent, this fraud is practised to a considerable extent, especially in Flanders.

Antiseptic Properties of Boracic Acid.—Prof. Mauricio Schiff, of Florence, after ex-

aming and tasting numerous samples of meat, prepared in many different ways, and preserved, by Herzen's method, for months at the summer temperature of Florence, declares that no trace of putrefaction could be detected, nor could any indications whatever of change be found with the aid of the microscope. Remnants of a large quantity of meat, packed without special care in tin cans, that had been carried on two tropical voyages, proved palatable after a year, and two of his friends subsisted upon meat put up in this way for a month. A solution of crude boracic acid in water, to which borax has been added, to render it more soluble, is employed in the process. The effect of the solution is also heightened by the addition of salt and saltpetre, which tends to preserve the original fresh appearance of the meat.

Chemical Production of Cellulose.—A method of producing cellulose by chemical processes, for paper manufacture, has been patented by Dr. Mitchelich, of Darmstadt, the peculiarity of which is, that the incrusting substance of the wood is not destroyed, but merely separated from the cellulose and made soluble, the original texture being left intact. Hence, in this process, it is not necessary, as in others, to divide the wood finely; a breaking up into pieces like those of domestic fire-wood is sufficient. In the process itself, a lime solution is used, which is boiled with the wood some 6 hours, at a pressure of 8 atmospheres. After boiling, the incrusting matters are found partly dissolved in the liquid, partly in the pores of the wood, from which latter they can be easily removed by squeezing apparatus. Where a very valuable white paper material is wanted, not in need of bleaching, whitish woods, as free of resin as possible, must be used, such as poplar, willow, or lime. The success of this process depends much less on the pressure in boiling than on the temperature, which must not rise above 120°. The use of oak-wood offers the advantage that the contained tannic acid is obtained as a by-product, that may be employed in tanning.

New Test for Alcohol.—While making some experiments on molybdic acid, Dr. E. W. Davy observed that, when a solution of that substance is brought in contact with alcohol, a deep azure-blue color is developed; and, as the protosulphate of iron and the protochloride of tin, two powerful oxidizing salts, produce a like effect on the solution, there is little doubt that it is due to the deoxidizing action of alcohol. This reaction of alcohol on the molybdic solution is extremely sensitive; thus, if one part by volume of commercial rectified spirits be mixed with 100 parts of distilled water, and one drop of this mixture brought in contact with it, a deep-blue coloration is at once developed.

Though small quantities of spirit, even when considerably diluted with water, will produce with the molybdic solution the blue reaction without the assistance of any external heat, still, where very minute quantities, diluted with such large proportions

of water as those just stated, are to be detected, it is necessary, for the success of the experiment, that the reaction should be assisted by a gentle heat, and also that too great a dilution of the test-solution with the liquid under examination should be avoided, as the blue coloration will not be developed if water be in excess; and, even after it has been produced, the addition of a certain proportion of that substance quickly causes its disappearance. Such being the case, the best way of employing the test is to place three or four drops of the molybdic solution in a small, white, porcelain capsule, and, having heated them slightly, allow one or two drops of the liquid to be examined to glide or fall gently on the acid solution, when there will be developed, either immediately or after a few moments, the blue coloration. And, where the alcohol is very largely diluted with water, it is better to continue the gentle heating of the test solution for some time, to concentrate it or expel as much water from it as possible, before adding the liquid to be tested; for, in this way, the author has succeeded in detecting the spirit in mixtures so dilute as to give no blue reaction when added immediately to the test solution on its being simply warmed. As regards the application of heat, the temperature of the acid solution must not be raised too high, for, if it be heated till the acid evolves its dense vapors, or begins to boil, the solution will of itself alone, from its partial decomposition, develop more or less blue coloration, which will become more perceptible on its cooling. But such an occurrence can be easily avoided by employing a water-bath as the heating agent.

But the coloration produced in the reaction stated disappears after a variable interval of exposure to the air—a circumstance which is due to the absorption of moisture from the atmosphere, and not to the reoxidation of the molybdenum compound, as might have been supposed.

The reaction is not peculiar to ordinary or ethylic alcohol, but is more or less readily developed by others—at least the author found it to be so in the case of methylic, propylic, butylic, and amylic alcohols, those being the only ones he had for his experiments. But it is more than probable that some at least of the other alcohols may act in a similar manner; however, the reaction is much more rapid and striking in the case of ethylic than in that of any of the other alcohols mentioned.

This test is of especial value for determining the purity of chloroform and chloral hydrate, one of the common impurities of the former being ethylic alcohol, and of the latter chloral alcoholate.

Extraction of Iodine from Seaweed.—Mr. Thowald Schmidt, of Aalborg, Jutland, has devised the following new method of obtaining iodine, potash-salts, and other commercial products from seaweed: After the seaweed is dried and burned, a concentrated solution of the ash is added to the liquor containing chlorides of sodium and calcium, left after the ammonia has been recovered in the ammonia-soda process by boiling with lime. The sulphates of potash, soda, and magnesia contained in the ash of the seaweed are thereby decomposed, and hydrated sulphate of lime and hydrated magnesia are precipitated in a form which may be available for paper-making as "pearl-hardening." The last traces of sulphates are got rid of by adding a small quantity of solution of chloride of barium. To the clear solution nitrate of lead is now added until all the iodine is precipitated as iodide of

lead, which is then separated by filtration and treated for the production of iodine or iodides. After filtration the liquid is boiled, nitrate of soda is added to convert the chloride of potassium present into nitrate of potash. The latter is separated by crystallization. There remains a solution of common salt containing traces of ammonia from the previous soda operation, and a trace of chloride of potassium. This solution is again treated by the ordinary ammonia-soda process for the production of bicarbonate of soda and white alkali.

Solubility of Tin, Antimony, and Arsenic, in Nitric Acid.—Mr. George Hay, in a communication to the Academy of Natural Sciences of Philadelphia, states the results of experiments made by him, which prove that not only is tin converted into a soluble salt by concentrated nitric acid, but that protonitrate of tin is formed. He also details similar experiments with arsenic and antimony. The circumstances under which the salt of tin was found were as follows: A dry test-tube holding a little concentrated nitric acid was floated in a vessel of water at a temperature of 86° Fahr. A fragment of pure tin dropped into the acid became coated with a white substance, and after fifteen minutes was entirely transformed into this white substance. Other fragments added at intervals were in like manner transformed. The contents soon presented a gelatinous appearance, but, upon the addition of about two volumes of water, the whole became a clear and colorless fluid, thus holding the tin in solution and proving that the white substance was not hydrate of metastannic acid. The solution was tested as follows: 1. A portion was boiled, and the whole of the dissolved metal was precipitated as hydrate of metastannic acid. 2. After neutralizing a portion of the free acid remaining in the tube, hydrosulphuric acid caused the precipitation of protosulphide of tin mixed with sulphur. 3. To a portion of the original solution was added a solution of the chloride of mercury, and in the course of a few hours a white precipitate, subchloride of mercury, was formed. 4. Chloride of gold gave no precipitate. 5. Potash solution gave a white precipitate, soluble in excess of potash. 6. To a mixture of ferricyanide of potassium and sesquichloride of iron was added a portion of the original solution, the result being, after a few hours, Prussian blue. These tests were retarded by the presence of a large excess of nitric acid, and the production of purple of Cassius was entirely prevented by the same cause. To obviate this difficulty a fresh solution was prepared by adding the metal to the acid until the contents of the tube had become thick and pasty, and there appeared to be no further action going on. Water was now added, but in this instance some of the white substance remained undissolved. The solution was filtered and the clear filtrate tested as before, with more satisfactory results.

The next experiment was with antimony.

Into a dry test-tube about two cubic centimetres of concentrated nitric acid was poured, and then about twenty grains of powdered antimony added. This was floated in water at 36° Fahr., and allowed to remain for twelve hours, being shaken occasionally. Gradually the fluid became green, and at the end of twelve hours the solution was strongly green.

On decanting this and diluting with water, an abundant white precipitate was produced, showing that a large proportion of the antimony had been dissolved in the nitric acid. In order to ascertain in what state of combination the antimony was held, the following experiments were made: Tartaric acid was added to the fluid containing the precipitate, and it at once dissolved to a colorless fluid. The fluid was now filtered in order to remove any particles of undissolved metal which might have been decanted. 1. After neutralizing a portion of the free acid in a portion of the filtrate, a strong solution of hydrosulphuric acid was added—the result was a bulky, orange-red, unmistakable precipitate of tersulphide of antimony, readily soluble in potash, and reprecipitated from its alkaline solution by dilute hydrochloric acid. 2. To another portion of the filtrate, potash was added, and a white precipitate of teroxide of antimony was obtained soluble in excess. 3. To the alkaline solution last obtained, nitrate of silver was added, and there was obtained a jet-black precipitate of suboxide of silver insoluble in excess of ammonia—this being distinctive of teroxide of antimony. 4. Another portion of original filtrate was neutralized by ammonia to remove free nitric acid, and then acidulated with hydrochloric acid. A drop or two of the solution thus obtained was put upon a clean surface of platinum, and a fragment of zinc introduced—the result was a dark-brown or black stain of metallic antimony not removable by cold hydrochloric acid, but removable by hot nitric acid. These four tests show that the original solution contained teroxide of antimony, and, as the solution was obtained by means of nitric acid, the probability is that it was a ternitrate of antimony, for a large quantity of the metal was dissolved. The HS precipitate was so bulky as at first almost to fill the test-tube. Boiling the original green solution gave an abundant white precipitate of antimonious acid accompanied by copious evolution of orange-red fumes. Boiled till the red fumes had disappeared—diluted and filtered—the filtrate did not pass through clear, but on passing twice more through the same filter was obtained a perfectly clear filtrate. This filtrate gave every one of the four tests above mentioned with the utmost readiness. In this case no other acid but the nitric had been used. Arsenic treated in the same manner yielded a green solution which answered all of the tests for arsenic acid, giving, under the proper treatment, tersulphide and pentasulphide of arsenic, arsenate of silver, etc.

A New Oxide of Sulphur.—The cause of the intense blue color produced by the action of sulphur on sulphuric oxide, or on disulphuric acid, is shown by R. Weber to be due to a new sulphur-oxide, first isolated by himself. To obtain it, a portion of sulphuric oxide is prepared, containing sulphuric acid, and into this is thrown, in small portions at a time, carefully-dried flour of sulphur. The sulphur is instantly converted into dark-blue liquid drops, which sink to the bottom and solidify. The temperature must be kept at 15° C., as below this point the whole liquid solidifies, and above it the blue substance decomposes. After the operation the excess of liquid is poured off,

the blue crystalline crust is drained, and the excess of sulphuric oxide drawn off, at a temperature not above that of the blood. The bluish-green crust thus obtained is very friable, and resembles malachite in structure. It decomposes, without fusion, slowly at common temperatures, but more rapidly on heating, evolving sulphurous oxide, and leaving sulphur behind. Its formula is S_2O_3 , and it is named by the author sulphur-sesquioxide, or dithionous oxide. No compounds of it have yet been made.

Sulphur as a Mordant.—C. Lauth having published the discovery that finely-divided sulphur, as precipitated from solutions of hyposulphites, is a good mordant for methyl green, Dr. Isidor Walz and Mr. Charles M. Stillwell have made a series of experiments to determine whether sulphur would act in a similar manner with other dye-stuffs. An account of these experiments is given in the *American Chemist* as follows: The first dye-stuff tried was eosin. Some sodium hyposulphite was added to an aqueous solution of eosin in a test-tube, and, after addition of a few drops of hydrochloric acid, the liquid was neutralized with ammonia. On standing a short time, a veritable lake of sulphur and eosin settled to the bottom as a rosy-pink precipitate. Next a piece of woollen fabric was dyed with eosin. The result again showed that sulphur acts as a mordant for eosin, and the resulting shade is somewhat different from that obtained by omitting the sulphur, as shown by a simultaneous dyeing test. This result induced the authors to test the behavior of wool, mordanted with sulphur, toward madder. A "swatch" from the same piece, but not mordanted, was placed in the dye-bath at the same time, in order to facilitate comparisons. In the bath prepared with French extract of madder, the mordanted wool took a full reddish-brown shade, while the non-mordanted cloth was but slightly stained. To decide whether this color was due to the alizarin or to purpurin, samples of mordanted and clean wool were treated in baths mounted with artificial alizarin on the one hand, and with commercial purpurin on the other. The samples from the alizarin bath were alike, and dyed a good yellow; those from the purpurin bath showed a light reddish-brown, the color of the mordanted sample being deeper than the other. Hence it appears that sulphur does not act as a mordant toward alizarin, but does act in that manner toward purpurin or the other coloring principles of madder. The authors extended their experiments to cochineal, logwood, redwood, and fustic; but, in the case of these dye-stuffs, they discovered no difference between the colors produced on ordinary and sulphur-mordanted wool.

Varying Composition of the Waters of the Nile.—The annual flood in the Nile begins toward the end of May, the increase in size being at first exceedingly gradual. In June it is just perceptible, and the river goes on in-

creasing in volume till about the middle of September, when it usually attains its greatest size. At Christmas the water is low again, and the same level remains till May. Prof. J. Alfred Wanklyn has published the following tabular statement of the composition of Nile water in different months:

DATE OF SAMPLE.	GRAINS PER GALLON.		
	Solids.	Chlorine.	Hardness.
1874—June 8th.....	15.0	1.60	7.0
July 19th.....	18.0	0.90	6.0
August 12th.....	12.0	0.80	8.5
September 20th.....	10.0	0.40	8.0
October 12th.....	11.0	0.40	7.5
November 12th.....	12.0	0.50	8.0
December 12th.....	9.0	0.45	6.5
1875—April —th.....	16.0	1.00	8.0
May 13th.....	22.0	1.20	10.0

What is specially worthy of note in this table is the great relative alteration in the proportion of chlorine: that, whereas in the beginning of June the chlorine amounts to 1.8 grain per gallon, it sinks to 0.8 grain when the river has attained a great size, and remains at very little above that proportion until the end of the year. In marked contrast with the variableness of the chlorine is the comparative constancy of the hardness. These phenomena become intelligible when we reflect on the conditions under which the river is placed: "The water which swells the Nile in the latter half of the year is storm-water, being thick and muddy. Storm-water sweeps over the surface of the country, without penetrating far below, and we may very readily understand that such water, passing over a country long ago denuded of salt, should carry little or no salt into the Nile, which it dilutes, and so causes it to contain only an exceedingly minute proportion of chlorine. By about Christmas, the storm-water had ceased flowing into the Nile, which, during the spring half-year, must be fed with water which has passed deeper into the ground, and which has undergone concentration by evaporation, in addition to having washed extensive strata, from which, doubtless, it extracts chlorine. We can easily understand how the Nile should become more chlorinous as the spring advances, and how the chlorine should be at the maximum just at the beginning of flood-time. The hardness, on the other hand, being due mainly to carbonate of lime, we can understand that, from the slightness of its solubility, the carbonate of lime, and consequently the hardness, should be under totally different conditions from the chlorine."

No doubt, other rivers would, on examination, show similar though minor fluctuations. The importance of recognizing the different causes to which fluctuation of chlorine in drinking-water is due will be obvious when it is considered how great a stress is laid upon the presence of chlorine as an index to sewage contamination.

Crystallized Hydrate of Chlorohydric Acid.—In a communication to the Paris Academy of Sciences, Messrs. Pierre and Puchot observe that, when a saturated solution of hydrochloric-acid gas is cooled to -21° or -22° C., the dry gas being passed continuously into the liquid, the temperature soon rises to -18° , and an abundant crystallization begins, the temperature remaining constant at -18° . Before the crystallization commences, there is always a reduction of 3° or 4° in temperature. Synthetic experiment showed that, to produce the crystals, the water absorbed about its own weight of the gas. The probable formula would therefore be $\text{HCl}(\text{H}_2\text{O}_2)$. In the air the crystals decompose readily, emitting dense fumes of hydrogen chloride. In a flask kept near 0° C. they slowly melt, the temperature remaining at -18° . Water dissolves them readily. As they sink in the solution in which they are formed, they must be denser than it. In the analysis a known weight of the drained crystals was treated with a definite quantity of distilled water, in amount sufficient to prevent the evolution of gas. The chlorine was then determined in the solution, and from this the ratio between the HCl and the H_2O could be calculated. In the first two determinations the ratio was 1 : 2.19; in the second, 1 : 2.085; hence the authors conclude upon the formula given above.

Sensitiveness of Silver Bromide to the Green Ray.—Repeated experiments, made by Mr. M. Carey Lea, have shown that—1. The sensitiveness of silver bromide to the different rays of light is distinctly modifiable by the presence of various bodies, colored or colorless; and, 2. That no relation can be traced between the color of these bodies and the refrangibilities of the rays, the sensitiveness to which is modified. During the past year Mr. Lea made the action of the green rays a special study, publishing his results in the *American Journal of Science and Arts*. To determine whether there exists any red substance capable of increasing the sensitiveness of the bromide to the green rays, the author experimented with fourteen different red pigments; but not one of these, with the single exception of coral-line, produced the slightest increase of sensitiveness. And, though coralline appears to have this effect, it in reality forms no exception to the general rule, because its action on green light may be destroyed without destroying its color. Of colorless, or nearly colorless substances, eight, viz., potassic arsenite, argentic arsenite, salicine, codeia, morphia acetate, tincture of capsicum, ammonium valerate, and caffeine, gave an increase of sensitiveness. From this it would appear that it is not among the colored but the colorless substances that we must look for those capable of increasing sensitiveness to green light. Eight other colorless substances, viz., ammonium hippurate, mucate and mulate, plumbic arsenite, phloridzin, parabonic acid, tincture of aloe, and potassic

formate, were indifferent, while the following eleven distinctly diminished the sensitiveness to green light, viz., brucia, strychnia, narcotin, daturin, acid ammonium nitrate, peperin, gentianin, podophyllin, aconitin, asparagin, and berberin. The author's conclusion from these premises is, that there exists no relation between the color of a substance and the color of the rays to which it increases the sensitiveness of silver bromide.

A New Test for Arsenic.—A simple and readily-applied test for arsenic, being a modification of Marsh's test, is offered by Dr. E. W. Davy, of the Royal College of Surgeons, Ireland. Marsh's test, as is well known, rests upon the fact that nascent hydrogen, in presence of certain arsenic compounds, gives rise to arseniureted hydrogen, a gas which can be very readily detected, even in very minute quantities. Marsh's method consists in generating, in a suitable apparatus, hydrogen by the action of dilute sulphuric acid on zinc, and then adding the arsenical compound in solution. Arseniureted hydrogen is quickly evolved, and a fine jet of the gas being ignited, and a cold surface being placed on the top of the flame, characteristic spots of metallic arsenic are produced. The process is, however, subject to this disadvantage, that the acid and zinc employed may themselves contain arsenic; and it is difficult to find either substance perfectly free. Dr. Davy proposes the employment of an amalgam of sodium as a means of generating the hydrogen, thus doing away altogether with the necessity of any acid, and using two metals that are not liable to arsenical contamination. The amalgam proposed by Dr. Davy consists of one part by weight of sodium to eight or ten of mercury.

In applying the test, the suspected solution or solid matter is placed along with a little water in the bottom of a test-glass; then add a small bit of the amalgam, about the size of a grain of wheat; and, lastly, place without delay, on the top of the glass, a piece of white filtering-paper or the cover of a white-porcelain crucible moistened with a drop of a dilute solution of nitrate of silver, slightly acidulated with nitric acid, when—if arsenic is present—a dull-black or deep-brown stain on the paper, or a dark silvery one on the porcelain, will be quickly developed in the part moistened, owing to the silver of the salt being reduced to the metallic condition by the agency of the arseniureted hydrogen thus evolved, which, coming in contact with the nitrate of silver, gives rise to the following reaction:

The silver solution is made by dissolving twenty grains of the nitrate in an ounce of distilled water, and then adding two drops of strong nitric acid to render the solution slightly acid. A small disk of bibulous paper, between the mixture in the glass and the paper or cover moistened with the silver solution, will intercept any particles of the liquid which might otherwise be projected against them, producing there minute black spots, and thus interfering with the results of this test.

Exceedingly minute quantities of arsenic can be readily detected by this process: thus the 1-1,000th part of a grain of arsenious acid, dissolved in 1 c.c. of distilled water, gives a very decided effect in a few moments; but much smaller quantities are

detectable by it: thus the 1-100,000th or even the 1-1,000,000th part of a grain of arsenious acid, dissolved in the same quantity of water (1 c.c.), will afford, by the blackening of the silver salt, after a little time, an indication of the presence of arsenic. Nor is this method of detecting arsenic directly applicable only where it exists as arsenious acid, but likewise to several other compounds of arsenic, whether they are soluble or insoluble in water; thus, for example, the two sulphides of arsenic (orpiment and realgar), the alkaline arseniates, and even metallic arsenic itself if reduced to powder, will readily show their arsenical nature by this test; and we may in a few moments detect by it the occurrence of arsenic in different green, yellow, and orange pigments, which are still much employed in the manufacture of wall-papers, in painting, and in the coloring of certain textile and other articles used in dress or for ornamentation.

Distribution of Arsenic in the Tissues.—This subject has been reinvestigated by Scalosoff, who experimented on dogs, rabbits, and frogs. The poison was administered with the food, in the form of arsenite of soda. It was afterward separated from the tissues by treating these with a mixture of nitric and sulphuric acids, evaporating nearly to dryness, adding more sulphuric acid, heating again till fumes appeared, and then, after adding more nitric acid, heating to carbonization. On exhaustion, with boiling water and filtering, a liquid is obtained, from which the arsenic may be precipitated by sulphureted hydrogen. It was found that dogs bear large doses of arsenic well, taking, without difficulty, fifteen to eighteen times the quantity, which, weight for weight, would kill a man. Arsenic was fed to a bull-dog for 84 days, the quantity being gradually increased from 5 to 150 milligrammes per day: 100 grammes of the muscle of this dog contained .00025 gramme arsenic, 100 grammes of liver .00271 gramme arsenic, 100 grammes of brain .00885 gramme arsenic, and 100 grammes of spinal cord .00983 gramme arsenic. Calling the quantity in 100 grammes of muscle 1, that in the same weight of liver is 10.8, brain 36.5, and spinal cord 37.8, thus showing the marked tendency of the arsenic to localize itself in the nervous tissues.

Ammonia as a Chemical Impurity.—An important contribution to the subject of the purity of chemicals has been made by Prof. F. H. Storer, in an account of his investigations (*American Journal of Science and Arts*) concerning the presence of ammonia as a contaminant of sulphuric acid, and of those substances in the manufacture of which sulphuric acid is employed. Schönbein stated in 1862 that ammonia was found in all the samples of sulphuric acid he had tested for its presence. Prof. Storer's results are equally conclusive, nine samples from different sources which he examined showing the presence of this impurity in appreciable quantities.

"There are several ways," says Prof. Storer, "in which sulphuric acid may be contaminated with ammonia. Some insignificant traces of this substance are, of course, contained in the air which is used for making the acid, and

a still larger amount is often contained in the water that plays so important a part in the process of manufacture. It is not impossible, indeed, that nitrogen compounds in the water may sometimes be the cause of appreciable traces of ammonia in the acid. It is easy to conceive, moreover, that considerable quantities of ammonia may be formed in the apparatus of the sulphuric-acid maker through reduction of nitric acid, or other oxide of nitrogen, that is necessarily present; and I find, in fact, by direct experiment, that ammonia is formed when warm dilute nitric acid is made to act upon lead or upon sulphur.

"A quantity of soft, clean, commercial lead that had just been remelted was placed in a small glass flask and 50 c.c. of dilute nitric acid (sp. gr. 1.15) were poured upon it. The flask was closed against the air with a gas-delivery tube, and after the action of the acid had ceased the solution was boiled with the milk of lime, and the distillate tested for ammonia. But the reaction with Nessler's liquor was so strong that no estimation of the amount of ammonia could be made. A quantity of the lead (80 grammes), boiled by itself in the milk of lime, gave a distillate in which no ammonia could be detected by the Nessler test. On the other hand, 50 c.c. of the dilute nitric acid were found to contain 0.000025 gramme of ammonia.

"In a second trial, 50 grammes of the commercial lead were warmed during three hours with 50 c.c. of the dilute nitric acid. The solution was distilled with the milk of lime, and the ammonia in the distillate was estimated by titration with standard oxalic acid: 0.002488 gramme of ammonia was found.

"In a third trial 25 grammes of pure lead (from Marquart, of Bonn) were warmed with 50 c.c. of the dilute nitric acid, and 0.008279 gramme of ammonia was found in the solution of nitrate of lead.

"Fifteen grammes of clean copper clippings were gently warmed with 50 c.c. of the dilute nitric acid until there was no more action. The solution was distilled with milk of lime, and the ammonia estimated by Nessler's test: 0.00004 gramme of ammonia was found.

"Twenty grammes of powdered brimstone were added to 50 c.c. of the dilute nitric acid, and the mixture was maintained at or near the temperature of boiling for three hours. On testing the liquid an abundance of ammonia was found.

"In another trial, 20 grammes of the powdered brimstone were mixed with 100 c.c. of the dilute nitric acid. The mixture was allowed to stand in the cold for 48 hours, and then boiled gently during 8 hours. On testing the liquor by the Nessler process 0.00225 gramme of ammonia was found in it.

"A small amount of nitrogen oxides may perhaps be reduced to ammonia in the process of sulphuric-acid making by other deoxidizing agents, such as the organic impurities of crude

of its high price, this coloring-matter will meet with a demand for printing on *silk* and *wool*, for its richness, to-day even, will produce colors at a remunerative price; thus one gramme to the litre gives a beautiful rose-color. Its application on silk is made by printing an aqueous solution, simply thickened with gum, and fixed by ordinary means. On wool it is applied for dyeing or for printing, as on silk. All attempts, made with a view to obtain a color on cotton capable of resisting ordinary washing, have remained without practical results.

Below are the different methods of fixation:

Add to gummed eosin arsenite of aluminium, print on stannated tissue, steam, and wash. Mix with a solution of eosin its equivalent of acetate of lead, or acetate of tin, or acetate of aluminium which has been thickened; print on linen that has either been stannated or oiled, steam, and wash.

Finally, the best method:

Print on tissue which has been coated with gelatin, gummed eosin, combined with three times its weight of tannin; fix by steam, and wash.

Eosin does not dye the mordants that are usually employed, such as stannic acid, tannin, aluminium, iron, glycerin, arsenious acid, and casein; a dye is produced by albumen, but without brilliancy.

CHILE (REPÚBLICA DE CHILE), an independent state of South America, comprised between latitude 24° and 56° south, and longitude 70° and 74° west. Its boundaries are: Bolivia on the north; the Argentine Republic and Patagonia on the east, the dividing line with both which countries being the Andean system of mountains; Cape Horn (as claimed by the Chilians, but contested by the Argentines) and the South Pacific on the south; and the ocean just named on the west.

The disputed question of title to the Patagonian territory (details of which were given in the ANNUAL CYCLOPEDIA for 1872, '73, '74, and '75, and particularly in the first and last) still continues undecided.* The policy of referring this important question to the arbitration of the King of the Belgians and the Emperor of Brazil has been strongly urged, and its adoption is by some regarded as probable.

The text of Article I. of the Chilean Constitution (May 25, 1833), relating to the boundaries of the country, is as follows: "The territory of Chile extends from the desert of Atacama to Cape Horn, and from the Cordillera of the Andes to the Pacific Sea (*sic!*), comprising the Archipelago of Chiloé, all the adjacent islands, and that of Juan Fernandez."

The President of the Republic is Señor Don Anibal Pinto, inaugurated September 18, 1876. The cabinet is composed of the following members: Minister of the Interior, Señor Don José V. Lastarria; Foreign Affairs, Señor Don José Alfonso; Finance, Señor Don Rafael Sotomayor; Justice, Public Worship, and Public Instruction, Señor Don Miguel Luis Amunátegui; and War and the Navy, Señor Don Belisario Prats.

The Council of State, composed of the cabinet ministers, three Senators, three members of the Chamber of Deputies, one member of the courts of justice, one ecclesiastical digni-

tary, one general, the director of one of the Departments of Finance, and an ex-minister, is presided over by the Chief Magistrate of the Republic.

The President of the Supreme Court of Santiago is Señor Montt. There is a Court of Appeals at Santiago, Concepcion, and La Serena. The Auditor-General of Accounts is Señor Don A. Tagle. The Postmaster-General is Señor Don R. S. Irrarázabal.

The Archbishop of Santiago is the Rt. Rev. R. N. Valdivieso; and the Bishops of La Serena, Concepcion, and Ancud are M. Orrego, J. H. Salas (elevated in 1854), and Fr. de Paula Solar (1857), respectively.

There is at present no minister plenipotentiary of Chile in the United States, the functions of *chargé d'affaires ad interim* being exercised by Señor Zenteno.

The area of Chili proper, as set down in an official report of 1875, is 124,246 square miles, which, with that given for the Magellanic possessions (95,753, regarded as somewhat exaggerated), would make a total of 219,999 square miles.

The following table shows the present territorial division of the republic, and the population according to the census of 1875:

PROVINCES.	Population.	PROVINCES.	Population.
Aconcagua	182,799	Nuble	184,880
Arauco*	51,807	Santiago	862,712
Atacama	71,802	Talca	110,220
Biobío*	76,459	Valdivia*	30,525
Chiloé	64,586	Vaiparaiso	176,629
Colchagua	146,889	Angol (Territory)* ..	20,006
Concepcion	157,865	Magellan Colony... ..	1,144
Coquimbo	157,469		
Curicó	92,110	Total	2,068,447
Llanquihue	48,493	Agaiuet, 1865	1,819,228
Linares	118,880		
Maule	118,467	Increase in 10 years ..	249,994

The provinces, etc., marked thus, * were either newly formed, or underwent modification in 1876.*

The army in 1874-'75 was composed of 4 generals of division, 6 generals of brigade, 10 colonels, 29 lieutenant-colonels, 57 majors, 124 captains, 25 adjutants-major, 89 lieutenants, and 185 sub-lieutenants—489 officers; and the following corps:

Artillery regiment.....	604 men.
Regiment of light horse.....	426 "
Regiment of heavy horse.....	286 "
Five line regiments of foot (each 400 strong)...	2,000 "
Total.....	3,516 men.

The force of the National Guard was as follows during the same period:

NATIONAL GUARD.	Horse.	Infantry.	Artillery.	Total.
Commanding officers...	80	82	4	66
Subaltern officers.....	47	808	80	925
Men	1,215	17,761	1,925	20,901
Total.....	1,292	18,601	2,009	21,902

The navy comprised during the same period the following vessels, etc.:

* See also the article ARGENTINE REPUBLIC in the present volume.

* See the ANNUAL CYCLOPEDIA for 1875, wherein is also given a list of the chief towns, with their population.

VESSELS.	Horse-power.	Cannon.	Marines.	Crew.
2 iron-clad corvettes...	1,000	16	580	4,064
5 corvettes.....	1,100	85	794	2,357
8 steamers.....	500	97	1,080
2 transport steamers..	260	8	155	912
1 pontoon.....	21	940
18 vessels.....	2,860	54	1,597	9,358

There were in the navy 1 vice-admiral and 3 rear-admirals; 3 first-class, 8 second-class, and 11 third-class captains; 18 lieutenants ranking as captains, 26 second-class lieutenants, 27 midshipmen, and 18 cadets; 1 commissary-general, 3 first-class and 10 second-class commissaries; 1 surgeon-general and 6 first-class surgeons; 1 inspector-general of engineers, 9 first-class, 5 second-class, and 15 third-class engineers; and 1 battalion of marine artillery of 440 men, commanded by 1 colonel, 1 lieutenant-colonel, 4 captains, 2 adjutants-major, 4 lieutenants, and 13 sub-lieutenants. The Valparaiso battalion of marine artillery represents a force of 1,816 officers and men, forming a part of the *guardia civil*.

The branches of the national revenue, and the estimated amount of the latter for 1875, are shown in the following table:

REVENUE.	
Customs.....	*\$3,000,000
State railways.....	8,650,000
Monopolies (tobacco, playing-cards, etc.).....	1,600,000
Tax on the sale of real estate.....	17,000
Agricultural tax.....	1,200,000
Patent-rights.....	400,000
Stamp-duty.....	270,000
Registry fees.....	500,000
Post-Office (including sale of stamps, \$250,000).....	280,000
National pawn-offices.....	2,000
Sale of Mejillones guano.....	300,000
Mint.....	60,000
Telegraphs.....	45,000
Last dividend of the 1878 loan.....	3,000,000
Sundries.....	116,000
Total.....	\$19,440,000

Here follow items of the national

EXPENDITURE.	
Ministry of the Interior.....	\$5,093,750
Ministry of Foreign Affairs (colonies, \$153,838), etc.....	252,408
Ministry of Finance.....	6,525,907
Ministry of Justice, etc.:	
Justice.....	\$567,848
Public Worship.....	817,126
Public Instruction.....	1,180,777
	2,965,751
Ministry of War:	
Army.....	\$1,684,541
National Guard.....	419,309
	2,058,850
Ministry of the Navy.....	1,178,515
Total.....	\$17,186,076

In the latter table is observable the sum of \$1,180,777 devoted to the branch of public instruction, the largest appropriation for that department in any Spanish-American country, save the Argentine Republic.

The gradual growth of the national revenue during the forty-five years 1831-'75, inclusive, is exhibited in the subjoined table:

YEARS.	Revenue.	YEARS.	Revenue.
1831.....	\$1,517,588	1854.....	\$3,946,217
1832.....	1,652,714	1855.....	6,257,026
1833.....	1,770,761	1856.....	6,599,867
1834.....	1,922,966	1857.....	6,419,148
1835.....	2,003,421	1858.....	5,961,774
1836.....	2,075,058	1859.....	6,264,165
1837.....	2,532,482	1860.....	7,494,751
1838.....	2,275,427	1861.....	5,850,821
1839.....	2,386,959	1862.....	6,287,155
1840.....	2,246,247	1863.....	6,700,639
1841.....	2,767,188	1864.....	6,574,918
1842.....	3,074,076	1865.....	7,801,048
1843.....	3,001,280	1866.....	6,197,111
1844.....	3,307,169	1867.....	9,756,589
1845.....	3,223,089	1868.....	10,694,974
1846.....	3,623,018	1869.....	11,484,506
1847.....	3,714,079	1870.....	11,537,751
1848.....	2,860,096	1871.....	11,631,082
1849.....	4,135,286	1872.....	13,590,410
1850.....	4,394,444	1873.....	15,263,582
1851.....	4,426,907	1874.....	16,009,153
1852.....	5,430,480	1875.....	*16,440,000
1853.....	6,552,485		

About one-half of the entire revenue is derived from the customs; and that proportion has been steadily preserved since 1831:

Total received for 1831.....	\$1,517,588
Custom-house receipts for 1831.....	890,624

Total estimated revenue for 1875 (exclusive of the \$3,000,000 of the last dividend of the 1878 loan).....	\$16,440,000
Custom-house receipts for 1875.....	8,145,253

The Valparaiso custom-house alone yielded, from January 1, 1831, to December 31, 1874, inclusive, a total of \$123,561,201, or very nearly one-half of the entire national revenue (\$264,995,044) for the same period.

The annual receipts at all the Chilean custom-houses, and at that of Valparaiso alone, in the forty-four years 1831-'74, inclusive, were as follows:

Y ^R S.	General Receipts.	Valparaiso Receipts.	Y ^R S.	General Receipts.	Valparaiso Receipts.
1831.....	\$680,684	\$345,636	1853.....	\$3,358,540	\$3,073,905
1832.....	1,019,947	398,954	1854.....	8,718,315	3,451,501
1833.....	1,025,885	107,354	1855.....	8,764,238	3,443,939
1834.....	1,241,080	856,257	1856.....	4,147,396	3,545,949
1835.....	1,167,229	962,509	1857.....	4,092,096	3,763,615
1836.....	1,379,948	1,066,177	1858.....	3,484,017	3,245,456
1837.....	1,506,072	1,292,906	1859.....	3,950,669	3,617,904
1838.....	1,856,197	1,141,832	1860.....	4,324,011	4,379,757
1839.....	1,476,725	1,262,599	1861.....	3,588,04	2,946,874
1840.....	1,825,009	1,662,428	1862.....	3,841,374	3,127,187
1841.....	1,931,371	1,495,224	1863.....	4,259,388	3,612,139

1843.....	1,765,382	1,568,755	1865.....	3,764,477	3,244,838
1844.....	1,763,055	1,629,426	1866.....	3,059,416	2,551,274
1845.....	1,773,789	1,607,928	1867.....	5,678,228	4,909,471
1846.....	2,079,708	1,878,760	1868.....	6,036,539	5,249,212
1847.....	2,108,066	1,887,676	1869.....	6,423,382	5,264,484
1848.....	1,940,740	1,877,084	1870.....	5,942,005	5,248,924
1849.....	2,323,678	2,206,802	1871.....	5,942,005	5,557,638
1850.....	2,627,442	2,446,814	1872.....	7,373,760	6,912,968
1851.....	3,729,906	2,426,644	1873.....	8,145,253	7,703,143
1852.....	3,465,088	2,652,972	1874.....	?	7,249,064

In June, 1875, the Minister of Finance estimated the revenue for that year at \$16,000,000; but unforeseen circumstances afterward transpired which rendered it necessary to lower the estimate.

The Mejillones guano-beds, of which the product had been estimated at \$300,000, pro-

* The amount really yielded by this branch in the year referred to was \$8,145,253.

* Or \$19,440,000, with the \$3,000,000 of the last dividend of the 1878 loan, as in the foregoing table of the revenue for the same year.

duced that year only \$175,000. The revenue from customs, which had been estimated at \$7,800,000, will show a decrease of \$100,000. In the other branches of revenue a proportionate reduction will also have to be made. Still, such reduction will not exceed \$400,000. To this must be added that expenditures have considerably decreased. Ordinary expenses up to October 31st scarcely reach \$12,220,225, while receipts up to the same time amount to \$13,204,290. Hence there was a balance in favor of the treasury; but it was apprehended that the balance would disappear in November and December, the revenue being at its lowest ebb in those months. Nevertheless, it was hoped that the ordinary revenue of the year would pay ordinary expenses, and that, if there should be a deficit, it would be very small. Extraordinary expenses, amounting to \$5,535,000, would be covered by the proceeds of the loan; and then Peru still owes Chili \$100,000 which the Minister of Finance hoped would soon be paid. Passing to the financial estimates for 1876, the only item to be reduced was that of the Mejillones guano-beds, the proceeds of which for that year will prove \$100,000 less than estimated by the minister. The total receipts from railways do not seem to have been over-estimated. Nevertheless, "on the Santiago & Curicó Railway it is very probable that there will be some decrease, but it is also very probable that the Ohilian & Talcahuano Railway will be unusually productive. It is hoped that, after the termination of the great public works undertaken, the situation of the public finances will be such as to warrant the appropriation of funds for the great necessities of the day—a rural police force, and charitable donations."

The finance committee of Congress assembled in October, 1876, to examine the budget estimates for the year 1876-'77. Numerous modifications for economy were introduced into the estimates of expenditure in the Departments of the Interior and of Finance, the most considerable being the reduction from 25 to 16 per cent. in the gratuity at present enjoyed by public employes, which implies a saving of \$260,000 per annum. Two of the committee voted for its entire suppression, and another proposed a sliding scale of from 5 to 25 per cent., to be granted in inverse proportion to the amount of the recipient's salary. The estimates of the War and Navy Departments were revised, and numerous modifications made, the staff being reduced to the lowest legal footing, and the crews of war-vessels limited to the force absolutely necessary to preserve the ships and armament in proper condition: the retrenchments amount to \$240,000. The estimates of the Department of Justice, Worship, and Instruction, were revised in a similar manner, and cut down by \$100,000.

At a meeting of the Council of State, it was resolved to summon Congress to an extraordinary session on October 17th, for the pur-

pose of deliberating upon the new budget estimates, and other topics of no less importance.

About the same time the Minister of Finance sent a note to the National Society of Agriculture, requesting the opinion of the directory on the following points, with a view to the reforming of the agricultural tax: 1. If it would be preferable to take as the basis of the tax the value of the land, instead of the estimated rent thereof, the former being more easily determined; 2. If it would be advisable to exempt small holdings from the tax; 3. If a permanent commission should be established to hear and decide complaints; 4. If it would not be just to concede the right of complaint to persons who consider themselves aggrieved by an inadequate assessment upon their neighbors, or if it would be more advisable to leave this matter to the authorities.

Later in 1876 the following decree was issued from the Ministry of Finance:

1. It will not be permitted to erase or alter the original marks of goods to be reëmbarked, nor add others to them. 2. Merchandise destined to different ports cannot be comprised in the same policy of reëmbarkation. 3. On every package reëmbarked, the custom-house will fix, by means of a special brand, the name of the port at which the reëmbarkation is effected, and of that to which the package is directed, or the words "*al extranjero*" (for abroad). The custom-houses will detain all packages disem-barked bearing the latter inscription, until it be ascertained whence they come. 4. Article 208 of the custom-house regulations is hereby abolished.

The bulletin of the National Agricultural Society published the report of a commission appointed to take into consideration the advisability of relieving raw materials from inward duty. To balance the loss to the revenue that such a measure would entail, it was proposed to increase from 25 to 85 per cent. the duties on some classes of manufactured goods imported from abroad. Wool, in whatever condition, unspan, is free of duty, both inward and outward.

Public taxation in Chili amounts annually to about \$3.70 for each inhabitant. In 1833 it was but \$1.40½ each; in 1868 it had reached \$2.38 each.

The statutes of the Banco Consolidado de Chili association have been approved. The capital is \$1,500,000; the reserve fund, \$500,000, formed by a deduction of not less than five per cent. from each half-year's net profits. This bank is the section of the Banco Nacional de Bolivia domiciled in Chili.

The total national debt, in April, 1875, stood as follows:

Home debt.....	\$10,929,600
Foreign debt.....	40,669,000
Total.....	\$51,618,600

The railway branch of the debt amounted in June, 1876, to \$35,000,000.

The total value and the destination of the exports were as follows in 1875:

COUNTRIES.	Value.
Great Britain.....	\$21,034,000
Peru.....	5,441,000
France.....	3,007,000
Bolivia.....	2,239,000
Uruguay.....	1,176,000
Germany.....	923,000
United States.....	418,000
Brazil.....	293,000
Argentine Republic.....	241,000
Ecuador.....	176,000
Other countries.....	379,000
Fisheries.....	653,000
Total.....	\$33,923,000
Coasting-trade.....	\$21,333,500
In transitu.....	2,033,500
	23,372,000
Total exports.....	\$59,300,000

The following table exhibits the value of the imports for 1875, and the countries from which they were received:

COUNTRIES.	Value.
Great Britain.....	\$15,706,000
France.....	7,915,000
Germany.....	4,162,000
Argentine Republic.....	2,737,000
Peru.....	2,411,000
United States.....	2,138,000
Bolivia.....	579,000
Brazil.....	493,000
Belgium.....	737,000
Other countries.....	1,638,000
Fisheries.....	91,000
Total.....	\$33,128,000
Coasting.....	\$21,333,500
In transitu.....	2,033,500
	23,372,000
Total imports.....	\$61,510,000

It is observed that, in the mean, some two-thirds of the Chilean exports are to Great Britain, and that somewhat over one-third of the imports are received therefrom.

The value of metals exported in 1875 was as follows: Silver, \$2,938,510; copper, \$13,968,658—total, \$16,907,163.

In the month of September, 1876, copper, silver, and cobalt were exported from Caldera of the value of \$446,211.79; and ores of the value of \$10,510.50 were received at the same port.

The following interesting report of the mineral wealth of the northern province of Atacama was published in 1876 by the Chilean consul-general at San Francisco, Señor Casanueva:

The value of the silver, bullion and bars, exported from that province during a period of thirty-two years (from 1843 to 1875) amounts to \$89,131,706. From 1843, the production of silver has increased from \$1,000,000 (amount produced in that year) to \$5,356,160 for the year 1875.

The value of the minerals of all kinds exported from the province during the thirty-two years above stated amounted to the enormous sum of \$240,000,000. The following table shows the ratio of increase in the production for the past thirty years, in periods of five years:

First period.....	\$15,914,455
Second ".....	27,925,071
Third ".....	40,210,407
Fourth ".....	42,813,249
Fifth ".....	50,548,205
Sixth ".....	51,363,092

This increase is very remarkable. Comparing the amount of mineral product exported from the prov-

ince of Atacama with the inward movement of the republic of Chili, the following is shown: In 1843, the total mineral exportation of Atacama amounted to \$1,721,321, and the total importation of Chili to \$3,500,000; while in 1875 the total exportation of minerals from Atacama amounted to \$13,668,471, and the total importation of Chili to \$38,417,729. Hence, the exportations of Atacama alone amounted to over one-third of the importations of the whole republic.

The following figures show the exportation of minerals from Atacama in 1875 in detail, viz.:

Silver in bars, \$5,356,160; copper in pigs, \$3,419,660; copper in bars, \$2,654,477; copper-ore, \$1,394,065; copper and silver bars, \$630,500; copper and silver ore, \$58,797; silver-ore, \$36,902; copper, silver, and gold bars, 36,240. Total, \$13,581,801.

In 1874 the amount of Bolivian ore sent to Atacama for reduction was 64,444,434 grammes; and in 1875, 21,047,582 grammes; while the production of the province in minerals of all kinds in 1874 amounted to 43,716,396 grammes, and in 1875 to 112,856,418 grammes.

In 1875 there were 486 mines in operation in the province, divided as follows: Copper-mines, 300; silver-mines, 169; copper and silver mines, 11; gold-mines, 3; gold and copper mine, 1; silver and gold mine, 1; copper, silver, and lead mine, 1. Total, 486.

The shipping movements at the ports of Chili in 1875 comprised 5,827 vessels entered, with an aggregate tonnage of 3,851,000; and 5,783 vessels cleared, with an aggregate of 3,833,168 tons.

In 1875 there were open to traffic in Chili 595 miles of railway—ten lines—of which 377 miles—five lines—belonged to the Government; and three new lines, with an aggregate length of 185 miles, were in process of construction.

The total length of telegraph-lines in the republic in 1875 was 2,559 miles; and the number of dispatches in 1874, 270,198.

As already stated, Chili is, after the Argentine Republic, the Spanish-American country in which the largest appropriations of funds are made to the cause of education. In 1875, 298 university degrees were conferred, four of the graduates being licentiate in medicine who had studied in foreign universities. The foundation of a second Instituto Nacional is now proposed, that at present in existence being insufficient to accommodate the number of students applying for admittance. During the year 1877 will be installed and in operation the classes of the Valparaiso Lyceum, in the new edifice now in course of construction, and which will shortly be completed. The primary schools in operation during the year 1875 numbered 1,359, of which 818 were public, and 541 private; the alternate schools number 62. Adequate buildings are required, as well as a regular system of teaching and discipline, and a sufficient number of text-books adapted to the requirements of the scholars; grave objections have likewise been urged against the class of teachers usually chosen. All this, however, is being gradually remedied; and if, as is expected, the intellectual standard of the preceptors be raised, it will soon be possible to form a staff satisfactory in every respect. The

public schools had in 1875 an attendance of 65,875 pupils, and the private schools, 28,630; or a total of 89,505 pupils. The outlay for the schools has amounted to \$801,522.14.

One of the first acts of Señor Amunátegui, the new Minister of Instruction, was to abolish the obligatory study of Latin by candidates for university degrees. The student can now choose between Latin and one living language, or French, English, and German. The clergy are greatly incensed at this measure, and firmly sustain the time-honored custom. They advert to the many perils to be apprehended from the proposed change, and prophesy the utter extinction of Latin as a branch of study in a short time. They, however, unadvisedly consider English as only of use occasionally, in matters of commerce, and likely to be soon forgotten.

The *Constituyentes* of Copiapó announces the proximate arrival of the machinery required for working the borax-deposits of Maricunga, of which great expectations are formed.

The presidential elections, which took place on June 25, 1876, were marked by the most perfect tranquillity. The Clerical (Mackenna) party, foreseeing the futility of the contest, forbore from even voting; and Señor Anibal Pinto, the Government candidate, was elected by a large majority.

CHINA, an empire in Asia. Emperor, Kwang-liu, formerly called Tsateen, born in 1872, a son of Prince Ch'un, and grandson of the Emperor Tan-Kwang, who died in 1850; succeeded to the throne in January, 1875.

The following table exhibits the area of the different provinces according to the latest estimates, and the population according to the estimate of 1842, which may be considered the most reliable at the present time:

PROVINCES.	Square Miles.	Population.
I. CHINA PROPER.		
Chihli	57,298	86,879,889
Shantung	59,779	29,522,877
Shensi	65,869	17,056,925
Honan	62,932	29,092,771
Kiangsu	40,140	89,644,924
Yunnan	54,008	26,596,988
Yuehwei	63,596	26,518,889
Kiangsi	85,671	8,160,000
Fokien	45,762	29,799,556
Hupeh	69,490	28,534,564

II. DEPENDENCIES.		
Mantchuria	266,810	12,000,000
Mongolia	1,204,923	2,000,000
Thibet	651,725	6,000,000
Corea	91,427	8,500,000
Central territory	5,260	Uninhabited
Dependencies	2,419,845	28,500,000
Total, China	3,978,840	428,500,000

The number of foreigners in the treaty ports was as follows:

British	1,611	Dutch	29
Americans	541	Italians	26
Germans	867	Austrians	86
French	311	Japanese	26
Spaniards	108	Belgians	11
Danes	66	Countries without treaties	865
Russians	55	Total	8,519
Swedes	38		

The estimates of the population of the larger cities vary very much. The following are the latest estimates for the treaty ports, except for Peking, where the figures of 1845 are retained:

Peking	1,645,814	Cheefoo	120,000
Canton	1,000,000	Ningpo	115,000
Tientsin	980,000	Newchwang	60,000
Hankow	600,000	Tamsul and Kialing	50,000
Foochow	600,000	Swatow	45,000
Amoy	300,000	Kiukiang	35,000
Shanghai	276,640	Klungchow (opened in 1876)	10,000
Takao	222,000		
Chinkiang	180,000		

(For an account of the revenue and customs duties, see ANNUAL CYCLOPEDIA for 1874.) The amount of the home debt is not known. In 1874 the Chinese Government contracted the first foreign loan, to the amount of £627,675. This loan was issued at 95%, bears 8% interest, and is secured by the customs duties.

The foreign commerce for the years 1872 to 1875 was as follows (in taels, 1 tael = \$1.61):

YEARS.	Imports.	Exports.
1872	74,826,180	68,719,887
1873	78,992,903	77,540,919
1874	64,860,864	66,712,868
1875	67,903,247	68,912,929

The commerce with the different foreign countries was as follows:

COUNTRIES.	Imports.	Exports.
Great Britain	21,183,000	29,165,000
Hong-Kong*	27,525,000	12,747,000
East Indies	14,855,000	241,000
Straits Settlements	700,000	793,000
United States	1,016,000	7,674,000
Continent of Europe	766,000	9,765,000
Japan	2,486,000	1,959,000
Russia (Odessa)		989,000
Siberia and Russia via Kiachta		3,022,000
Total	68,481,000	66,852,000

The foreign trade of the different treaty ports in 1875 was as follows (in taels):

PORTS.	Foreign Imports.	Domestic Imports.	Exports.
Newchwang ..	1,740,000	1,095,000	2,668,000
Tientsin	8,480,000	6,989,000	1,660,000
Cheefoo	8,525,000	1,998,000	2,268,000
Hankow	6,897,000	6,827,000	17,732,000
Kiukiang	2,758,000	675,000	9,895,000
Chinkiang	9,050,000	2,323,000	1,029,000
Shanghai	10,539,000	7,499,000	26,828,000
Ningpo	6,180,000	1,602,000	4,964,000
Foochow	3,808,000	1,506,000	13,289,000
Tamsul	893,000	127,000	815,000

The negotiations with England about the Margary murder continued during the year, and at one time threatened to end in war. The commission under the command of Colonel Grosvenor, sent out in 1875 to Yunnan, to investigate the case, arrived in that province on March 6th. As fears were entertained for its safety, the Indian Government sent forward a military escort consisting of two companies of the Sixty-seventh Regiment and a detachment of the Sixth Regiment, to proceed through Burmah and conduct the commission home. Every attention was shown both to the troops and the commission by the King of Burmah on their passage through his territory, and they were everywhere received by the population with the signs of the greatest friendship. On June 2d, the commission, together with the troops, arrived at Rangoon, Messrs. Baker and Grosvenor arriving a few days later. On the 18th the commission returned directly to China. When it arrived in Manwyne, the inhabitants decidedly denied that Mr. Margary had ever been there, but a guide showed to the officers of the escort the place where he was murdered, and the tree to which his head had been affixed. In Bhamo, the wife of General Lisitahi, who had been imprisoned on a suspicion of complicity in the murder, came to the commission to assure the English of the innocence of her husband. In the mean while the relations between the Chinese Government and Sir Thomas

Wade, the British ambassador, were of a very delicate nature. In June Sir Thomas left Peking with his secretary, after having presented to the Chinese Government demands approaching an ultimatum, and went to Shanghai, where he intended to await the arrival of Mr. Grosvenor, who reached there on July 6th. The departure of the British ambassador from Peking and the establishment of the legation at Shanghai greatly startled the Chinese authorities, who first made efforts to persuade him to return, and afterward proposed to send the Viceroy of Nanking to reopen negotiations with him, but Wade rejected all overtures. In August, the Chinese Government appointed Li-Hung-Chang, Viceroy of Chihli Province, special commissioner to treat with Minister Wade. The viceroy tried every means to induce the minister to come to Tientsin, but all in vain. The British ambassador went to Cheefoo, accompanied by Admiral Ryder and several vessels of the squadron. During this time considerable excitement prevailed among the foreigners as well as among the natives of Tientsin. The Chinese were decidedly opposed to the plan that the viceroy should go to Cheefoo, claiming that, if he did, Sir Thomas Wade would secure his person; they consequently assumed a hostile attitude toward foreigners; the excitement at one time running so high that the German residents asked their consul, Herr von Bismark, who was also temporarily at Cheefoo, for protection. But as all these manifestations did not move Sir Thomas Wade, the viceroy finally consented to go to Cheefoo, where he met the British minister on August 21st. The minister demanded that Tsen-yu-ying, ex-Governor of Yunnan, and other officers and gentry, should be summoned to Peking for examination. The viceroy replied that, if sufficient grounds for such action were advanced in support of charges against Tsen and others their production at Peking would be possible; but that mere suspicions and non-supported charges would not authorize recourse to such procedure, especially as the Chinese Government, desiring continuance of peaceful relations, had no reason to disbelieve the final report of the imperial commissioner sent specially to Yunnan to investigate.

The negotiations came to an end on September 13th, by the signature of a convention in which all the questions arising out of the Yunnan outrage were satisfactorily settled. The

convention was referred to the Imperial Government at Peking and the Foreign Office in London for ratification, and at the close of the year its precise terms had not been published, although the following concessions were known to have been made by the Chinese commissioner: Mrs. Margary is to receive an indemnity in money; three new ports are to be opened to foreign trade; an important city in the province of Yunnan is to be opened to commerce, with a political or consular resident there to protect and watch over British interests in that distant quarter; and the opening of the Yang-tse-kiang as far as navigable.

In 1875 a dispute arose with Germany about a German vessel, the *Anna*, which was captured and plundered, and the captain and mate murdered by her crew, mostly composed of Chinese, at Foochow. The German Government claimed that the Chinese authorities had not observed due diligence in the arrest and punishment of the pirates, and demanded an indemnity, and that the guilty officers should be punished. The Chinese Government tried at first to evade the responsibility, but upon several men-of-war being sent from Germany in the beginning of the year 1876, the Government showed itself more accommodating, and after considerable delay the following agreement was arrived at: Three of the pirates having been captured, the two principal ones were executed, while the other received one hundred blows with a bamboo stick, and was banished to another province for three years. Rewards of \$1,000 and \$500 were offered for the capture of the other pirates, still at large. The persons who received the rice from the vessel in their houses were sentenced to blows with the bamboo stick. In the villages Pak-soeung and Sei-soeung, six huts belonging to receivers of the stolen goods were burned. Captain Lam, who should have watched over the safety of the coast, and who permitted the people to commit unlawful acts, was discharged and placed before a court to be tried. Lieutenant-Colonel Yin and Colonel Lin, who did not take the matter in hand with the necessary vigor, lost their buttons, the sign of their rank, temporarily. The mandarin Tsu was transferred to another place, because he did not arrest the murderers. The rest of the cargo found was sold, and the receivers were fined, making in all \$13,880, which was handed over to the consul for the ship-owners.

The Viceroy of Canton had some trouble in the early part of the year with the Portuguese authorities in Macao. The difficulties were settled by the Chinese yielding and abandoning their position, having been intimidated by the threats of the Portuguese. The intention was to establish a custom-house on Patara Island, near Macao. The Portuguese authorities declared their purpose to resist any such attempt by force, and they garrisoned their forts and occupied the island with a large body of troops.

In consequence of these energetic preparations the Chinese stopped proceedings.

On January 26th, the Chinese New-Year, Prince Kung, attended by the highest dignitaries of the empire, some forty in number, received the diplomatic body. Prince Kung and the Chinese officials returned the visits of the foreign ministers on February 6th and 7th.

The difficulties with Kashgaria continued during the year. Jakub Kushbegi, the Amir of Kashgaria, assumed the offensive, and collected an army of 40,000 men, with which he marched against the Chinese. He defeated the latter in several battles, the Chinese general Tso in consequence committing suicide. The war with Kashgaria as well as the numerous local rebellions cost large amounts of money. In April, Governor-General Tso gave the cost of the impending campaign against Kashgaria at 50,000,000 taels, being then in arrears 27,000,000 taels. The Viceroy of Kansuh required 15,000,000 taels for the suppression of local rebellions. Heavy liabilities had been in-

curred toward the Russians at Ili for supplies furnished by them. The central Government was powerless to raise the required amount, and proposed to appeal to the viceroys of the wealthiest provinces.

Rebellions were reported from various parts of the empire. In the early part of the year two formidable ones broke out, one in Kwangtung, which had gained great strength, the rebels having been joined by the imperial troops sent to quell them. Several interior cities had been taken and were held by the rebels according to the latest accounts. The other was in Shansi, and was also of considerable magnitude. Toward the close of the

BOCA TIGRIS, CHINA.

year a rebellion in Chihkiang was suppressed before it was fairly started. The headquarters of the conspirators was the city of Wenchow, while the whole southeastern portion of the province had been worked up by them. A rebellion in Chihli broke out in the spring in consequence of a terrible famine. Famines were also reported from other parts of the empire. One of the most terrible in its consequences was that in the northern provinces. Thousands of deaths from starvation occurred daily. Rice had been ordered from the south and from Formosa, and the Peking authorities had given 100,000 taels and 1,000,000 cattles of rice for the relief of the destitute. Hamlin College contributed 1,000,000 piculs of rice, and Li-Hung-Chang, Viceroy of Chihli Province, also sent 1,000,000 piculs of rice. The first rain in nine months fell on July 2d.

While this part of the empire was suffering from droughts, Foochow and the surrounding country was visited by a terrible inundation from June 10th to June 15th, causing great loss of life, some 5,000 bodies being found near Foochow alone.

A terrible onslaught was made on July 17th upon the French Catholic chapel at Ningkuoh Fu, in the province of Nganhwui, when a crowd of about 1,000 soldiers and ruffians, under the guidance of officials, burst into a chapel during service-time and murdered members of the congregation. The men en-

tered the chapel, interrupted the service, forced the officiating priest upon his knees, and demanded that he should cease pronouncing the doctrines of the T'ien-chu sect. The priest declined to make the promise, whereupon a scene of indescribable uproar ensued, during which frightful outrages occurred. The priest was tortured and eventually put to death, being hacked to pieces; a little child whom he had adopted was torn limb from limb, and the corpse of another father was taken from its grave and brutally ill-used. The members of the Inland Mission all left the neighborhood, and the Roman Catholics posted guards around their houses. The chief conspirator was a military mandarin named Wu, who openly expressed his malignant hatred of the Christian religion. Anti-Christian riots also occurred in the province of Szechuen. The highways were occupied and the mails stopped. The leader in these disturbances, General Ming, took an active part in the great Taiping rebellion.

Four new ports were opened to foreign commerce during the year. On April 1st, the port of Kiungchow, on the island of Hainan, was opened at last, this having been promised in the treaty of 1862. The delay was owing partly to the British consul, who considered the commerce of the island as unimportant, and partly to the Chinese Government. The island has become a vice-consulate of Canton; a British consul lives there, and a custom-house has been built. But as the city Kiungchow is situated a mile up the river, the custom-house was erected at Hoihow, on the coast. The anchorage is shallow, and the port itself is considered the most unsuitable one that could be selected. The other ports are Wanchow, on the coast between Foochow and Ningpo; Woohoo, on the river Yang-tse, between Nanking and Kiukiang; and Ichang,

CHINESE FLOWER BOAT.

on the Upper Yang-tse, 860 miles farther into the interior of China than the present advanced post of foreign commerce, Hankow. Besides these ports, which will be endowed with consular and custom-house establishments, there are to be six "landing-places" on that great river, where steamers will be

permitted to touch and take in or land merchandise or passengers. The chief interest attaches to the port of Ichang, placed high up on the great river of China 1,000 miles from the sea. It is practically the highest point to which steamers can hope to ascend the Yang-tse-kiang, for, although there is an immense volume of water in the river for many hundreds of miles above Ichang, the river flows through a series of formidable rapids, which will probably do more than even the exclusive policy of the Chinese Government to keep foreign steam enterprise out of the promising region of Szechuen. The prospects of trade at Ichang were fully reported on by a commission from the Chamber of Commerce at Shanghai, which visited that and other places in 1869.

From that report it appeared that Ichang is likely to form the entrepot and the connecting link between two rich areas—the valley of the Yang-tse-kiang, with its laborious millions, on the one side, and on the other the province of Szechuen, which all travelers unite in extolling as the land of plenty. The principal entrepot at present is not Ichang, but a place about sixty miles lower down the river, named Shasi, where the Shanghai delegates estimated the "shipping in port" at 40,000 tons; but Shasi lies low, and is devoid of all interest save a purely commercial one, while Ichang is described as charmingly situated and possessing sanitary advantages which are not to be overlooked in selecting a residence in the interior of a continent.

The first line of railroad in China was formally opened on June 30th. It extends from Shanghai to Woosung, a distance of eleven miles. The line runs along the borders of the river Van Poo, of which the navigation between Shanghai and Woosung is impeded by a sand-bank. It was proposed some time ago by the foreign merchants at Shanghai to build a railroad from that place to Woosung; but the Chinese authorities refused to grant the necessary permission. After having exhausted every possible means to obtain the required permission, it was determined, without consulting the Chinese, to form a company for exploring the forbidden route. The requisite capital was subscribed without delay; and, on the survey being made, it appeared that, with the exception of three little creeks which it would be necessary to bridge over, and a few hollows which would have to be filled up, the line presented no engineering difficulties of any kind.

It was then determined to go on, at all risks, with the railroad. The governor of the district was prevailed upon to give his authorization for the making of a "suitable road," which he did the more willingly inasmuch as large numbers of work-people had constantly to make the journey from Woosung to Shanghai. Then the land had to be bought; also the right of building bridges over the creeks. The Chinese proprietors were afraid to sell without first obtaining the sanction of the authorities; but as some sort of road was wanted by every one, no objection was made to the proposed purchase. Having acquired the own-

CANTON, FROM THE TEMPLE OF THE FIVE GENII.

ership of the land on which it was intended to construct the railway, the Shanghai merchants sent to England for rails, which in due time arrived. Meanwhile the wood-work had been completed, and in the middle of January last the engineers began to lay the rails down. Still the officials looked calmly on; until, on the 16th of March, it was found possible to make a trial-trip along the line of railway three miles in length. The English directors and shareholders traveled in the carriages, and the luggage-vans were filled with Chinese, who seemed to make the journey with great satisfaction to themselves. When the governor of the district was informed that the railway was partly completed, and that engines were running over a portion of the line, he at first treated the report with contempt. But it was confirmed again and again by eye-witnesses; and ultimately he went out to see for himself, and, in presence of an excited crowd, ordered the rails to be taken up. The chairman of the company, however, begged him, before requiring the execution of such an extreme measure, to consider the matter in private; and the two went together to the government-house, where the governor's own permission to construct a "suitable road" was shown to him. The discussion was thus narrowed to the question

whether the road of iron between Woosung and Shanghai was really a "suitable" one; and the governor at last consented to submit this point to the superior officials at Peking. Before an answer could be received, trains were running all the way from Shanghai to Woosung. An authorization arrived from Peking to tolerate what the foreigners had already completed, which gave them the right of keeping open the entire line. In December the railroad was mobbed by the natives, and was forced to stop running for a time.

Li-Hung-Chang, the Viceroy of Chihli, and First Secretary of State, who was selected to conduct the negotiations with Minister Wade, is regarded as the implacable enemy of foreigners and the leading opponent of progress. He was the second of five brothers, sons of a poor literary man. During the Taiping rebellion he offered his services to the Government, and, besides rising rapidly in military rank, he gained much imperial favor. Although accused of the foulest treachery in beheading the rebel kings, whose lives he had guaranteed, after the fall of Soochow, he was created a noble, and invested with the yellow jacket, the highest honor in China for military

achievements. In 1864 he founded the Imperial Arsenal at Nanking, and supplied it both with skilled workmen and all the apparatus necessary for making guns, torpedoes, rockets, shells, and other war implements. In 1865, after the fall of Nanking, he was made governor-general; in 1866 he went north, and put an end to the Nienfu insurrection; in 1870 was ordered to fight the Mohammedan rebels in Shan-si and Kiangsi, but, while *en route*, he was recalled and made Governor-General of Chihli, and in 1872 was raised to the rank of a second-class noble. He is about fifty-five years of age.

The following table of the distribution of missionaries of different Protestant societies in China, in 1874, has been compiled on the basis of a like table furnished in 1875 to European readers by the China Inland Missionary Society. Besides the missionaries included in the table, the Southern Presbyterians had one missionary at Ningpo in the Chihkiang Province, the Irish Presbyterians two, and the Scottish United Presbyterians one, in Mantchooria, not in China proper. The number of stations occupied was thirty-one in the whole empire. The population of the provinces is given in round numbers:

PROVINCES AND MISSIONARY SOCIETIES.	Kwangtung, 20 millions.	Fukien, 25 millions.	Chihkiang, 8 millions.	Kiangsu, 40 millions.	Shantung, 29 millions.	Chihli, 37 millions.	Hopei, 30 millions.	Kiangsi, 7 millions.	Ngsanwei, 27 millions.

CHRISTIAN CONNECTION. The *Christian Almanac* for 1877 gives a list of 1,263 ordained ministers of the Christian Connection in the United States and Canada, who are distributed by States as follows: Maine, 65; New Hampshire, 39; Vermont, 19; Massachusetts, 40; Rhode Island, 14; Connecticut, 2; New York, 156; New Jersey, 11; Pennsylvania, 66; Virginia, 10; West Virginia, 2; Kentucky, 9; Ohio, 228; Indiana, 194; Michigan, 62; Illinois, 105; Wisconsin, 86; Iowa, 128; Missouri, 27; Nebraska, 7; Kansas, 20; Canada, 23. The total number of unordained ministers is given as 328. The *Register* gives the following list of schools and seminaries of the Connection: Union Christian College, Merom, Sullivan County, Ind., Rev. T. C. Smith, A. M., president, with six teachers; Antioch College, Antioch High School, and Ohio Free Normal School, Yellow Springs, Ohio, J. B. Weston, acting president; Waukegan Christian Institute, Hickory County, Mo., Rev. J. Whitaker, B. S., principal, with three assistants; Proctor Academy, Andover, N. H., Rev. Alva H. Morrill, principal; the Eaton Family School, Middleboro', Mass., Amos H. Eaton, principal; the Christian Biblical Institute, Stanfordsville, Dutchess County, N. Y.; Starkey Seminary, Eddytown, Yates County, N. Y., Prof. B. F. McHenry, A. M., principal, with six teachers. The publishing-house of this denomination is at Dayton, Ohio, and its newspaper organ, the *Herald of Gospel Liberty*, is printed there. No statistics are given of the number of church-members connected with the denomination.

CHRISTIAN UNION. The General Council of the Christian Union in the United States met at Providence Chapel, Hancock County, Ohio, May 31st. H. Ellis was chosen moderator. A resolution was adopted, providing that a General Council shall be held once in two years, at such times and places as shall be by itself determined, which council shall consist of all the members of the churches of Christ in the United States, and shall have supervision over the interests general and common to all the bodies represented. The following preamble and resolutions on union were adopted:

Whereas, It is our duty to God and man, from time to time, to define our position, that all may know why, as a body of Christians, we take our position outside of all denominations in laboring to secure unity and build up the cause of true religion; and—

Whereas, Sectarianism has never been defined by men sustaining sects in its true light, or its evils seen by such in their real character; and—

Whereas, No member of a sect, who justifies sects, can be in a position to put forth to the world the truth as to the evils of sectarianism and its remedy; and—

Whereas, Religious organizations and religious thought shape society; and—

Whereas, When the Church falls into great wrongs in theory or practice, society has lost its true light and balance-wheel, and is driven on into infidelity and corruption by the very power that should have led it to life, and steadied and guided its forces: therefore—

Resolved, 1. That sectarianism is to separate into sections, or separate parts, what belongs together.

2. That all Christians in every place do belong together, and to separate them for any cause, or by any means, is sectarianism.

3. That the genius and spirit of the gospel, as well as the letter of the Bible and the history of the primitive Church, proclaim the great but simple truth that the Christians of the place are rightfully, and, in fact, by divine ordination, the real visible church of the place.

4. That all the Christians, whether in or out of sects, are required by the life Christ has planted in them, and by the prayer of Jesus, and the teachings of the New Testament, and their love to Christ, and their love to each other, and their love for the salvation of men, to meet together, not to make a church, but to obey God, and do the duties of a church as taught in the gospel.

5. That all religious associations built upon a narrower basis than that which teaches and treats all the Christians of the place as equal brethren of the one church of the place, which present creeds, tests, and usages which exclude a part of the Christians of a place, are not built after the New Testament model, and have no claims to be regarded as churches of Christ, simply because they have Christians among them.

6. That the Church is a divine institution, is God-made, is spiritual; not mechanical, not human, not man-made; and God alone can place members in his Church; and as every one who truly loveth is born of God—and, therefore, a member of his Church—therefore it does not depend on our doctrinal views, baptism, votes, or enrollment, but on a loving and obedient heart.

7. That the evils of sectarianism admonish us of the great importance of scattering light before the whole world on this subject, calling all Christians to repent of this sin, and put it away, and return to the primitive spirit and practice of the church gathering, as taught in the gospel.

The leading principles of the Christian Union (South) are set forth in the following extracts from the *Declaration of Principles*:

We may well afford to dispense with all those doctrines and tenets which set the brethren at variance, and to take the following primary constitution as the groundwork of our organization, viz.:

1. The Lord Jesus Christ is the only head of the Church. The Pope of Rome, or any other pretending to be the head thereof, should be regarded as that man of sin and son of perdition who exalteth himself above all that is called God.

2. The name Christian is the only appellation needed or received by the Church. All party or sectarian names are excluded as being unnecessary, if not hurtful.

3. The Holy Bible, or the Scriptures of the Old and New Testaments, is a sufficient rule of faith and practice.

4. Christian character, or vital piety, is a just, and should be the only, test of fellowship, or of church-membership.

5. The right of private judgment and the liberty of conscience is a right and a privilege that should be accorded to, and exercised by, all.

CLIFFORD, JOHN H., was born in Providence, R. I., January 16, 1809; died at New Bedford, Mass., January 2, 1876. He graduated at Brown University in 1827, and began the practice of law in New Bedford, where he afterward resided. He soon entered upon an extensive practice, and attained the foremost position at the bar. He represented New Bedford in the Legislature in 1835, and was

subsequently President of the Senate. In 1849 he was appointed by Governor Briggs Attorney-General of the State, and in the course of his official duties conducted the prosecution of Prof. Webster for the murder of Dr. Parkman. He continued to act as Attorney-General till 1853, when he was elected Governor. He was again Attorney-General from 1854 till 1858. In 1867 he retired from the legal profession, and became President of the Boston & Providence Railroad Company. In 1859 the degree of LL. D. was conferred on him by Brown University. For several years ex-Governor Clifford was President of the Board of Overseers of Harvard University.

COLERIDGE, Sir JOHN TAYLOR, a British lawyer and writer, born in 1790; died February 11, 1876. He was a nephew of Samuel Taylor Coleridge. At Corpus Christi College, Oxford, where he received his education, he was a fellow-student of Dr. Arnold. He was elected a Fellow of Exeter College in 1810, was called to the bar at the Middle Temple in 1819, going to the Western Circuit; became a sergeant-at-law in 1832, was appointed one of the judges of the King's Bench, and upon retiring from the judicial bench in 1858 was created a Privy Councillor. He showed considerable literary acquirements at an early age, and having edited the *Quarterly Review* for some time, he continued to contribute numerous articles to it until his death. He published an edition of Blackstone's "Commentaries" with notes (1825), and a "Memoir of the Rev. John Keble, M. A." (1869, third edition, 1870).

COLET, LOUISE RÉVON, a French authoress, born September 15, 1810; died March 10, 1876. In 1835 she went to Paris, where she married Hippolyte Colet, a musical writer and composer. After his death in 1851 she turned her attention still more diligently to literature. She received the prize for poetry of the Institute four times for the following poems: "Le Musée de Versailles" (1839), "Le Monument de Molière" (1843), "La Colonie de Mettray" (1852), and "L'Acropole d'Athènes" (1855). Besides these four she also published the following poetical works: "Fleur du Midi" (1836), "A ma Mère" (1839), "Penserosa" (1839), "Les Funérailles de Napoléon" (1840), "Le Marabout de Sidi-Brahim" (1845), "Réveil de la Bologne" (1846), "Les Chants des Vaincus" (1846), and "Le Poème Femme" (in three parts, 1853-'56). Among her prose works, which comprise novels, traveling adventures, and personal reminiscences, are the following: "La Jeunesse de Mirabeau" (1841), "Les Cœurs brisés" (1843), "Deux Mois d'Émotion" (1843), "Folles et Saintes" (1844), "Deux Femmes célèbres" (1846), "Madame Hoffmann-Tauska" (1854), "Promenade en Hollande" (1859), "Deux Mois dans les Pyrénées" (1859), and "Naples sous Garibaldi" (1861).

COLLINS, MORTIMER, an English poet and novelist, born in 1825; died July 25, 1876. He

devoted himself at an early age to journalism, being in connection with various journals, particularly the London *Globe*. Among his poetic works are "Summer Songs" (1860), "Idyls and Rhymes" (1865), and "Inn of Strange Meetings and Other Poems" (1871). His novels are as follows: "Who is the Heir?" (1865), "Sweet Anne Page" (1868), "The Ivory Gate" (1869), "The Vivian Romance" (1870), "Marquis and Merchant" (1871), "Two Plunges for a Pearl" (1872), "Princess Clarice" (1872), "Miranda" (1873), "Squire Silchester's Whim" (1873), "Mr. Carrington" (1873), written under the assumed name of R. T. Cotton, "Transmigration" (1874), and "Frances" (1874). He also published a volume of essays anonymously in 1871, entitled "The Secret of Long Life."

COLOMBIA (ESTADOS UNIDOS DE COLOMBIA), an independent state, occupying the northwestern portion of South America and the southeastern portion of Central America. The territorial division* of the republic is into nine federal States and six Territories, which, with their populations and capitals, according to the census of 1870, are as follows:

DIVISIONS.	Population.	CAPITALS.	Population.
STATES.			
Antioquia.....	865,974	Medellin.....	29,765
Bolívar.....	241,704†	Cartagena.....	8,608

Nevada and Motilones.....	8,678	Espiritu Santo...	...
San Martín.....	4,056	Villavicencio.....	625
San Andrés and Providencia....	8,580	San Luis.....	816
Total.....	2,951,311		

It is estimated that, including the number of uncivilized Indians interspersed throughout the country, the total population of Colombia is at the present time about 3,000,000.

Of the 2,951,311 forming the total of the foregoing table, 1,484,129 were males, constituting an excess of 88,058 females.

BOGOTÁ, COLOMBIA.

The President of the Republic is Señor Aquileo Parra, inaugurated April 1, 1876; and the cabinet is composed of the following ministers or secretaries: Of Interior and Foreign Affairs, Dr. Manuel Ancizar; of Finance and Public Works, Dr. C. N. Rodríguez; of Treasury and Credit, Señor Luis Robles; and of War and Marine, Señor Rafael Niño.

Here follow the names of the chief magistrates of the nine States:

STATES.	
Antioquia.....	Señor R. de Villa.
Bolívar.....	" E. Nuñez.
Boyacá.....	" E. Neira.
Cauca.....	" C. Conto.
Cundinamarca.....	" J. Sanchez.
Magdalena.....	" M. Dávila García.
Panamá.....	" R. Aizpuru.
Santander.....	" M. A. Estrada.
Tolima.....	" General Córdoba.

The Colombian consul-general in New York is Señor Miguel Salgar.

The national revenue for the year ending

* Complete details concerning boundaries, area, etc., were given in the ANNUAL CYCLOPEDIA for 1874.

† The figures set down opposite Bolívar are the result of the census of 1874.

August 31, 1875, with the sources from which it was derived, is shown in the annexed table:

REVENUE.	
Customs	\$1,976,918
Salt monopoly	728,721
Panamá Railway	250,000
Post-Office	550,000
Telegraphs	19,280
Mint	5,808
National property	91,675
Church property	185,000
Sundries	698,000
Total	\$4,879,597

The total expenditure, in the same fiscal year, was as follows:

EXPENDITURE.	
Ministry of Interior, etc.	\$205,400
" Finance	214,818
" War and Marine	288,000
National debt	1,259,980
Public Works	170,108
Foreign Affairs	57,000
Treasury	75,000
Public Instruction	121,000
Pensions	44,000
Post-Office	216,000
Total	\$2,654,801

The surplus resulting from the comparison of the totals of the revenue and expenditure amounts to \$1,725,596.

The largest single item of expenditure, in the fiscal year 1874-'75 (see table immediately preceding), was that made on account of the national debt, thus showing that Colombia is now prompt in meeting her engagements.

The total amount of the national debt, in 1875, was \$14,872,174, of which \$9,865,500 formed the foreign branch.

The total value of the exports for the year 1874-'75 was \$9,984,386, comprising the following commodities:

Sugar	\$54,954	Bread-fruit	\$376
Starch	40,872	Gold-dust	71,814
Brandy	5,167	Gold (ingots)	994,949
Rice	866	Gold and silver (ingots)	973,969
Cotton	141,589	Brazil-wood	42,976
Indigo	64,435	Mahogany	10,783
Cattle	10,918	Lignum-vitæ	8,872
Balsam	10,782	Mora	64,051
Cocoanuts	7,683	Cedar	22,585
Chocolate	288	Plants	10,189
Cacao	1,490	Cinchona	1,511,736
India-rubber	149,938	Cheese	223
Hides	464,392	Hats	188,618
Coffee	782,395	Cotton-seed	13,519
Tortoise-shell	670	Salt	100
Sugar-cane	1,960	Tobacco-leaf	2,715,639
Dividivl	125,542	Vegetable Ivory	170,021
Specie (gold and silver)	1,117,465	Cigars	11,852
Mats	1,477	Sundries	140,125
Ores	124,241	Total	\$9,984,386
Timber	4,513		
Maize	10,281		

The value of Colombian exports to Great Britain, in 1874, was \$4,978,000, or more than one-half of the total value of the exports to all countries.

The total value of the imports in 1874-'75 was \$14,844,856; that of the imports from Great Britain, \$2,964,976; and that of the imports from the United States, \$767,472.

The coasting-trade for the year above referred to amounted to \$245,089.

The shipping movements at the various

ports of the republic were as follows in the year 1874-'75:

PORTS.	ENTERED.			
	LADEN.		IN BALLAST.	
	No. of Vessels.	Tons.	No. of Vessels.	Tons.
Ruenaventura	197	17,971
Cartagena	80	57,427	18	6,073
Cúcuta	108	8,428
Riosacha	81	6,873	89	6,104
Riosucio	81	1,925	4	206
Sabanilla	168	189,400	23	13,433
Santamarta	61	33,774	15	10,139

Total	702	836,884	129	78,727

As was demonstrated in the article "Colombia," in the ANNUAL CYCLOPEDIA for 1874, there now exists a regularly-organized system of public instruction in that republic. The amount appropriated for that department, in the year 1874-'75, was but \$121,000, which the director-general declares to be altogether inadequate to cover the unavoidable outlays. The sum by him estimated as requisite for the year 1876-'77 was \$229,504. As will be shown in the following tables, each State appropriates a certain amount of funds for the maintenance of its own public schools.

The following is an official table of details, relative to primary instruction in Colombia, in 1875:

STATES.	No. of Male Pupils.	No. of Female Pupils.	Total No. of Pupils.	Total No. of Schools.	State School Fund.
Antioquia	9,062	4,866	13,928	168	\$66,680
Bolívar	3,065	1,400	4,465	67	20,000
Boyacá	6,276	1,854	8,130	136	40,596
Cauca	6,537	1,920	8,457	159	49,182
Cundinamarca	10,015	5,578	15,593	253	153,322
Magdalena	1,479	1,000	2,479	40	13,496
Panamá	1,553	180	1,638	28	12,253
Santander	7,319	3,765	11,074	213	123,927
Tolima	8,212	776	4,083	68	23,953
Territorios nacionales	789	102	891	23
Totals	49,407	21,411	70,819	1,159	\$508,779

The following table exhibits the amount per 100 inhabitants which each of the nine States appropriated to public instruction in 1874-'75:

Cundinamarca.....	\$37 43	Cauca.....	\$12 00
Santander.....	29 14	Boyacá.....	8 89
Antioquia.....	18 04	Bolívar.....	8 27
Magdalena.....	15 88	Panamá.....	5 99
Tolima.....	12 04		

The number of normal schools in the republic in 1875, with the attendance thereat, etc., is set forth in the subjoined table:

STATES.	Students supported by Nat'l Gov't	Students at the Expense of the States.	Students supported by Private Individuals, or by Districts.	Total No. of Students.
Bolívar.....	10	2	21	33
Boyacá.....	12	2	14	28
Cauca.....	11	14	6	31
Cundinamarca.....	19	..	7	26
Magdalena.....	7	4	16	27
Panamá.....	7	9	..	16
Santander.....	9	8	7	24
Tolima.....	12	1	..	13
Totals.....	87	40	71	198

The only railways in the republic are the Panamá, 47½ miles in length; that from Sabanilla to Barranquilla, 15 miles; and the new line from Puerto Barrio to Medellín, only a part of which was opened to traffic in 1876. It will be eight or nine years before it is completed. There were, in 1875, 1,227 miles of telegraph, the number of dispatches transmitted in the same year being 98,375.

In May, 1875, the Colombian Congress passed a law authorizing the Executive to negotiate for the opening a communication by canal between the Atlantic and Pacific Oceans. Negotiations were shortly afterward commenced, and a contract was drawn up, the terms of which we here transcribe:

The undersigned, Manuel Ancizar, Secretary of State for the Departments of Interior and Foreign Relations, of the Colombian Government, duly authorized by the President of the Union, and Antonio de Gogorza, for himself and for General Stephen Turr, according to sufficient power exhibited, have agreed to the following:

ARTICLE I. Antonio de Gogorza, in his own behalf and that of his client, General Stephen Turr, accepts in all its parts, and as part of the present agreement, the Colombian law, No. 83, of May 26, 1875, "authorizing the Executive power to negotiate for the opening up communication by canal between the Atlantic and Pacific Oceans," and submits to the provisions and conditions therein made. And reciprocally the Colombian Government hereby concedes to, and puts them in possession of, the franchises granted in section 1 of Article II. of the above-cited law, counting the ninety-nine years of privilege from the date hereof.

ART. II. The Colombian Government authorizes General Turr and Señor Gogorza to associate themselves with two persons, approved of by the minister of the republic in France or Great Britain, and by them deemed competent, and proceed to form an international commission of engineers to survey the isthmus at Darien, and at the expense of the grantees to make the exploration mentioned in condition three, Article II. of the law above cited, and within the time therein allowed; within twelve months thereafter to make report to the Colombian Government of the result of said exploration in the manner

provided in the above-cited condition three of the law: *Provided*, That should unforeseen accident, such as earthquake, inundation, or armed resistance of the natives, cause delay, a reasonable extension of time be granted.

ART. III. The tracing and fixing of the line of the canal in all its length, as also that of any auxiliary railway that may be projected from ocean to ocean, must be wholly beyond and to the east of a straight line connecting the cape of Tiburon with the headland of Garachine, whose exact situation will be determined by the exploring engineers.

ART. IV. Should the river Atrato be selected by the engineers as one of the entries to the canal, its mouth, through which such entrance is proposed, must be channeled and adapted to the ingress and egress of vessels of six hundred tons, and be considered part of the line of the canal. But the navigation of the Atrato, in so far as its channel may not constitute part of the canal, shall remain free and unnumbered.

ART. V. Should the preliminary survey referred to (in Article III.) show the practicability of a canal without locks or tunnels, the grantees, General Turr and A. de Gogorza, and their associates, will, under the immediate patronage of the Colombian Government, be authorized to form, within the eighteen months specified by the law, a company for the execution of the work.

ART. VI. The deposit mentioned in Article III. of the law cited shall be made in such bank as the national Executive may designate, the receipt of the bank being evidence of the fulfillment of said obligation. Said deposit may be in bonds of the Colombian foreign debt, at the market price at the time of the deposit. It is understood that, in case the grantees should forfeit this deposit under provision of section 2 of Article XXIII. of the cited law, the same, with the accumulated interest, will pass, without any reduction, to the Colombian Government.

ART. VII. The wild lands ceded by Article IV. of the cited law shall be adjudged to the grantees as soon as the deposit shall have been made. Those situated on the banks of the canal, rivers, or maritime coasts, shall be divided into lots alternating with those of equal size reserved to the Government, and fronting those reserved to the Government on the opposite sides of the canal, rivers, or coasts. None of said lots shall measure less than three nor more than four thousand metros of front on said canal, rivers, or coasts, thus forming an area of, say, one thousand hectares, more or less. With a belt of six and a half miles (one thousand miriametros) on either side of the canal, the Government can concede no lands (to other parties) until the expiration of the ten years from the time of the commencement of the work, or until after the present grantees shall have received the entire quantity ceded them by Article IV. of the law above cited.

ART. VIII. The number of fiscal agents which, under provisions of Article IV., may be placed at the termini of the canal, shall not exceed twice the number in the custom-house at Barranquilla; and their salaries, so far as the same may become chargeable to the company, shall not exceed those allotted to employes of the same class in said custom-house.

ART. IX. Until the contingency mentioned in Article XIX. (Article XVII. f) of the law above cited, the tonnage of vessels shall be stated in their charters or registers, and that of their cargo shall be set forth in their manifests and bills of lading.

ART. X. The grantees obligate themselves to constitute an agent in Bogotá, duly authorized to represent them in the adjustment of debts and disputes that may arise from adverse construction of contract; and, for a like purpose, the Government shall name an agent to reside near the domicile of the company. In every case where irreconcilable differences may arise, they shall be submitted to the decision of the Federal Supreme Court.

ART. XI. The term "Colombian dollars," employed in the law and in this contract, signifies silver pieces of 25 grains of 900 each, being equivalent to 5 francs, or 100 cents each.

ART. XII. By the "formal commencement of the work of the canal," mentioned in section 2 of Article XXII. of the law, is understood that work upon the line should be continuously executed for three months, by at least one thousand operatives under their respective chiefs, with the necessary machinery, implements, etc., for the excavation of the canal.

ART. XIII. It is understood, and is hereby specifically stipulated, that vessels in the exclusive service of the canal shall traverse the same free of all tax or duty.

ART. XIV. Five years before the expiration of the ninety-nine of privilege, the national Executive shall, with the concurrence of the company, name a commission to examine the canal and its appurtenances, and note what repairs, if any, shall be made before the canal and other property is turned over to the Government when the grantees' privilege shall expire.

ART. XV. The nation grants permission to the grantees to establish, at their own expense, any telegraphic lines they may deem necessary to the construction and operation of the canal.

Signed in duplicate, in Bogotá, the twenty-eighth of May, one thousand eight hundred and seventy-six.

M. ANCIZAR,
ANTONIO DE GOGORZA,

For himself and General Turr.

Approved May 28, 1876.

[L. s.]

AQUILEO PARRA,

President of the Union.

A revolution broke out in July, 1876, against the Government, in the States of Tolima and Antioquia, but it was afterward transferred to Cauca; the town of Cartago, in the latter, having been chosen as headquarters of the insurgent forces. As late as the middle of December they were still in possession of that town. The revolution, carried on by the clerical party, was begun at the instigation of the southern clergy, who protested from the pulpit against the policy adopted by the Government of placing the public schools under secular directors, and suppressing all ecclesiastical control therein. The Parra Administration met, at the time of its inauguration (April 1st), with formidable opposition within the ranks of its own party; so much so, that the United States minister at Bogotá wrote, on April 8, 1876, that "a grave mistake, during the first six months, may prove fatal to its existence, and to the peace of the country."

COLORADO. The convention assembled under the provisions of an enabling act of Congress, approved March 3, 1875, after a session of eighty-six days completed, in March, 1876, a State constitution, which was ratified by the people July 1st. A proclamation was issued by President Grant, August 1st, which declared Colorado to be a State in the Union.

In the Bill of Rights of the new constitution, the usual guarantees of national and civil rights have been retained, and, to the end that more power should be reserved to the people, it is further declared that the General Assembly shall make no irrevocable grants of special privileges or immunities; that private property

shall not be taken or damaged for public or private use without just compensation previously made to the owner thereof, or paid into court for his use; that no preference shall be given by law to religious denominations; that right and justice shall be administered without sale, denial, or delay; that aliens, who are *bona-fide* residents of the State, shall acquire, inherit, possess, and enjoy property to the full extent as if native-born citizens. The grand-jury system has been so modified as to make a grand-jury consist of twelve men instead of twenty-three—any nine of whom concurring may find a bill, and the question whether it may not be abolished altogether is left to the Legislature. The petit-jury system has been so modified as to permit the organization of a jury of less than twelve men in civil cases, thereby materially reducing the expenses of the courts. The right of trial by jury in all criminal cases has been preserved, and for the purpose of protecting witnesses in criminal prosecutions, and that the accused may always meet the witnesses against him face to face, provision is made for the taking of depositions before some judge of the Supreme, District, or County Court, which can be used upon trial of the cause when the personal attendance of the witness cannot be obtained.

The Executive Department consists of a Governor, Lieutenant-Governor, Secretary of State, Auditor, Treasurer, Attorney-General, and Superintendent of Public Instruction, who are elected for two years. Their terms of office begin on the second Tuesday of January following their election. The official terms of the first State officers began in November, 1876. The Governor is empowered to remove all officers by him appointed, for misconduct or malfeasance in office; also to grant pardons, subject, however, to such regulations as may be provided by law, and in all cases when a pardon is granted he is required to send the reasons for granting it to the General Assembly. A two-thirds vote of all the members of each House is required to pass a bill over the Governor's veto. The Lieutenant-Governor is President of the Senate. The Superintendent of Public Instruction is *ex-officio* State Librarian. Neither the State Treasurer nor Auditor is eligible for reelection as his own immediate successor.

The legislative power is vested in a Senate of twenty-six members, elected for four years, and a House of forty-nine Representatives, elected for two years. It is declared that the number of Senators and of Representatives shall not be increased before 1890. The sessions of the Legislature after the first are limited to forty days. The first General Assembly met on the first Wednesday in November, 1876. It is required to meet again on the first Wednesday in January, 1879, and biennially thereafter on the same day. It is provided that no act of the Legislature shall take effect until ninety days after its passage, unless, in case of emergency (which shall be expressed in the

preamble or body of the act), the General Assembly shall, by a vote of two-thirds of all the members elected to each House, otherwise direct. No bill, except the general appropriation for the expenses of the government only, introduced in either House after the first twenty-five days of the session, shall become a law.

Section 25 of Article V. declares that "the General Assembly shall not pass local or special laws in any of the following enumerated cases, that is to say: for granting divorces; laying out, opening, altering, or working roads or highways; vacating roads, town plots, streets, alleys, and public grounds; locating or changing county-seats; regulating county or township affairs; regulating the practice in courts of justice; regulating the jurisdiction and duties of justices of the peace, police magistrates, and constables; changing the rules of evidence in any trial or inquiry; providing for changes of venue in civil or criminal cases; declaring any person of age; for limitation of civil actions or giving effect to informal or invalid deeds; summoning or impaneling grand or petit juries; providing for the management of common schools; regulating the rate of interest on money; the opening or conducting of any election, or designating the place of voting; the sale or mortgage of real estate belonging to minors or others under disability; the protection of game or fish; chartering or licensing ferries or toll-bridges; remitting fines, penalties, or forfeitures; creating, increasing, or decreasing fees, percentage, or allowances of public officers; changing the law of descent; granting to any corporation, association, or individual, the right to lay down railroad-tracks; granting to any corporation, association, or individual, any special or exclusive privilege, immunity, or franchise whatever. In all other cases, where a general law can be made applicable, no special law shall be enacted."

Judicial power is vested in a Supreme Court, district and county courts, and justices of the peace. The Supreme Court has appellate jurisdiction and is empowered to issue writs of *habeas corpus*, *mandamus*, *quo warranto*, *certiorari*, injunction, and other original and remedial writs, with authority to hear and determine the same. The Supreme Court shall consist of three judges, elected by the people for nine years, and is required to hold at least two sessions each year at the seat of government. The district courts, of which there are at present four, shall have original jurisdiction of all cases, both at law and in equity, and such appellate jurisdiction as may be conferred by law. In them is vested original jurisdiction to determine all controversies upon relation of any person, on behalf of the people, concerning the rights, duties, and liabilities of railroad, telegraph, or toll-road companies or corporations. In each district a judge is elected by the people for six years. At least one term

of the district court shall be held annually in each county, except in such counties as may be attached, for judicial purposes, to another county wherein such courts are held. County judges are elected by the people every three years.

A general election is held annually on the first Tuesday of October. Every male person over the age of twenty-one years, possessing the following qualifications, shall be entitled to vote at all elections:

1. He shall be a citizen of the United States, or, not being a citizen of the United States, he shall have declared his intention, according to law, to become such citizen, not less than four months before he offers to vote.

2. He shall have resided in the State six months immediately preceding the election at which he offers to vote, and in the county, city, town, ward, or precinct, such time as may be prescribed by law: *Provided*, That no person shall be denied the right to vote at any school-district election, nor to hold any school-district office, on account of sex.

Sections 2 and 3 of Article VII. provide as follows:

Sec. 2. The General Assembly shall, at the first session thereof, and may at any subsequent session, enact laws to extend the right of suffrage to women of lawful age, and otherwise qualified according to the provisions of this article. No such enactment shall be of effect until submitted to the vote of the qualified electors at a general election, nor unless the same be approved by a majority of those voting thereon.

Sec. 3. The General Assembly may prescribe, by law, an educational qualification for electors, but no such law shall take effect prior to the year of our Lord one thousand eight hundred and ninety, and no qualified elector shall be thereby disqualified.

The following Territorial institutions are made State institutions: The university, at Boulder; the Agricultural College, at Fort Collins; the School of Mines, at Golden; and the Institute for the Education of Mutes, at Colorado Springs.

The general supervision of public schools is vested in a Board of Education, consisting of the Superintendent of Public Instruction, who is president, the Secretary of State, and the Attorney-General. The General Assembly is required to provide for the establishment and maintenance of a thorough and uniform system of free public schools throughout the State, wherein all residents of the State between the ages of six and twenty-one years may be educated gratuitously. One or more public schools shall be maintained in each school-district within the State, at least three months in each year; any school-district failing to have such school shall not be entitled to receive any portion of the school-fund for that year.

The public-school fund of the State shall forever remain inviolate and intact; the interest thereon, only, shall be expended in the maintenance of the schools of the State, and shall be distributed among the several counties and school-districts of the State, in such manner as may be prescribed by law.

The public-school fund of the State shall consist of the proceeds of such lands as have heretofore been, or may hereafter be, granted to the State by the General Government for educational purposes; all estates that may escheat to the State; also all other grants, gifts, or devises, that may be made to this State for educational purposes.

The General Assembly may require that every child of sufficient mental and physical ability shall attend the public school, between the ages of six and eighteen years, for a time equivalent to three years, unless educated by other means.

The General Assembly is required to provide by law for an annual tax, sufficient, with other resources, to defray the expenses of the State government. Section 3 of Article X. provides that "all taxes shall be uniform upon the same class of subjects within the territorial limits of the authority levying the tax, and shall be levied and collected under general laws, which shall prescribe such regulations as shall secure a just valuation for taxation of all property, real and personal: provided, that mines and mining claims bearing gold, silver, and other precious metals (except the net proceeds and surface improvements thereof), shall be exempt from taxation for the period of ten years from the date of the adoption of this constitution, and thereafter may be taxed as provided by law. Ditches, canals, and flumes, owned and used by individuals or corporations for irrigating lands owned by such individuals or corporations, or the individual members thereof, shall not be taxed separately, so long as they shall be owned and used exclusively for such purpose."

The property of the State, counties, cities, towns, and other municipalities, and public libraries, are exempted from taxation, and, unless otherwise provided by law, lots and buildings thereon, used exclusively for religious worship, for schools, and strictly charitable purposes, and places of burial of the dead, are exempted. For the purpose of defraying the expenses of the State a tax is provided for, not in any case to exceed six mills on the dollar, with restrictions that when the valuation of property within the State shall amount to \$100,000,000, the rate shall not exceed four mills, and when the valuation shall amount to \$300,000,000, the rate shall never thereafter exceed two mills on each dollar of valuation. Corporations and corporate property, real and personal, are required to share the burdens of taxation, and the power to tax the same is never to be relinquished or suspended.

A State Board of Equalization is created, consisting of the Governor, Auditor, Treasurer, and Secretary of State, whose duties are to equalize and adjust the valuation of real and personal property among the several counties, and the Board of County Commissioners in the respective counties are constituted County Boards of Equalization, whose duties are to equalize and

adjust such valuations within their respective counties.

The Legislature is prohibited from lending the credit of the State in aid of any corporation, either by loan or becoming a subscriber to any stock, or a joint owner with any party, except in case of forfeitures and escheats.

The constitution has denied the General Assembly the power to create corporations, or to extend or enlarge their chartered rights by special legislation, or to make such rights and privileges irrevocable; but in case it shall be found that the exercise of such rights and privileges proves injurious to the people, then the General Assembly shall have power to alter, revoke, or annul such charters, when that can be done without injustice to the corporators. It has declared that railroad corporations shall be liable as common carriers, and that, to avail themselves of the benefits of future legislation, they must subject themselves to all the provisions and requirements of the constitution. It has forbidden the consolidation of parallel and competing lines, and of all unjust and unreasonable discriminations between individuals in their business with such corporations.

Provision is made for the establishment and maintenance of the office of Commissioner of Mines, who is to be appointed by the Governor for four years.

A State census is to be taken in 1885, and every ten years thereafter.

The new State government was inaugurated November 3d. The message of Governor Routt shows outstanding warrants and other liabilities to the amount of \$50,000; resources from delinquent taxes and from taxes available January and July, 1877, \$73,000, leaving \$23,000 to meet the current expenses of the State till 1878. To provide for the present exigency, a tax-levy of three mills was recommended.

By the act of Congress, September 4, 1841, each new State on being admitted is granted 500,000 acres of land for the purposes of internal improvement. The enabling act also grants to the State fifty sections "for the purpose of erecting public buildings at the capital for legislative and judicial purposes;" fifty other sections "for the purpose of erecting a suitable building for a penitentiary or State-prison;" seventy-two sections "for the use and support of a State University;" and twelve salt-springs, with "six sections of land adjoining" for the use of the State: making in all, with the 500,000 acres first mentioned, 655,160 acres. The Governor recommends that the Legislature appoint five gentlemen to locate these lands, and urges that they be withheld from sale for a few years, to avoid the error of most of the Northwestern States, of too hastily placing their lands in the market, thus losing the advantages arising from the natural growth and improvement of the country.

The first election for State officers was held October 3d, when the following (Republicans)

were chosen : Governor, John L. Routt ; Lieutenant-Governor, Lafayette Head ; Secretary of State, William M. Clark ; Auditor, David C. Crawford ; Treasurer, George C. Corning ; Attorney-General, Archibald J. Sampson. At the same time, James B. Belford (Republican) was elected member of Congress, and E. T. Welles, Henry C. Thatcher, and S. H. Elbert, Judges of the Supreme Court. Mr. Belford's majority was 1,037, in a total vote of 25,567. The State Senate consists of 19 Republicans and 7 Democrats ; the House of 31 Republicans and 18 Democrats. In the whole Assembly there are 55 Republicans and 25 Democrats, giving the former a majority of two-thirds on a joint ballot. The total vote of the State for State Senators was 28,493, of which 15,213 were Republicans and 13,280 Democrats ; Republican majority 1,938.

The Governor further recommends that a general system of irrigation be adopted by the State, and suggests that the Legislature memorialize Congress for a grant of lands sufficient to enable the State to accomplish this object. Concerning mines and mining, he says : " The present product of gold and silver bullion and ores amounts to nearly \$8,000,000 annually. With the prospect of early railroad communication with the southwestern portion of the State, by which the people of the San Juan country will be enabled to add the product of the marvelously rich silver-mines of that region to the yield of the mines of the north, we may reasonably expect that the amount exported will be increased to at least \$10,000,000 in the next year. An interest upon which the future wealth and prosperity of the people so much depend should receive every encouragement at your hands."

Two Republican Senators were elected by the Legislature, viz., Jerome B. Chaffe and Henry M. Teller. The latter drew the short term, and was subsequently elected for the full term immediately following his present term. (For an account of the physical characteristics and natural resources of Colorado, see ANNUAL CYCLOPEDIA for 1873, p. 730.)

COMMERCE OF THE UNITED STATES. The fiscal year of the Federal Government ends on June 30th. The following are comparative statements for the years 1875-'76 and 1874-'75 :

IMPORTS, GOLD VALUE.

ITEMS.	1875-'76.	1874-'75.
Dutiable.....	\$390,879,377	\$386,725,509

The following is a condensed statement of imports into the United States for the calendar years 1872 and 1876:

IMPORTS.	1872.	1876.
Manufactures.....	\$278,835,855	\$129,525,317
Produce.....	255,124,456	215,123,056
Unmanufactured articles*	51,591,692	37,001,645
Chemicals.....	32,984,171	26,549,421
Metals.....	82,109,143	15,218,274
Live-stock.....	3,708,071	1,552,763
Works of art.....	1,664,167	1,804,170
Total.....	\$655,962,575	\$426,779,651

One striking feature of these reductions is, that they have taken place in spite of the general decline of prices.

The total value of exports from the port of New York for 1875 was \$255,515,942; for 1876, \$279,097,136, viz.: to Great Britain, \$151,682,227; France, \$15,175,135; Holland and Belgium, \$14,679,002; Germany, \$32,381,654; other countries of North Europe, \$3,362,485; Spain, \$2,073,329; other countries of South Europe, \$11,172,134; China and Japan, \$1,844,807; Australia, \$2,366,275; British North American colonies, \$4,295,497; Cuba, \$9,096,274; Hayti, \$4,085,847; other West Indies, \$8,614,670; Mexico, \$1,471,104; British Guiana, \$1,038,375; Brazil, \$3,105,163; other countries of South America, \$3,325,355; all other ports, \$4,346,643. The following were the leading articles of export for 1876 and 1875:

* Hides, coal, paper-materials, etc.

Metals.....	8,430,568	5,568,800
Live-stock.....	1,888,119	2,488,569
Works of art.....	156,617	880,179
Total.....	\$521,508,160	\$652,376,773

It is the largest exportation the country ever enjoyed, and is \$180,000,000 more than in 1872. The balance in favor of the United States in 1876 was \$226,000,000. The table shows that the products of the farms and of the soil constitute five-sixths of the whole amount of exports, and that the American position in the trade of the world is, in the main, simply that of a great agricultural nation.

CONGREGATIONALISTS. The following is a summary of the statistics of the Congregational churches in the United States for 1875, as they are given in the *Congregational Quarterly* for January, 1876:

To the total number of ministers should be added 126 foreign missionaries, who are not included in the table.

The number of licentiates was 258; number of baptisms of adults, 8,748; of baptisms of infants, 5,184; total number of persons in Sunday-schools, 401,888; amount of charitable contributions (2,418 churches reporting), \$1,241,014.39; amount of home expenditures (1,020 churches reporting), \$1,888,446.74.

The following is a summary of the statistics of the Congregational theological seminaries in the United States for the year 1875-'76:

SEMINARIES.	Professors.	Lecturers.	Resident Licentiates.	Students.	Volumes in Library.
Andover.....	7	2	4	61	80,000
Bangor.....	5	0	0	89	15,000

Oberlin.....	5	5	1	50	College
: Total.....	36	22	9	1808	

The annual meeting of the *American Congregational Union* was held in New York City, May 12th. The treasurer reported that his total receipts for the year ending May 1st had been \$46,816.94, which with the balance of \$3,580, which was in the treasury at the begin-

ning of the year, gave the total resources of the Union for the year at \$50,396.94.

The fiftieth meeting of the *American Home Missionary Society* was held in New York City, May 10th. Rev. Dr. Theodore L. Woolsey presided. The treasurer's report showed that the society had a balance on hand May 1, 1875, of \$16,830.33, and that its receipts from that time to the 1st of May, 1876, had been \$326,875.95; the expenditures for the year had been \$326,857.95: leaving a balance still on hand of \$16,848.33. According to the report of the Executive Committee the society had in its service 976 ministers of the gospel in thirty-three States and Territories. It had ten missionaries who had preached during the year to congregations of colored people, and thirty-seven who had preached in foreign languages to Germans, Welsh, French, and Swedish congregations. The number of pupils in Sunday-schools was 85,370. Ninety-two churches had been organized by the missionaries during the year, and 41 churches had become self-supporting. Fifty-five houses of worship had been completed, and 20 others were in process of erection. The additions to the churches, as near as could be ascertained, had been 4,869 on profession of faith, and 2,967 by letter—in all, 7,836.

The sixty-seventh annual meeting of the *American Board of Commissioners for Foreign Missions* was held in Hartford, Conn., October 2d. The Rev. Mark Hopkins, D. D., presided. The Prudential Committee reported that the receipts of the board, for the year ending September 1st, had been: From ordinary donations, \$346,118.92; to extinguish the debt, \$40,463.60; for the Centennial offering, \$7,037.95; from legacies, \$64,891.30; from other sources, \$6,930.63: total, \$465,442.40. The expenditures had been \$452,168.66. The debt of the board was \$31,052.22, against \$44,323.96 at the close of the previous year. The committee reported that the gifts to the board for the year (including the contributions for the payment of the debt and the Centennial offerings) had exceeded those of any previous year since the withdrawal of the Presbyterians from cooperation with the society.

The thirtieth anniversary of the *American Missionary Association* was held in Fitchburg, Mass., October 25th and 26th. The Hon. E. S. Tobey presided. The report of the treasurer showed that the receipts for the year had been \$264,709.03, and the expenditures \$261,382.88. The receipts were \$8,824.19 less, and the expenditures were \$28,943.04 less, than for the preceding year. The expenditures during the year were distributed as follows: For the Southern work, \$198,758.35; for the Chinese work, \$5,633.80; for the Indian work, \$1,542.67; for the foreign work, \$12,164.05. In all, fifty-six churches had been gathered in the South through the agency of the Association, with which about 4,000 persons were connected. The number of admissions to membership dur-

ing the year had been 665. A Congregational State Conference of twelve churches had been formed in Alabama. Seventy thousand pupils had been taught, in the course of the year, by teachers who had themselves, in many cases, enjoyed the instruction furnished by the higher institutions under the care of the Association. The dedication of Jubilee Hall of Fisk University, at Nashville, Tenn., was regarded as the most important event in the record of the Southern work of the year.

In the department of work among the Chinese of the Pacific coast, thirteen schools, sustained at an expense of \$5,638.80, had given instruction during the year to 1,536 pupils, among whom more than one hundred had thrown aside idol-worship, and eighty-nine had become converts to Christianity. The work among the Indians had been prosperous. The foreign work had been attended with disappointment. A work of exploration, with a view to selecting suitable points for mission-stations in Africa, undertaken by the Association, had been interrupted, and for the time prevented, by the death of the Rev. E. P. Smith, to whom it had been committed. A suitable man was needed to supply Mr. Smith's place, and labor as an explorer and organizer. It was desired to send with him three colored missionaries and their wives. Mention was made in the report of the Committee on Church Work of the fact that missionary societies, having in view the prosecution of work in Africa, were being established among the colored people, and that theological students were in training for the same work. The Committee on the Foreign Work reported, recommending the transfer of the mission in Jamaica to the Wesleyan, Baptist, and Episcopal missions, expressing sympathy with the endeavor to prosecute the work in Africa with the aid of the negro; and commending the project of finding some healthy localities in Africa, in which all the missionary agencies on that continent could be concentrated.

The twenty-third annual meeting of the *Congregational Union of Ontario and Quebec* was held at Montreal, beginning June 7th. The Rev. Daniel Macallum was elected chair man. The statistics were reported for sixteen months, from January, 1875, to May, 1876, as follows: Number of pastors in office, 53; of churches reported out of ninety really in operation, 81; of regular preaching-stations, 112; total attendance at all stations, 13,420; number of church-members, 5,338; number of Sunday-schools, 81; of scholars on the rolls of the same, 7,195; of scholars in 22 pastors' Bible-classes, 555; number of church-edifices, 72, with 19,495 sittings; number of parsonages, 20; total value of church property, \$375,260; total debt on the same, \$41,160; total amount raised for all objects, \$102,658. The receipts of the Congregational College of British North America for the year ending May 31, 1876, had been \$3,680, and the ex-

penditures, \$3,050. Fifteen students were in attendance. The capital stock of the Provident Fund Society amounted to \$16,404. A resolution was adopted approving the action of the Centennial Commissioners in closing the Exhibition at Philadelphia on Sundays. A resolution was adopted—

That this Union desires to reaffirm the great principle for which the Congregational churches in Britain and the colonies have so long and so earnestly contended, that there should be an entire separation of Church and state; that the civil ruler ought not to interfere in matters of conscience and religion, and that the teachers of religion should not interfere with the exercise of civil rights, beyond exhorting their hearers to perform their civil duties, as well as all others, conscientiously and in the fear of God; and while rejoicing that this principle is now advocated in this Province by some who were not in favor of it before, the members of this Union earnestly pray that the agitation upon this question which is now felt, and the means to assert and give effect to the principle of religious equality, may issue in the most perfect civil and religious liberty in all parts of the Dominion.

The annual meeting of the *Congregational Union of New Brunswick and Nova Scotia* was held in St. John, N. B., in September. The reports showed that there were connected with the Union 20 churches. Reports from 17 of these churches gave the total number of members at 1,186. The churches failing to report had about 170 members, making, it was estimated, the total number in all the churches about 1,350. The total church attendance was about 3,600. Eleven churches reported that repairs and improvements had been made upon them. Nine parsonages were reported. The total value of church property above indebtedness was about \$100,000. There were 14 Congregational ministers in the two provinces, of whom 10 were connected with the Union. A resolution was adopted urging the discontinuance of the Sunday traffic on the railways.

The *Congregational Year-Book* for 1876, published in January, gave statistics showing that there were in England and Wales 3,141 churches and "branch churches," and 972 preaching and evangelistic stations, making in all 4,113 places of worship. It was estimated that these churches, etc., provided sittings for 1,854,580 persons. The number of colonial and mission stations was 918, making in all 5,026 churches and preaching-places supported by British Congregationalists. The total amount expended by the county associations for missions in England and Wales during the year was £20,261; amount expended by the Home Missionary Society, £3,728. An expenditure of £1,712 had been made in Scotland for similar purposes. The other disbursements by the churches were: Through the London Missionary Society, £93,327; through the Colonial Missionary Society, £2,536; through the Irish Evangelical Society, £2,811; through the Congregational Union of Victoria, £1,611; through the Canadian Missionary Society and

Indian Mission, £1,219; through the Evangelical Continental Society, £3,254: total, £129,957, exclusive of local expenditure for missions directly by Congregational churches. In the 27 colleges and institutes there were 897 Congregational students in the United Kingdom and the colonies, and about 500 natives qualifying themselves for evangelistic work in foreign lands.

The forty-sixth annual meeting of the *Congregational Union of England and Wales* was held in London, beginning May 1st. The report of the secretary stated that the conference on church finance had been held with satisfactory results. The principle of a financial board for the whole country, for the administration of the combined funds of the Congregational body, for the augmentation of ministerial incomes, and for home-missionary purposes, had been approved, and a meeting was appointed to be held, May 15th, to consider the mode of management. Action had been taken in respect to the supply of candidates for the ministry, but it had yet to be submitted to the county associations for approval. The Congregational lectures had been attended with marked success. The accounts of the Union showed that upward of £6,000 had been received from the sale of publications. The Rev. Dr. Aveling presided at the meetings of the Union. A paper was read by the Rev. C. Clemance on the subject of the "Evangelization of the Country," at the close of which the following resolution was unanimously adopted:

Resolved, That it be an instruction to the committee to invite the committees of the several county associations to make inquiries within their respective bounds in regard to the spiritual condition of the people, more particularly in villages and thinly-peopled districts, and the extent to which provision for a pure scriptural ministry of the gospel among them is lacking, and to report, making suggestions as to the way in which the Congregational churches can best contribute to the want which may be shown to exist.

The subjects of "Organized Congregationalism," "University Reform," and "Temperance," were also discussed. On the last subject a resolution was adopted, declaring—

That the Assembly regards the prevalence and the reputed increase of intemperance with grave concern; that it is grateful for the measure of success which has attended the efforts of those societies which specifically aim at the promotion of sobriety among the people, whether by inculcating self-restraint and abstinence, or by seeking to diminish facilities for drunkenness; and expresses the hope that some plan will be speedily discovered for the cooperation in the interests of temperance of those who hold divergent views in regard to the question of total abstinence and that of the restriction or prohibition of the liquor-traffic.

The anniversary of the *Home Missionary Society* was held in London, May 9th. The total increase in the receipts of the society for the year had been £4,802 18s. 6d., and the total expenditure £4,492 8s. 7d. The reports of the

missions showed that the work of the year had been prosperous.

The thirty-seventh autumnal meeting of the *Congregational Union of England and Wales* was held in Bradford, beginning October 9th. The Rev. Dr. Aveling presided. The most important work of the meeting was the consideration and adoption of the financial scheme which had been discussed at the meetings of the Union and of the local associations for several years. The object of this scheme was to provide a means by which the congregations and associations of the country could concentrate their efforts to aid and strengthen the weaker churches in the rural districts. Its most essential feature consisted in the institution of a representative council of finance, composed of delegates sent from the county associations and unions accepting the scheme, who should receive and appropriate the moneys which might be raised. The scheme, having been approved by the Union, was remitted to the county associations and unions for further consideration.

The eighty-second anniversary of the *London Missionary Society* was held in London, May 11th. Henry Lee, Esq., of Manchester, presided. The treasurer's report stated that the contributions to the society for general purposes had been £99,024 5s. 11d., and the contributions and dividends for special objects £15,829 13s., making a total of £114,853 18s. 11d., or, with the balance of the preceding year added, £118,188 18s. 6d. The report of the directors reviewed the work of the society as well as the work of Protestant missions in general, in India, Madagascar, China, the South Sea Islands, and Africa. The rearrangements and extended plans adopted by the board for the improvement of the Madagascar mission had nearly all been carried into effect during the year. A wider work had been taken up in the education of the young, and more systematic efforts had been adopted to supply suitable preachers to distant country congregations. The missionaries had gone to reside in the new centres of effort to which they had been appointed. Visits had been paid to new localities. A mission had been started in New Guinea and among the islands at the eastern end of that country. Mr. R. Arthington, of Leeds, had offered the society £5,000 for the purchase of a steamer and the establishment of a mission on one of the shores of Lake Tanganyika. The directors had accepted the offer, and had dispatched an agent to Zanzibar to make preliminary inquiries. They thought it desirable to raise an additional £5,000 before the work should be begun.

The fortieth annual meeting of the *Colonial Missionary Society* was held in London, May 11th. The Right Hon. W. E. Baxter, M. P., presided. The report of the Executive Committee stated that the total income of the society from its beginning had amounted to

£152,000, being an average of less than £4,006 per annum. It had now 813 churches, 250 preaching-stations, 232 pastors and evangelists, and three colleges within the British colonies. The receipts for the year had been £4,596 18s. 2d., and the expenses £4,022 13s. 5d. In the amount of receipts were included legacies to the amount of £1,300. Three hundred pounds sterling had been granted to the Canadian Congregational Missionary Society, £264 10s. to the Congregational College of British North America, and £205 to the Congregational Union and Mission in Victoria, Australia.

In *Australasia* the Congregationalists have organized "Congregational Unions" for each of the colonies of Victoria, New South Wales, Queensland, South Australia, Western Australia, Tasmania, and New Zealand; and they have two colleges, the Congregational College at Melbourne, Victoria, and Camden College, Sydney; and, conjointly with Presbyterians and Baptists, they support the Union College of South Australia.

In *Africa* there are Congregational Unions in Natal and Madagascar.

There are also a number of independent churches, not formally associated in unions, in the *Cape Colony*, in the *West India*, in *British Guiana*, in *China*, and in *India*.

The "Congregational Year-Book" enumerates the following churches and societies on the Continent of Europe as "partly Congregational:" I. In *France*.—1. The Union of Evangelical Churches, formed in 1849: It has 7 chapels in Paris, 41 churches in the provinces, and 8 stations; a general synod of the pastors and delegates of the churches is held every two years. 2. Independent churches, not in connection with the Evangelical Union: There were 9 churches of this class in 1876. 3. The Evangelical Society of France, which was established in 1833 for the diffusion of evangelical truth, without regard to differences of ecclesiastical polity: It supported in 1876 20 independent churches. II. In *Belgium*.—The Evangelical Society, or Belgian Christian Missionary Church, established in 1838: It had, in 1876, 15 churches and 6 schools. There is an institution for training evangelists at Nice, established in 1874. III. In *Switzerland*.—1. Geneva—*a*, the Evangelical Church; *b*, the Evangelical Society: The latter supports a faculty of theology at Geneva. 2. Vand—the Free Churches (45 in 1876): They are united on a basis which, though Presbyterian in form, secures the independence of each. There is a faculty of theology at Lausanne. 3. Neuchâtel—the "Evangelical Church, independent of the state." It was founded in 1873, has a faculty of theology at Neuchâtel, and was in 1876 composed of 21 churches, with 41 pastors, and 3,001 male members. 4. Bern has 7 independent churches. IV. In *Spain*.—Nineteen churches had been formed up to 1876, of which 5 were in Madrid.

CONGRESS, UNITED STATES. The first session of the Forty-fourth Congress* com-

menced at Washington, on December 6, 1875. The President *pro tempore*, Thomas W. Ferry,

* The following is a list of members at the first session of the Forty-fourth Congress.

SENATE.

- Alabama—George Goldthwaite, George E. Spencer.
- Arkansas—Powell Clayton, Stephen W. Dorsey.
- California—Aaron A. Sargent, Newton Booth.*
- Connecticut—James E. English,† William W. Eaton.
- Delaware—Eli Baulsbury, Thomas F. Bayard.
- Florida—Simon B. Conover, Charles A. Jones.*
- Georgia—Thomas M. Norwood, John B. Gordon.
- Illinois—John A. Logan, Richard J. Oglesby.
- Indiana—Oliver P. Morton, Joseph E. McDonald.*
- Iowa—George G. Wright, William B. Allison.
- Kansas—James M. Harvey, John J. Ingalls.
- Kentucky—John W. Stevenson, Thomas G. McCreery.
- Louisiana—J. Rodman Hunt, (Vacancy).
- Maine—Lot M. Morrill, Hannibal Hamlin.
- Maryland—George E. Dennis, William Pinkney Whyte.*
- Massachusetts—George S. Boutwell, Henry L. Dawes.*
- Michigan—Thomas W. Ferry, Isaac P. Christianity.*
- Minnesota—William Windom, Samuel J. R. McMillan.*
- Mississippi—James L. Alcorn, Branch K. Bruce.*
- Missouri—Lewis V. Boggs, Francis M. Cockrell.*
- Nebraska—Phineas W. Hitchcock, Algernon S. Paddock.*
- Nevada—John P. Jones, William Sharon.*
- New Hampshire—Aaron H. Cragin, Bainbridge Wadleigh.
- New Jersey—Frederick T. Frelinghuysen, Theodore F. Randolph.*
- New York—Roscoe Conkling, Francis Kernan.*
- North Carolina—Matthew W. Ransom, Augustus S. Merriam.
- Ohio—John Sherman, Allen G. Thurman.
- Oregon—James K. Kelly, John H. Mitchell.
- Pennsylvania—Simon Cameron, William A. Wallace.*
- Rhode Island—Henry B. Anthony, Ambrose E. Burnside.*
- South Carolina—Thomas J. Robertson, John J. Patterson.
- Tennessee—Henry Cooper, David M. Key,†
- Texas—Morgan C. Hamilton, S. B. Maxey.*
- Vermont—Justin S. Morrill, George F. Edmunds.
- Virginia—John W. Johnston, Robert E. Withers.*
- West Virginia—Henry G. Davis, Allen T. Covert.*
- Wisconsin—Timothy O. Howe, Angus Cameron.*

HOUSE.

- Alabama—Jeremiah Harrison, Jeremiah N. Williams, Taul Bradford, Charles Hays, John H. Caldwell, Goldsmith W. Hewitt, Burwell B. Lewis, William H. Forney.
- Arkansas—Lucien C. Gause, William F. Slemmons, William W. Wilshire, Thomas M. Gunter.
- California—William A. Piper, Horace F. Page, John K. Luttrell, P. D. Wigginton.
- Connecticut—George M. Landers, James Phelps, Henry E. Starkweather,‡ William H. Barnum.
- Delaware—James Williams.
- Florida—Josiah T. Walls, William J. Purman.
- Georgia—Julian Hartridge, William E. Smith, Philip Cook, Henry E. Harris, Milton A. Candler, James H. Blount, William H. Felton, Alexander H. Stephens, Benjamin H. Hill.
- Illinois—Bernard G. Canfield, Carter H. Harrison, Charles B. Farwell, Stephen A. Hurlbut, Horatio C. Burdard, Thomas J. Henderson, Alexander Campbell, Greenbury L. Fort, Richard H. Whiting, John O. Bagby, Scott Wike, William M. Springer, Adlai E. Stevenson, Joseph G. Cannon, John R. Egan, William A. J. Sparks, William R. Morrison, William Bartel, William B. Anderson.
- Indiana—Benoni S. Fuller, James D. Williams, Michael C. Kerr, Jephtha D. New, William S. Holman, Milton S. Robinson, Franklin Landers, Morton C. Hunter, Thomas J. Cason, William S. Raymond, James L. Evans, Andrew H. Hamilton, John H. Baker.
- Iowa—George W. McCrary, John Q. Tufts, Lucien L. Atinworth, Henry O. Pratt, James Wilson, Ezekiel S. Sampson, John A. Kasson, James W. McDill, Addison Oliver.
- Kansas—William A. Phillips, John E. Goodwin, William E. Brown.
- Kentucky—Andrew R. Boone, John Young Brown, Charles W. Milkin, J. Proctor Knott, Edward Y. Parsons, Thomas L. Jones, Joseph C. S. Blackburn, Milton J. Durhan, John D. White, John B. Clarke.
- Louisiana—Randall L. Gibson, E. John Ellis, Chester B. Derrill, William M. Levy, Frank Morey, Charles E. Nash.
- Maine—John H. Burleigh, William P. Frye, James G. Blaine, Harris M. Plaisted, Eugene Hale.
- Maryland—Philip F. Thomas, Charles B. Roberts, William J. O'Brien, Thomas Swann, Eli J. Henkle, William Walsh.

- Massachusetts—William W. Cropp, Benjamin W. Harris, Henry L. Pierce, Rufus S. Frost,* Nathaniel F. Banks, Charles F. Thompson, John K. Tarbox, William Wirt Warren, George F. Hoar, Julius H. Beelya, Chester W. Chapin.
- Michigan—Alpheus S. Williams, Henry Waldron, George Willard, Allen Potter, William B. Williams, George H. Durand, Omar D. Conger, Nathan B. Bradley, Jay A. Hubbell.
- Minnesota—Mark H. Dunnell, Horace B. Strait, William B. King.
- Mississippi—Lucius Q. C. Lamar, G. Wiley Wells, Hernando D. Money, Otho E. Singleton, Charles E. Hooker, John E. Lynch.
- Missouri—Edward C. Kehr, Erastus Wells, William H. Stone, Robert A. Hatcher, Richard F. Bland, Charles H. Morgan, John F. Phillips, Benjamin J. Franklin, David Bea, Bezin A. De Bolt, John B. Clark, Jr., John M. Glover, Aylett H. Buckner.
- Nebraska—Lorenzo Crouse.
- Nevada—William Woodburn.
- New Hampshire—Frank Jones, Samuel N. Bell, Henry W. Blair.
- New Jersey—Clement H. Stinnickson, Samuel A. Dobbins, Miles Bass, Robert Hamilton, Augustus W. Cutler, Frederick H. Teese, Augustus A. Hardenbergh.
- New York—Henry B. Metcalfe, John G. Schumaker, Simson B. Chittenden, Archibald M. Bliss, Edwin E. Meade, Samuel S. Cox, Smith Ely, Jr., Elijah Ward, Fernando Wood, Abram S. Hewitt, Benjamin A. Willis, N. Holmes Odell, John O. Whitehouse, George M. Beebe, John H. Bagley, Jr., Charles H. Adams, Martin I. Townsend, Andrew Williams, William A. Wheeler, Henry H. Hathorne, Samuel F. Miller, George A. Bagley, Scott Lord, William H. Baker, Elias W. Leavenworth, Clinton D. MacDougal, Elbridge G. Lapham, Thomas C. Platt, Charles C. B. Walker, John M. Davy, George G. Hoskins, Lyman K. Bass, (Vacancy).
- North Carolina—Jesse J. Yates, John A. Hyman, Alfred M. Waddell, Joseph J. Davis, Alfred M. Scales, Thomas S. Ashe, William M. Robbins, Robert B. Vance.
- Ohio—Milton Saylor, Henry B. Banning, John S. Savage, John A. McMahon, Americus V. Rice, Frank H. Hurd, Lawrence T. Neal, William Lawrence, Early F. Poppleton, Charles Foster, John L. Vance, Ansel T. Walling, Milton I. Southard, Jacob P. Cowan, Nelson H. Van Vorhes, Lorenzo Danford, Laurin D. Woodworth, James Monroe, James A. Garfield, Henry B. Payne.
- Oregon—Lathystie Lane.
- Pennsylvania—Chapman Freeman, Charles O'Neill, Samuel J. Randall, William D. Kelley, John Robbins, Washington Townsend, Alan Wood, Jr., Helster Clymer, A. Herr Smith, William Mutchler, Francis D. Collins, Winthrop W. Ketchum, James B. Reilly, John B. Packer, Joseph Powell, Sobieski Ross, John Reilly, William S. Stenger, Levi Malah, Levi A. Mackey, Jacob Turney, James H. Hopkins, Alexander G. Cochran, John W. Wallace, George A. Jenks, James Sheakley, Albert G. Egbert.
- Rhode Island—Benjamin T. Eames, Lstimer W. Ballou.
- South Carolina—Joseph H. Rainey, Edward W. M. Mackey, Solomon L. Hoge, Alexander S. Wallace, Robert Smalls.
- Tennessee—William McFarland, Jacob M. Thornburgh, George C. Dibrell, H. Y. Riddle, John M. Bright, John F. House, Washington C. Whitthorne, John D. C. Atkins, William P. Caldwell, H. Casey Young.
- Texas—John H. Reagan, David B. Culbertson, James W. Throckmorton, Roger Q. Mills, John Hancock, Gustave Schleicher.
- Vermont—Charles H. Joyce, Dudley C. Denison, George W. Hendee.
- Virginia—Beverly B. Douglas, John Goode, Jr., Gilbert O. Walker, William H. H. Stowell, George C. Cobell, John Randolph Tucker, John T. Harris, Epps Hunton, William Terry.
- West Virginia—Benjamin Wilson, Charles J. Faulkner, Frank Herford.
- Wisconsin—Charles G. Williams, Lucien B. Caswell, Henry S. Magoon, William Pitt Lynde, Samuel D. Burchard, Alanson M. Kimball, Jeremiah M. Rusk, George W. Cate.

* Sent given to Josiah G. Abbott, July 14, 1875.
 † Sent given to Stephen S. Fenn, June 22, 1876.
 ‡ Died January 26, 1876, and succeeded by John T. Wall.

DELEGATES FROM TERRITORIES.

- Arizona—Hiram S. Stevens.
- Colorado—Thomas M. Patterson.
- Dakota—Jefferson P. Kidder.
- Idaho—Thomas W. Bennett.†
- Montana—Martin Maginnis.
- New Mexico—Stephen B. Elkins.
- Utah—George Q. Cannon.
- Washington—Orange Jacobs.
- Wyoming—William R. Steele.

of Michigan, called the Senate to order. In the House Michael C. Kerr was elected Speaker, receiving 178 votes, and James G. Blaine 106, with three scattering votes. (For the President's Message, *see* PUBLIC DOCUMENTS in ANNUAL CYCLOPEDIA, 1875, or vol. xv.)

In the Senate, on December 8, 1875, Mr. Morton, of Indiana, proposed the following amendment to the Constitution of the United States, which was read twice, and referred to the Committee on Privileges and Elections:

I. The President and Vice-President shall be elected by the direct vote of the people in the manner following: Each State shall be divided into districts, equal in number to the number of Representatives to which the State may be entitled in the Congress, to be composed of contiguous territory, and to be as nearly equal in population as may be; and the person having the highest number of votes in each district for President shall receive the vote of that district, which shall count one presidential vote.

II. The person having the highest number of votes for President in a State shall receive two presidential votes from the State at large.

III. The person having the highest number of presidential votes in the United States shall be President.

IV. If two persons have the same number of votes in any State, it being the highest number, they shall receive each one presidential vote from the State at large; and if more than two persons shall have each the same number of votes in any State, it being the highest number, no presidential vote shall be counted from the State at large. If more persons than one shall have the same number of votes, it being the highest number in any district, no presidential vote shall be counted from that district.

V. The foregoing provisions shall apply to the election of Vice-President.

VI. The Congress shall have power to provide for holding and conducting the elections of President and Vice-President, and to establish tribunals for the decision of such elections as may be contested.

VII. The States shall be divided into districts by the Legislatures thereof, but the Congress may at any time by law make or alter the same.

In the Senate, on January 31, Mr. Wright, of Iowa, introduced the following joint resolution to amend the Constitution of the United States, which was referred to the Committee on Privileges and Elections:

After the year eighteen hundred and seventy-six the President and Vice-President of the United States shall be elected by a direct vote of the people of the several States, and the electors in each State shall have the same qualifications as the electors of the most numerous branch of the State Legislature.

The person receiving the greatest number of votes for President shall be the President, and the person receiving the greatest number of votes for Vice-President shall be the Vice-President; but if two or more persons shall each receive an equal and the greatest number of votes for President, then the House of Representatives shall, from such persons, immediately choose the President; and if two or more persons shall each receive an equal and the greatest number of votes for Vice-President, then the Senate shall, from such persons, immediately choose the Vice-President. In such elections, each House shall vote *visa voce*, and each member shall have one vote; and the person receiving a majority of the votes cast shall be elected; and, in case of a tie, the presiding officer shall determine it.

The election for President and Vice-President shall be held at the time now provided by law for

choosing the electors of such officers, but Congress may prescribe a different time, which shall be the same in all the States; and Congress shall prescribe the manner of holding and conducting such election, and making the returns thereof; and, in case of failure so to do, that duty shall devolve, in the order named, first, on the President of the United States; second, on the Legislature of each State within that State; and, third, upon the chief Executive of each State within that State.

The returns shall be canvassed at the time and in the manner now provided, or which may be hereafter provided, by the joint rules of the two Houses, or by law, by and in the presence of both Houses of Congress, who shall be the judges (each House voting separately) of the returns and election; but in case the two Houses shall not agree, then the matter of disagreement shall be referred to the Supreme Court of the United States, which shall forthwith decide the same, and such decision shall be final.

On the same day Mr. Wright also introduced the following joint resolution to amend the Constitution:

The Senate of the United States shall be composed of two members from each State, who shall hereafter be elected by a direct vote of the people thereof for six years; and the electors in each State shall have the same qualifications as the electors of the most numerous branch of the State Legislature; but Congress may, by law, provide for conducting and holding the election and canvassing the vote.

In the Senate, on March 22d, Mr. Edmunds, of Vermont, introduced the following joint resolution to amend the Constitution of the United States. It was referred to the Committee on the Judiciary:

ARTICLE XII. That the twelfth article of the amendments of the Constitution be, and the same is hereby, abrogated, and in the place thereof the following be, and the same is hereby, ordained and established, namely:

The electors shall meet in their respective States, and vote by ballot for President and Vice-President, one of whom at least shall not be an inhabitant of the same State with themselves; they shall name in their ballots the person voted for as President, and in distinct ballots the person voted for as Vice-President, and they shall make distinct lists of all persons voted for as President, and for all persons voted for as Vice-President, and of the number of votes for each; which lists they shall sign and certify, and transmit sealed to the seat of Government of the United States, directed to the presiding justice of the Supreme Court of the United States. And the Supreme Court, at a time and place to be fixed by law, shall publicly open all the certificates and count the votes, and the person having the greatest number of votes for President, considered by the court to have been lawfully given and certified, shall be President, if such number be a majority of the whole number of electors lawfully appointed; and if no person have such majority, the state of the votes shall be immediately certified to the House of Representatives, and then, from the persons having the highest number, not exceeding three on the list of those voted for as President, the House of Representatives shall choose immediately, by a *visa voce* vote, the President; but the vote shall be taken by States, the representation from each State having one vote; and if the votes of any State shall not show a majority for any one candidate, the vote of such State shall not be reckoned. A quorum of the House of Representatives for the purpose of such election shall consist of a member or members from two-thirds of the States, and a majority of all the States shall be necessary to a choice; and if, on the first vote, there shall be a failure to elect, further

votes shall immediately continue to be taken until a President shall be elected.

And if the House of Representatives shall not choose a President, when the right of choice shall devolve upon them, before the fourth day of March next following, then the Vice-President shall act as President, as in the case of the death or other constitutional disability of the President. The person having the greatest number of votes for Vice-President, to be counted and determined as in case of President as before provided, shall be Vice-President, if such number be a majority of the whole number of electors appointed. And if no person have a majority, then from the two highest numbers on the list the Senate shall choose a Vice-President; a quorum for the purpose shall consist of two-thirds of the whole number of Senators, and a majority of the whole number shall be necessary to a choice. But no person constitutionally ineligible to the office of President shall be eligible to that of Vice-President of the United States.

Sec. 2. No person holding the office of a Justice of the Supreme Court of the United States shall be eligible to be elected as President or Vice-President until the expiration of two years next after he shall have ceased to be such Justice.

On May 12th the committee reported the same back with amendments, but no further action was taken.

In the House, on December 14, 1875, Mr. Blaine, of Maine, introduced the following joint resolution for an amendment of the Constitution, which was referred to the Committee on the Judiciary:

ARTICLE XVI. No State shall make any law respecting an establishment of religion, or prohibiting the free exercise thereof; and no money raised by taxation in any State for the support of public schools, or derived from any public fund therefor, nor any public lands devoted thereto, shall ever be under the control of any religious sect; nor shall any money so raised or lands so devoted be divided between religious sects or denominations.

On the same day Mr. Randall, of Pennsylvania, introduced to the House the following joint resolution for an amendment of the Constitution, which was referred to the Committee on the Judiciary:

ARTICLE XVI.—1. From and after the next election for a President of the United States the President shall hold his office during the term of six years, and, together with the Vice-President chosen for the same term, be elected in the manner as now provided, or may hereafter be provided; but neither the President, nor the Vice-President, when the office of President has devolved upon him, shall be eligible for reelection as President.

On January 18th the Judiciary Committee reported back the resolution with a substitute, which was read, as follows:

No person who has held, or may hereafter hold, the office of President shall ever again be eligible to said office.

Mr. Frye, of Maine, from the minority of the committee, submitted the following amendment:

Strike out these words:

No person who has held, or may hereafter hold, the office of President shall ever again be eligible to said office.

And insert in lieu thereof the following:

From and after the 4th day of March, in the year

1885, the term of office of President and Vice-President of the United States shall be six years; and any person having been elected to and held the office of President, or who for two years has held such office, shall be ineligible to a reelection.

The Speaker *pro tempore* (Mr. Holman): "The question is on the amendment submitted by the gentleman from Maine (Mr. Frye) on behalf of the minority of the committee. The gentleman from Kentucky (Mr. Knott), the chairman of the Committee on the Judiciary, is entitled to the floor."

Mr. Knott, of Kentucky, said: "I do not propose at this time to enter into a discussion of the reasons which influenced the Committee on the Judiciary in reporting this proposed amendment to the Constitution. I desire merely to state as succinctly as possible the conclusions at which they arrived. The committee appreciated the unanimity of opinion everywhere that there should be some limit to eligibility to the office of President. The only question upon which there was any contrariety of judgment, as is apparent from the report of the committee and the views of the minority, was as to the length of the term. As the House knows, there were a variety of propositions submitted to the committee: one to extend the term to six years and render the incumbent forever after ineligible to the office of President; another extending the term to six years and rendering the incumbent ineligible for the six succeeding years; another extending the term to six years and making the President a Senator for life for the United States at large, after the expiration of his term of office; another limiting the term to four years.

"After considering these various propositions the committee concluded that they could give to the people of this country no good reason why the presidential term should be extended beyond its present limits. An amendment to the Constitution in this direction is evidently in the interests of the people themselves, jealous at all times, as they should be, of executive power. The committee, therefore, were of opinion that no amendment extending the term beyond its present limits would meet the approbation of the people of this country, and that such a proposition would be entirely nugatory.

"Neither could the committee appreciate the propriety or the importance of rendering the President eligible after the lapse of a given period of time. It occurred to them, I have no doubt, as it did to myself, that men make their calculations as though they expected to live always, and that a President in office, with an expectation of being elected again after the lapse of four or six years, would, if inclined to use his influence at all for the promotion of his own ambition, be under the same temptation as if he were immediately reelected.

"The committee, therefore, submit to the House the proposition, simple and unadorned,

that no person who has held or who may hereafter hold the office shall ever again be eligible for that office, believing that there never will be a time when suitable candidates cannot be found who will be more than willing to take the office upon those conditions. Whether I shall add anything more upon this question will depend upon what may be said by other gentlemen during the discussion. I now yield to the gentleman from Indiana (Mr. New)."

Mr. New, of Indiana, said: "I call for the reading of the joint resolution, introduced by myself, for information."

The resolution was read as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article be proposed to the Legislatures of the several States as an amendment to the Constitution of the United States, which, when ratified by three-fourths of said Legislatures, shall be valid as a part of the Constitution, namely:

ARTICLE XVI. From and after the next election for the President of the United States the President shall hold his office during the term of four years, and, together with the Vice-President chosen for the same term, be elected in the manner now provided by law, or as may hereafter be provided. But neither the President, the Vice-President, nor any other person in the office of President, as devolved upon him by law, shall be eligible to the office of President a third time.

Mr. New: "Mr. Speaker, it will be observed that the joint resolution just read leaves the matter of the presidential term where it is, except that a third term by the same President is prohibited.

"I shall not occupy much time. I cannot hope to present anything new, or which would not upon reflection occur to the minds of other members. The reasons which I shall assign in opposition to a one-term limitation, and in favor of eligibility to a second term with ineligibility to a third, will perhaps be familiar to all the members of this body. For the most part my arguments will be such as I have gleaned from reading the past history of this question and the history of the country.

"We cannot over-estimate the importance of the subject. We cannot fail to appreciate the disagreeable attitude in which we place ourselves, as also the possible serious consequences to the future of the country, if our action here should lead to a change in the Constitution, and that change should turn out to be a mistake. For one, sir, I admit now at the very threshold of my remarks that I am not fully convinced that the public safety requires any alteration in the Constitution relating to the Executive term. But if any step is to be taken in that direction, then, sir, in my judgment the modification proposed in my proposition is the one and only one that should be made.

"In the convention which framed the Constitution there was a marked difference of opinion among the delegates as to what should be the length of the President's term of office,

as also the manner of his election and the powers with which he should be invested.

"It has been said by a distinguished American patriot that there is no nation which has not at some period or other in its history felt an absolute necessity of the services of particular men in particular stations as vital even to the preservation of its political existence. Thus we have Madison entering upon his second term while the War of 1812 was in progress. Jackson had been voted for and elected the second time when, in December, 1832, it became necessary to promptly rebuke and put down nullification. The salutary effect will not soon be forgotten of the proclamation which he issued at that time, containing an exposition of the principles and powers of the General Government, and expressing a determination to maintain the laws.

"General Grant is now serving his second term. It is probably too soon to impartially judge of his first, while, as for the second, it is not yet concluded. Some of us, doubtless in some degree affected by party bias and political prejudice, think his executive services to the country not of extraordinary merit; but whether it would have been better or worse for the people if some other aspirant had secured the prize we can never know. The fair thing probably in this regard would be to give all aspirants who failed to obtain the place the benefit of the doubt.

"I maintain that no argument unfavorable to the second election of the same President can fairly be drawn from the past history of the country taken as a whole.

"Would it be wise to limit the Executive to a single term in the future? I answer that it would not. If confined to one term, he would, in my opinion, be more inclined to overlook and disregard the public good where his own personal interest or ambition was in the way. If eligible to reelection there would be greater disposition and inducement to keep within the lines marked out for him by the Constitution, and make his administration efficient and just, for to do this would be to give himself character with his countrymen, and thus prepare the way for reelection. He would be more attentive to learn the will and the wants of the people. He would give less heed to the counsels of bad men and court the advice and good-will of those in whom the people have confidence, and who by their public services and high character give tone to public opinion."

Mr. Frye, of Maine, said: "Now, sir, the majority resolution is that no person who has held or may hereafter hold the office of President of the United States shall ever again be eligible to the office.

"Now there seem to me, Mr. Speaker, two or three well-founded objections to the majority resolution. And, first, the term of office is too short. Why, sir, there are no men in the country who understand better than mem-

bers of Congress of how great importance experience is in this matter of office for the better performance of its duties. When I came here to the Congress of the United States, for the first two years I found myself a complete, ignoble, unworthy cipher, and in my modesty and humility again and again in the thoughts by day and in the dreams by night I determined to resign the position and get out of a place where I was so utterly useless. I suppose that there is not a modest or sensitive man in the House who has not again and again experienced the same feelings. There are a dozen men of experience in this House, having been here term after term, holding commanding positions and swaying the legislation of the House hither and thither just as they please. Whence comes that power? From preëminent ability? From superior intellect? From excellence in learning? No, sir. From experience in the performance of the duties devolving upon members of Congress. They in everything else have their peers in hundreds of men on this floor who are here to-day for the first term. And, sir, it seems to me that the same rule holds good in the office of President of the United States. If he is fit to be elected to the position he will be a better man the second term than in the first. He will perform his duties more wisely during the second term than the first. I submit therefore to the House that when you limit the presidential term to four years you are forcing upon the country a loss of valuable experience which it might otherwise enjoy, in my opinion, without any prayer from the people, even against their wishes.

"I, sir, do not believe for one that they have ever asked any such proposition as this. I never have seen it in any press representing the people and their voice. I submit if they have desired any change in the term at all it has been in favor of one of six years, not one limited to four, and that no man shall be eligible to a second term.

"Again, sir, there is a serious objection to it. It provides that no person who has held the office of President shall be eligible to a reelection. Then, sir, suppose a Vice-President who by the death of the President has held that position for two hours' time or two days' time, he will be forever ineligible as President of the United States. Sir, it seems to me that proper consideration has not been given to that, for there is no reason why a Vice-President accidentally taking office for a few days or a few weeks shall be made ineligible to the office of President of the United States. In those days or those weeks he cannot by any possibility have gained that control of the patronage of the country which will endanger the liberties of the people or improperly secure his election. He may be the man of all others we desire for that high office, and yet we cannot be gratified.

"Again, sir, I submit that this amendment

never can be adopted by three fourths of the States of this Union. And why? Suppose the Democratic party—a forced hypothesis, I admit—come into power and elect its President in the next election. It has been out of power for fifteen years. It went out of power when the patronage of the Government was comparatively small; it will come back again into power when the patronage of that Government is immense—so immense that to-day it has frightened the people, if they have sought it, into seeking an amendment of the Constitution so that that patronage shall not be used. Now, sir, I submit to my Democratic friends, if they elect the next President of the United States and he has that patronage in his hands, is there a hod-carrier in the remotest town of all our borders who will not be instructed by their party, then in power, to vote at the polls against this amendment to the Constitution? You know this will be so; it is absurd were we to ask the question. Will they not say: 'We are in power; we have the patronage now and can retain power by its use and reelect the President of the United States.' Shall not we, as Republicans, if we prevail, instruct our men to vote against the adoption of that amendment? Certainly we would do it, and under no such circumstances would three-fourths of the States be induced to adopt it, and it would thus become mere child's play.

"The minority of the committee submit a different proposition, one for a six-year term; and I have given my reasons why I prefer that. It provides, somewhat curiously, perhaps, to those who have not reflected upon the subject, that, if adopted, the amendment shall not take effect until the year 1885. Why 1885? Because when we propose a resolution to the House we propose it seriously, thinking that the people need it and that they may adopt it. Now suppose that we had said that from and after the next election this amendment should go into effect, what would be the result? The very first question, a very serious one, presented would be this: Would it affect the term of office of the next President? If it does, then, being adopted six months or a year after the election of the next President, it would make a six-year President out of one elected for four years.

"Now, suppose that the Democrats should elect their candidate for President at the next election. Is it possible that the Republican voters of the country will vote for the adoption of an amendment to the Constitution which will give that Democratic President two years longer of office than he was entitled to on the day he was elected? Of course not: and every Republican in the country will vote against the adoption of such an amendment as that.

"Suppose, then, you put it off until 1881, as has been proposed. Then you are in this condition: Suppose that next year we elect our candidate for President. The amendment

as adopted will take effect in 1881, making the term of office six years and the President ineligible for reelection. Having elected our President, how natural is it for us to say: 'Our President is a good man, and every President hitherto elected has had an opportunity for reelection; ours only of the men elected to the office is limited to this one term of four years; the next one to be elected and all thereafter will have six years of office!' That will be an invidious distinction against the President of the party in power, and every member of that party will vote against the adoption of such an amendment, and you cannot get three-fourths of the States to adopt it, and the amendment will fall through.

"Now put off the operation of the amendment if adopted until 1885, and you will have removed it from all these difficulties which otherwise beset it. You have made it certain that if it commends itself to the people it will be adopted by them. No party, as such, would necessarily be arrayed against it.

"Now, while I have reported this amendment in behalf of the minority of the committee, I am free to confess that I do not see any necessity for it."

Mr. Reagan, of Texas, said: "I now offer the following amendment as a substitute both for the original report of the committee and the pending amendment:

That no person who has held or may hereafter hold the office of President shall ever hereafter be eligible to said office.

That the term of office of President and Vice-President of the United States shall be six years.

"Mr. Speaker, I desire to say a few words only. I have not participated in this debate, and I shall not now participate in the discussion of the general question. I am not satisfied with the amendment to the Constitution proposed by the majority of the Committee on the Judiciary, nor do I feel satisfied with the amendment offered by the minority. I therefore offer this amendment, which will take effect from its adoption, if it shall be adopted. I desire to see the presidential term made for six years and for a single term."

The question was taken; and there were—yeas 71, nays 184, not voting 85.

So Mr. Reagan's substitute was rejected.

The question recurred on the following amendment of Mr. Frye:

Strike out "no person who has held or may hereafter hold the office of President shall ever again be eligible to said office," and insert in lieu thereof the following:

From and after the 4th day of March, in the year 1885, the term of office of President and Vice-President of the United States shall be six years; and any person having been elected to and held the office of President, or who, for two years, has held such office, shall be ineligible to a reelection.

The question was taken; and it was decided in the negative—yeas 107, nays 143, not voting 89; as follows:

YEAS—Messrs. Adams, Ashe, George A. Bagley,

John H. Bagley, Jr., John H. Baker, Banks, Blaine, Bradley, William B. Brown, Horatio C. Burchard, Burleigh, Cate, Chittenden, Clymer, Cochrane, Conger, Crapo, Crouse, Farwell, Faulkner, Foster, Freeman, Frost, Frye, Garfield, Robert Hamilton, Hancock, Haralson, Hardenbergh, Benjamin W. Harris, Harrison, Hatcher, Hathorn, Hendee, Henderson, Abram S. Hewitt, Hopkins, Hoskins, House, Hubbell, Huribut, Joyce, Kasson, Kehr, Ketchum, Kimball, King, Franklin, Landers, Lane, Lapham, Lawrence, Leavenworth, Luttrell, Edmund W. M. Mackey, Levi A. Mackey, MacDougall, McCrary, Miller, Monroe, Morgan, Norton, Oliver, O'Neill, Packer, Phelps, William A. Phillips, Pierce, Piper, Plaisted, Platt, Potter, Rainey, Randall, Reagan, John Reilly, Riddle, John Robbins, Roberts, Robinson, Sobieski Ross, Sampson, Siseakley, Singleton, Sinnickson, A. Herr Smith, Strait, Stowell, Teese, Thornburgh, Throckmorton, Washington Townsend, Turney, Van Vorhes, Robert B. Vance, Walling, Warren, Erastus Wells, Wheeler, White, Whiting, Willard, Alpheus S. Williams, James D. Williams, Willis, James Wilson, Woodworth, and Yeates—107.

NAYS—Messrs. Ainsworth, Anderson, Atkins, Bagby, William H. Baker, Ballou, Banning, Barnum, Beebe, Bell, Blackburn, Blair, Bland, Boone, Bradford, Bright, John Young Brown, Buckner, Samuel D. Burchard, Cabell, John H. Caldwell, Campbell, Candler, Cannon, Caulfield, Chapin, John B. Clarke, of Kentucky, John B. Clarke, Jr., of Missouri, Collins, Cook, Cowan, Culbertson, Cutler, Davis, Day, De Bolt, Denison, Dibrell, Douglas, Dunnell, Durand, Durham, Eames, Eden, Egbert, Felton, Forney, Fort, Franklin, Fuller, Gause, Glover, Goodin, Andrew H. Hamilton, Henry R. Harris, John T. Harris, Hartzell, Haymond, Hereford, Goldsmith W. Hewitt, Hill, Holman, Hooker, Hunter, Hunton, Hurd, Hyman, Thomas L. Jones, Knott, George M. Landers, Levy, Lewis, Lord, Lynch, Lynde, Magoon, Maish, McDill, McMahon, Meade, Metcalfe, Milliken, Mills, Morrison, Mutchler, Nash, Neal, New, Odell, Page, Parsons, Payne, John F. Philips, Poppleton, Powell, Pratt, Rea, Rice, William M. Robbins, Miles Ross, Rusk, Savage, Saylor, Scales, Seelye, Slemmons, Smalls, William E. Smith, Southard, Sparks, Springer, Stenger, Stevenson, Stone, Swan, Tarbox, Terry, Thompson, Thomas, Martin I. Townsend, Tucker, Tufts, John L. Vance, Waddell, Waldron, Charles C. B. Walker, Gilbert C. Walker, Alexander S. Wallace, Walls, Walsh, Ward, G. Wiley Wells, Whitehouse, Wigginton, Wike, Charles G. Williams, James Williams, Jeremiah N. Williams, William B. Williams, Wilshire, Benjamin Wilson, Woodburn, and Young—143.

NOT VOTING—Messrs. Bass, Bliss, Blount, William P. Caldwell, Cason, Caswell, Cox, Danford, Darrall, Dobbins, Ellis, Ely, Evans, Gibson, Goode, Gunter, Hale, Hartridge, Hays, Henkle, Hoar, Hoge, Jenks, Frank Jones, Kelley, Lamar, McFarland, Money, Morey, O'Brien, Purman, James B. Reilly, Schleicher, Schumaker, John W. Wallace, Whitthorne, Andrew Williams, Alan Wood, Jr., and Fernando Wood—89.

So Mr. Frye's amendment was rejected.

The question recurred on the engrossment and third reading of the joint resolution, as follows:

Resolved, by the Senate and House of Representatives of the United States of America, in Congress assembled (two-thirds of each House concurring therein). That the following be proposed to the Legislatures of the several States as an amendment to the Constitution of the United States, which, when ratified by three-fourths of said Legislatures, shall be valid as a part of said Constitution:

ARTICLE XVI. No person who has held, or may hereafter hold, the office of President, shall ever again be eligible to said office.

The question was taken; and it was decided in the negative—yeas 145, nays 108, not voting 36; as follows:

Yeas—Messrs. Ainsworth, Ashe, Atkins, Bagby, John H. Bagley, Jr., Banks, Banning, Barnum, Beebe Bell, Blackburn, Bland, Boone, Bradford, Bright, John Young Brown, Buckner, Samuel D. Burchard, Cabell, John H. Caldwell, Candler, Cate, Caulfield, Chapin, John B. Clarke, of Kentucky, John B. Clark, Jr., of Missouri, Clymor, Cochran, Collins, Cook, Cowan, Cronnas, Culberson, Cutler, Davis, De Bolt, Dibrell, Douglas, Dunnell, Durand, Durham, Eden, Egbert, Faulkner, Felton, Forney, Franklin, Frost, Fuller, Gause, Gibson, Glover, Goodin, Andrew H. Hamilton, Hancock, Henry R. Harris, John T. Harris, Harrison, Hartzell, Hatcher, Hersford, Abram S. Hewitt, Goldsmith W. Hewitt, Hill, Holman, Hopkins, House, Hunton, Hurd, Thomas L. Jones, Knott, Franklin Landers, George M. Landers, Lane, Levy, Lewis, Lord, Luttrell, Lynde, Levi A. Mackey, Maish, McFarland, McMahon, Meade, Metcalfe, Milliken, Mills, Morgan, Morrison, Mutchler, Odell, Parsons, Payne, Phelps, John F. Phillips, William A. Phillips, Piper, Poppleton, Powell, Reagan, John Reilly, Rice, Riddle, John Robbins, William M. Robbins, Roberts, Miles Ross, Savage, Sayler, Scales, Schleicher, Sheakley, Singleton, Simons, William E. Smith, Southard, Sparks, Springer, Stenger, Stevenson, Stone, Tarbox, Terry, Thompson, Throckmorton, Tucker, Turney, John L. Vance, Robert E. Vance, Waddell, Charles C. B. Walker, Gilbert C. Walker, Walling, Ward, Warren, Erastus Wells, Whitehouse, Wigginton, Alpheus S. Williams, James D. Williams, Jeremiah N. Williams, Willis, Wilshire, Benjamin Wilson, and Yeates—145.

Nays—Messrs. Adams, Anderson, George A. Bagley, John H. Baker, William H. Baker, Ballou, Blaine, Blair, Bradley, William E. Brown, Horatio C. Burchard, Burleigh, Campbell, Cannon, Chittenden, Conger, Crapo, Davy, Denison, Eames, Farwell, Fort, Foster, Freeman, Frye, Garfield, Hale, Robert Hamilton, Haralson, Hardenberg, Benjamin W. Harris, Haythorn, Raymond, Hendee, Henderson, Hooker, Hoskins, Hubbell, Hunter, Hurlbut, Hyman, Joyce, Kasson, Kehr, Ketchum, Kimball, King, Latham, Lawrence, Leavenworth, Lynch, Edmund W. M. Mackey, Magoon, MacDougal, McCrary, McDill, Miller, Monroe, Nash, Neal, New, Norton, Oliver, O'Neill, Packer, Page, Pierce, Plaisted, Platt, Potter, Pratt, Purman, Rainey, Randall, Robinson, Sobieski Ross, Rusk, Sampson, Seelye, Sinnickson, Snells, A. Herr Smith, Strait, Stowell, Swann, Teese, Thomas, Thornburgh, Martin I. Townsend, Washington Townsend, Tufts, Van Vorhes, Waldron, Alexander S. Wallace, Walls, Walsh, G. Wiley Wells, Wheeler, White, Whiting, Wike, Willard, Charles G. Williams, William B. Williams, James Wilson, Fernando Wood, Woodburn, and Woodworth—108.

Not Voting—Messrs. Baas, Bliss, Blount, William F. Caldwell, Cason, Caswell, Cox, Danford, Darrall, Dobbins, Ellis, Ely, Evans, Goode, Gunter, Hartridge, Hays, Henkle, Hoar, Hoge, Jenks, Frank Jones, Kelley, Lamar, Money, Morey, O'Brien, Rea, James B. Reilly, Schumaker, John W. Wallace, Whithorne, Andrew Williams, James Williams, Alan Wood, Jr., and Young—36.

So (two-thirds not having voted in favor thereof) the joint resolution was rejected.

On the same day, Mr. Harrison, of Illinois, introduced again the following joint resolution for an amendment of the Constitution, which was referred to the Judiciary Committee:

ARTICLE XVI.—From and after the election for President of the United States next following the ratification of this article, the President shall hold his office during the term of six years, and, together

with the Vice-President chosen for the same term, be elected in the manner as now provided or may hereafter be provided; but neither the President nor Vice-President, when the office of the President is devolved upon him, shall be eligible for reelection as President, but shall be from and after the expiration of his office as President, unless the same be by impeachment, a Senator for life for the United States at large, and, as such Senator, shall have the same privilege as other Senators (except that he shall not vote as Senator, nor shall he be President *pro tempore* of the Senate), the same immunities, and compensation; but his attendance upon the sessions shall not be compulsory, nor shall his compensation be abridged by reason of his non-attendance.

On the same day, Mr. Morrison, of Illinois, introduced again the following joint resolution to amend the Constitution, which was referred to the Judiciary Committee:

ARTICLE XVI.—From and after the next election for a President of the United States, the President shall hold his office during the term of six years, and, together with the Vice-President chosen for the same term, be elected in the manner as now provided, or may hereafter be provided; but the President shall not be eligible for more than six years in any term of twelve years.

On the same day, Mr. McCrary, of Iowa, introduced the following joint resolution for an amendment of the Constitution, which was referred to the Judiciary Committee:

All civil officers of the United States, except judges of the Supreme and inferior courts, the heads of departments, and those whose duties are temporary in their character, shall hold office for a term of four years, unless a longer term shall be fixed by law. Congress may by law provide for the election by the people, of postmasters and other officers whose duties are to be performed within the limits of any State or part of a State; but the President shall have the power of removal of any such officer, whether appointed or elected, for any cause affecting the incumbent's character, habits, or other qualifications, excepting political or religious opinions.

On January 6th, Mr. Reagan, of Texas, introduced the following joint resolution, proposing amendments to the Constitution of the United States, which was read a first and second time, and referred to the Judiciary Committee:

1. That the words, "and direct taxes," where they occur in the first line of clause 3, section 2, Article I., of the Constitution, be stricken out.

2. That the following words be added to the end of clause 1, section 8 of Article I., of the Constitution: "And direct taxes, when levied by the United States, shall be apportioned between the several States and Territories, and the District of Columbia, in proportion to the value of the property in each, and each State, Territory, and the District of Columbia, shall have the right to collect its portion of the same, if it elect to do so, by its own officers, and from subjects of taxation provided by its own laws, and pay the same over to the United States, as may be provided by law. And on the refusal or failure of any State, Territory, or the District of Columbia, to collect and pay over its portion of any such tax, the same shall be collected as may be provided by the laws of the United States."

On the same day, Mr. Oliver, of Iowa, introduced the following joint resolution to amend the Constitution of the United States, which was referred to the Judiciary Committee:

After the year 1876, the President and Vice-President of the United States shall be elected by a direct vote of the people of the several States, and the electors in each State shall have the same qualification as the electors of the most numerous branch of the State Legislature.

The person receiving the greatest number of votes for President shall be the President, and the person receiving the greatest number of votes for Vice-President shall be the Vice-President; but if two or more persons shall each receive an equal and the greatest number of votes for President, then the House of Representatives shall from such persons immediately choose the President; and if two or more persons shall each receive an equal and the greatest number of votes for Vice-President, then the Senate shall from such persons immediately choose the Vice-President. In such elections each House shall vote *visa voce*, and each member shall have one vote, and the person receiving a majority of the votes cast shall be elected; and in case of a tie, the presiding officer shall determine it.

The election for President and Vice-President shall be held at the time now provided by law for choosing the electors of such officers, but Congress may prescribe a different time, which shall be the same in all the States; and Congress shall prescribe the manner of holding and conducting such elections, and making the returns thereof; and in case of failure so to do, that duty shall devolve in the order named, first, on the President of the United States; second, on the Legislature of each State within that State; and, third, upon the chief Executive of each State within that State.

The returns shall be canvassed at the time and in the manner now provided, or which may be hereafter provided by the joint rules of the two Houses or by law, by and in the presence of both Houses of Congress, who shall be the judges (each House voting separately) of the returns and election; but in case the two Houses shall not agree, then the matter of disagreement shall be referred to the Supreme Court of the United States, which shall forthwith decide the same; and such decision shall be final.

At the same time Mr. Oliver introduced the following joint resolution, which was likewise referred:

The Senate of the United States shall be composed of two members from each State, who shall hereafter be elected by a direct vote of the people for six years: and the electors in each State shall have the same qualifications as the electors of the most numerous branch of the State Legislature; but the Congress may by law provide for conducting and holding the election and canvassing the vote.

On January 17th, Mr. O'Brien, of Maryland, introduced the following joint resolution to amend the Constitution, which was referred to the Judiciary Committee:

ARTICLE XVI. Section 1. No State shall make any law respecting an establishment of religion or prohibiting the free exercise thereof; and no minister or preacher of the gospel or of any religious creed or denomination shall hold any office of trust or emolument under the United States or under any State; nor shall any religious test be required as a qualification for any office or public trust in any State, or under the United States.

Sec. 2. No money received by taxation in any State for the support of public schools, or derived from any public fund therefor, nor any public lands devoted thereto, shall ever be under the control of any religious sect; nor shall any money so raised, nor lands so devoted, be divided between religious sects or denominations; nor shall any minister or preacher of the gospel, or of any religious creed or denomination, hold any office in connection with the

public schools in any State, nor be eligible to any position of trust or emolument in connection with any institution, public or private, in any State or under the United States, which shall be supported in whole or in part from any public fund.

On the same day Mr. New, of Indiana, introduced the following joint resolution to amend the Constitution, which was referred to the Judiciary Committee:

ARTICLE XVI. From and after the next election for the President of the United States the President shall hold his office during the term of four years, and, together with the Vice-President chosen for the same term, be elected in the manner now provided by law, or as may hereafter be provided. But neither the President, the Vice-President, nor any other person in the office of President, as devolved upon him by law, shall be eligible to the office of President a third time.

On January 18th Mr. Williams, of Wisconsin, introduced the following joint resolution to amend the Constitution, which was referred to the Judiciary Committee:

ARTICLE XVI. No State shall make any law respecting an establishment of religion, or prohibiting the free exercise thereof; and no money raised by taxation in any State for the support of public schools, or derived from any public fund therefor, or any public lands devoted thereto, shall ever be under the control of any religious sect; nor shall any money so raised or lands so devoted be divided between religious sects or denominations; neither shall money raised by taxation in any State be appropriated for the maintenance of any sectarian school or sectarian institution.

Several other amendments of less interest were proposed and referred. It is not necessary to notice them here.

In the Senate, on January 10th, Mr. Morton, of Indiana, said: "Mr. President, it has been suggested to me by several Senators that the report of the Committee on Privileges and Elections in regard to the tenure of office of the President *pro tempore* of the Senate should properly have been accompanied by a resolution or resolutions embracing the conclusions of the committee. I now, therefore, offer the following resolutions:

Resolved, That the tenure of office of the President *pro tempore* of the Senate elected at one session does not expire at the meeting of Congress after the first recess, the Vice-President not having appeared to take the chair.

Resolved, That the death of the Vice-President does not have the effect to vacate the office of President *pro tempore* of the Senate.

Resolved, That the office of President *pro tempore* of the Senate is held at the pleasure of the Senate.

Resolved, That Hon. Thomas W. Ferry, a Senator from Michigan, who was elected President *pro tempore* of the Senate at the last session, is now the President *pro tempore* of the Senate by virtue of said election.

The Chief Clerk read the resolutions. Mr. Merrimon, of North Carolina, said: "Mr. President, I entertain the opinion that when the Senate elects a President *pro tempore*, the Senator so elected may rightfully continue to hold his office, unless his term as

Senator shall sooner terminate, or he shall be removed for cause, until the Vice-President shall return to preside over the Senate, and in case he shall fail to so return because of death or other cause, then until a new Vice-President shall be elected and qualified; and I ask the indulgence of the Senate while I state briefly the reasons that have brought me to this conclusion.

"The Senate is a perpetual body; it is created, its powers are conferred, defined, and limited by the Constitution. The general laws of parliamentary bodies are applicable to it only so far as the same are not modified by and not inconsistent with the Constitution. It cannot rightfully exercise powers not so conferred; it is not a body possessed of arbitrary powers; it must be governed in all things by the spirit of the Constitution. That it has the physical power to remove at will the President *pro tempore* I do not deny, because there is no tribunal to review its action, but whether it has the right without reasonable cause to make such removal may well be questioned; indeed, I cannot suppose there could exist any disposition to exercise such arbitrary power. It therefore appears that the Senate is thus governed by the Constitution.

"The Vice-President is President of the Senate, and he is beyond the control of that body, because the Constitution makes him so. It provides in terms no less definite and no less binding another officer to supply his place in his absence. The clause containing that provision is in these words:

The Senate shall choose their other officers, and also a President *pro tempore* in the absence of the Vice-President, or when he shall exercise the office of President of the United States.

"This clause is mandatory; the Senate must choose its officers, other than its President, and a President *pro tempore* as well and as surely as any other, when the contingency requiring one shall arise. This officer is not at the option of the Senate; he is essential, as absolutely so as any other known to our system of government. If the Vice-President shall be absent, the Senate cannot proceed lawfully with business for one hour without this officer, and plainly because the Constitution commands that in that case such officer shall be elected. The Senate may determine what other officers it will have, but this officer it must have; he is designated. He may be not improperly styled an officer provided by the Constitution.

"What, then, is the term of his office? The words "shall choose . . . also a President *pro tempore*" plainly and necessarily imply for during the time of the absence of the Vice-President from the Senate for any cause. The term or phrase *pro tempore*, has a very general meaning. It implies, generally, for the time, the occasion, the exigency; as if the president of the national convention of one of our political parties should be temporarily absent, in that case, by the general law of parliamentary

bodies, a temporary presiding officer would be appointed or elected to supply his place during such absence. Such officer would be styled president or presiding officer *pro tempore*, and he would continue to preside until the return of the regular president, and an adjournment to a day certain would not displace him unless he should be removed. The time of the absence of the president in that case is the time, the occasion, the exigency, to be supplied. This rule, as thus stated, applies to all deliberative bodies governed by general parliamentary law. But the special meaning of the term *pro tempore* must be ascertained by its use in a particular case, and so in the case now under consideration.

"The Senate is required to have always a presiding officer, and the Constitution provides that 'in the absence of the Vice-President, or when he shall exercise the office of President of the United States,' the Senate shall make one which is designated by name as President *pro tempore*—that is, for the time of such absence. To say that the power conferred to appoint *pro tempore* may be for one sitting of the Senate, for one hour, a day, a month, a session, or at the will of the Senate, does not meet the case provided for: the purpose is to supply a certain, fixed presiding officer for the time the regular officer shall be absent, whether that be long or short. He may be absent for a day, for a whole session, or for his whole term of office, and that absence is the measure of time to be supplied by the President *pro tempore*. The term of such an officer could not be fixed by more definite terms; no other words could describe or fix his term more aptly; it is as certain as if it had provided for a year or four years, and nothing is left to discretion. If this view is not correct, then what is the true measure of time? And who shall determine it? If it is said the Senate, then whence the power? The power is expressly given to elect, and the term is fixed as definitely as language can make it: no power is given to limit the term, either in words or by necessary implication. To say that the Senate can determine the term of office thus fixed by the Constitution, and that without cause, is shocking to the legal mind! If the office were one created by the Senate, then it may fix the term and determine it; but that is not the case: here the office is fixed, designated, and the term limited by the Constitution itself.

The President *pro tempore* is an officer in the sense of the Constitution; he is, in the Senate, in the place of the Vice-President. He exercises the same power. He is clothed with important powers; grave duties devolve upon him, and he enjoys privileges which necessarily imply duration; he is amenable to the Senate for the just and proper exercise of these powers, and great responsibility attaches to him as such officer. The Constitution makes him an officer in the full sense of that term; in point of time, power, opportunity, privilege, and,

indeed, in every respect pertinent and lawful. He is not a mere occupant of the chair by the courtesy or will of the Senate; he is more than that; he presides not by courtesy, but by right; he exercises high powers, not by the toleration of a majority, but by the sanction of the Constitution; his official character is recognized by the other branch of Congress, by the Executive and Judicial Departments of the Government, and his official acts are good to all intents and purposes whenever or wherever called in question.

"The framers of the Constitution well understood that by the general parliamentary law the Senate could make a temporary presiding officer, who would be subject to its will and pleasure. Then the significant question presents itself, why the provision in question? Was it mere surplusage—only in affirmance of the general parliamentary law? By no rule of construction can it be so construed, if it can have another reasonable meaning; indeed, a purpose and different meaning must be assigned, if this can reasonably be done. Can this be done? It is manifest that it can. The plain purpose was to provide a different officer from the one allowed by the general parliamentary law: one not at the will and pleasure of the Senate, but one like the Vice-President, beyond its arbitrary control, one free and independent, one not subject to the whim of the hour, or the caprice and changing intrigues of political parties. The manifest object was to provide an officer as nearly independent as might be. The same conservative spirit that dictated the nature, character, form, and independence of the Senate suggested the wisdom of making the presiding officer of that body as free and independent as possible. It was deemed unwise to make an officer so dignified and important the mere tool of a party or a majority, by making him subject to their will and pleasure. This view makes the provision of the Constitution in question operative, and answers a wholesome, indeed, a necessary, purpose, in view of the nature and purposes of the Senate. Any other makes it nonsensical and nugatory."

Mr. Saulsbury, of Delaware, said: "Mr. President, I do not propose to occupy more than a few moments of the time of the Senate, but I cannot concur entirely in the views which have just been expressed by the Senator from North Carolina, and I desire to say in the commencement of the remarks which I have to make that I regard this not as a question appertaining at all to the present incumbent of the chair, but as a question purely of a legal character, involving the rights and powers of this body. It rises above any considerations of a private character, because it affects the dignity and powers of the Senate itself. If it were a question involving any personal rights, I should take it on myself to say that so far as I have observed the action of the present incumbent of the office no man could have discharged the duties more satisfactorily to the

body; no one could have acted with greater courtesy and urbanity to all; and he has displayed an impartiality and ability that entitle him to the regard and consideration of every member of the Senate.

"But, sir, it is not a question affecting private rights, but a question involving, as I before said, the rights of the Senate—the right of this body to change at its pleasure the presiding officer of the body.

"The only provision in the Constitution which refers to it is found in the fifth clause of the third section of the first article, which was quoted by the Senator from North Carolina. The Senator infers, from the fact that there is a specific authority given to elect a President *pro tempore*, that the Speaker *pro tempore* is named, that it was intended thereby that he was to be distinguished from other officers in respect to the tenure of his office and the power and authority of the Senate over such officer. I dissent from that view. The reason why he is specifically named in that clause is very apparent from the face of the clause of the Constitution referred to.

"The Constitution had provided in the preceding clause for the Senate a presiding officer, the Vice-President of the United States; and unless there had been a special provision of the Constitution as to who should preside over this body in the absence of the Vice-President there would have been no authority whatever in the Senate of the United States to choose its presiding officer. I hold that but for the provision here inserted in the Constitution the death or absence of the Vice-President would have left this body entirely without a presiding officer, and incapable from any inherent power in the Senate as a deliberative body to provide one. It would have been in the precise condition that the House of Commons in England is, which to-day cannot elect a Speaker *pro tempore* except by the consent and approval of the crown. And so, but for this special provision authorizing the Senate of the United States to provide a President *pro tempore* in case of the death or absence of the Vice-President, this body would have had no power to select its own presiding officer; and hence it is that that clause is specifically inserted delegating authority to the Senate in case of the absence or death of the Vice-President, or when he shall exercise the office of President of the United States, to provide a presiding officer. For this reason he is specifically named in the Constitution, while the 'other officers' are not named.

"Now, I differ from the conclusions of the honorable Senator as to the results which would follow provided the Senate had not the power to choose. I cannot concur in the view entertained by some, that when we have once elected a President *pro tempore* we have exhausted the power which is conferred by the provision of the Constitution authorizing the selection of a President *pro tempore*. If that

view is correct, what is the consequence? Then, if your President *pro tempore* should die, you have no inherent power to select a successor to him, and you have no authority in the Constitution, and you see at once that the consequence would be that the business of the Senate must stop. Or, to trace that doctrine out to its logical consequences: suppose you elect a President *pro tempore* and he fails to discharge the functions of his office—it is not probable that he would do so, but it is within the possibilities—suppose he should refuse to receive any communication from the House of Representatives; suppose he should refuse to receive any message from the President of the United States; suppose he should refuse to sign the bills that were passed by Congress, you have no power of removal by electing another President *pro tempore* to supersede him, because according to this doctrine, having executed the power granted, the power is exhausted and you can go no further."

Mr. Merrimon: "I beg to interrupt my friend. He misapprehends my position entirely. I said that the Senate had power to remove him for cause—lawful cause. The case put would be a case where there would be cause. I maintain that his office as Senator while he is a member of the Senate remains intact, and for any act that he might commit he might be dealt with as a Senator though he be the presiding officer."

Mr. Saulsbury: "My answer to that is that, so far as I read the Constitution, it was not absolutely necessary that the Senate should have chosen a President from its own body. There may be a provision of law to that effect somewhere, but the Constitution is silent as to who may be chosen. It distinctly says that the Senate may choose a President *pro tempore*; but it does not say that it shall select him out of its own body. Suppose the President *pro tempore* should not be also a Senator, how, then, would you reach him for failure to perform the duties of his office? But suppose it to be true that there is a provision which requires that the President *pro tempore* shall be selected from among the Senators; suppose that the Senator presiding as President *pro tempore* should discharge every duty incumbent on him as a Senator; suppose he votes and discharges his duties as a Senator, but fails to discharge his duties as President *pro tempore*, how would you reach him? The only manner in which you could affect him, according to the doctrine that I think is here contended for, is by his removal from this body as a Senator, by expelling him, and in that way reaching him as President *pro tempore*."

"Well, sir, if he had discharged his duties faithfully as a Senator, conducted himself with perfect propriety, performed the duties and functions pertaining to his office as a Senator, I see not how you are to reach him, because it is not to be presumed that the Senate would act unjustly, and for the purpose of removing

a President *pro tempore*, whose office is entirely distinct and separate from his office as Senator. It is not to be supposed that in order to reach him in that capacity you would be unjust and turn him out of the Senate if he had discharged his duties as a Senator; for let it be observed that the function of his office as President *pro tempore* is not a function pertaining to his office as a Senator of the State he represents."

Mr. Merrimon: "I will interrupt my friend a moment to explain further my dissent from that view, and will do it in aid of the view I submitted a while ago. I insist that a part of the duty of a Senator under the Constitution is that if he shall be designated by the Senate to preside as President *pro tempore* he shall so act; it is one of the duties that devolve upon him as a Senator, and therefore, if any Senator on this floor were designated to-day to preside in the chair, and should obstinately refuse to do it, that would be ground for dealing with him as a Senator. The Constitution devolves the obligation on him to discharge that duty as much as any other, if the Senate shall assign it to him."

Mr. Saulsbury: "I differ entirely from the view of the Senator from North Carolina. I was proceeding to say that you have no power, according to the argument of the Senator, traced to its logical results, to reach him for any cause whatever; for, according to his argument, the Senate having exercised the grant of power contained in the Constitution to choose a President *pro tempore*, your power becomes exhausted, and you cannot again exercise that power in any respect."

"But let us trace this still further in its consequences. He is an officer of the Senate. He is not a civil officer; and for the proper discharge of his duties you cannot reach him except as an officer of the Senate. You cannot reach him by impeachment. The House of Representatives has no right to prefer articles of impeachment against a Senator, and you cannot try him, therefore, upon any articles of impeachment. He is, therefore, not a civil officer of the Government in the ordinary and usual acceptation of that term, but his office is one purely as an officer of the Senate, elected by its votes, exercising his functions alone for the orderly transaction of the business of the Senate, responsible to the Senate, removable at the will and pleasure of the Senate. Being an officer of the Senate alone, his relation to the Senate differs from that of the other officers of this body only in its greater dignity and the nature of the duties it enjoins."

"Now, sir, in submitting these remarks, which have been very hastily thrown out, and I am sure are very crude, I only want to maintain and uphold the authority of the body, so that, when it shall have either an inefficient officer, or one who fails to discharge properly the function of his office in the chair, the power may be asserted in this body to provide an-

other officer who will discharge his duties; and I am sure that no one who knows me will attribute any remarks which I utter as being intended to apply to the present very efficient and very able presiding officer of this body. My sole purpose is to maintain what I conceive to be indispensably and absolutely necessary: the right of this body to change its officers whenever in its pleasure it becomes proper to do so."

Mr. Jones, of Florida, said: "Mr. President, I agree in all that has been said by the committee in the report except what is stated in their last conclusion, and I concur entirely with the Senator from North Carolina (Mr. Merrimon) in the views he has expressed in regard to this case.

"Whatever might have been the construction of the Constitution before the act of March 1, 1792, was passed, it is very clear that that act must have great weight in the consideration of the question before us. It is not enough to show, therefore, by the terms of the Constitution, that the President *pro tempore* of the Senate is an officer of the Senate, and under those provisions alone would be removable at the pleasure of the Senate. It is possible that such a construction would have been warranted before the act of 1792 was passed; but the Constitution gave to Congress the right to say, and that body has said, what officers shall succeed to the office of President in the event of the death of the President and Vice-President. While it may be true, therefore, that the Constitution intended to place the President of the Senate under the control of this body and make him removable at its pleasure, if no legislation was had under the first section of the second article of the Constitution, which empowers Congress to provide for filling the office of President when the first two officers in the Government are dead or are removed, still, the last provision in the Constitution gives Congress the power to change the tenure of the office of the President of the Senate when it gives it authority to say that the person who fills it in a certain exigency shall be President of the United States.

"If the power conferred upon Congress touching the filling of the office of President of the United States be in conflict with that which is supposed to exist on the part of this body to remove its presiding officer, then reasonable construction must decide the question at issue. It is not enough to say that the President *pro tempore* of the Senate, like the Sergeant-at-Arms of the Senate, is an officer of this body, and because the Sergeant-at-Arms may be removed by the Senate, so may the President *pro tempore* be removed. This mode of reasoning would be admissible if Congress under the Constitution had not pointed out duties beyond the Senate for the one officer in a certain contingency which it has not prescribed for the other.

"This is the great point, in my opinion, upon which this debate must turn.

"If Congress has the right (which no one will deny) to cast upon the President *pro tempore* of the Senate the office of President of the United States when the President and Vice-President are dead, and, in order to guard against doubts and uncertainties in a matter of so much importance, it becomes necessary that the tenure of office of the President of the Senate should be fixed, can it be said that the right to remove such officer on the part of the Senate should supersede the right of Congress to designate him as heir-expectant of the presidency? Or, to put the proposition in another shape, if Congress under an express provision of the Constitution has the right to cast upon the President of the Senate duties and powers, either *in presenti* or in expectancy, which are in conflict, or which may come in conflict, with the right of the Senate to remove such officer, derived by implication, which powers shall prevail? The right of this body to remove this officer is a right derived by implication, while the other right exercised by Congress is in virtue of an express power given by the Constitution. The Constitution made it the duty of Congress to declare by law what officer shall exercise the executive office of the nation when left vacant by both the President and Vice-President. Congress accordingly has provided that in such a contingency the office shall be filled by the President of the Senate or the Speaker of the House for the time being. Congress was not invested with the general power to fill the office; but the Constitution requires that it shall provide by law what officer shall act as President in such an exigency.

"The law then designates the President *pro tempore* of the Senate as the officer who shall succeed to the presidency in the contingency mentioned. How will this law operate with the right asserted in behalf of this body to remove that officer at its pleasure? Remember that the law provides that if there be no President *pro tempore* of the Senate the Speaker of the House shall act as President. All experience teaches us that nothing is more dangerous to the peace and security of nations than those conflicts which arise out of disputes about the right to the chief office in the state.

"With the absolute power of removal over the officer who is designated by law to fill the office of President, if the occasion should arise, which I pray it may not, for putting in practice this part of our Constitution, to what intrigue and political excitement would not this power lead in the Senate when it was within its competency to designate the man who should occupy the first place in the nation! The power given in the Constitution to the Senate to choose its own President would in that event be converted into a power to elect a President of the United States. But, sir, this is the body which has the power to remove from office by impeachment. A large partisan majority here and in the other House may remove both the

President and Vice-President, and they may be prompted to do this by the hope of getting some favorite into the presidential office. Mark you that in case of the removal of both the President and Vice-President, the Senate, under the rule insisted upon on the other side, would elect the President. Is it wise to give to that tribunal which alone has the power under the Constitution of removing the President and Vice-President absolute power to name their successor? Need it be said, sir, that little checks like the one we advocate in this case might prove sufficient to save the state? This very power of the Senate to elect or remove a President at pleasure might lead to combinations and conspiracies to promote the fortunes of particular men.

"Why is it that the question now under debate has been brought before us? No complaint has ever been made against the gentleman in the chair on account of the manner in which he has performed his duties. No one supposes that this subject would now be agitated had we not lost the Vice-President. And what does this show? It shows that the Senate is looking beyond the office of President of the Senate, and, recognizing the uncertainties of life, is anxious about the person who might be called to the first office in the Government. And this, in my opinion, is not what the Constitution intended. It did not mean that the Senate should say who should be President in the exigency stated. If it did, very strange language has been employed to convey this meaning. But the Constitution gave Congress the power to decide this question, and that body has designated the officer. According to our view the President of the Senate, selected without reference to any higher duties than belong to that office, would, in the emergency mentioned, succeed to the presidency. In the other case, the Senate would have the power while complying with the letter of the law, and furnishing an officer for the vacancy filling the description in the statute, to exercise in its choice as to the person who should be placed at the head of the Government. Let the present situation illustrate the question. The present presiding officer was elected at a time when no thought was entertained of the death of the Vice-President. He was liable to be superseded at any moment by the latter officer. If during the absence of the Vice-President he and the President died, were removed, or resigned, Mr. Ferry would have become President. In that case there would have been no opportunity for the Senate to engage in a contest about the succession under one view of the law. But how would the case stand under the other view? Should sickness or accident imperil the life of the Chief Magistrate, then the Senate would have the power to exercise a choice as to the person who might be called to the presidency. The selection of a President *pro tempore* of the Senate under such circumstances would become a selection of a Presi-

dent of the United States. And will any man say, or can he say, that with such a momentous issue cast upon this body there would not be much of the feeling, the acrimony, passion, and excitement, and with them much of the danger, attending an ordinary election for that high officer?

"But, sir, this is not all. As I said a while ago, the Constitution provides that if there be no President *pro tempore* of the Senate, the Speaker of the House, in the emergency stated, shall act as President. Remember now that while this body may bind its own members by its decision respecting the capacities and powers of its own presiding officer, so far as these relate to his ordinary duties in this body, it cannot claim the right to bind, and it cannot bind by any decision it may make, the other House of Congress in regard to this right of removal, in so far as that right involves the question of title to the presidency. The House of Representatives, being equally interested in this question with the Senate, has a right to decide for itself. And this body may confirm this report, and affirm that the Speaker of the House is removable at the will and pleasure of that body, and that therefore the President of the Senate is removable at the pleasure of this. And I would say here, by way of parenthesis, that the conclusion arrived at is, because the Speaker of the House is removable at the will and pleasure of that body, the President *pro tempore* is likewise removable by this."

Mr. Merrimon: "What authority is there for saying that the Speaker of the House may be removed at the will of the House?"

Mr. Jones, of Florida: "None. The people's Representatives may possibly come to a different conclusion, and they may say, as they have the right to say, that their Speaker holds his office for two years, and is not removable at pleasure, and that the presiding officer of this body holds his office by a like tenure. It is hardly necessary for me to say what conclusion this reasoning will justify. If the Senate should act upon the theory of this report and displace their President when in the judgment of the House they had no right to do so, and a vacancy occurred in the office of President, the House might be found claiming the office of President of the United States for their Speaker, and the Senate for their President. This condition of things could never result from the law as we understand it; for, although the House might believe in the power of removal as set up in this report, and the Senate in a fixed tenure of office, no harm could come from such a difference. This is all I have to say on this part of the case.

"I contend that by the very words of the Constitution the power of removal does not exist. The Constitution gives to the Senate the right to elect a President *pro tempore* in the absence of the Vice-President. Upon the appearance of the latter officer the right of the

former to the chair terminates. The language is:

The Senate shall choose their other officers, and also a President *pro tempore*, in the absence of the Vice-President, or when he shall exercise the office of President of the United States.

"The language in regard to the Speakership is:

The House of Representatives shall choose their Speaker, and other officers.

"No one who has studied the Constitution can fail to detect the pointed difference in the language employed in the two cases. The Senate is not to choose their President *pro tempore* and other officers, but their own officers and a President *pro tempore*."

The Presiding Officer: "A division is called for. The question is on the first resolution, which will be reported."

The Chief Clerk read as follows:

Resolved, That the tenure of a President *pro tempore* of the Senate elected at one session does not expire at the meeting of Congress after the first recess, the Vice-President not having appeared to take the chair.

The question being taken by yeas and nays, resulted—yeas 59, nays none; as follows:

YEAS—Messrs. Alcorn, Allison, Anthony, Bayard, Boggy, Booth, Boutwell, Bruce, Burnside, Cameron of Wisconsin, Christianity, Clayton, Cockrell, Conkling, Conover, Cooper, Cragin, Davis, Dawes, Dennis, Dorsey, Eaton, Edmunds, Frelinghuysen, Goldthwaite, Gordon, Hamilton, Hamlin, Harvey, Howe, Ingalls, Jones of Florida, Kelly, Kernan, Key, McCreery, McDonald, McMillan, Merrimon, Mitchell, Morrill of Vermont, Morton, Norwood, Oglesby, Patterson, Randolph, Ransom, Sargent, Saulsbury, Sherman, Spencer, Stevenson, Thurman, Wadleigh, Wallace, West, Whyte, Withers, and Wright—59.

ABSENT—Messrs. Cameron of Pennsylvania, Caperton, English, Ferry, Hitchcock, Johnston, Jones of Nevada, Logan, Maxey, Morrill of Maine, Paddock, Robertson, and Windom—13.

So the resolution was adopted unanimously.

The Presiding Officer: "The next question is on the second resolution; which will be read."

The Chief Clerk read as follows:

Resolved, That the death of the Vice-President does not have the effect to vacate the office of President *pro tempore* of the Senate.

The yeas and nays were ordered; and being taken, resulted—yeas, 62; nays, none; as follows:

YEAS—Messrs. Alcorn, Allison, Anthony, Bayard, Boggy, Booth, Boutwell, Bruce, Burnside, Cameron of Wisconsin, Caperton, Christianity, Clayton, Cockrell, Conkling, Conover, Cooper, Cragin, Davis, Dawes, Dennis, Dorsey, Eaton, Edmunds, English, Frelinghuysen, Goldthwaite, Gordon, Hamilton, Hamlin, Harvey, Howe, Ingalls, Jones of Florida, Kelly, Kernan, Key, McCreery, McDonald, McMillan, Merrimon, Mitchell, Morrill of Maine, Morrill of Vermont, Morton, Norwood, Oglesby, Patterson, Randolph, Ransom, Sargent, Saulsbury, Sherman, Stevenson, Thurman, Wadleigh, Wallace, West, Whyte, Windom, Withers, and Wright—62.

ABSENT—Messrs. Cameron of Pennsylvania, Ferry, Hitchcock, Johnston, Jones of Nevada, Logan, Maxey, Paddock, Robertson, and Spencer—10.

So the resolution was adopted unanimously.

The Presiding Officer: "The question is now on the third resolution."

The Chief Clerk read as follows:

Resolved, That the office of President *pro tempore* of the Senate is held at the pleasure of the Senate.

Mr. Thurman, of Ohio, said: "The solution of this question is perhaps somewhat difficult, although it is within a narrow compass; and it depends, I imagine, upon the inquiry whether the words '*pro tempore*,' in the clause of the Constitution that has been read, are used in that instrument in a technical parliamentary sense, or whether their meaning is fixed by the context of the clause in which they occur. If they are used in a technical parliamentary sense, then it seems to be admitted on all hands that the President *pro tempore* is subject to removal like the Speaker *pro tempore* of the House, in case there should be such an officer there, or any other *pro tempore* official. In other words, according to the technical parliamentary sense of the words '*pro tempore*' in relation to the tenure of an officer, they mean the same as '*durante bene placito*'—during our good pleasure.

"But it is said, and argued with great force by the Senator from North Carolina (Mr. Merrimon) and the Senator from Florida (Mr. Jones), that these words are not used in a mere technical parliamentary sense, but that their meaning is fixed by the context of the clause in which they occur; and that is: 'The Senate shall choose their other officers, and also a President *pro tempore*, in the absence of the Vice-President, or when he shall exercise the office of President of the United States.' It is argued with force, that it is not said that the Senate shall choose a President *pro tempore*, to hold his office during the good pleasure of the Senate; that there is no such limitation as that 'during the pleasure of the Senate;' and it is said, further, that the '*tempus*' that is contemplated here is the absence of the Vice-President, or his discharge of the duties of President, which necessitates his absence, or is another case of absence; and it must be admitted that, looking at the clause, giving it a natural construction, there is great force in that argument. They shall choose also a President *pro tempore* in the absence of the Vice-President, or when he shall exercise the office of President of the United States. Whenever the Vice-President shall exercise the office of the President of the United States, the Senate shall choose 'a President *pro tempore*,' not a President to-day, and another to-morrow, and another the day after, to hold merely during the pleasure of the Senate, but a President *pro tempore* for that occasion, for that time. There certainly is very great force in this view of the Constitution, and there is also very great force in the reasons that have been suggested of a more enlarged and general nature. Nevertheless, Mr. President, I cannot say that I am perfectly clear in my own mind which con-

struction ought to prevail; and, inasmuch as the question as now before us is a mere abstract question, as it is not necessary for us to determine it at all, and it cannot become necessary for us to determine it after the passage of the first and second resolutions unless somebody shall move to proceed to the election of a President *pro tempore*, and thus to displace the present incumbent; as we have unanimously voted that he is rightfully President *pro tempore* now, and nobody has yet moved to displace him by proceeding to another election, it is very obvious that any decision we might make upon this third resolution at this time would be what lawyers call *obiter dictum*. I, therefore, in order that the matter may undergo further reflection and consideration before we decide upon it, move that the resolution be postponed indefinitely."

The Presiding Officer: "The Senator from Ohio moves to postpone the resolution now under consideration, indefinitely."

Mr. Edmunds, of Vermont, said: "Mr. President, the Senator from Ohio has so much surprised me by his expression of a doubt upon this subject, that, in order that I may reflect upon the matter, I move that the Senate adjourn."

The motion was agreed to.

In the Senate, on January 12th, the President *pro tempore* said: "The question is on the motion of the Senator from Ohio (Mr. Thurman) to postpone indefinitely the third resolution."

Mr. Edmunds: "Mr. President, I am so much surprised at the doubt my friend from Ohio (Mr. Thurman) expressed about this thing that I think it necessary for me to say a few words upon the subject for my own satisfaction, if not for that of anybody else.

"The power of the Senate to elect a President *pro tempore* is one which is named in the Constitution. It is there provided—

The Vice-President of the United States shall be President of the Senate, but shall have no vote, unless they be equally divided.

The Senate shall choose their other officers, and also a President *pro tempore*, in the absence of the Vice-President, or when he shall exercise the office of President of the United States.

"I think it obvious, from the well-known course of law existing at the time the Constitution was formed, that this clause empowering the Senate to choose a President *pro tempore* was inserted merely to rebut an implication that would arise from the statement that the Vice-President shall be President of the Senate. If that clause had not been put into the Constitution there would have been no need to insert the other, that the Senate should have power to choose a President *pro tempore*, any more than there would have been to insert in the powers of the House of Representatives a power on the part of that body to choose a Speaker *pro tempore*; and no such clause is introduced into it because, as I say, it was well known, from the constitution of all

parliamentary or other deliberative bodies, that it is one of their inherent powers, in order that they may act at all, in order that they may exist in any active sense, that they shall select some person to preside over their deliberations.

"Therefore it appears to me plain, in the first place, that this clause touching the power of the Senate to elect a President *pro tempore* was merely put in to exclude the presumption which might otherwise have arisen from the preceding clause which states that the Vice-President of the United States shall be the President of the Senate—to exclude the presumption that that was an exclusion of the power of the Senate to have a President *pro tempore* in his absence, and the Senate in that case, of course, would be obliged to wait until he should come, just as for a long time in England the House of Commons were totally unable to do any business at all, according to their precedents and usages, when the Speaker was absent or sick or unable to take the chair; for they had no power, as they then understood, growing up as they did, to select anybody to act as Speaker *pro tempore*. They got over that delusion, however, I will add, a good while ago; but that used to be the first impression.

"Inasmuch as this first clause would be a direct declaration that the Vice-President of the United States, and he alone in a legal sense, should be the President of the Senate, in order to guard against any question that might arise as to the ordinary power of the Senate to exercise what would otherwise be one of its inherent functions, this additional clause was inserted, that in the absence of the Vice-President, or while he exercised the duties of President of the United States, the Senate should choose a President *pro tempore*.

"Then the question is, what is a President *pro tempore*? The Constitution does not say 'they shall choose a President to fill the vacancy caused in the presidency of the Senate when the Vice-President exercises the office of President of the United States,' which is for a fixed period, when the President dies, during the whole period of his unexpired term. So I conclude that if the Constitution-makers had intended that the President *pro tempore* of the Senate, in spite of the very meaning of those words, should be an officer who had a title to an office which was continuous, determined either by the efflux of time or by some external contingency, they would have said so and would have declared, when they were regulating the office of the President *pro tempore* of the Senate, that this officer should hold his office until the Vice-President should again take the chair or until the expiration of the term of the Vice-President who had been transferred to the performance of the duties of President of the United States. That would have most naturally occurred to everybody who had intended that the Presiding Officer of the Senate should be an

officer irremovable at the pleasure of the Senate, as upon all principles it is agreed that but for this clause he would have been. I think that was admitted in the debates by gentlemen on the other side. It would have been easy for them to have said so; and had it been in their minds there can be but very little question that they would have said so, as it appears to me.

"But what does 'President *pro tempore*' mean? It has never been held, that I know of, until this discussion, that '*pro tempore*' means during the period of the absence of the Vice-President or during the period that he is exercising the functions of President of the United States; '*pro tempore*' does not mean that, or it never did until now. It has always been understood to mean—and I believe there is as little question about its uniformity of construction as of any words that ever appear in proceedings—'for the time being;' that is, the instant, the present time, and not for any future time, either to-morrow or next day. A president or an officer, anything 'for the time being' is for the present time, and to-morrow would be another time; and, but for the construction that we have put upon this clause of the Constitution, and which we have affirmed by the resolutions we have already adopted, I should have had no doubt that it would have been the duty of the Senate every morning during the absence of the Vice-President to elect a President *pro tempore* for that day. I should have had no doubt about it at all; but we have construed by a long course of usage the duration of the office of our President *pro tempore* not to terminate with the particular day of our session upon which he is called to the chair; and so we have affirmed it now to be our law, and I believe it to be.

"I am fortified in this opinion completely by the state of the English law upon the subject at the time the Constitution was made, and, indeed, ever since, until quite recently. Of course everybody knows that the Senate was constituted upon the model of the House of Lords. Senators do not hold their offices for life, as the Lords do, but they hold them independent of direct elections by the people. They are selected by other bodies than the people—by the Legislatures of the States—and they have a limited term. Like the Lords, they have regularly a Presiding Officer who is not one of their body, but who is an independent and external officer, if I may use that phrase. The Lord Chancellor in England, or, if he be dead, the Lord Keeper of the Great Seal, is the regular Presiding Officer of the House of Lords, not a member of the body, having no vote. In the practice of the House of Lords and under its immemorial proceedings, when the Lord Chancellor was absent, just as we say 'when the Vice-President is absent,' the Lords chose a Speaker of the Lords *pro tempore*, the very phrase being used in all the journals and proceedings, as well-known a parliamentary com-

mon law in England as any other law that existed in England at the time our Constitution was made. But you will find, when you look at the journals of the Lords, that although their standing order reads, as it appears in May's book on parliamentary law—I cannot find the original order—that they are to choose a Speaker *pro tempore* 'during the vacancy,' which is a much stronger term than simply '*pro tempore*;' yet every morning they choose a fresh Speaker *pro tempore*, usually the same gentleman, of course; but I am speaking of the officer. He only holds by virtue of the standing orders of the Lords from day to day, and the first thing after prayers are said and the House is counted, in the absence of the Lord Chancellor, is to elect a Speaker *pro tempore*, and he holds through that day. The next day, the Chancellor not appearing, the same ceremony is gone through with, until the Lord Chancellor appears.

"I say that the wise men who framed the Constitution and who were modeling it in this respect somewhat upon the methods and proceedings and characteristics of the government with which they were most familiar, in providing for this President *pro tempore* of the Senate in the absence of the Vice-President, must have expected that those words would have the same construction that they were known to have by the immemorial practice and common law of the House of Lords in Great Britain. So then our historic knowledge, as well as the words of the Constitution, clearly proves to my mind that the President *pro tempore* holds his office at the pleasure of this body, and that every day, if we like, we may select another officer, and but for our long practice—a very convenient one, too, indeed—I should have said, if the question were a new one, that he would only hold his office from day to day, without an order of the Senate, which it would be perfectly competent to make, of course, that he should hold for any definite length of time or until the reappearance of the regular Presiding Officer.

"But certainly, Mr. President, whatever may be said upon this topic, the Constitution does not fix the term of the President *pro tempore*. The most that can be said is that it leaves it open to doubt and dispute. It does not define how long he shall exercise the powers of that office. Now, then, the law in this country is perfectly well settled (and every lawyer, I suppose, is familiar with it), decided by the Supreme Court of the United States more than once, that where the Constitution does not fix—that is the language of the court—the term of an officer appointed under the Constitution, he is removable at any time at the pleasure of the appointing power. I am not now discussing the question of removals by the President, whether with or without the consent of the Senate. That is open to dispute, as we all understand. But as the Supreme Court say, in the case of Hennen, in 18 Peters's Reports

(which I have brought in for any gentleman to read if he likes), whether the assent of the Senate be necessary to a removal by the President of an officer appointed under the Constitution, all parties agree, and it is clear law, that the appointing power, the whole body of the appointing power, has the clear right to remove at its pleasure any officer appointed under the Constitution whose term of office is not fixed by it. The Constitution confessedly does not fix the term, by any definite language of any sort, during which this officer shall exercise his functions. It does not say that he shall hold until the end of the term of the Vice-President who is exercising the office of President of the United States, or that he shall hold until the Vice-President returns. It says he shall hold '*pro tempore*.' Now, it is said to be open to doubt whether '*pro tempore*' means for the time being or for some future time to be determined by some subsequent event; but in any case, as the Constitution has not defined how long this officer shall hold, the law is clear, as with every other officer of the United States whose term is not fixed, that the power of appointment includes the power of removal and change. When, therefore, the Senate of the United States has power to appoint a President *pro tempore* and other officers, as the committee so well state in their report, there is carried in that grant of power also the right to change those officers at pleasure. So it appears clear to me that this third resolution declares a plain principle of law, which is binding upon us, and which it is our duty for the benefit of the future to declare."

Mr. Wallace, of Pennsylvania, said: "Will the Senator from Vermont permit me to ask him whether this resolution would cover the case of the devolving of the presidency of the United States on the incumbent of the chair, the President of the Senate *pro tempore*? In other words, does he hold that the Senate would have the power to change the President *pro tempore* of the Senate after the presidency of the United States had been cast upon him by the operation of the act of 1792?"

Mr. Edmunds: "This resolution does not refer to that question at all. We are merely asserting the general power of the Senate. Whether the Senate would have power to change its President *pro tempore* after he by law should be required to perform the duties of President of the United States is of course entirely another question. If it is of any advantage to my friend from Pennsylvania to know my opinion, although it is entirely outside of this debate, I will state it frankly. I think the power of the Senate over its President *pro tempore*, which exists in the nature of its own body and under the Constitution, cannot be cut short by any act of Congress whatever."

Mr. Morton, of Indiana, said: "Mr. President, until this question was brought before the committee I had never heard a suggestion

from any source that the President *pro tempore* of the Senate was not removable at the pleasure of the Senate. I have no doubt that the reason for saying anything about the Senate having power to elect a President *pro tempore* grew out of the clause suggested by the Senator from Vermont (Mr. Edmunds). The fourth clause of the third section of the first article says:

The Vice-President of the United States shall be President of the Senate, but shall have no vote unless they be equally divided.

"Now, to rebut the presumption that he was the only President of the Senate, and that the Senate could not hold a session in his absence, the next clause provides that in his absence the Senate may elect a President *pro tempore*. When the Vice-President is absent the Senate is then on the same footing with every other deliberative body; that is, it has the power to elect its own presiding officer. The Constitution makes the Vice-President *ex officio* the President of the Senate. The Senate has no control over him except by impeachment, articles being preferred by the House of Representatives. That is an arbitrary provision, not common to most deliberative bodies. Then, to rebut any presumption that in the absence of the Vice-President the Senate could not hold a session, but must wait until he came back, it provides that the Senate may elect a President *pro tempore*. In other words, it simply puts the Senate then on the footing of other deliberative bodies that elect their own presiding officer.

"What is the law in regard to deliberative bodies that elect their own presiding officer? The general law established by parliamentary usage, not only in England, but in this country, and every other country in State Legislatures, in city councils, whatever may be the grade or character of the presiding officer, or of the body, is that in the absence of any provision giving to them another person as a presiding officer they may elect their own presiding officer, and remove him at pleasure. The common parliamentary law is that a presiding officer elected by the body itself holds at the pleasure of the body. I will read from Cushing's 'Treatise on Parliamentary Law:'

It is essential, also, to the satisfactory discharge of the duties of a presiding officer, that he should possess the confidence of the body over which he presides, in the highest practicable degree. It is apparently for the purpose of securing this necessary confidence that the presiding officer is required to be chosen by the assembly itself, and by an absolute majority of votes; that he is removable by the assembly at its pleasure; and that he is excluded from all participation in the proceedings as a member. Each of these particulars requires to be briefly considered.

"Again:

The presiding officer, being freely elected by the members, by reason of the confidence which they have in him, is removable by them, at their pleasure, in the same manner, whenever he becomes permanently unable, by reason of sickness or otherwise,

to discharge the duties of his place, and does not resign his office; or whenever he has in any manner, or for any cause, forfeited or lost the confidence upon the strength of which he was elected.

"That is the common law applicable to all deliberative bodies who elect their presiding officers; and the reason is just as strong here as it is anywhere else. Now, let me consider for a moment the arguments that have been offered on the other side. First, the argument offered by my friend from North Carolina (Mr. Merrimon). He admits that the Senate can remove a President *pro tempore* for cause.

"The Senate, according to his admission, may of its own motion change this officer; he says 'for cause.' Who is to judge of that cause? The Senate. Whether it be good cause or bad cause, indifferent cause or no cause at all, the Senate is the exclusive judge of it. It may be because he has committed high crimes and misdemeanors, or it may be that he does not represent the sentiments of a majority of the body, or that he is not satisfactory as a presiding officer, or for any other reason. The Senate may remove him, he says, for cause. Well, as the Senate is the exclusive judge of that cause, it seems to me that admits the whole case. When the Senate comes to make the removal, it is not bound to assign a cause; it is not bound to give any reason for it. It is presumed there must be some cause, but whether the cause is sufficient, reasonable, or unreasonable, the Senate is the exclusive judge. Therefore it amounts simply to this, that the Senate, according to his own admission, may change the Presiding Officer at pleasure."

Mr. Norwood, of Georgia, said: "Suppose the President of the United States were to die to-day; would not our present President *pro tempore* be President of the United States to-morrow; and, if so, could we change him, and elect another man to that office to-morrow morning? Would he not become instantly upon the death of the President of the United States the occupant of the executive office? Could we then to-morrow by a vote here change that officer?"

Mr. Morton: "I think I comprehend the question of the Senator from Georgia, and that it is this: When the duties of President of the United States are devolved upon the President *pro tempore* of the Senate by the death of the President of the United States, can the Senate then change the President *pro tempore* at pleasure, and thus in effect change the Executive of the nation? That is the question. Upon that point I am not prepared to answer. I do not know what would be the effect of the law of 1792; whether that law would have the effect to fix the tenure of the President *pro tempore* or not; but that it can have no effect upon his office before the contingency happens is perfectly clear. Until that time comes the question suggested cannot be raised."

Mr. Kernan, of New York, said: "Suppos-

ing the President of the United States dies, and the President *pro tempore* of the Senate enters upon the functions, and is acting as President, could not the Senate appoint a new President *pro tempore*?"

Mr. Morton: "That is precisely one of the difficulties surrounding this question. That contingency has never yet happened. It was seriously discussed among Senators when the impeachment of President Johnson was pending, whether, in case the President *pro tempore* of the Senate should have the duties of the President of the United States devolved upon him, he would have to leave this Chamber, and we elect another. That was a question which was then considered; and it is not free from doubt. My own impression is that he is still the President of the Senate, and that he has the duties of President of the United States devolved upon him in addition thereto; and I am informed, in regard to the President of the Senate in one of the States upon whom the office of Governor devolved, the Governor having been impeached and removed from office, that the construction there was given to a similar provision that the President of the Senate was still presiding officer of the body, and came into the Senate every day and called the body to order, and then called a member to the chair. I believe that was the case in Arkansas."

Mr. Norwood: "We are now construing a clause in the Constitution which gives us power over the President *pro tempore* to make and unmake him, as I understand the Senator from Indiana to contend. Now, if his position be correct, would it not follow that the act of Congress would divest the Senate of a constitutional power? The act provides for this officer becoming President of the United States, and in that event we should lose control of him. In that event the act of Congress would supersede a power vested in the Senate by a provision of the Constitution, which would be a legal impossibility."

Mr. Morton: "I said that that was a question about which there was doubt; but my impression off-hand is that he would still be President *pro tempore* of the Senate, even after the duties of President of the United States had been devolved on him under the act of 1792. But I say this in answer to my friend from Georgia, that the effect of the Constitution, what this provision means, certainly cannot be changed by the subsequent passage of a law. The act of 1792 can have no effect upon the construction of this provision of the Constitution."

Mr. Norwood: "Now, then, if I understand the Senator from Indiana, his position is that notwithstanding the President might die to-day and the President *pro tempore* of the Senate become President of the United States to-morrow, by operation of the act of 1792, we still could exercise our constitutional power over that officer as the President of this body and change him."

Mr. Morton: "That is my impression; but that case has not occurred. I simply mean to say that whatever may be the effect of the act of 1792 in fixing the term of the President *pro tempore*, it can have no such effect until the contingency takes place, even if the Senator is right about it. It cannot have that effect in advance of the happening of the contingency."

Mr. Norwood: "Would it not follow, then, I will ask the Senator, by the exercise of the power for which he contends, that the Senate of the United States would have the constitutional power to elect a President of the United States?"

Mr. Morton: "No, sir; not the President of the United States."

Mr. Norwood: "If the President *pro tempore* of the Senate becomes President of the United States *eo instanti* on the death of the President, and we the next day can change that officer, an officer of this body, and put another in the chair, would we not virtually elect the President of the United States?"

Mr. Morton: "We would not elect a President of the United States at all, I submit to my friend. The President *pro tempore* of the Senate does not become Vice-President; he simply is the presiding officer of the Senate. He does not lose any of his functions as Senator; he votes on every question; his name is called on the roll; and he has a right to call any other member to the chair and come down and take part in the debates. He is in no sense the Vice-President of the United States; and when the duties of President of the United States are devolved upon the President of the Senate *pro tempore*, he does not become President of the United States, but he is simply performing the duties of that officer for the time being under the law."

Mr. Stevenson, of Kentucky, said: "Mr. President, I desire to say that the usage of the Senate upon the question of the tenure of the President *pro tempore* for seventy years has been directly opposed to the argument of the Senator from Indiana. I confess frankly that precedents in legislation are not necessarily conclusive evidence of what the law is. But when there has been, as in this case, a long, unbroken series of precedents, always in one direction, it is strongly persuasive that their construction of this clause of the Constitution is the true one. This argument finds additional support when we ascertain such jurists as Judge Collamer, of Vermont, and James A. Bayard, of Delaware, able and honored members of the legal profession, opposed in political sentiment, concurring in opinion that the office of President *pro tempore* of the Senate is one of fixed tenure, and is not subject to removal at the mere pleasure of the Senate. The debates in 1861 show that Senators Collamer and Bayard differed—not upon the point of the permanency of the tenure of the President *pro tempore*, not upon the point that that officer did not hold his appointment at the mere pleasure of

the Senate, as the pending resolution asserts. No, sir; they differed alone upon the point upon the duration of the appointment. Mr. Collamer held that the President *pro tempore* continued to hold his position during the absence of the Vice-President, during the senatorial term of such officer, and that the return of the Vice-President to the Senate did not terminate the tenure of the appointment of President *pro tempore*; while Mr. Bayard, upon the other hand, argued that the true limitation of the tenure of the President *pro tempore* during his term as Senator was the return of the Vice-President. In other words, as soon as the Vice-President took his place in the Senate the office of President *pro tempore* ceased, and another election became necessary.

"Both these eminent legal minds concurred in opinion that it was not competent for the Senate to remove the President *pro tempore* at their whim and pleasure. The views of each were in direct opposition to the report of the committee and to the conclusions reached by them.

"There was no difference of opinion between them on the point that the office of President *pro tempore* was fixed by the Constitution, although they reached different results as to its duration.

"I concur in the opinion of Mr. Bayard, so ably vindicated by the masterly argument of the Senator from North Carolina (Mr. Merriam). I could, I am sure, add nothing to what was so forcibly and well said by him in support of his views of this question, and in which I so heartily concur, and I should say nothing but for the construction so earnestly insisted upon by the Senator from Indiana (Mr. Morton) in his argument to-day, and which, if it prevail, may lead to pernicious results, foreseen by the framers of the Constitution, and intended to be avoided and guarded against by this clause of the Constitution creating the office of President *pro tempore* of the Senate.

"The honorable Senator from Indiana insists that the act of 1792, declaring that the President *pro tempore* shall, upon the happening of certain contingencies, become President of the United States, cannot change the Constitution. I admit it. But that Senator will not deny that an act of Congress, passed so shortly after the adoption of the Constitution as this act of 1792, constitutes a strong contemporaneous implication as to what the framers of the Constitution intended in creating the office of President *pro tempore* of the Senate, and as to what that Congress thought as early as 1792, was the true construction of that clause of the Constitution creating that office.

"Examine the clause itself:

The Vice-President of the United States shall be President of the Senate, but shall have no vote, unless they be equally divided.

"The Constitution creates this office. The incumbent is not elected by the Senate. He holds his office independently of the body over

which he presides. This is an exception to usages of parliamentary law, which allows deliberative bodies to choose their presiding officers. There is no disagreement or doubt on this point. The Constitution then proceeds:

The Senate shall choose their other officers, and also a President *pro tempore*, in the absence of the Vice-President, or when he shall exercise the office of President of the United States.

"The Senator from Vermont (Mr. Edmunds) says that nobody questions the right of the Senate to choose its officers. That is a canon in parliamentary law disputed by nobody. Let that be admitted. Let it further be conceded that the framers of the Constitution were well and thoroughly versed in parliamentary law, and, being so versed, none knew better than they that the Senate possessed the right, under that law, to choose a presiding officer in the absence of the Vice-President. With this knowledge of parliamentary usage the pertinent question arises: Why did they insert this latter clause and create the President *pro tempore* of the Senate a constitutional officer? It was wholly unnecessary, as argued by the Senator from Vermont. The Senate possessed the right to elect a President *pro tempore*. Why should the Constitution create this office? Why did the wise men who framed that instrument create an office and define its duties? They surely had an object in its creation. What was it? In the legal construction of any instrument no canon of the law is more strongly established or better recognized than that you shall so construe it as to make all its provisions harmonize, if possible, and that effect shall be given to every expression contained therein.

"The first question which arises in the clause of the Constitution is: What was the intention of the framers of this Constitution in creating the President *pro tempore* of the Senate a constitutional officer? The Senate would have had the right to choose him without it. It will not do to say that this is an unnecessary provision; it would be disrespectful to the memory of those wise men to say that this clause is mere surplusage. You must, therefore, so construe this clause as to give to it some definite effect. You must search for the intentment of the framers in creating this office of *pro tempore* President of the Senate. When you do so, I am clearly persuaded that their purpose was to make him a permanent officer. Permanent how long? Clearly during the absence of the Vice-President. But is that the entire limitation? No, sir! The Constitution says in addition, during the period the Vice-President is discharging the duties of President of the United States in the event of the death or removal by impeachment of the latter-named officer. I admit that the tenure of the President *pro tempore* is of uncertain duration. Still its tenure is fixed and determined, not by the Senate, but by the Constitution; not for any specified time, but during the absence or

death of the Vice-President, or while he is discharging the duties of President. If the Vice-President returns to the Senate and takes the chair, the tenure of the President *pro tempore* is determined and ceases, and a new election is legal. If the Vice-President never returns, then the President *pro tempore* continues until his term of Senator expires; hence the act of 1792 by its provisions recognizes this construction of the clause as the true intentment of the framers of that instrument. Hence a uniform series of precedents for seventy years in recognizing the President *pro tempore* of the Senate during the absence of the Vice-President and until his return as its permanent presiding officer, not removable except for cause."

Mr. Conkling, of New York, said: "Suppose, in such an event as has been suggested, the President *pro tempore* of the Senate should enter upon the execution of the duties of President of the United States and his term as Senator should expire before the end of the presidential term, is it the opinion of the Senator from Kentucky that he would continue to be acting *ex officio* as President of the United States, although the term of his senatorship, by virtue of which he came to be President *pro tempore*, had expired?"

Mr. Stevenson: "I should think that he would continue to be President until the Governors of the several States had, after being notified by the Secretary of State of the death of the President, caused an election of an electoral college, and a new election of President had taken place under the provisions of the act of Congress. The strongest answer against the argument of the Senator from Indiana (Mr. Morton), as I think, is to be found in the extraordinary results which might practically follow his construction.

"The act of 1792, in the event of the death of the President and Vice-President, makes the President *pro tempore* President of the United States until a new election can be held in accordance with the provisions of that act.

"Does the Senator from Indiana sincerely believe that the Senate of the United States could remove at its pleasure the President *pro tempore* of the Senate after he became President of the United States? If the argument in favor of the right of the Senate to remove the President *pro tempore* at its pleasure be correct, the right to remove him after he was President would follow. If not, why not? Indeed, I understood the honorable Senator to claim that this right of the Senate to remove its President *pro tempore* would extend to him even if he was President of the United States. In support of that postulate, he insisted that in some of the States a Lieutenant-Governor who had become Governor still presided over the Senate of the State when the State constitution contained provisions somewhat similar to that which we are now considering. He cited Arkansas, and was sustained in his

statement by the Senator from Arkansas that such was the usage in his State. I shall certainly take no issue with the Senator from Arkansas as to what the provision of the constitution of that State is, or what has been the usage under it. But I think I can say, both to the Senate and to the country, if the Arkansas constitution contains such a provision, and the president *pro tempore* of the Arkansas Senate after being Governor still presided over the Senate, that out of the thirty-seven States which constitute this Union Arkansas is the solitary State where such an anomaly exists. The case cited by the Senator from Indiana of the President of the Senate becoming Governor of the State occurred in Kentucky. Indeed, it occurred while I discharged the executive duties of that Commonwealth. I was elected Lieutenant-Governor on the State ticket in 1857 with Hon. John L. Helm, who was elected Governor. Governor Helm died within a few days after taking the oath, at his own home in Hardin County, and without ever reaching the seat of government. By his death I as Lieutenant-Governor became acting Governor of the Commonwealth of Kentucky and acted as such for one year, when I was elected Governor. There was then no Lieutenant-Governor, the law having made no provision for the election of one. The Lieutenant-Governor, by the terms of the constitution of Kentucky, is elected by the people and presides over the Senate. When I was elected Governor, the Senate of Kentucky elected Hon. P. H. Leslie president of that body, who, when I was elected to this body, was qualified as Governor and served out my unexpired term. Had the people of Kentucky been informed that Governor Leslie after qualifying as Governor could still have presided in the Senate, or that he was subject to removal from the office of Governor except for cause, I am sure they would have been confounded.

"Mr. President, any construction of any clause of the Constitution of the United States, or the constitution of any State, which would confer upon the Senate of the United States the right to remove at its pleasure the President *pro tempore* after he had become President of the United States, without cause and at its pleasure, or which would in a State authorize the Senate to remove the president *pro tempore* after he had become invested with the executive duties as Governor or acting Governor, must be erroneous. Such a construction carries its own refutation. It would lead to mischief which could not be estimated. It was against such results that the Federal Constitution, in my judgment, intended to provide.

"The intimation of the Senator from Indiana that the President *pro tempore* of the Senate, after becoming President of the United States, might still preside in the Senate, is novel and extraordinary. It seems to be unsupported by law and unsustained by usage. Such a doctrine finds no support in the usage of the State governments, unless in Arkansas."

Mr. Thurman said: "If it does not interrupt the argument of my friend from Kentucky, I can name two instances in my own State in which the governorship of the State devolved on the Speaker of the Senate, and in each of those cases it was decided that the Speaker accepting the office of Governor vacated his seat as senator."

Mr. Conkling: "Does the Constitution devolve the duties on him?"

Mr. Thurman: "In the very words of the Constitution of the United States."

Mr. Conkling: "That he shall act as Governor?"

Mr. Thurman: "Yes, sir; the words are copied from the Constitution of the United States. It was so held for a plain reason, too plain for argument, that it is impossible that the legislative and executive powers or the judicial and executive powers of government can be vested in the same individual.

"Upon the question that is immediately before the Senate, and as to which I have said that I was not entirely clear, but that the impression of my mind was in favor of the views of the minority of the committee, I wish to say a very few words indeed:

The Senate shall choose their other officers, and also a President *pro tempore*, in the absence of the Vice-President, or when he shall exercise the office of President of the United States.

"I wish the attention of the Senator from Indiana for one moment. The Senator says that the power conferred in this clause is precisely the same in respect to the President of the Senate that it is in respect to 'the other officers,' and that if it is competent for the Senate to remove its Secretary, or its Chief Clerk, or its Sergeant-at-Arms, it follows necessarily that it has a like power to remove the President *pro tempore*. I submit to him that he is entirely mistaken in that. There is not one word in this clause that by any implication whatever fixes the duration of the office of any officer of the Senate except the President *pro tempore*. There is not one word in the clause, which, either expressly or by any implication, fixes the term of office of the Secretary of the Senate, of the Chief Clerk of the Senate, of the Sergeant-at-Arms, or of any of those officers who are strictly officers of the Senate. But, when you come to the President *pro tempore*, there are most pregnant words that do intimate, that do raise a fair implication, if they do not express it in fact, that he is to hold during the entire absence of the Vice-President, and, if that absence be caused by death, as in the case now before us, that then he must continue to hold as long as he is a member of the body, unless, in the mean time, another Vice-President has been chosen. Let us see how this matter is:

The Vice-President of the United States shall be President of the Senate, but shall have no vote, etc. The Senate shall choose their other officers.

"Why was the clause 'The Senate shall

choose their other officers' put in at all? The reason of it is very obvious. You will find a like provision in regard to the House of Representatives. It was to give each body the absolute power to choose its own officers. Just for the same reason that each House is made the sole judge of the election, returns, and qualifications of its own members, so the choice of its own immediate servants is vested in each House, and it is to prevent the choice of officers of the Senate, or officers of the House being made a subject-matter of legislation, being governed by law, or being conferred upon any executive authority. It is for that reason alone that the clause is put in here that 'the Senate shall choose their other officers.' Then the Constitution goes on and says: 'And also a President *pro tempore*, in the absence of the Vice-President, or when he shall exercise the office of President of the United States.'

"If the Senator from Indiana is right, why was not this clause condensed so as to say 'the Senate shall choose their other officers, and when necessary a President *pro tempore*?' Why was it not put in those few words? Where was the necessity of putting in words that import a term for which that President is to hold his office? If the Senator from Indiana and the majority of the committee are correct, the whole object would have been accomplished by saying, 'The Senate shall choose their other officers, and also a President *pro tempore* when necessary.' That would have left him in the power of the Senate. But, instead of saying in those few words that the Senate should have the power to elect a President *pro tempore*, they go on to say, 'and a President *pro tempore* in the absence of the Vice-President.' And that is not all: 'Or when he shall exercise the office of President of the United States.'

"It does look as if the plain import of this language was that there is to be such an officer, and it is admitted he is an officer, for, if he is not, he could not become President under the act of 1792, and that act would be unconstitutional. There is to be such an officer as a President *pro tempore* of the Senate, and that officer is elected for an absence of the Vice-President, and if that absence is to be continuous, as in the case of his becoming President of the United States upon the death, resignation, or removal from office of the President, then that Senator, thus President *pro tempore*, is to hold for the whole term.

"That is the natural import of this language, as it seems to me upon further reflection. In view of the language of the Constitution and in view of the fact that it seems to have been the idea of the framers of the Constitution that the presiding officer of this body should have a certain independent status, a certain permanency of tenure of office, and with the strong reasons which have been given favoring this permanency of tenure, I cannot bring myself ultimately to the conclusion that

this is an office held *durante beneplacito*; that we are to turn our presiding officer out one day and put somebody else in; and that, owing to some casual change of majority or change of feeling in the Senate, we are to reverse the thing the next day and reinstate the old officer. I know that there is very little to be gained by supposing extreme cases. There is very little to be gained by supposing that the Senate would do so improper a thing; and yet it might be done in times of high party excitement.

"Then, I think, Mr. President, that there is great force in what was said by the Senator from Florida (Mr. Jones). If you say that the President *pro tempore* can be changed at the will of the Senate, and the House of Representatives should take the opposite view of it, and the office of President of the United States should devolve on the President of the Senate, you might have a conflict between the two Houses as to who was the Chief Executive Magistrate. If, for instance, we were to change our President *pro tempore*, elect some one else in his stead, and (this not being a matter of the special privileges of the Senate, upon which our judgment is conclusive—for upon it depends who shall be President of the United States) if the House of Representatives should take the opposite view and say, 'You have improperly elected a man; you have violated the Constitution by electing a man when there was no vacancy and when you had no power to change your presiding officer,' we can see that there would be a conflict immediately between the two Houses. That may be an extreme case, too—that is to say, a case not very likely to occur—and yet it is a case so likely to occur that it has been thought necessary to provide by law for the event of the death of both the President and Vice-President of the United States, and it is provided for in the Constitution also. The Constitution contemplates that both President and Vice-President may die or their offices become vacant, and it requires Congress to provide for such a contingency, and Congress has provided for it; so that it is not reasoning from extreme cases or improbable hypotheses to say such a case may arise; and, seeing that it may arise, it is possible there may be this conflict between the two Houses if the opinion advocated by the majority of the committee shall prevail. The other opinion, that which makes the office of President *pro tempore* permanent as long as the Vice-President is absent, removes any possibility of danger of a conflict."

The Presiding Officer (Mr. Allison in the chair): "The question is on the indefinite postponement of the third resolution."

The Chief Clerk read the resolution, as follows:

3. *Resolved*, That the office of President *pro tempore* of the Senate is held at the pleasure of the Senate.

The question being taken by yeas and nays, resulted—yeas 18, nays 86, as follows:

YEAS—Messrs. Bogy, Caperton, Cockrell, Cooper, Davis, Eaton, Goldthwaite, Harvey, Johnston, Kelly, Kernan, McCreery, Merrimon, Randolph, Stevenson, Thurman, Wallace, and Whyte—18.

NAYS—Messrs. Alcorn, Allison, Anthony, Booth, Boutwell, Bruce, Cameron of Pennsylvania, Cameron of Wisconsin, Christiancy, Clayton, Conkling, Cragin, Dawes, Edmunds, Frelinghuysen, Hamilton, Hamlin, Ingalls, Key, McDonald, McMillan, Mitchell, Morrill of Maine, Morrill of Vermont, Morton, Oglesby, Paddock, Patterson, Sargent, Saulsbury, Spencer, Wadleigh, West, Windom, Withers, and Wright—36.

ABSENT—Messrs. Bayard, Burnside, Conover, Dennis, Dorsey, English, Ferry, Gordon, Hitchcock, Howe, Jones of Florida, Jones of Nevada, Logan, Maxey, Norwood, Ransom, Robertson, and Sherman—18.

So the motion was not agreed to.

The Presiding Officer: "The question recurs on the adoption of the resolution."

The result was announced—yeas 84, nays 15; as follows:

YEAS—Messrs. Alcorn, Allison, Anthony, Booth, Boutwell, Bruce, Cameron of Wisconsin, Christiancy, Clayton, Conkling, Cragin, Dawes, Edmunds, Frelinghuysen, Hamilton, Hamlin, Ingalls, Kernan, Key, McDonald, McMillan, Mitchell, Morrill of Maine, Morton, Oglesby, Paddock, Patterson, Sargent, Saulsbury, Spencer, Wadleigh, West, Windom, and Wright—84.

NAYS—Messrs. Bogy, Caperton, Cooper, Davis, Eaton, Goldthwaite, Johnston, McCreery, Merrimon, Randolph, Stevenson, Thurman, Wallace, Whyte, and Withers—15.

ABSENT—Messrs. Bayard, Burnside, Cameron of Pennsylvania, Cockrell, Conover, Dennis, Dorsey, English, Ferry, Gordon, Harvey, Hitchcock, Howe, Jones of Florida, Jones of Nevada, Kelly, Logan, Maxey, Morrill of Vermont, Norwood, Ransom, Robertson, and Sherman—23.

So the resolution was agreed to.

The Presiding Officer: "The next resolution will be read."

The Chief Clerk read as follows:

4. *Resolved*, That Hon. Thomas W. Ferry, a Senator from Michigan, who was elected President *pro tempore* of the Senate at the last session, is now the President *pro tempore* by virtue of said election.

The Presiding Officer: "The resolution is withdrawn."

In the Senate, on December 15th, Mr. Edmunds, of Vermont, offered the following resolution:

Resolved, That the joint rules of the Senate and House of Representatives in force at the close of the last session of Congress be, and the same are hereby, adopted as the joint rules of the two Houses for the present session.

The resolution was referred to the Committee on Rules.

On January 10th, Mr. Hamlin, of Maine, from the committee, reported back the resolution, with a proposition to amend by inserting after the word *Resolved*, the words:

By the Senate (the House of Representatives concurring).

Mr. Morton, of Indiana, said: "If it is in order, I move to amend by striking out the twenty-second joint rule."

Mr. Hamlin: "That will be in order after the Senate shall have acted on the amendment proposed by the committee."

The amendment was agreed to.

Mr. Hamlin: "Mr. President, from what is said to me by Senators around me, I apprehend that the scope of the resolution and the subject to which it relates may not be familiar to all the Senate. I will state very briefly what the resolution is. It is a novel proposition. It is such a one as I have never before known in the Senate. I have made some investigation in relation to the matter, and I do not find that from the commencement of the Government to the present time the attention of the Senate has ever been called to the precise point which the resolution raises and brings before us.

"The Senate has its rules. The Senate is an existing body, and its rules exist with the body. The House of Representatives is a body which expires once in two years, and its rules expire, of course, with each expiring Congress. We have besides what we call the joint rules for the arrangement of business between the two Houses—rules that have been concurrently agreed upon by both the House and the Senate; and I think that from the commencement of the Government to the present time—certainly within my recollection—there has been no instance when the Senate or the House has been asked to act at the commencement of any session of Congress upon the joint rules. Occasionally new joint rules are proposed and agreed to; amendments are suggested and agreed to. But what is the condition of things? The House, in its constitutional limit, expires, and with it its joint rules must expire; and if they expire upon the part of the House, they must necessarily expire upon the part of the Senate; and it is only by acquiescence in long years that they have been treated and regarded as rules, and not by an affirmative vote either of the House or of the Senate.

"But the Senator from Vermont now brings the matter to the notice of the Senate, and on looking at it carefully and critically, and in a legal point of view, the committee are unanimously of opinion that the point which he has suggested is one which the Senate certainly should take notice of, at least when it is brought to its attention. To illustrate its necessity, some action of the body is desired under a joint rule to-day, and the Senator rises in his place and interposes an objection that there is no joint rule existing to-day between the House and the Senate to which either the Senate or the present House has agreed, and it would seem to me that in a parliamentary sense that objection would be well taken. True, we may acquiesce in the adoption of such rules as the House may adopt; they may adopt these several rules; but I suggest that in their action this year they have not done so, and I think in the ruling of the Speaker of the House in a very few words he has placed

the matter so clear and so plain that no man can misunderstand it. I call the attention of the Senate to what took place in the other House in relation to adopting rules at the commencement of the session. A member from Pennsylvania (Mr. Randall) submitted the following resolution :

Resolved, That the rules of the House of Representatives of the Forty-third Congress shall be the rules of the House of Representatives until otherwise ordered, excepting Rule 166 and Rule 167.

"I will state that the first of those rules is one in relation to suspending the rules of the House, with which we have nothing to do; and the other is in relation to dilatory motions, and that was a rule of the House with which the Senate have nothing to do. The same gentleman (Mr. Randall) also submitted another resolution—there were two of them—authorizing the Speaker of the House to appoint four Representatives, the Speaker himself to be the fifth member, who should constitute a Committee on Rules in that body. A gentleman from Ohio (Mr. Garfield) raised a question of order, that there was no necessity for adopting the rules of the House. He did not state why, but he said :

I rise to a point of order. I object to the resolution under the existing rules; which are our rules without declaration of this sort.

"I inferred instantly that they had adopted previously some general rule to extend the rules of the House from one Congress to another; and on looking I find that precisely that thing was done, and that was exactly what Mr. Garfield meant."

Mr. Morton: "Will the Senator state that point again?"

Mr. Hamlin: "The gentleman from Ohio raised the question of order that the resolution submitted by the gentleman from Pennsylvania, Mr. Randall, was not necessary, inasmuch as 'the existing rules are our rules without declaration of this sort.' Why did Mr. Garfield say so? He used no explanatory language; I have read all he said; but on referring to the records of the House we find that in 1869 the House did adopt a resolution declaring that the rules should be the rules of that House and of succeeding Houses until otherwise ordered. That was the question raised, and now I will read the ruling of the Speaker upon it, so clear, so plain, that it seems to me there can be no doubt about it:

The Chair overrules it, on the ground that the Constitution clearly gives to each House the right to adopt its own rules. Whatever may have been the rules or orders of a preceding House in reference to this matter, they cannot supersede the constitutional right of this House to adopt its own rules.

"Upon that the resolutions were unanimously agreed to in the House, and the rules of the House were agreed to; but there is no suggestion in that resolution that they shall apply to or that they are meant to apply to the joint rules; and I repeat again that the joint rules

of the two Houses have never been adopted at the commencement of any Congress; at least I have been able to find no such case; but they have been operative only by acquiescence.

"That being the case, and the Senator from Vermont presenting the resolution to the Senate recommending the agreement of the Senate to the joint rules as they stand, the committee were of opinion that if there were a necessity that the Senate should at this session agree to joint rules, there was an equal necessity that the House should also agree to them, and therefore we recommend the amendment of the resolution by making it a concurrent resolution."

The President *pro tempore*: "The question is on the amendment proposed by the Senator from Indiana (Mr. Morton), excepting the twenty-second joint rule."*

Mr. Conkling, of New York, said: "Let it be read."

The Chief Clerk: "After the word 'Congress' in the fourth line, it is proposed to insert 'excepting the twenty-second joint rule;' so as to make the resolution read:

Resolved by the Senate (the House of Representatives concurring), That the joint rules of the Senate and

* The twenty-second rule was as follows:

The two Houses shall assemble in the hall of the House of Representatives at the hour of one o'clock p. m., on the second Wednesday in February next succeeding the meeting of the electors of President and Vice-President of the United States, and the President of the Senate shall be their presiding officer; one teller shall be appointed on the part of the Senate, and two on the part of the House of Representatives, to whom shall be handed, as they are opened by the President of the Senate, the certificates of the electoral votes; and said tellers, having read the same in the presence and hearing of the two Houses then assembled, shall make a list of the votes as they shall appear from the said certificates; and the votes having been counted, the result of the same shall be delivered to the President of the Senate, who shall thereupon announce the state of the vote and the names of the persons, if any, elected; which announcement shall be deemed a sufficient declaration of the persons elected President and Vice-President of the United States, and together with a list of the votes be entered on the journals of the two Houses. If, upon the reading of any such certificate by the tellers, any question shall arise in regard to counting the votes therein certified, the same having been stated by the presiding officer, the Senate shall thereupon withdraw, and said question shall be submitted to that body for its decision; and the Speaker of the House of Representatives shall in like manner, submit said question to the House of Representatives for its decision; and no question shall be decided affirmatively, and no vote objected to shall be counted, except by the concurrent votes of the two Houses; which being obtained, the two Houses shall immediately reassemble, and the presiding officer shall then announce the decision of the question submitted, and upon any such question there shall be no debate in either House; and any other question pertinent to the object for which the two Houses are assembled may be submitted and determined in like manner. At such joint meeting of the two Houses seats shall be provided as follows: For the President of the Senate, the "Speaker's chair;" for the Speaker, a chair immediately upon his left; the Senators in the body of the hall, upon the right of the presiding officer; for the Representatives, in the body of the hall not occupied by the Senators; for the tellers, Secretary of the Senate, and Clerk of the House of Representatives, at the Clerk's desk; for the other officers of the two Houses, in front of the Clerk's desk, and upon either side of the Speaker's platform. Such joint meeting shall not be dissolved until the electoral votes are all counted and the result declared; and no recess shall be taken unless a question shall have arisen in regard to counting any of such votes, in which case it shall be competent for either House, acting separately, in the manner hereinbefore provided, to direct a recess, not beyond the next day at the hour of one o'clock p. m.

House of Representatives in force at the close of the last session of Congress, excepting the twenty-second joint rule, be, and the same are hereby, adopted as the joint rules of the two Houses for the present session.

Mr. Bayard, of Delaware, said: "Mr. President, the effect of a joint rule is a question of exceeding interest, and I confess, for one, my want of knowledge of the precedents of the body on this subject. The effect of the present amendment to this resolution, so far as I have heard it, is to abrogate by the action of the Senate one of the present joint rules of the two Houses, adopted on the 6th of February, 1865. It relates to the exceedingly important subject of the count of the electoral votes. I am one of those who have always believed that this joint rule was unwarranted by the Constitution; that by it powers are assumed distinctively by the two Houses of Congress which are not only not expressly given, but which I do not think are fairly to be implied by the very scant language of the Constitution on the subject. At the last session of Congress, the honorable Senator from Indiana (Mr. Morton) proposed an amendment of this joint rule. I think it was in the shape of a new joint rule, or perhaps it may have been a bill."

Mr. Morton: "The first movement was a rule, and afterward a bill was presented." (*See ANNUAL CYCLOPEDIA, 1875, CONGRESS.*)

Mr. Bayard: "The subject then underwent consideration in very little proportion to its importance. I said then, and I think still, that no time would be so fortunate for the settlement of joint rules between the two Houses of Congress as when the two Houses should be under the control of different parties. A subject like this should rise far beyond the possibility of partisan heats, and the propositions in regard to it and the settlement of those propositions should be made free from anything like the color of party advantage.

"Independent, however, of the question of the power of the two Houses of Congress over this counting of the votes, comes at once the question whether a joint rule adopted by the two Houses falls and becomes void by the expiration of the Congress in which that rule was adopted. So far as the Senate is concerned it will not, I think, be suggested, because this is a continuing body; there is always and at all times a quorum continuing from one Congress to another. It is not so with the House of Representatives, the termination of whose legal existence is at the end of every two years. I should like to learn from those who have examined this subject, and are therefore much more competent to speak of it than I am, whether this has been the understanding or the action of the Senate; because from custom invariable, long-continued, reasonable, and just, the force of law almost is obtained. Certain it is that, under this rule adopted in 1865, the electoral votes for President and Vice-President have three times been counted; and

therefore it is a question of great importance for the Senate and the other House to settle whether a joint rule has a longer life than the Congress in which it is adopted, and whether upon the expiration of that Congress *ipso facto* the rule dies. So far as the Senate is concerned, we all know that the Senate's rules continue, but the question is what effect the different constitution of the other House of Congress has upon a joint rule. It is true that there is a very customary resolution of the House, made, I believe, at the opening of each new Congress, respecting the rules, and I believe at the present session of Congress the usual resolution was passed adopting the rules of the former Congress with two exceptions; but in the Senate I have no knowledge of any such practice, and the peculiar constituency of this body would make such a practice unnecessary, if not irregular."

Mr. Merrimon, of North Carolina, said: "I simply wish to say that the Committee on Rules were unable to ascertain that there was any departure on the part of the Senate from the uniform custom of continuing the joint rules from Congress to Congress. The long experience of our Chief Clerk, embracing about thirty-eight years, knows of no exception, and as far as he has been able to learn, on examination, there has been no exception."

Mr. Morton: "No exception to what?"

Mr. Merrimon: "No exception to the practice that the joint rules continue from Congress to Congress on the part of the Senate. But when the matter was brought to the attention of the Committee on Rules, we could not see how any rule, whether joint or otherwise, of one Congress could be binding upon a subsequent Congress, for the Congress as a Congress lasts but two years. As a legal proposition, if a joint rule is not binding upon the House, how could it be binding upon the Senate? We thought one House of Representatives could not by its own mere construction imply an engagement on the part of a subsequent Congress. The committee went on the ground that if a joint rule was not binding on a subsequent House, it could not be binding upon the Senate in connection with a subsequent House, for an engagement with one Congress is no engagement with another Congress."

Mr. Frelinghuysen, of New Jersey, said: "I agree with the Senator from Delaware, that the twenty-second joint rule is very objectionable. Therefore, it seems to me to be the part of wisdom to adopt the joint rules, leaving out the twenty-second, which is not agreeable generally, I think, to the Senate, and then adopt some rule as a substitute for it. If we leave the rule as it is, everything is unsettled; we must have another rule. It is uncertain, as the matter is left in the twelfth article of amendment to the Constitution, whether the President of the Senate acts merely ministerially, or whether he acts judicially. The law says he is to open the certificates, and the votes then,

in the presence of the two Houses, are to be counted. Counted by whom? Who is to determine whether a vote is lawful or not? Does it require both Houses of Congress acting separately to admit a vote, or are they to be presumed to be lawful votes, so as to require both Houses to reject them? There are a great many questions involved, and it seems to me that this is a propitious time, and that it is our duty to fix this question, so that that danger to the country resulting from the present uncertainty shall be removed."

Mr. Thurman, of Ohio, said: "The resolution now before the Senate rests upon the assumption that the joint rules of the two Houses fall at the end of what is called every Congress, and that they must necessarily do so upon the theory that the House of Representatives expires at the end of every Congress, while it is said that the Senate is a perpetual body. Why is it said that the Senate is a perpetual body? I know of no reason except one, and that is that only one-third of its members go out every two years, so that there is always a sufficient number of Senators in office to constitute a quorum of the Senate."

"The Senate is said to be a perpetual body, because it can be convened at any instant. I say, that the Congress of the United States can be convened at any moment. In the contemplation of our Constitution there is never one moment of time when there is not a Congress of the United States which can be convened upon the call of the President, and in point of fact it is so; for, although some of the States have been accustomed to elect after the 4th of March, as the State of Connecticut, and perhaps the State of Kentucky, yet the great majority of the States elect before the 4th of March, in the fall preceding the 4th of March of the odd year; and I believe that, under an act of Congress which we have passed, and which will go into effect after 1876, all the members of the House of Representatives will be elected before the 4th of March of the year when a Congress expires. But there never has been one day, I believe, since the inauguration of this Government when a quorum of the House of Representatives has not been elected, and a Congress could not have been convened upon the call of the President; and I say the theory of our Government is that all the departments of the Government, executive, judicial, legislative, are in existence at every moment of time. A department of Government is not the less in existence because some seat may be vacant in it. There is no less a Supreme Court because there may be a vacancy on the bench of that court. There is no less a Chief Executive because the President may die. There is no less a Congress because seats on this floor, or in the other House, may be vacant. No, sir; the theory of our Government is that there is a Congress always in existence, and the fact is that there is such a Congress; that at no time, perhaps, in all our

history has there been a single moment when, upon a call of the President, a lawful Congress of the United States could not have been assembled."

Mr. Sherman, of Ohio, said: "The rules of the House of Representatives, I believe it is conceded on all hands, expire with the Congress. There can be no doubt about that; because that has been the universal practice of the Government, I believe, from the beginning. While I was a member of the House there were two or three important occasions when, before the House was organized, it was held that there were no rules. The hour rule, so necessary in the government of the House, was abandoned during at least two periods of stormy contest; and it was agreed on all hands, that the rules of the House of Representatives expired with the Congress, and that no law, no act of Congress even, could prevent it. An act of Congress cannot extend the rules of one House to another, because the Constitution, the supreme law of the land, declares that each House shall make its own rules. By the established practice of the Government from the beginning to this hour, it has been held that the rules of the House of Representatives expire with the Congress, and that no law can operate to extend the rules from one Congress to another, because that would be to violate the Constitution itself. In this respect, the rules of each House are precisely alike. The rules of the Senate are no more operative than the rules of the House of Representatives. We have the power to change them at any moment."

Mr. Morton: "Mr. President, I have always understood the theory of the two Houses to be this: first, that the Senate is a continuing body. That results from the nature of its organization, and also because it is a part of the executive department of the Government. We have had some discussion here within a few days, involving that very question. When the Senate adjourns from one session to another, it is nothing more than a recess of the Senate. It does not differ in point of law from an adjournment from Thursday over to Monday. The officers all continue. We have just decided that a President *pro tempore* of the Senate elected at a former session continues to be President *pro tempore* when the Senate meets in a new Congress. In that way we have recognized the continuous character of the Senate; but I believe I have never before heard it said that the House of Representatives was a continuing body. The Senator from Ohio says that in that respect it is precisely like the Senate. The organization of the Senate is never lost; all the officers continue. If we have a Vice-President, he continues during his term. We have a President *pro tempore*, a Sergeant-at-Arms, and a Secretary, and they continue until the Senate itself makes a change. Therefore the organization of the body is not lost, and every ad-

journalment of the Senate is simply in the nature of a recess. But, Mr. President, that is not the case with the House of Representatives at all. In the House it is just the reverse. The Senator from Ohio (Mr. Thurman) says, that a member of the House is elected for two years. So he is. That is the term prescribed by the Constitution. He says that he is paid when Congress is not in session. First, he was paid a *per diem* only when Congress was in session; afterward it was changed to a salary by the year; but that certainly does not affect the question of the legal existence of the House. We speak in general of 'Congress,' two years. But, so far as the legal existence of the House of Representatives is concerned, how can we conceive of that when the members have never come together, their credentials have never been examined, and they have no officers elected? There is no House of Representatives until it is organized."

Mr. Saulsbury, of Delaware, said: "Mr. President, I do not concur in all that I have heard on this question. I differ from the views expressed by the Senator from Ohio (Mr. Thurman). I do not regard the House of Representatives as being at all times an organized body. While it is true that the House of Representatives is one of the departments of this Government, yet there are periods when there is no organization of the body, according to the view which I take, and the members of the House of Representatives in each Congress have the right to adopt their own rules, and the rules provided by the previous Congress are not obligatory upon them. But I do not concur in the views expressed by the other Senator from Ohio (Mr. Sherman), that it is competent for this body to annul, at pleasure, any joint rule between the two Houses. The view which I take of these joint rules is that, as they require the concurrent action of both Houses, they partake of the nature of a statute, and that neither House may annul a joint rule without the concurrence of the body that helped enact it. I therefore do not believe that it is competent for the Senate of the United States to annul the twenty-second joint rule, nor do I believe that it is competent for the House, after its having been enacted or ordered by the concurrent action of both Houses, without the concurrent action of both Houses to render it null and void. This is the view I take of the joint rules."

Mr. Conkling: "Mr. President, I dispose sufficiently of the whole question as it presents itself to me by turning to the Constitution and finding that 'the House of Representatives shall be composed of members chosen every second year by the people of the several States,' and so on, and by seeing further that 'the Congress shall assemble at least once in every year; and such meeting shall be on the first Monday in December, unless they shall by law appoint a different day,' as it in the beginning was determined by law and as it has been

since. I find my way sufficiently clear when I see that once in two years the members of the House of Representatives are rechosen, not some of them but all of them, thus supplying anew the whole *personnel*, the whole incarnation (if I may so speak) of that House. Now, by settled usage in that case, in analogous cases, and by usage, as it seems to me very clearly within the attributes and within the prerogatives of the House, each Congress (as it is called for convenience, as the Senator from Ohio says) proceeds to take its own orders, to make its own rules under the express permission of the Constitution of the United States. When the Senate concurs in a joint rule, a concurrent rule, the Senate assents to the making of rules by the House, if they proceed from the House, extending as to those rules to this body. It assents by adopting them as a part of its own rules. Should any House undertake to make rules to govern a succeeding House, I conceive the action would be entirely nugatory; and, if so, it follows as a matter of course that a rule made by one House, although the Senate may be a party to it, if it is designed to bind a succeeding House, is as void as it would be were it a rule for the House alone. Certainly the House would have no greater prerogative, no more far-reaching prerogative in the establishment of a rule, if it happens to be a rule to which some other body is to be a party, than it would have were it a rule for the government of itself, supposing all the time that it be a rule in the strict sense of that word as distinguished from a statute or from that kind of joint resolution which a Senator over the way had in mind when he inquired whether the signature of the President had ever been attached to this rule.

"If I be right in that, Mr. President, it is very clear that in every Congress as it is called (adopting again this term for convenience), the House of Representatives is obliged to adopt rules in some form for its government; and it is very clear that the resolution referred to by the Senator from Oregon, adopted by the House at the commencement of the session, was an expedient, competent, and orderly proceeding. If that resolution covered, as perhaps it did, the joint rules of the two Houses, it brings to us the question whether we will adopt those joint rules. Now, undoubtedly it would be competent for the Senate, *sub silentio* (as the Senator from Massachusetts said touching another matter), by acquiescence, by that silence which implies consent, to go on and observe the joint rules. That it seems has been done repeatedly, perhaps usually, before. It would have happened now very likely but for the fact that every Senator who has regarded this subject at all cannot have failed to feel that we were called upon to take some action touching the twenty-second joint rule, which it has been said by the Senator from Delaware and by other Senators involves very grave dangers. A resolution was offered by the Senator from

Vermont—for what reason of course I cannot know—bringing to our attention the question not whether if we simply by silence allowed these rules to drift they would be for all purposes of convenience and for all purposes of technical regularity an authority, and, if you please, the rules of the Senate, but whether, if we saw fit to abstain from adopting them or to insist that they be changed as a condition to adopting them, that power resides in the Senate.”

Mr. Bayard: “I submit as an amendment to the resolution a substitute, and ask that it be read.”

The Chief Clerk: “It is moved to strike out all after the word ‘that’ in the first line of the resolution, and insert:

The Committee on Rules of the Senate and House of Representatives be, and they are hereby, instructed to examine and, after conference, to report what amendments, if any, should be made in the present joint rules of the two Houses; and also whether any, and what, legislation is expedient in regard to the matters considered in the present twenty-second joint rule.”

Mr. Bayard: “As I understood the amendment of the Senator from Indiana, it is to adopt the joint rules of the two Houses, as they now stand, excepting the twenty-second.”

Mr. Edmunds, of Vermont: “No, Mr. President; the precise proposition is not to adopt the joint rules of the two Houses as they now stand, but to adopt the joint rules of the last session. Then the Senator from Indiana moves to amend that resolution by an exception. Now the Senator from Delaware offers a substitute for the whole thing; and as the Chair states it is clear that in order we must perfect the original resolution before we vote on the substitute, so that the question is on the amendment of the Senator from Indiana.”

The President *pro tempore*: “The question now is on the amendment proposed by the Senator from Indiana to except the twenty-second joint rule.”

The amendment was agreed to.

The President *pro tempore*: “If no further amendment be offered to the text of the resolution, the question is on the amendment of the Senator from Delaware as a substitute for the resolution.”

Mr. Bayard: “Gentlemen have differed on this floor in regard to the power of each House over the joint rules. A very ingenious and able presentation of the subject was made by the Senator from Ohio who sits near me (Mr. Thurman), claiming that the House of Representatives was a continuing body, and that there was needed no adoption at the incoming of each new Congress of either the separate or the joint rules governing the preceding House. Having heard him and considered his point, I entirely dissent from his view. I believe that the House of Representatives is not a continuing body, and that, indeed, it is not only separate but that each House has its op-

erative legal existence and would be without any rules until it has adopted the parliamentary rules of the preceding House, as is usually done. The proposition has been made here that, this being a joint rule, made by two contracting parties, neither can at will retire from the rule. That is a very grave subject. Gentlemen on this floor have admitted such a view, and declared that it required a joint consent to the rescission of a rule as much as to its formation; but from that proposition I entirely dissent. I cannot believe that, either under the language of the Constitution or the very theory of checks and balances which the two Houses were designed to enforce one upon the other, the independence of either House can be taken from it, either by its own act or an act of the other House. Therefore I hold, as these rules are made, they are made during the good pleasure of each House, and that it is in the power of either the Senate or House of Representatives to retire from a joint rule at any time, and simply give notice of that fact to the other branch of Congress.

“But still the question has been made, and I think it would be advisable to have it settled by conference of the two Houses through their respective Committees on Rules. I cannot doubt that on examination they will come to the conclusion to adopt the whole code, if I may so call it, except this twenty-second joint rule, which is highly exceptionable. Therefore I do not think there is any necessity to apprehend embarrassment in treating this subject, because I have referred the matter to the two Houses. These points having been raised, I think they should be disposed of gravely and properly. I know no reason why there should not be an entire assent between the two branches on the subject; but, the question having been raised, I think it is a good opportunity to have the subject considered.”

The President *pro tempore*: “The question is on the amendment of the Senator from Delaware (Mr. Bayard).”

The amendment was rejected, there being on a division—yeas, 22; nays, 26.

The resolution was agreed to.

In the Senate, on December 8, 1875, Mr. Morton, of Indiana, offered a bill to provide for counting the electoral vote for President. The bill was substantially the same as the one offered at the previous session. (See ANNUAL CYCLOPEDIA, 1875, p. 199.) The bill was referred to the Committee on Privileges and Elections, and reported back without amendment on March 8, 1876. (This subject was extensively discussed at previous sessions of Congress; see volume of AMERICAN CYCLOPEDIA for 1875.)

The first section provides that the two Houses of Congress shall assemble in the hall of the House of Representatives, at the hour of one o'clock, on the last Wednesday in Jan-

ary next succeeding the meeting of the electors of President and Vice-President of the United States, and the President of the Senate shall be their presiding officer; one teller shall be appointed on the part of the Senate, and two on the part of the House of Representatives, to whom shall be handed, as they are opened by the President of the Senate, the certificates of the electoral votes; and the tellers, having read the same in the presence and hearing of the two Houses then assembled, shall make a list of the votes as they shall appear from the certificates; and the votes having been counted, the result of the same shall be delivered to the President of the Senate, who shall thereupon announce the state of the vote, and the names of the persons, if any, elected, which announcement shall be deemed a sufficient declaration of the persons elected President and Vice-President of the United States, and, together with a list of the votes, be entered on the *Journals* of the two Houses. If, upon the reading of any certificate by the tellers, any question shall arise in regard to counting the votes therein certified, the same having been stated by the presiding officer, the Senate shall thereupon withdraw, and the question shall be submitted to the body for its decision; and the Speaker of the House of Representatives shall, in like manner, submit the question to the House of Representatives for its decision; and no electoral vote or votes from any State, to the counting of which objections have been made, shall be rejected except by the affirmative vote of the two Houses. When the two Houses have voted, they shall immediately reassemble, and the presiding officer shall then announce the decision of the question submitted. And any other question pertinent to the object for which the two Houses are assembled may be submitted and determined in like manner.

The second section provides that if more than one return shall be received by the President of the Senate from a State, purporting to be the certificates of electoral votes given at the last preceding election for President and Vice-President in such State, all such returns shall be opened by him in the presence of the two Houses when assembled to count the votes; and that return from such State shall be counted which the two Houses, acting separately, shall decide to be the true and valid return.

By the third section it is provided that when the two Houses separate to decide upon an objection that may have been made to the counting of any electoral vote or votes from any State, or for the decision of any other question pertinent thereto, each Senator and Representative may speak to such objection or question ten minutes, and not oftener than once; but after such debate has lasted two hours, it shall be in the power of a majority of each House to direct that the main question shall be put without further debate.

Section 4 declares that, at such joint meet-

ing of the two Houses, seats shall be provided as follows: For the President of the Senate, the Speaker's chair; for the Speaker, immediately upon his left; the Senators in the body of the Hall upon the right of the presiding officer; for the Representatives, in the body of the Hall not provided for the Senators; for the tellers, Secretary of the Senate, and Clerk of the House of Representatives, at the Clerk's desk; for the other officers of the two Houses, in front of the Clerk's desk and upon each side of the Speaker's platform. The joint meeting shall not be dissolved until the electoral votes are all counted and the result declared; and no recess shall be taken unless a question shall have arisen in regard to counting any such votes, in which case it shall be competent for either House, acting separately, in the manner hereinbefore provided, to direct a recess not beyond the next day at the hour of ten o'clock in the forenoon.

Mr. Bayard, of Delaware, said: "I have felt long that which I apprehend the honorable Senator from Indiana has felt, some degree of embarrassment in regard to the measure of power committed to Congress over the counting, accepting or rejecting of the electoral votes of the electors of the various States. The letter of the Constitution on this subject is very meagre. In the second article of the original Constitution it was provided that 'each State shall appoint, in such manner as the Legislature thereof may direct, a number of electors equal to the whole number of Senators and Representatives to which the State may be entitled in Congress;' and then proceeds to exclude Senators or Representatives or persons holding an office of trust or profit from the office of elector. Then follows in the original Constitution a provision for the meeting of the electors, which has been superseded and annulled by the twelfth amendment of the Constitution. Then follows a paragraph authorizing Congress in its discretion to determine the time of choosing the electors and the day on which they shall give their votes, and declaring that that day shall be the same day throughout the United States.

"The twelfth article of amendments, superseding a portion of the third paragraph of the second article, provided that—

The electors shall meet in their respective States and vote by ballot for President and Vice-President, one of whom, at least, shall not be an inhabitant of the same State with themselves; they shall name in their ballots the person voted for as President, and in distinct ballots the person voted for as Vice-President, and they shall make distinct lists of all persons voted for as President, and of all persons voted for as Vice-President, and of the number of votes for each; which lists they shall sign and certify, and transmit sealed to the seat of Government of the United States, directed to the President of the Senate. The President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates and the votes shall then be counted.

"This latter clause contains all the power

that is delegated to the two Houses of Congress or to any other officer of the Government in respect to the counting of the electoral vote; and the present bill provides simply the legislative machinery to accomplish this result. There has been argument heretofore before Congress, which I have concurred in, to the effect that the two Houses are mere witnesses to the counting of these votes. The only officer named is the Presiding Officer of the Senate, into whose custody the certificates shall have been delivered in accordance with the mandate of the Constitution by the electors or their agents, their messengers, and those certificates being in his hands are to be opened by him and the votes are then to be counted; by whom, is simply a matter of inference, perhaps of necessary inference; but they are to be counted."

Mr. Sherman, of Ohio, said: "The proviso of section 3, in my judgment, may possibly enable either House to defeat the object of the bill, the object of the bill as declared on the second page, in section 1, being to prevent either House from defeating the counting of the vote of any State, and to repeal the practice that had grown up under the twenty-second joint rule, by which either House might by its affirmative vote exclude any State for any cause whatever from having its electoral vote counted for President. That rule is sufficiently met by the language of the twenty-ninth, thirtieth, and thirty-first lines of the first section, as follows:

And no electoral vote or votes from any State, to the counting of which objections have been made, shall be rejected except by the affirmative vote of the two Houses.

"But, under the proviso to section 3, I fear very much that either House might by indirection defeat the counting of a vote, because it provides for the separation of the two Houses and the consideration by each House of the question, and then provides:

That after such debate has lasted two hours it shall be in the power of a majority of each House to direct that the main question shall be put without further debate.

"This provision is not compulsory, and either House might prolong debate indefinitely, and thus prevent the question from being taken on the counting of the vote. It is true it is rather a violent supposition to suppose that either House of Congress would, by an abuse of its power, endanger the existence of the Government; but the object of this bill is to guard against all possibility of the abuse of power in that respect, and it is not an improbable supposition that in high party times, under great excitement, one House might thus neglect or refuse to direct the main question to be put. We know very well the influence of party excitement and party feeling, especially under strong provocation. Therefore it seems to me that this provision ought to be more peremptory in its character; it ought to require, after

two hours' debate, a peremptory putting of the main question. I suggest to the Senator from Indiana whether it would not be safer and more in harmony with the object of the bill to require after a reasonable time, say two hours, that the question should be put in each House and the convention again assembled. I therefore move an amendment to make the provision read: 'That after such debate has lasted two hours it shall be the duty of each House to put the main question without further debate.'

Mr. Cooper, of Tennessee, said: "We do know that the difficulty which the second section seeks to provide against has arisen and may arise in the future; and the great question to be determined, it seems to me, is, where shall we lodge the power of deciding in such an emergency what has been the expressed will of the people of a State who may by some abnormal condition in their political affairs send two returns to be counted purporting to be the vote of the electoral college of that State?

"The bill as reported by the committee proposes to vest this power in the two Houses of Congress, acting separately. It provides that they must concur before the President of the Senate or the proper officer shall be permitted to count either of the returns thus made. It seems to me that, if we would avoid a conflict where such a difficulty arises, it would be better to vest the choice of which is the proper return in somebody who will determine it and not leave it between the two Houses, which may be composed, as at present, of opposite politics, and which would be apt in that case to disagree, and thus exclude the vote of any State that might thus send two or more returns.

"The suggestion was first intimated by the Senator from Pennsylvania, and afterward by the Senator from Maryland, that, as the Constitution has vested the House of Representatives, who are directly from the people, with the power to choose a President in default of an election by the people, it gives us the proper idea of what would be the safest body with which to intrust this power of choice in the event of a difference of opinion, or of two returns coming from any one State. It strikes me to be more consistent with the theory of the Constitution of the United States that this power should be vested in that body, thus pointed out by the Constitution to choose a President where the people themselves shall fail to make a choice, than that it should be placed elsewhere. I therefore have prepared an amendment to the second section, which I offer for the consideration of the Senate, carrying out this view to vest in the House of Representatives, the representatives of the people, the choice of the proper returns to be counted in the event that two or more returns are sent up. I move to strike out in the second section all after the word "which," in line seven, to the end of the section as follows:

The two Houses, acting separately, shall decide to be the true and valid return.

"And in lieu thereof insert—

The House of Representatives, voting by States, in the manner provided by the Constitution when the election devolves upon the House, shall decide to be the true and valid return.

"So that, if amended, the section will read :

That if more than one return shall be received by the President of the Senate from a State, purporting to be the certificates of electoral votes given at the last preceding election for President and Vice-President in such State, all such returns shall be opened by him in the presence of the two Houses when assembled to count the votes; and that return from such State shall be counted which the House of Representatives, voting by States, in the manner provided by the Constitution when the election devolves upon the House, shall decide to be the true and valid return."

Mr. Frelinghuysen, of New Jersey, said : "Mr. President, it had always appeared to me that the provision of the twelfth article of the amendments to the Constitution, which declares that the President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates, and omit to say that he shall do anything more, was equivalent to the exclusion of the idea that any other duty was to be performed by him, and that the Constitution left it open as to who should count the votes otherwise than by stating that they should 'then be counted.' There is some force, however, in the resolution of the convention to which our attention has been called by the Senator from Maryland; and as we are making suggestions it has occurred to me that the second section might be amended by adding :

And if the two Houses do not agree as to which is the true and valid return, then the President of the Senate shall determine which is the valid return.

"I do not mean to say that, on deliberation, that is the best provision; but it is very clear from the amendments which have been offered that it is within the compass of our power to provide for that omission which exists in the bill."

Mr. Cooper : I ask leave to modify my amendment, instead of striking out to leave the section as it now is, and add the words :

And if the Houses do not agree on which return shall be counted, the House of Representatives, voting by States in the manner provided by the Constitution when the election devolves upon the House, shall decide which shall be the true and valid return.

"So that the question shall only be left to the House voting in that way in the event that the two Houses acting separately cannot agree."

On March 14th, the Senate, as in Committee of the Whole, resumed the consideration of the bill to provide for and regulate the counting of votes for President and Vice-President, and the decision of questions arising thereon, the pending question being on the amendment of Mr. Sherman to strike out in lines seven, eight, and nine, of the third section the words :

In the power of a majority of each House to direct that the main question shall be put.

And insert in lieu thereof :

The duty of each House to put the main question.

So that the proviso will read :

Provided, That, after such debate has lasted two hours, it shall be the duty of each House to put the main question without further debate.

The amendment was agreed to.

The President *pro tempore* : "The question will now be on the amendment proposed by the Senator from Tennessee (Mr. Cooper), which will be read."

Mr. Johnston, of Virginia, said : "Mr. President, I offer the following amendment to the amendment, as a substitute for it :

But if the Senate should vote for counting one certificate and the House of Representatives another, the joint meeting of the two Houses shall finally determine which shall be counted, by a vote by States, the representation from each State (including the Senators therefrom) having one vote; but if the representation of any State shall be equally divided its vote shall not be counted.

The President *pro tempore* : "The question is on the amendment of the Senator from Virginia to the amendment of the Senator from Tennessee."

Mr. Johnston : "It is evident that the bill is defective in one respect. The author of the bill himself admits that in a certain contingency this bill will not be operative; that where there are two returns from a State and the House of Representatives votes for accepting one return and the Senate the other, in that event the vote of the State will be lost. It seems to me in a bill of so much importance as this there ought to be no omission of that sort, but that the bill ought to be complete and provide for every contingency that may arise. It is not only the right of Congress to provide for counting the electoral votes, but it is an imperative duty, and we ought to perform that duty. It seems to me that Congress itself is the only body to determine this question. The Constitution provides that where there has been no election by the people the House of Representatives shall decide who shall be President, but the same Constitution provides that where there shall be 'no election of Vice-President the Senate shall decide who shall be Vice-President. The second article of the Constitution in the second section has this provision. After providing for the election of President by the House, it says :

The person having the greatest number of votes as Vice-President shall be the Vice-President, if such number be a majority of the whole number of electors appointed; and if no person have a majority, then from the two highest numbers on the list the Senate shall choose the Vice-President; a quorum for the purpose shall consist of two-thirds of the whole number of Senators, and a majority of the whole number shall be necessary to a choice. But no person constitutionally ineligible to the office of President shall be eligible to that of Vice-President of the United States.

"It seems, then, according to that provision of the Constitution, that in a certain event the Vice-President shall be chosen by the Senate. There is provision for the failure of an election by the electoral college of President and Vice-President; in one event the House elects the President, and in another event the Senate elects the Vice-President. The returns of the election of both officers are embraced in the same certificates. It would seem to me, therefore proper, as the election is for both, that the two Houses should be the joint tribunal to determine the question. In that view I think the amendment I have offered is the proper solution of this question."

Mr. Frelinghuysen, of New Jersey, said: "I shall propose an amendment when the proper time comes, which I will now read:

If the two Houses shall not agree, the difference shall be immediately referred to the Chief-Justice of the Supreme Court, the presiding officer of the Senate, and the Speaker of the House, whose decision shall be final. If the Chief-Justice is absent or unable to attend, the senior Associate Justice of the Supreme Court present in the Capitol or other place of meeting shall act in his place.

"This is a judicial question; a question of law and of fact; but judicial, whether of fact or law; and it seems to me that there is a propriety in referring it to the presiding officer of the judicial department. It is true that it is judicial, and yet it is political in its nature. The Constitution has imposed certain duties upon the presiding officer of the Senate, and the presiding officers of the Senate and of the House are competently associated with the Chief-Justice. If it be said that nothing will result excepting the loss of the vote of one State unless we make this arrangement, the loss of one State is a great loss; it is an organic loss; it is a loss that may change the character of the whole election; it is a loss that the people of this country would not quietly submit to. It seems to me it is very important that before we pass this bill we should make such arrangement as will secure the vote of every State, for thereby we may avoid civil war."

Mr. Thurman, of Ohio, said: "I am not prepared just now to vote upon any of the propositions which have been suggested; that is, I am not as well prepared as I would like to be. This subject is full of difficulty. For reasons that I gave yesterday, I do not think a matter of disagreement can be referred to the Supreme Court. I do not believe you can confer upon that court as a court any such power. I have seen no reason to change the opinion I expressed yesterday.

"Then, to give the House of Representatives the right to decide it may be a matter of necessity, and yet there are very grave considerations there, for you put the House under the temptation to disagree with the Senate, so that the result of the disagreement may be that the House will have the decision alone. So, take

it any way you will, there is difficulty. I do not believe that we can or ought to confer this power, in the case of disagreement of the Houses, upon the presiding officer of either House. I do not think that can be done. What I desire is that we may, in the situation in which we find ourselves placed, one House having a majority of one party and the other House having a majority of the other party, endeavor to come to some understanding that, being agreed upon, will command the support of reasonable men of all parties."

Mr. Frelinghuysen: "I move the amendment which I read to the Senate as an amendment to the amendment suggested by the Senator from Tennessee (Mr. Cooper), to come in after the word 'agree.'"

The President *pro tempore*: "The Senator from New Jersey moves to amend the amendment of the Senator from Tennessee by striking out all after the word 'agree' and inserting what he has read, which is to perfect the text while the substitute is pending offered by the Senator from Virginia (Mr. Johnston). The Senator from Virginia proposes a substitute for the whole amendment, striking out all after the word 'and.' The rule permits a perfection of the text. The question will be first on the amendment proposed by the Senator from New Jersey."

Mr. Morton, of Indiana, said: "Mr. President, there are three propositions here as amendments to the second section of this bill. That section provides for a case where there are two returns of electoral votes from the same State, and further provides that only that return which both Houses agree is the true and valid return shall be counted.

"But, sir, I now present the question as to whether you can constitute an umpire between these two Houses. In the first place, to go back to the main proposition, the Constitution declares that—

The President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates, and the votes shall then be counted.

"Two constructions are contended for here. One is that the President of the Senate himself shall open and count the votes and shall determine all questions arising upon the certificates, or, in case there are two certificates, shall decide which is the true and valid return. That is one construction claimed. There is another that the duty of the President of the Senate is simply to open the certificates in the presence of the two Houses; that the two Houses are assembled, not as a joint convention, but each in its separate capacity; that they are there not only as witnesses, but they are there as judges; and, if a question arises in regard to the vote of a State or a part of it, it is to be settled by the two Houses who are present there as the judges of the election.

"We could, without doing any great violence to the Constitution, adopt either of these

constructions. Each is possible under the language. The Constitution says:

The President of the Senate shall, in the presence of the Senate and the House of Representatives, open all the certificates, and the votes shall then be counted.

"It does not say who shall count them; it leaves it open to inference that they shall be counted by the two Houses on the one hand, or by the President of the Senate on the other. I will assume, for the sake of the argument, that you can give to it either construction. I will assume that it is open to both views. Then the question comes, which is the more reasonable, which is the better, which is the safer of the two: to adopt that construction which gives this great power to one man, the President of the Senate, who may be counting the votes for himself, as it has turned out six times in our history; or would it be safer to leave it to the determination of the two Houses of Congress, representing the States and the people? If we are open to adopt either one of these constructions, I say the latter is the safer, it is the more reasonable, it is in conformity with the spirit of our government and of popular institutions. I then adopt the latter construction."

The Presiding Officer (Mr. Mitchell in the chair): "The question is on the amendment of the Senator from New Jersey (Mr. Frelinghuysen) to the amendment of the Senator from Tennessee (Mr. Cooper)."

The question being taken, resulted as follows:

YEAS—Messrs. Allison, Anthony, Bruce, Burnside, Cameron of Pennsylvania, Conkling, Dawes, Ferry, Frelinghuysen, Hamlin, Howe, Logan, McMillan, Morrill of Vermont, Morton, Paddock, Robertson, Sharon, West, and Windom—20.

NAYS—Messrs. Bayard, Bogy, Booth, Boutwell, Christiancy, Cooper, Davis, Eaton, Goldthwaite, Gordon, Ingalls, Johnston, Jones of Florida, Kelly, Kernan, Key, McCreery, McDonald, Maxey, Merrimon, Mitchell, Norwood, Randolph, Ransom, Saulsbury, Stevenson, Thurman, Whyte, and Withers—29.

ABSENT—Messrs. Alocorn, Cameron of Wisconsin, Caperton, Clayton, Cookrell, Conover, Cragin, Dennis, Dorsey, Edmunds, English, Hamilton, Harvey, Hitchcock, Jones of Nevada, Morrill of Maine, Oglesby, Patterson, Sargent, Sherman, Spencer, Wadleigh, Wallace, and Wright—24.

So the amendment to the amendment was rejected.

The Presiding Officer: "The question is on the amendment offered by the Senator from Virginia (Mr. Johnston) to the amendment of the Senator from Tennessee (Mr. Cooper)."

Mr. Johnston: "I ask for the yeas and nays."

The question being taken, resulted as follows:

YEAS—Messrs. Allison, Bogy, Davis, Johnston, Kelly, McCreery, Ransom, Sargent, Saulsbury, Thurman, and Withers—11.

NAYS—Messrs. Booth, Boutwell, Burnside, Cameron of Pennsylvania, Cameron of Wisconsin, Christiancy, Cookrell, Conkling, Cooper, Dawes, Dennis, Eaton, Edmunds, Ferry, Frelinghuysen, Gordon, Hamilton, Hitchcock, Howe, Ingalls, Jones of Florida, Key, Logan, McDonald, McMillan, Maxey, Merrimon, Mitchell, Morton, Norwood, Oglesby, Pad-

dock, Randolph, Robertson, Sharon, West, Whyte, Windom, and Wright—39.

ABSENT—Messrs. Alocorn, Anthony, Bayard, Bruce, Caperton, Clayton, Conover, Cragin, Dorsey, English, Goldthwaite, Hamlin, Harvey, Jones of Nevada, Kernan, Morrill of Maine, Morrill of Vermont, Patterson, Sherman, Spencer, Stevenson, Wadleigh, and Wallace—23.

So the amendment to the amendment was rejected.

The President *pro tempore*: "The question recurs on the amendment proposed by the Senator from Tennessee (Mr. Cooper), which will be read."

The Secretary read the amendment, as follows:

And if the two Houses do not agree as to which return shall be counted, then that vote shall be counted which the House of Representatives, voting by States in the manner provided by the Constitution when the election devolves upon the House, shall decide to be the true and valid return.

The yeas and nays being taken, resulted as follows:

YEAS—Messrs. Bogy, Caperton, Cooper, Davis, Gordon, Johnston, Kelly, McCreery, McDonald, Ransom, Saulsbury, Thurman, and Withers—18.

NAYS—Messrs. Allison, Booth, Boutwell, Burnside, Cameron of Pennsylvania, Cameron of Wisconsin, Christiancy, Cookrell, Conkling, Dawes, Dennis, Eaton, Edmunds, Ferry, Frelinghuysen, Hamilton, Hitchcock, Howe, Ingalls, Jones of Florida, Key, Logan, McMillan, Maxey, Merrimon, Mitchell, Morton, Oglesby, Paddock, Robertson, Sargent, West, Whyte, Windom, and Wright—35.

ABSENT—Messrs. Alocorn, Anthony, Bayard, Bruce, Clayton, Conover, Cragin, Dorsey, English, Goldthwaite, Hamlin, Harvey, Jones of Nevada, Kernan, Morrill of Maine, Morrill of Vermont, Norwood, Patterson, Randolph, Sharon, Sherman, Spencer, Stevenson, Wadleigh, and Wallace—25.

So the amendment was rejected.

Mr. Maxey, of Texas, said: "I offer an amendment, and ask that it be read."

The Chief Clerk: "The amendment is to add to the second section the following:

But if the two Houses fail to agree as to which of the returns shall be counted, then the President of the Senate, as presiding officer of the two Houses, shall decide which is the true and valid return, and the same shall then be counted."

The President *pro tempore*: "The section will be read as it will stand if this amendment be agreed to."

The Chief Clerk read as follows:

SECTION 2. That if more than one return shall be received by the President of the Senate from a State, purporting to be the certificates of electoral votes given at the last preceding election for President and Vice-President in such State, all such returns shall be opened by him in the presence of the two Houses when assembled to count the votes; and that return from such State shall be counted which the two Houses, acting separately, shall decide to be the true and valid return. But if the two Houses fail to agree as to which of the returns shall be counted, then the President of the Senate, as presiding officer of the two Houses, shall decide which is the true and valid return, and the same shall then be counted.

Mr. Edmunds, of Vermont, said: "I have two objections to this amendment. The first

is one perhaps of mere phraseology. It declares that 'the President of the Senate, as presiding officer of the two Houses, shall decide.' I do not think myself, under the Constitution, that any duty of the President of the Senate imposed upon him by the Constitution, in respect of counting the votes, is in the character of a presiding officer of the two Houses, which implies a strict joint assembly, and logically to my mind would imply that the two Houses then and there assembled, as they frequently do in the States, as they do in my State, should act in a consolidated way, and decide any question that might arise just as either House would alone. Therefore, phrased as the amendment is, I cannot vote for it for that reason, for I do not understand that the President of the Senate is the presiding officer of either House when he is performing that duty, in any legal and constitutional sense. That he sits in the chair, and that everybody keeps quiet, I agree; but in respect of it in a legal and constitutional sense I do not believe it at all. But of course it would be very easy to change that phraseology.

"The objection that I have in substance to this amendment, and which to my mind is absolutely fatal, is that the President of the Senate may be, sometimes has been, and very likely often will be, a candidate for President or for Vice-President himself, and this amendment proposes that that very person, selected by designation, shall, in a case of great doubt and dispute, when the two Houses, acting with a patriotic disposition to follow the law and the Constitution, are unable to agree, decide himself whether he shall be President or not. It appears to me that that would be a very unsafe and dangerous proposition. It is wrong in principle, as I think; and, that it would be dangerous in the last degree in practice, I have no doubt at all."

Mr. Cameron, of Pennsylvania, said: "I would suggest to the Senator from Texas to make a correction in his amendment by blotting out the words 'as Presiding Officer of the two Houses.'"

Mr. Maxey: "I will state to the Senator from Pennsylvania that my attention was called to that by the Senator from Vermont. I think the expression 'President of the Senate' is sufficient, and that the words 'as Presiding Officer of the two Houses' are unnecessary. I ask that that modification be made."

The Chief Clerk: "It is proposed to insert at the end of the second section of the bill the following:

But if the two Houses fail to agree as to which of the returns shall be counted, then the President of the Senate shall decide which is the true and valid return, and the same shall then be counted."

The President *pro tempore*: "The question is on agreeing to this amendment."

The call of the roll resulted as follows:

YEA—Messrs. Bogey, Cameron of Pennsylvania,

Hamlin, Maxey, Robertson, Sargent, and Withers—7.

NAYS—Messrs. Allison, Anthony, Bayard, Booth, Boutwell, Burnside, Cameron of Wisconsin, Caperton, Christiancy, Conkling, Dawes, Dennis, Eaton, Edmunds, English, Ferry, Frelinghuysen, Goldthwaite, Gordon, Hamilton, Howe, Ingalls, Johnston, Jones of Florida, Jones of Nevada, Kelly, Key, McCreery, McDonald, Merrimon, Mitchell, Morrill of Maine, Morton, Norwood, Oglesby, Sharon, Whyte, and Wright—38.

ABSENT—Messrs. Alcorn, Bruce, Clayton, Cockrell, Conover, Cooper, Cragin, Davis, Dorsey, Harvey, Hitchcock, Kernan, Logan, McMillan, Morrill of Vermont, Paddock, Patterson, Randolph, Ransom, Saulsbury, Sherman, Spencer, Stevenson, Thurman, Wadleigh, Wallace, West, and Window—23.

So the amendment was rejected.

Mr. Merrimon, of North Carolina, said: "I now offer the amendment which I suggested."

The Chief Clerk: "It is proposed in section 2 of the bill, lines seven, eight, and nine, to strike out the words:

The two Houses acting separately shall decide to be the true and valid return.

"And in lieu thereof to insert:

Shall be duly authenticated by the State authorities, recognized by, and in harmony with, the United States, as provided by the Constitution.

"So that the section will read, if amended:

That if more than one return shall be received by the President of the Senate from a State, purporting to be the certificates of the electoral votes given at the last preceding election for President and Vice-President in such State, all such returns shall be opened by him in the presence of the two Houses when assembled to count the votes; and that return from such State shall be counted which shall be duly authenticated by the State authorities recognized by, and in harmony with, the United States, as provided by the Constitution."

The President *pro tempore*: "The question is on the amendment proposed by the Senator from North Carolina."

The amendment was rejected.

Mr. Randolph, of New Jersey, said: "I have withheld the amendments that were under discussion yesterday, partly because I did not intend to speak to them, and partly because I felt that some amendments might be offered that would do away with the necessity for those which I had already presented. I now offer as an amendment to the pending bill the additional sections which I send to the Chair, and I ask the Clerk to read them."

The Chief Clerk: "It is proposed to insert as additional sections to the bill the following:

SECTION —. To insure each State the count of the electoral vote, except it shall be rejected, as provided for in section 1 of this act, it is declared the duty of each House of Congress to record its vote by yeas and nays upon all questions as to which are the true and valid returns of a State; and it shall be the duty of the presiding officer of each House to immediately forward to the other a true and detailed return of such vote.

SEC. —. Should it then appear that the two Houses have failed to agree as to which are the true and valid returns, they shall immediately reassemble, and the President of the Senate shall announce those returns as valid which shall have received a majority

of all the votes cast in both Houses of Congress, considered as if in joint meeting assembled.

Sec.—Should it occur that the aggregate vote of both Houses be equally divided upon the question, then, and in that event only, the President of the Senate shall give the casting vote.

Mr. Randolph: "The Senator from Indiana, in speaking to this question, said that no plan had been presented, that no plan could be presented, which would not in certain exigencies leave a State unrepresented. I called his attention yesterday to the fact that the operation of the amendment that I had proposed would get rid of that difficulty. Under the amendment that I have suggested there is no contingency in which the electoral vote of a State can fail to be counted. Whether this be the right plan or not, I do not pretend to say, but I do say that the two Houses of Congress in one way or another will decide, and must decide, which the true returns of a State are, and the difficulty that has been so frequently suggested in the course of this debate is overcome by it, and that, too, in a plain, practical manner."

The yeas and nays were ordered; and being taken, resulted as follows:

YEAS—Messrs. Bayard, Caperton, Cooper, Davis, Gordon, Johnston, McCreery, Randolph, Ransom, Saulsbury, Thurman, and Withers—18.

NAYS—Messrs. Boggy, Boutwell, Burnside, Cameron of Wisconsin, Christiancy, Conkling, Cragin, Daves, Dennia, Dorsey, Eaton, Edmunds, Ferry, Frelinghuysen, Goldthwaite, Hamlin, Howe, Jones of Florida, Kelly, Key, Logan, McDonald, McMillan, Merrimon, Mitchell, Morrill of Maine, Morton, Oglesby, Paddock, Patterson, Sargent, Spencer, Wedleigh, West, Whyte, Windom, and Wright—37.

ABSENT—Messrs. Alcorn, Allison, Anthony, Booth, Bruce, Cameron of Pennsylvania, Clayton, Cockrell, Conover, English, Hamilton, Harvey, Hitchcock, Ingalls, Jones of Nevada, Kernan, Maxey, Morrill of Vermont, Norwood, Robertson, Sharon, Sherman, Stevenson, and Wallace—24.

So the amendment was rejected.

The bill was reported to the Senate as amended, and the amendments made as in Committee of the Whole were concurred in.

The bill was ordered to be engrossed for a third reading, and was read the third time.

Mr. Burnside, of Rhode Island, said: "I move a reconsideration of the vote by which this bill was ordered to a third reading, with a view to offer an amendment."

The President pro tempore: "The Chair hears no objection. The motion to order the bill to a third reading is reconsidered, and the bill is now open to amendment."

Mr. Burnside: "I now offer my amendment."

The Chief Clerk read the amendment; which is to strike out all of section 2, and insert in lieu thereof—

That if more than one return shall be received by the President of the Senate from a State, purporting to be the certificates of electoral votes given at the last preceding election for President and Vice-President in such State, he shall immediately make a report thereof to the Chief-Justice of the Supreme Court of the United States, who shall at once cause

the said Supreme Court to proceed to examine as to who are the legal electors of said State, and shall have power to send for persons and papers; and the said Chief-Justice shall, on or before the last Tuesday in January next succeeding the meeting of the electors of President and Vice-President, report to the President of the Senate which of the said electors were legally elected; and the returns sent by the electors so designated shall, if in all other respects they are legal, be counted before the two Houses.

Mr. Burnside: "I am aware that there may be a supposed constitutional objection to this, but I think in an emergency like this, if it is possible for Congress to give the Constitution a liberal construction which will enable us to avoid the discord that may arise from double sets of returns from any single State at the next election, we ought to do it. Take, for instance, the case of Louisiana. If the electoral votes should be so equally divided as to make the return from that State decide the election, it is clear to me, and must be clear to every Senator here, that the two Houses would disagree upon that subject. It is clear to me that the present House of Representatives, the same House which is to act when we count the electoral votes at the next presidential election, would declare the McEnery government the legal government of the State of Louisiana. We all know that the Senate would declare the Kellogg government the legal government because it has already passed a resolution to that effect.

"Now, Mr. President, is it at all reasonable to suppose that either party would be satisfied with the result in such a case when the electoral votes are counted next February? Does any Senator believe that there would not be great discord in the country if that state of affairs should arise? Yet under this bill it may arise. I hold it to be the duty of Congress to pass some law or make some joint rule that will avert the difficulty."

Mr. Bayard, of Delaware: "I will offer now an amendment, the amendment originally proposed by the Senator from Tennessee (Mr. Cooper)."

The Chief Clerk: "At the end of the second section it is proposed to insert:"

And that if the two Houses do not agree as to which return shall be counted, then that vote shall be counted which the House of Representatives, voting by States in the manner provided by the Constitution when the election devolves upon the House, shall decide to be the true and valid return.

The President pro tempore: "The question is on the amendment of the Senator from Delaware (Mr. Bayard). The amendment is to modify the second section before the question is taken on the amendment of the Senator from Rhode Island (Mr. Burnside) to strike it out and insert a substitute. The Chair understands that this is the same amendment originally offered by the Senator from Tennessee (Mr. Cooper)."

The question being taken, resulted as follows:

YEAS—Messrs. Bayard, Boggy, Caperton, Cooper, Davis, Goldthwaite, Johnston, Kelly, Key, McCre-

ry, McDonald, Maxey, Randolph, Ransom, Saulsbury, Thurman, Wallace, and Withers—18.

YAYS—Messrs. Allison, Anthony, Booth, Burnside, Cameron of Pennsylvania, Cameron of Wisconsin, Christiancy, Conkling, Dawes, Dennis, Dorsey, Eaton, Edmunds, English, Ferry, Frelinghuysen, Hamilton, Hamlin, Howe, Jones of Nevada, Logan, McMillan, Merrimon, Mitchell, Morrill of Maine, Morton, Oglesby, Paddock, Patterson, Sargent, Sherman, Whyte, Windom, and Wright—84.

ABSENT—Messrs. Alcorn, Boutwell, Bruce, Clayton, Cockrell, Conover, Cragin, Gordon, Harvey, Hitchcock, Ingalls, Jones of Florida, Kernan, Morrill of Vermont, Norwood, Robertson, Sharon, Spencer, Stevenson, Wadleigh, and West—21.

So the amendment was rejected.

The President *pro tempore*: "The question recurs on the amendment proposed by the Senator from Rhode Island (Mr. Burnside)."

The amendment was rejected.

The bill was ordered to be engrossed for a third reading, and was read the third time.

The President *pro tempore*: "Shall the bill pass?"

The yeas and nays being taken, resulted as follows:

YEAS—Messrs. Allison, Anthony, Booth, Burnside, Cameron of Pennsylvania, Cameron of Wisconsin, Christiancy, Dawes, Dorsey, Ferry, Frelinghuysen, Hamilton, Hamlin, Hitchcock, Ingalls, Jones of Nevada, Key, Logan, McMillan, Merrimon, Mitchell, Morrill of Maine, Morton, Oglesby, Paddock, Patterson, Sargent, Sherman, Spencer, Thurman, Windom, and Wright—82.

NAYS—Messrs. Bayard, Bogv, Caperton, Cockrell, Conkling, Cooper, Davis, Dennis, Eaton, Edmunds, English, Goldthwaite, Howe, Johnston, Jones of Florida, Kelly, McCreery, McDonald, Maxey, Randolph, Ransom, Saulsbury, Stevenson, Wallace, Whyte, and Withers—28.

ABSENT—Messrs. Alcorn, Boutwell, Bruce, Clayton, Conover, Cragin, Gordon, Harvey, Kernan, Morrill of Vermont, Norwood, Robertson, Sharon, Wadleigh, and West—15.

So the bill was passed.

In the Senate, on December 15, 1875, Mr. Morton, of Indiana, submitted the following concurrent resolutions, which were read:

1. *Resolved by the Senate (the House of Representatives concurring)*, That the people of the United States constitute a nation, and are one people in the sense of national unity.

2. *Resolved*, That the Government of the United States is not a compact between the States in their municipal and corporate characters, but was formed by the people of the United States in their primary capacity; that the rights of the States are defined and guaranteed by the Constitution, and not by any outside theory of State sovereignty; and that the rights of the States cannot be enlarged or diminished except by an amendment to the Constitution.

3. *Resolved*, That the rights of the States have the same sanction and security in the Constitution as the rights and powers of the national Government; and that local domestic government by the States within the limits of the Constitution is an essential part of our free republican system.

4. *Resolved*, That the doctrine that a State has the right to secede from the Union is inconsistent with the idea of nationality, is in conflict with the spirit and structure of the Constitution, and should be regarded as having been forever extinguished by the suppression of the rebellion.

The resolutions were ordered to be printed, but no subsequent action was taken on them.

In the Senate, on January 10th, Mr. Whyte, of Maryland, offered the following:

Resolved by the Senate (the House of Representatives concurring), That the people of the several States, acting in their highest sovereign capacity as free and independent States, adopted the Federal Constitution and established a form of government in the nature of a confederated republic, and, for the purpose of carrying into effect the objects for which it was formed, delegated to that Government certain rights enumerated in said Constitution, but reserved to the States respectively or to the people thereof all the residuary powers not delegated to the United States by the Constitution nor prohibited by it to the States.

No vote was taken on the resolution.

In the House, on December 15, 1875, Mr. Hale, of Maine, submitted the following preamble and resolution, upon which he called the previous question:

Whereas, The country is suffering under the evils of an irredeemable currency, which causes uncertainty in business and stimulates speculation, to the prejudice of legitimate business and labor; and whereas both political parties in the United States stand committed against repudiation and in favor of a speedy return to specie payment; and whereas Congress established a like policy in the act of March 16, 1869, which was followed by the act of January 14, 1875, providing for the resumption of specie payments on the last day of January, 1879: therefore—

Resolved, That, in the judgment of this House, prompt legislative measures should be taken to render the said act of January 14, 1875, effective, by placing in the hands of the Secretary of the Treasury whatever power may be necessary to that end.

The question was upon seconding the previous question.

The House divided; and the tellers reported that there were—yeas 75, nays 143.

So the previous question was not seconded.

In the House, on December 15th, Mr. Holman, of Indiana, said: "I submit the following resolution and on it demand the previous question:"

Resolved, That in the judgment of this House, in the present condition of the financial affairs of the Government, no subsidies in money, bonds, public lands, indorsements, or by pledge of the public credit, should be granted by Congress to associations or corporations engaged or proposing to engage in public or private enterprises; and that all appropriations from the public Treasury ought to be limited at this time to such amounts only as shall be imperatively demanded by the public service.

The previous question was seconded; yeas 138, nays not counted.

The main question was ordered.

The Speaker: "The main question having been ordered, the question is, Will the House adopt the resolution?"

The question was taken, and resulted as follows:

YEAS—Messrs. Adams, Ainsworth, Anderson, Ashe, Bagby, George A. Bagley, John H. Bagley, Jr., John H. Baker, William H. Baker, Ballou, Banning, Beebe, Bell, Blackburn, Blaine, Blair, Bland, Bliss, Blount, Boone, Bradford, Bradley, John Young Brown, William R. Brown, Horatio C. Burchard, Samuel D. Burchard, Burleigh, John H. Caldwell, William P. Caldwell, Campbell, Candler, Cannon, Cason, Caswell, Cate, Cauldfield, Chapin,

Chittenden, John B. Clarke, of Kentucky, John B. Clark, Jr., of Missouri, Clymer, Cochran, Collins, Conger, Cook, Cowan, Cox, Crapo, Crounse, Culberson, Cutler, Danford, Davis, Davy, De Bolt, Denison, Dibrell, Dobbins, Durand, Eames, Eden, Egbert, Ellis, Ely, Evans, Faulkner, Felton, Forney, Fort, Foster, Franklin, Freeman, Frost, Frye, Fuller, Garfield, Gause, Gibson, Glover, Goodin, Gunter, Hale, Andrew H. Hamilton, Robert Hamilton, Haralson, Hardenbergh, Benjamin W. Harris, Henry R. Harris, Harrison, Hartridge, Hartzell, Hatcher, Raymond, Henderson, Henkle, Hereford, Abram S. Hewitt, Goldsmith W. Hewitt, Hill, Hoar, Holman, Hooker, Hopkins, Hoskins, Hubbell, Hunter, Hurd, Jenks, Frank Jones, Joyce, Kasson, Ketchum, Kimball, King, Knott, Franklin Landers, George M. Landers, Lapham, Lawrence, Leavenworth, Levy, Lewis, Lord, Luttrell, Lynch, Lynde, Levi A. Mackey, Magoon, Maish, MacDougall, McCrary, McDill, McFarland, McMahon, Metcalfe, Miller, Milliken, Money, Monroe, Morgan, Morrison, Mutchler, Nash, Neal, New, Norton, O'Brien, Odell, Oliver, Packer, Page, Payne, John F. Phillips, William A. Phillips, Pierce, Piper, Plaisted, Poppleton, Potter, Ramey, Randall, Rea, James B. Reilly, Rice, John Robbins, William M. Robbins, Roberts, Robinson, Miles Ross, Rusk, Sampson, Savage, Sayler, Scales, Schumaker, Seelye, Sheakley, Singleton, Sinnickson, A. Herr Smith, William E. Smith, Southard, Sparks, Springer, Starkweather, Stenger, Stevenson, Stowell, Tarbox, Teese, Thompson, Thomas, Thornburgh, Martin I. Townsend, Tufts, Turney, Van Vorhes, Vance, Waddell, Waldron, Charles C. B. Walker, Alexander S. Wallace, Walling, Ward, Warren, Wheeler, Whiting, Whitthorne, Wigginton, Wike, Willard, Alpheus S. Williams, Charles G. Williams, James Williams, James D. Williams, Jeremiah N. Williams, William B. Williams, Willis, Benjamin Wilson, James Wilson, Alan Wood, Jr., Fernando Wood, and Woodworth—223.

YAYS—Messrs. Cabell, Darrall, Douglas, Dunnell, Goode, Hancock, John T. Harris, House, Hunton, Hyman, Thomas L. Jones, Kelley, Lanar, Mills, Morey, O'Neill, Parsons, Reagan, John Reilly, Slemmons, Smalls, Straight, Stone, Terry, Throckmorton, Tucker, Robert B. Vance, John W. Wallace, Erastus Wells, G. Wiley Wells, White, Yeates, and Young—36.

NOT VOTING—Messrs. Atkins, Banks, Barnum, Bass, Bright, Buckner, Durham, Farwell, Hathorn, Hays, Hendee, Hoge, Hurlbut, Kehr, Lane, Edmund W. M. Mackey, Meade, Phelps, Platt, Powell, Pratt, Purman, Sobieski Ross, Schleicher, Swann, Washington Townsend, Gilbert C. Walker, Walls, Walsh, Whitehouse, Andrew Williams, Wilshire, and Woodburn—33.

So the resolution was adopted.

In the House, on December 15th, Mr. Springer, of Illinois, said: "I offer the following resolution, upon which I move the previous question:"

Resolved, That, in the opinion of this House, the precedent established by Washington and other Presidents of the United States, in retiring from the presidential office after their second term, has become, by universal concurrence, a part of our republican system of government, and that any departure from this time-honored custom would be unwise, unpatriotic, and fraught with peril to our free institutions.

The question was put upon seconding the previous question, and on a division there were—yeas 144, nays 2.

So the previous question was seconded. The main question was then ordered to be put, being upon the adoption of the resolution.

The question was taken on the resolution, and resulted as follows:

YAYS—Messrs. Adams, Ainsworth, Anderson, Ashe Atkins, George A. Bagley, John H. Bagley, Jr., John H. Baker, William H. Baker, Ballou, Banning, Beebe, Bell, Blackburn, Blair, Bland, Blount, Boone, Bradford, Bright, John Young Brown, William E. Brown, Buckner, Horatio C. Burchard, Samuel D. Burchard, Burleigh, Cabell, John H. Caldwell, William P. Caldwell, Campbell, Candler, Casson, Cate, Cauldfield, Chapin, Chittenden, John B. Clarke, John B. Clark, Jr., Clymer, Cookrane, Collins, Conger, Cook, Cowan, Cox, Crapo, Crounse, Culberson, Cutler, Danford, Darrall, Davis, Davy, De Bolt, Dibrell, Douglass, Dunnell, Durand, Eames, Eden, Egbert, Ellis, Ely, Evans, Faulkner, Felton, Forney, Fort, Foster, Franklin, Freeman, Frost, Frye, Fuller, Garfield, Gause, Gibson, Glover, Goode, Goodin, Gunter, Hale, Andrew H. Hamilton, Robert Hamilton, Hancock, Hardenbergh, Benjamin W. Harris, Henry R. Harris, John T. Harris, Harrison, Hartridge, Hartzell, Hatcher, Raymond, Henderson, Henkle, Hereford, Abram S. Hewitt, Goldsmith W. Hewitt, Hill, Hoar, Holman, Hooker, Hopkins, Hoskins, House, Hunter, Hunton, Jenks, Frank Jones, Thomas L. Jones, Joyce, Kasson, Kelley, Ketchum, Knott, Franklin Landers, George M. Landers, Lane, Lapham, Lawrence, Leavenworth, Levy, Lewis, Lord, Luttrell, Lynde, Levi A. Mackey, Maish, McCrary, McDill, McMahon, Metcalfe, Miller, Milliken, Mills, Money, Monroe, Morgan, Morrison, Mutchler, Neal, New, Norton, O'Brien, Odell, Oliver, Parsons, Payne, John F. Phillips, William A. Phillips, Pierce, Piper, Poppleton, Potter, Powell, Randall, Rea, Reagan, John Reilly, James B. Reilly, Rice, John Robbins, William M. Robbins, Roberts, Robinson, Miles Ross, Sobieski Ross, Sampson, Savage, Sayler, Scales, Schumaker, Seelye, Sheakley, Singleton, Sinnickson, A. Herr Smith, William E. Smith, Southard, Sparks, Springer, Starkweather, Stenger, Stevenson, Stone, Swann, Tarbox, Teese, Terry, Thompson, Thomas, Throckmorton, Martin I. Townsend, Washington Townsend, Tucker, Tufts, Turney, Van Vorhes, John L. Vance, Robert B. Vance, Waddell, Waldron, Charles C. B. Walker, Gilbert C. Walker, John W. Wallace, Walling, Walsh, Ward, Warren, Erastus Wells, Wheeler, Whitehouse, Whitthorne, Wigginton, Wike, Willard, Alpheus S. Williams, Charles G. Williams, James Williams, James D. Williams, Jeremiah N. Williams, William B. Williams, Willis, Benjamin Wilson, James Wilson, Alan Wood, Jr., Fernando Wood, Woodworth, Yeates, and Young—233.

NAYS—Messrs. Bradley, Denison, Haralson, Hoge, Hubbell, Hyman, Lynch, MacDougall, Nash, Page, Plaisted, Pratt, Smalls, Alexander S. Wallace, Walls, G. Wiley Wells, White, and Whiting—18.

NOT VOTING—Messrs. Bagby, Banks, Barnum, Bass, Blaine, Blise, Cannon, Caswell, Dobbins, Durham, Farwell, Hathorn, Hayes, Hendee, Hurd, Hurlbut, Kehr, Kimball, King, Lamar, Edmund W. M. Mackey, Magoon, McFarland, Meade, Morey, Phelps, Platt, Purman, Ramey, Rusk, Schleicher, Slemmons, Straight, Stowell, Thornburgh, Andrew Williams, Wilshire, and Woodburn—38.

Accordingly the resolution was adopted.

In the House, on March 13, 1876, Mr. Baker, of Indiana, said: "I send a resolution to the Clerk's desk to be read, and move that the rules be suspended so as to adopt the resolution now, and upon that motion I call for the yeas and nays."

The Clerk read as follows:

Resolved, That the people of the United States constitute one nation and not a mere confederacy of States or nations; that the Constitution was formed

by the people acting in their primary and individual capacity through their delegates thereto duly constituted; that the Government under the Constitution is one of the people, by the people, and for the people; that in its appropriate sphere the Government of this nation is sovereign and supreme; that in its nature it is permanent and indissoluble except by the act and consent of the whole people; that no State has the right or authority to judge of the constitutionality of the laws enacted by it, and to nullify or resist the execution of the same; and that all overt acts by any State or the people thereof of secession therefrom, or of rebellion against the same, constitute treason; and that the late war of the rebellion for the dismemberment of the Union was causeless and indefensible on any theory of right or constitutional law.

The Speaker said: "The motion is to suspend the rules and adopt the resolution."

Mr. Cox, of New York, said: "I rise to a point of order. Would it be in order to read from the Constitution the following?"

Done in Convention by the unanimous consent of the States.

GEORGE WASHINGTON.

The Speaker: "It would not be."

The question was taken, and resulted as follows:

YEAS—Messrs. Ainsworth, Anderson, John H. Baker, Ballou, Bass, Blaine, Bradley, William R. Brown, Horatio C. Burchard, Campbell, Cannon, Cason, Caswell, Chittenden, Conger, Danford, Davy, Denison, Dobbins, Dunnell, Durand, Eames, Evans, Farwell, Fort, Foster, Frost, Goodin, Andrew H. Hamilton, Hardenbergh, Benjamin W. Harris, Hathorn, Haymond, Hendee, Henderson, Hoar, Hoskins, Hubbell, Hunter, Hyman, Jenks, Joyce, Kasson, Kehr, Kelley, Lapham, Lawrence, Leavenworth, Lynch, Magoon, MacDougall, McCrary, McDill, Miller, Monroe, Nash, New, Norton, Oliver, O'Neill, Packer, Page, Phelps, William A. Phillips, Pierce, Plaisted, Platt, Potter, Powell, James B. Reilly, Robinson, Rusk, Sampson, Seelye, Sinnickson, Smalls, A. Herr Smith, Strait, Stevenson, Teese, Thornburgh, Washington Townsend, Tufts, Van Vorhes, John L. Vance, Alexander S. Wallace, John W. Wallace, White, Willard, Andrew Williams, Alpheus S. Williams, Charles G. Williams, William B. Williams, James Wilson, Alan Wood, Jr., Woodburn, and Woodworth—97.

NAYS—Messrs. Ashe, Atkins, Beebe, Blackburn, Bland, Blount, Boone, Bright, John Young Brown, Cabell, John H. Caldwell, William P. Caldwell, Candler, Cate, John B. Clarke of Kentucky, Cook, Cowan, Culbertson, De Bolt, Dibrell, Douglas, Ellis, Faulkner, Felton, Forney, Franklin, Glover, Goode, Gunter, Hancock, Henry R. Harris, Hartridge, Goldsmith W. Hewitt, Hill, Hooker, House, Hunton, Hurd, Thomas L. Jones, Knott, Levy, Lewis, Lord, Mead, Milliken, Mutchler, Odell, Parsons, Payne, John F. Phillips, Piper, Rea, Reagan, Rice, Riddle, John Robbins, William M. Robbins, Miles Ross, Seales, Sheakley, Singleton, William E. Smith, Stone, Terry, Throckmorton, Tucker, Robert B. Vance, Waddell, Charles C. B. Walker, Ward, James D. Williams, Jeremiah N. Williams, Willis, Yeates, and Young—75.

NOT VOTING—Messrs. Adams, Bagby, George A. Bagley, John H. Bagley, Jr., William H. Baker, Banks, Banning, Barnum, Bell, Blair, Bliss, Bradford, Buckner, Samuel D. Burchard, Burleigh, Caulfield, Chapin, John B. Clark, Jr., of Missouri, Clymer, Cochrane, Collins, Cox, Crapo, Crounse, Cutler, Darrall, Davis, Durham, Eden, Egbert, Ely, Freeman, Frye, Fuller, Garfield, Gause, Gibson, Hale, Robert Hamilton, Haralson, John T. Harris, Harrison, Hartzell, Hatcher, Hays, Henkle, Hereford, Abram S. Hewitt, Hoge, Holman, Hopkins, Hurlbut,

Frank Jones, Ketchum, Kimball, King, Lamar, Franklin Landers, George M. Landers, Lane, Luttrell, Lynde, Edmund W. M. Mackey, L. A. Mackey, Maish, McFarland, McMahon, Metcalfe, Mills, Money, Morey, Morgan, Morrison, Neal, O'Brien, Poppleton, Pratt, Purruan, Rainey, Randall, John Reilly, Roberts, Sobieski Ross, Savage, Sayler, Schleicher, Schumaker, Slemens, Southard, Sparks, Springer, Stenger, Stowell, Swann, Tarbox, Thompson, Thomas, Martin I. Townsend, Turney, Waldron, Gilbert C. Walker, Walling, Walls, Walsh, Warren, Erastus Wells, G. Wiley Wells, Wheeler, Whitehouse, Whiting, Whitthorne, Wigginton, Wike, James Williams, Withshire, Benjamin, Wilson, and Fernando Wood—117.

So (two-thirds not voting in favor thereof) the resolution was not adopted.

In the House, on March 13th, Mr. Cox, of New York, said: "I move to suspend the rules and adopt the following resolutions."

The Clerk read as follows:

Resolved, That the people of the United States constitute a nation in the sense, to the extent, and for the purposes defined in the Federal Constitution.

Resolved, That the Government of the United States is a Federal Union, and was formed by the people of the several States in their sovereign capacity; that the rights and powers of the United States Government are defined and limited by the Federal Constitution, and these rights and powers cannot be enlarged or diminished except by an amendment to the Constitution.

Resolved, That the rights of the States have the same sanction and security in the Constitution as the rights and powers of the Federal Government, and that local domestic government by the several States within the limits of the Constitution is absolutely necessary for the preservation of the liberties of the citizen and the continuance of our republican system of government.

Resolved, That the doctrine that a State has a right to secede from the Union is in conflict with the idea of a "perpetual union" as contemplated by the Constitution, and should be regarded as being forever extinguished by the results of the recent civil conflict.

The Speaker: "Those in favor of the motion to suspend the rules will vote 'Ay,' and those opposed 'No.'"

The question was then taken; and it was decided in the affirmative, as follows:

YEAS—Messrs. Ainsworth, Anderson, Ashe, Atkins, John H. Bagley, Jr., Banning, Bass, Beebe, Blackburn, Bland, Blount, Boone, Bright, John Young Brown, Buckner, Cabell, John H. Caldwell, William P. Caldwell, Campbell, Cannon, Cason, Cate, Caulfield, John B. Clarke of Kentucky, John B. Clark, Jr., of Missouri, Clymer, Cochrane, Cook, Cowan, Cox, Cutler, Davy, De Bolt, Dibrell, Douglas, Durand, Eden, Ellis, Faulkner, Felton, Forney, Fort, Franklin, Fuller, Glover, Goode, Goodin, Andrew H. Hamilton, Robert Hamilton, Hancock, Hardenbergh, Benjamin W. Harris, Henry R. Harris, Hartridge, Hartzell, Hendee, Henkle, Goldsmith W. Hewitt, Hill, Holman, Hooker, Hopkins, House, Hunton, Hurd, Jenks, Thomas L. Jones, Kehr, Kelley, Knott, Franklin Landers, George M. Landers, Leavenworth, Levy, Lewis, Lord, Luttrell, Lynde, L. A. Mackey, Maish, McDill, McFarland, Meade, Milliken, Morgan, Morrison, Neal, New, O'Brien, Odell, Parsons, Payne, Phelps, John F. Phillips, William A. Phillips, Pierce, Piper, Poppleton, Potter, Randall, Rea, Reagan, John Reilly, James B. Reilly, Rice, Riddle, John Robbins, William M. Robbins, Roberts, Miles Ross, Sampson,

Savage, Saylor, Scales, Schleicher, Sheakley, Singleton, William E. Smith, Southard, Sparks, Strait, Stenger, Stevenson, Stone, Teese, Terry, Thompson, Throckmorton, Washington Townsend, Tucker Tufts, Turney, John L. Vance, Robert B. Vance, Waddell, Charles C. B. Walker, Walling, Walsh, Ward, Warren, Wike, Willard, Alpheus S. Williams, James D. Williams, Jeremiah N. Williams, Willis, James Wilson, Woodburn, Yeates, and Young—150.

NARS—Messrs. John H. Baker, Blaine, Bradley, Horatio C. Burchard, Conger, Deunison, Dunnell, Egbert, Evans, Farwell, Foster, Hoar, Hubbell, Hyman, Lapham, Lawrence, Lynch, Magoon, MacDougal, McCrary, Monroe, Nash, Norton, Oliver, Paoker, Page, Plaisted, Platt, Purman, Robinson, Busk, Seelye, Sinnickson, Smalls, Thornburgh, Van Vorhes, Alexander S. Wallace, John W. Wallace, White, Andrew Williams, Alan Wood, Jr., and Woodworth—42.

NOR VOTING—Messrs. Adams, Bagby, George A. Bagley, William H. Baker, Ballou, Banks, Barnum, Bell, Blair, Bliss, Bradford, William B. Brown, Samuel D. Burchard, Burleigh, Candler, Caswell, Chapin, Chittenden, Collins, Crapo, Crouse, Culbertson, Dandford, Darrall, Davis, Dobbins, Durham, Eames, Ely, Freeman, Frost, Frye, Garfield, Gause, Gibson, Gunter, Hale, Haralson, John T. Harris, Harrison, Hatcher, Hathorn, Haymond, Hays, Henderson, Hereford, Abram K. Hewitt, Hoge, Hoskins, Hunter, Hurlbut, Frank Jones, Joyce, Kasson, Ketchum, Kimball, King, Lamar, Lane, Edmund W. M. Mackey, McMahon, Metcalfe, Miller, Mills, Money, Morey, Mutchler, O'Neill, Powell, Pratt, Rainey, Sobieski Ross, Schumaker, Slemons, A. Herr Smith, Springer, Stowell, Swann, Tarbox, Thomas, Martin I. Townsend, Waldron, Gilbert C. Walker, Walls, Erastus Wells, G. Wiley Wells, Wheeler, Whitehouse, Whiting, Whitthorne, Wigginton, Charles G. Williams, James Williams, William B. Williams, Wilshire, Benjamin Wilson, and Fernando Wood—97.

So the resolutions were adopted on a suspension of the rules (two-thirds having voted in favor thereof).

In the House, on April 3d, Mr. Blackburn, of Kentucky, moved that the rules be suspended, so that the following resolution might be adopted by the House:

Resolved, That the President of the United States be requested to inform this House, if, in his opinion, it is not incompatible with the public interest, whether, since the 4th day of March, 1869, any executive offices, acts, or duties, and, if any, what, have been performed at a distance from the seat of Government established by law, and for how long a period at any one time, and in what part of the United States; also, whether any public necessity existed for such performance, and, if so, of what character, and how far the performance of such executive offices, acts, or duties, at such distance from the seat of Government established by law, was in compliance with the act of Congress of the 16th day of July, 1790.

The rules were suspended (two-thirds voting in favor thereof), and the resolution was adopted.

On May 4th President Grant sent the following message to the House in reply to the resolution:

To the House of Representatives:

I have given very attentive consideration to a resolution of the House of Representatives, passed on the 3d day of April, requesting the President of the United States to inform the House whether any executive offices, acts, or duties, and, if any, what, have within a specified period been performed at a

distance from the seat of Government established by law, etc.

I have never hesitated, and shall not hesitate, to communicate to Congress, and to either branch thereof, all the information which the Constitution makes it the duty of the President to give, or which my judgment may suggest to me, or a request from either House may indicate to me, will be useful in the discharge of the appropriate duties confided to them. I fail, however, to find in the Constitution of the United States the authority given to the House of Representatives (one branch of the Congress in which is vested the legislative power of the Government) to require of the Executive, an independent branch of the Government—coordinate with the Senate and House of Representatives—an account of his discharge of his appropriate and purely executive offices, acts, and duties, either as to when, where, or how performed.

What the House of Representatives may require as a right in its demand upon the Executive for information is limited to what is necessary for the proper discharge of its powers of legislation or of impeachment.

The inquiry in the resolution of the House as to where executive acts have within the last seven years been performed, and at what distance from any particular spot, or for how long a period at any one time, etc., does not necessarily belong to the province of legislation. It does not profess to be asked for that object.

If this information be sought through an inquiry of the President as to his executive acts in view or in aid of the power of impeachment vested in the House, it is asked in derogation of an inherent natural right, recognized in this country by a constitutional guarantee which protects every citizen, the President as well as the humblest in the land, from being made a witness against himself.

During the time that I have had the honor to occupy the position of President of this Government, it has been, and, while I continue to occupy that position, it will continue to be, my earnest endeavor to recognize and to respect the several trusts and duties and powers of the coordinate branches of the Government, not encroaching upon them, nor allowing encroachments upon the proper powers of the office which the people of the United States have confided to me, but aiming to preserve in their proper relations the several powers and functions of each of the coordinate branches of the Government, agreeably to the Constitution, and in accordance with the solemn oath which I have taken to "preserve, protect, and defend" that instrument.

In maintenance of the rights secured by the Constitution to the executive branch of the Government, I am compelled to decline any specific or detailed answer to the request of the House for information as to "any executive offices, acts, or duties, and, if any, what, have been performed at a distance from the seat of Government established by law, and for how long a period at any one time, and in what part of the United States."

If, however, the House of Representatives desires to know whether, during the period of upward of seven years during which I have held the office of President of the United States, I have been absent from the seat of Government, and whether during that period I have performed, or have neglected to perform, the duties of my office, I freely inform the House that from the time of my entrance upon my office I have been in the habit, as were all of my predecessors (with the exception of one who lived only one month after assuming the duties of his office, and one whose continued presence in Washington was necessary from the existence at the time of a powerful rebellion), of absenting myself at times from the seat of Government; and that during such absences I did not neglect or forego the obligations or the duties of my office, but continued to

discharge all of the executive offices, acts, and duties which were required of me as the President of the United States. I am not aware that a failure occurred, in any one instance, of my exercising the functions and powers of my office in every case requiring their discharge, or of my exercising all necessary executive acts, in whatever part of the United States I may at the time have been. Fortunately, the rapidity of travel and of mail communication, and the facility of almost instantaneous correspondence with the offices at the seat of Government which the telegraph affords to the President, in whatever section of the Union he may be, enable him in these days to maintain as constant and almost as quick intercourse with the departments at Washington as may be maintained while he remains in the capital.

The necessity of the performance of executive acts by the President of the United States exists and is devolved upon him, wherever he may be within the United States during his term of office, by the Constitution of the United States.

His civil powers are no more limited, or capable of limitation, as to the place where they shall be exercised, than are those which he might be required to discharge in his capacity of Commander-in-Chief of the Army and Navy, which latter powers, it is evident, he might be called upon to exercise possibly even without the limits of the United States. Had the efforts of those recently in rebellion against the Government been successful in driving a late President of the United States from Washington, it is manifest that he must have discharged his functions, both civil and military, elsewhere than in the place named by law as the seat of Government.

No act of Congress can limit, suspend, or confine this constitutional duty. I am not aware of the existence of any act of Congress which assumes thus to limit or restrict the exercise of the functions of the Executive. Were there such acts, I should nevertheless recognize the superior authority of the Constitution, and should exercise the powers required thereby of the President.

The act to which reference is made in the resolution of the House relates to the establishing of the seat of Government, and the providing of suitable buildings and removal thereto of the offices attached to the Government, etc. It was not understood at its date, and by General Washington, to confine the President in the discharge of his duties and powers to actual presence at the seat of Government. On the 30th of March, 1791, shortly after the passage of the act referred to, General Washington issued an executive proclamation, having reference to the subject of this very act, from Georgetown, a place remote from Philadelphia, which then was the seat of Government, where the act referred to directed that "all offices attached to the seat of Government" should for the time remain.

That none of his successors have entertained the idea that their executive offices could be performed only at the seat of Government is evidenced by the hundreds upon hundreds of such acts performed by my predecessors, in unbroken line from Washington to Lincoln, a memorandum of the general nature and character of some of which acts is submitted herewith; and no question has ever been raised as to the validity of these acts, or as to the right and propriety of the Executive to exercise the powers of his office in any part of the United States.

U. S. GRANT.

WASHINGTON, May 4, 1876.

Memorandum of absences of the Presidents of the United States from the national capital during each of the several administrations, and of public and executive acts performed during the time of such absences.

PRESIDENT WASHINGTON

was frequently absent from the capital; he appears

to have been thus absent at least one hundred and eighty-one days during his term.

During his several absences he discharged official and executive duties, among them:

In March, 1791, he issued a proclamation, dated at Georgetown, in reference to running the boundary for the territory of the permanent seat of the Government.

From Mount Vernon he signed an official letter to the Emperor of Morocco, and from the same place the commission of Oliver Wolcott as Controller of the Treasury, and the proclamation respecting the Whiskey Insurrection in Pennsylvania; also, various sea-letters, the proclamation of the Treaty of 1795 between the United States and Spain, the executive order of August 4, 1792, relative to the duties on distilled spirits, etc.

When at Germantown, he signed the commission of John Brackenridge as attorney of the United States for Kentucky, and that of engineer of the United States Mint.

He proposed to have Mr. Trujillo officially presented, as envoy extraordinary and minister plenipotentiary from Spain, to him at Mount Vernon; but, although Mr. Trujillo went there for the purpose, the ceremony of presentation was prevented by Mr. Trujillo having accidentally left his credentials.

PRESIDENT JOHN ADAMS

was absent from the capital during his term of four years, on various occasions, three hundred and eighty-five days.

He discharged official duties and performed the most solemn public acts at Quincy, in the same manner as when at the seat of Government.

In 1797 (August 25th) he forwarded to the Secretary of State a number of passports which he had signed at Quincy.

He issued at Quincy commissions to numerous officers of various grades, civil and military.

On the 28th of September, 1797, he forwarded to the Secretary of State a commission for a justice of the Supreme Court, signed in blank at Quincy, instructing the Secretary to fill it with the name of John Marshall if he would accept, and if not, Bushrod Washington. He issued a proclamation opening trade with certain ports of Saint Domingo, and signed warrants for the execution of two soldiers, and for a pardon.

PRESIDENT JEFFERSON

was absent from the seat of Government, during his two terms of office, seven hundred and ninety-six days, more than one-fourth of the whole official period.

During his absence he signed and issued from Monticello seventy-five commissions, one letter to the Emperor of Russia, and nine letters of credence to diplomatic agents of the United States, accredited to other governments.

PRESIDENT MADISON

was absent from the seat of Government, during his two presidential terms, six hundred and thirty-seven days.

He signed and issued from Montpelier, during his absence from the capital, seventy-one commissions, one proclamation, and nine letters of credence to ministers, accrediting them to foreign governments, and, as it appears, transacted generally all the necessary routine business incident to the executive office.

PRESIDENT MONROE

was absent from the capital, during his presidential service of eight years, seven hundred and eight days, independent of the year 1824, and the two months of 1825, for which period no data are found.

He transacted public business wherever he happened to be, sometimes at his farm in Virginia, again at his summer resort on the Chesapeake, and sometimes while traveling. He signed and issued from

these several places, away from the capital, numerous commissions to civil officers of the Government, exequaturs to foreign consuls, letters of credence, two letters to sovereigns, and thirty-seven pardons.

PRESIDENT JOHN Q. ADAMS

was absent from the capital, during his presidential term of four years, two hundred and twenty-two days.

During such absence he performed official and public acts, signing and issuing commissions, exequaturs, pardons, proclamations, etc.

Referring to his absence in August and September, 1937, Mr. Adams, in his "Memoirs," vol. viii., p. 75, says: "I left with him (the chief clerk) some blank signatures to be used when necessary for proclamations, remission of penalties, and commissions of consuls, taking of him a receipt for the number and kind of blanks left with him, with directions to return me, when I came back, all the signed blanks remaining unused, and to keep and give me an account of all those that shall have been disposed of. This has been my constant practice with respect to signed blanks of this description. I do the same with regard to patents and land-grants."

PRESIDENT JACKSON

was absent from the capital, during his presidential service of eight years, five hundred and two days.

He also performed executive duties and public acts while absent.

He appears to have signed and issued, while absent from the capital, very many public papers, embracing commissions, letters of credence, exequaturs, pardons, and among them four executive proclamations.

On the 26th of June, 1833, he addressed a letter from Boston to Mr. Duane, Secretary of the Treasury, giving his views at large on the removal of the "deposits" from the United States Bank and placing them in the State banks, directing that the change with all its arrangements should be, if possible, completed by the 15th September following, and recommending that Amos Kendall should be appointed an agent of the Treasury Department to make the necessary arrangements with the State banks. Soon after, September 23d, a paper signed by the President, and purporting to have been read to the cabinet, was published in the newspapers of the day. Early in the next session of Congress a resolution passed the Senate, inquiring of the President whether the paper was genuine or not, and if it was published by his authority, and requesting that a copy be laid before that body.

The President replied, avowing the genuineness of the paper, and that it was published by his authority; but declined to furnish a copy to the Senate on the ground that it was purely executive business, and that the request of the Senate was an undue interference with the independence of the Executive, a coordinate branch of the Government.

In January, 1837 (26th), he refused the privilege to a committee, under a resolution of the House of Representatives, to make a general investigation of the Executive Departments without specific charges, on the ground, among others, that the use of the books, papers, etc., of the departments for such purpose would interfere with the discharge of public duties devolving upon the heads of the different departments, and necessarily disarrange and retard the public business.

PRESIDENT VAN BUREN

was absent from the capital, during his presidential term, one hundred and thirty-one days.

He discharged executive duties and performed official and public acts during these absences.

Among the papers signed by President Van Buren, during his absence from the seat of Government, are commissions, one of these being for a United States judge of a district court, pardons, etc.

PRESIDENT TITLER

was absent from the capital, during his presidential term, one hundred and sixty-three days, and performed public acts and duties during such absences, signing public papers and documents to the number of twenty-eight, in which were included commissions, exequaturs, letters of credence, pardons, and one proclamation making public the Treaty of 1842 between the United States and Ecuador.

PRESIDENT POLK

was absent from the capital, during his presidential term, thirty-seven days, and appears to have signed but two official public papers during such absence.

PRESIDENT TAYLOR

was absent from the capital, during the time he served as President, thirty-one days, and while absent signed two commissions, three "full powers," two exequaturs, and the proclamation of August 11, 1849, relative to a threatened invasion of Cuba, or some of the provinces of Mexico.

PRESIDENT FILLMORE

was absent from the capital, during the time he served as President, sixty days. During such absence he signed pardons, commissions, exequaturs, etc.

PRESIDENT PIERCE

was absent from the capital in all, during his presidential term, fifty-seven days. The several periods of absence which make up this aggregate were each brief, and it does not appear that during these absences the President signed any public official documents, except one pardon.

PRESIDENT BUCHANAN

was absent from the capital, during his presidential term, fifty-seven days, and the official papers which he is shown to have signed during such absence are three exequaturs and one letter of credence.

In addition to the public documents and papers executed by the several Presidents during their absences from the seat of Government, constant official correspondence was maintained by each with the heads of the different Executive Departments.

Mr. Randall, of Pennsylvania, said: "As the question involved in the original resolution and in the communication just read would seem to be a judicial one, as to the power of the President to shift for prolonged periods the place where he administers the Government, I move the message and accompanying document be referred to the Judiciary Committee and ordered to be printed; and on that motion I demand the previous question."

The previous question was seconded and the main question ordered; and the motion was agreed to.

In the Senate, on March 14th, Mr. Wright, of Iowa, said: "I move that the Senate proceed to the consideration of Senate bill fixing the salary of the President of the United States."

The motion was agreed to; and the Senate, as in Committee of the Whole, proceeded to consider the bill. It provides that from and after the 4th of March, 1877, the salary of the President of the United States shall be \$25,000 per annum.

The bill was reported to the Senate without

amendment, ordered to be engrossed for a third reading, and read the third time.

The President *pro tempore*: "The question is, 'Shall the bill pass?' on which the yeas and nays are demanded."

The Secretary proceeded to call the roll, which resulted as follows:

YEAS—Messrs. Allison, Bogy, Christiancy, Clayton, Cockrell, Conkling, Dawes, Ferry, Goldthwaite, Hamilton, Harvey, Hitchcock, Kernan, Key, Logan, McCreery, McDonald, Maxey, Morrill of Vermont, Morton, Patterson, Stevenson, Thurman, Wallace, Whyte, and Wright—26.

NAYS—Messrs. Bayard, Boutwell, Cooper, Davis, Dorsey, Frelinghuysen, Hamlin, Howe, Ingalls, Jones of Florida, Jones of Nevada, McMillan, Mitchell, Paddock, Robertson, Sargent, Sharon, Spencer, Windom, and Withers—20.

ABSENT—Messrs. Alcorn, Anthony, Booth, Bruce, Burnside, Cameron of Pennsylvania, Cameron of Wisconsin, Caperton, Conover, Cragin, Dennis, Eaton, Edmunds, English, Gordon, Johnston, Kelly, Merrimon, Morrill of Maine, Norwood, Oglesby, Randolph, Ransom, Saulsbury, Sherman, Wadleigh, and West—27.

So the bill was passed.

On April 6th the bill was passed by the House.

On April 19th President Grant returned the bill, with his objections, as follows:

To the Senate of the United States:

Herewith I return Senate bill entitled "An act fixing the salary of the President of the United States," without my approval.

I am constrained to this course from a sense of duty to my successors in office, to myself, and to what is due to the dignity of the position of Chief Magistrate of a nation of more than 40,000,000 people.

When the salary of the President of the United States, pursuant to the Constitution, was fixed at \$25,000 per annum, we were a nation of but 3,000,000 people, poor from a long and exhaustive war, without commerce or manufactures, with but few wants, and those cheaply supplied. The salary must then have been deemed small for the responsibilities and dignity of the position, but justifiably so from the impoverished condition of the Treasury and the simplicity it was desired to cultivate in the republic.

The salary of Congressmen, under the Constitution, was first fixed at \$6 per day for the time actually in session—an average of about 120 days to each session—or \$720 per year, or less than one-thirtieth of the salary of the President.

Congress have legislated upon their own salaries from time to time since, until finally it reached \$5,000 per annum, or one-fifth that of the President before the salary of the latter was increased.

No one having a knowledge of the cost of living at the national capital will contend that the present salary of Congressmen is too high, unless it is the intention to make the office one entirely of honor, when the salary should be abolished—a proposition repugnant to our republican ideas and institutions.

I do not believe the citizens of this republic desire their public servants to serve them without a fair compensation for their services. Twenty-five thousand dollars does not defray the expenses of the Executive for one year, or has not in my experience. It is not now one-fifth in value what it was at the time of the adoption of the Constitution in supplying demands and wants.

Having no personal interest in this matter, I have felt myself free to return this bill to the House in

which it originated, with my objections, believing that in doing so I meet the wishes and judgment of the great majority of those who indirectly pay all the salaries and other expenses of Government.

U. S. GRANT.

EXECUTIVE MANSION, April 18, 1876.

In the House, on August 4th, Mr. Lord, of New York, said: "I hold in my hand a report from the Committee on the Judiciary upon the House resolution, which is known as the Blaine amendment to the Constitution. I had been directed by the committee to make this report, and intended to do so early in the day, but was prevented. I now present the report."

The Speaker *pro tempore*: "If a motion has been entered to reconsider the vote by which the joint resolution was referred, then the gentleman should ask to take up that motion."

Mr. Lord: "I will put it in that form."

The Speaker *pro tempore*: "The gentleman from New York calls up at this time the motion to reconsider the vote by which the joint resolution which will be read was referred to the Committee on the Judiciary."

The Clerk read as follows:

The Committee on the Judiciary respectfully report that they have had under consideration House resolution No. 1, and have amended the same by adding thereto that the article should not vest, enlarge, or diminish legislative power in the Congress. Thus amended the resolution was unanimously adopted. While there may be a difference of opinion as to the necessity of such a constitutional amendment, all agree that the underlying principles are right and in accordance with the spirit of the age.

The Speaker *pro tempore*: "The Clerk will now report the joint resolution."

The Clerk read as follows:

JOINT RESOLUTION PROPOSING AN AMENDMENT TO THE CONSTITUTION OF THE UNITED STATES.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following be proposed to the several States of the Union as an amendment to the Constitution, namely:

ARTICLE XVI.—No State shall make any law respecting an establishment of religion, or prohibiting the free exercise thereof; and no money raised by taxation in any State for the support of public schools, or derived from any public fund therefor, nor any public lands devoted thereto, shall ever be under the control of any religious sect; nor shall any money so raised or lands so devoted be divided between religious sects or denominations.

The Speaker *pro tempore*: "The amendments proposed by the committee will now be read."

The Clerk read as follows:

In line 12, after the word "sect," insert the words "or denomination."

At the end of the article add the following: "This article shall not vest, enlarge, or diminish legislative power in the Congress."

Mr. Lord: "I move the previous question."

The previous question was seconded and the main question ordered; and under the opera-

tion thereof the motion to reconsider was agreed to.

The Speaker *pro tempore*: "The question is, Will the House refer this resolution to the Committee on the Judiciary?"

The question was decided in the negative.

Mr. Lord: "I now propose my substitute, and call for the previous question."

Mr. Conger: "Then I insist upon the proposition that this House has decided that this matter is not in the hands of the Judiciary Committee, and therefore cannot be reported from that committee."

The Speaker *pro tempore*: "The point of order is overruled."

Mr. McCrary: "I wish the gentleman from New York would allow me a moment."

Mr. Lord: "I will as soon as the substitute is read."

The Speaker *pro tempore*: "The substitute will be read."

The Clerk read as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following be proposed to the several States of the Union as an amendment to the Constitution, namely:

ARTICLE XVI.—No State shall make any law respecting an establishment of religion, or prohibiting the free exercise thereof; and no money raised by taxation in any State for the support of public schools, or derived from any public fund therefor, nor any public lands devoted thereto, shall ever be under the control of any religious sect or denomination; nor shall any money so raised or lands so devoted be divided between religious sects or denominations. This article shall not vest, enlarge, or diminish legislative power in the Congress.

Mr. Lord: "Before demanding the previous question, I yield five minutes to the gentleman from Iowa (Mr. McCrary), who was not present at the meeting of the committee this morning, and desires to occupy a few moments."

Mr. McCrary: "Mr. Speaker, the situation of this question before the House, as I understand it, is this: The original proposition to amend the Constitution as offered by the late member from Maine, Mr. Blaine, is the main proposition pending before the House. The gentleman from New York offers a substitute for that original amendment, and I suppose the first vote will be on adopting the substitute for the original proposition. I desire to say, sir, that I am in favor of the original resolution, and hope it will be adhered to by the House, and I am opposed to the amendment in the nature of a substitute offered by the gentleman from New York.

"The difference between the two is this: the original is a plain proposition to amend the Constitution upon the matter before it. The substitute embodies the original proposition and adds to it what I consider in no other light than a nullifying clause."

Mr. Kasson: "That is it."

Mr. McCrary: "It amends the Constitution and denies to Congress the power to legislate

for enforcing the amendment after you have made it. Now, sir, a proposition like that is too plain for discussion. If the House, if the people of the country, desire the Constitution of the United States to be amended in this particular, then it follows it ought to be so amended that the legislative body that makes laws for the national Government shall have power to enforce it by proper legislation.

"It would be an anomaly, it would be a strange proceeding indeed, to put a provision in the Constitution of the United States and accompany it with another proposition that the law-making power of the United States shall have no power to enforce it. Therefore I hope the substitute will not be adopted, but the original proposition will be sustained by the House."

Mr. Lord: "I must resume the floor. This question has been before the Congress for nearly eight months, and has been pressed upon our attention by the President, by the press, and by the most distinguished Republican leader in the House. The Committee on the Judiciary have unanimously adopted his amendment almost *in his verbis*. I will say that the gentleman who introduced the amendment—and I know his views upon this question, for he stated them to me more than once—never contended that such amendment to the Constitution, which was drawn by him, conferred any legislative power on Congress whatever, and he never intended that it should. But inasmuch as this question, as said by the gentleman from Massachusetts (Mr. Hoar), is one that has been watched with some jealousy, and inasmuch as several Congresses in the adoption of past amendments have added a clause to each amendment declaratory of the power of Congress, it was deemed wise to add to this article that it should not 'vest, diminish, or enlarge' legislative power in Congress. It was understood by the committee, and I believe that on reflection it will without exception be understood by the House, that this additional clause does not in any manner change the preceding part of the proposed article. It is simply declaratory; more than this, if Congress had any power over the question before, it is thoroughly and absolutely reserved. The criticism, therefore, of the learned gentleman from Massachusetts (Mr. Banks) falls utterly to the ground, because the proposed amendment provides that this article shall not 'vest, diminish, or enlarge' the power of the Congress. Mark the words, 'shall not diminish the power of the Congress.' Therefore if the Congress has any power now, under any possible view, over the subject-matter of the proposed amendment, such power remains in full force and vigor. The words of limitation only apply to the proposed article; I repeat, any power the Congress has under the Constitution is expressly affirmed and reserved. Therefore, so far from the power of Congress in the premises being affected, even

to the thousandth part of a hair, we affirm that any power that the Constitution has vested in the Congress heretofore will be there when this constitutional amendment is adopted by the States. And we allege that the proposed article, with the addition made by the committee, will be submitted precisely as its author intended it should be. Under these circumstances I move the previous question."

The previous question was seconded and the main question ordered; and under the operation thereof the substitute reported by the Committee on the Judiciary was agreed to.

The joint resolution, as amended, was ordered to be engrossed and read a third time; and being engrossed, it was accordingly read the third time.

The Speaker *pro tempore*: "The Chair will order the yeas and nays to be now called, as this is a proposed amendment to the Constitution, and it requires a two-thirds vote."

The question was taken; and there were—yeas 180, nays 7, not voting 98; as follows:

YEAS—Messrs. Abbott, Adams, Ainsworth, Atkins, Bagby, John H. Bagley, Jr., William H. Baker, Ballou, Banks, Banning, Bell, Blair, Bland, Boone, Bright, John Young Brown, William R. Brown, Horatio C. Burchard, Samuel D. Burchard, Cabell, William P. Caldwell, Cannon, Cason, Caswell, Cate, Caulfield, Chittenden, John B. Clark, Jr., of Missouri, Clymer, Cochrane, Conger, Cook, Cox, Crouse, Cutler, Danford, Darrall, Davis, Davy, Dibrell, Dobbins, Dunnell, Durand, Durham, Eames, Eden, Evans, Felton, Finley, Fort, Foster, Franklin, Freeman, Frye, Garfield, Gause, Goode, Goodin, Gunter, Hale, Andrew H. Hamilton, Hancock, Hardenburgh, Benjamin W. Harris, Harrison, Hartridge, Hartzell, Haymond, Henderson, Henkle, Abram S. Hewitt, Hoar, Holman, Hopkins, Hutton, Hurd, Hyman, Jenks, Thomas L. Jones, Joyce, Kasson, Kerr, Lamar, Franklin Landers, Lane, Lapham, Lawrence, Leavenworth, Levy, Lewis, Lord, Lynch, Lynde, Mackey, Maish, MacDougall, McCrary, McDill, McFarland, McMahon, Metcalf, Miller, Milliken, Mills, Monroe, Morgan, Morrison, Mutchler, Neal, New, O'Neill, Packer, Page, Payne, William A. Phillips, Pierce, Piper, Plaisted, Platt, Poppleton, Potter, Powell, Pratt, Rainey, Randall, Rea, Reagan, John Reilly, Rice, Riddle, John Robbins, William M. Robbins, Roberts, Robinson, Miles Ross, Rusk, Sampson, Savage, Scales, Singleton, Sinneckson, Slemons, Smalls, A. Herr Smith, William E. Smith, Southard, Springer, Stenger, Stevenson, Stone, Teese, Terry, Thomas, Thompson, Throckmorton, Washington Townsend, Tufts, Turney, Van Vorhes, John L. Vance, Waddell, Charles C. B. Walker, Gilbert C. Walker, Walsh, Ward, Warren, Erastus Wells, White, Whitthorne, Wigington, Willard, Alpheus S. Williams, James Williams, James D. Williams, Jeremiah N. Williams, Willis, Benjamin Wilson, James Wilson, Woodburn, and Yeates—180.

NAYS—Messrs. Blackburn, Bradford, John H. Caldwell, John B. Clarke of Kentucky, Forney, Knott, and O'Brien—7.

NOT VOTING—Messrs. Anderson, Ashe, George A. Bagley, John H. Baker, Bass, Beebee, Bliss, Blount, Bradley, Buckner, Burleigh, Campbell, Candler, Chapin, Collins, Cowan, Crapo, Culberson, De Bolt, Denison, Douglas, Egbert, Ellis, Ely, Faulkner, Fuller, Gibson, Glover, Robert Hamilton, Haralson, Henry R. Harris, John T. Harris, Hatcher, Hathorn, Hayes, Hendee, Hereford, Goldsmith W. Hewitt, Hill, Hoge, Hooker, Hoskins, House, Hubbell, Hunter, Huribut, Frank Jones, Kelley, Kim-

ball, King, George M. Landers, Le Moyné, Luttrell, Magoon, Mead, Money, Nash, Norton, Odell, Oliver, Phelps, John F. Philips, Purman, James B. Reilly, Sobieski Ross, Saylor, Schleicher, Schumaker, Seelye, Sheakley, Sparks, Spencer, Strait, Stowell, Swann, Tarbox, Thornburgh, Martin I. Townsend, Tucker, Robert B. Vance, Wait, Waldron, Alexander S. Wallace, John W. Wallace, Walling, G. Wiley Wells, Wheeler, Whitehouse, Whiting, Wike, Andrew Williams, Charles G. Williams, William B. Williams, Wilshire, Alan Wood, Jr., Fernando Wood, Woodworth, and Young—98.

So (two-thirds voting in the affirmative) the joint resolution was passed.

In the Senate, on August 7th, the President *pro tempore* laid before the Senate the joint resolution proposing an amendment to the Constitution of the United States; and it was read twice.

Mr. Frelinghuysen, of New Jersey, said: "Mr. President, the people of our country are seriously and profoundly in earnest on this subject. This amendment, as the Senate will see, prohibits the appropriation of any school-funds to any school that is under control of any sect or denomination, and prohibits the division of such fund among different denominations. So far it is very well as a *pronunciamento*; but suppose a State for the purpose of propitiating some religious denomination does make an appropriation in violation of this amendment, what are we to do about it? The amendment is a mere *brutum fulmen*; it has no sanction and there is no one to enforce it. If the power was given to Congress by legislation to enforce the amendment, we could make it a high crime for any officer to pay or for any one to receive the money, or we could by legislation appoint some official, possibly the Attorney-General of the United States, whose duty it should be to bring the violation to the attention of the courts. The only remedy now under the amendment, and I do not know whether that could be without further legislation, would be for a tax-payer to seek the courts and after the money had been paid and spent, and after tedious years perhaps the tax-payer might recover his contribution to that fund. Therefore it seems to me that another section should be added giving Congress the power to enforce this amendment.

"But there is a more serious objection to the amendment than that I have noticed. The amendment only applies to a school-fund, and prohibits its being appropriated to schools under denominational control. There is not a word in the amendment that prohibits public money from being appropriated to theological seminaries, to reformatories, to monasteries, to nunneries, to houses of the Good Shepherd, and many kindred purposes. We know that in one State within a decade \$1,200,000 was voted Protestant institutions for which the Catholics of the country were taxed, and we know that in the same period several millions of dollars were voted to Catholic institutions for which Protestants were taxed.

"Besides, sir, even in reference to schools this amendment only prohibits appropriating the school-fund to denominational schools. It does not by any means forbid appropriations from the Treasury generally even to denominational schools.

"I call the attention of the Senate thus briefly to this subject.

"The amendment should cover the whole subject. I propose a substitute to be referred to the committee with the pending resolution."

The President *pro tempore*: "The Senator's substitute will be read."

Mr. Sargent, of California, said: "I offer a substitute."

The President *pro tempore*: "The substitute proposed by the Senator from New Jersey (Mr. Frelinghuysen) will first be read."

The Chief Clerk read as follows:

ARTICLE XVI., Section 1.—No State shall make any law respecting the establishment of religion or prohibiting the free exercise thereof; and no public property and no money raised by taxation in any State, Territory, or District, or derived from public lands, or other public source, shall be appropriated to any school, educational, or other institution that is under the control of any religious sect or denomination; and no such appropriation shall be made to any religious sect or denomination or to promote its interests; nor shall any public money, land, or property be divided between religious sects or denominations.

Sec. 2. The Congress shall have power to enforce by appropriate legislation the provisions of this article.

The President *pro tempore*: "The substitute proposed by the Senator from California will now be read."

The Chief Clerk read as follows:

ARTICLE XVI., Section 1.—There shall be maintained in each State and Territory a system of free common schools; but neither the United States nor any State, or Territory, county, or municipal corporation shall aid in the support of any school wherein the peculiar tenets of any religious denomination shall be taught.

Sec. 2. The Congress shall have power to enforce by appropriate legislation the provisions of this article.

Mr. Christiancy, of Michigan, said: "Mr. President, I agree with the Senator from New Jersey that the people are in earnest on this question; but whoever may be the father of the provision contained in this joint resolution and proposed to be made a part of the Constitution, if he really meant to meet the evil, I do not think he ought to be at all proud of his offspring. The defects in the resolution have not been fully pointed out, and I will proceed to read the resolution as it passed the House and is sent here, and it will be seen that there is a defect in it to which the attention of the Senate has not yet been called:

No State shall make any law respecting the establishment of religion or prohibiting the free exercise thereof—

"Thus far it is simply imposing on the States what the Constitution already imposes on the United States, and that is all correct—

and no money raised by taxation in any State—

"For what purpose, now? I call attention to the limitation—

no money raised by taxation in any State for the support of public schools, or derived from any public fund therefor—

"That is, a public fund for public schools— nor any public lands devoted thereto—

"That is, devoted to public schools—

shall ever be under the control of any religious sect; nor shall any moneys so raised or lands so devoted—

"Limited all the way to the public schools— be divided among religious sects or denominations.

"It simply prohibits, after a fund has been raised for public schools or after lands have been devoted to public-school purposes, the diversion of that fund or those lands to sectarian schools or for the benefit of churches. That is all it does. Theological schools, schools where any particular system of religion is taught, are not the public schools; and there is no prohibition there upon the States raising any amount of money or devoting any amount of public lands to the support of private schools for instruction in the religion of any sect.

"This resolution, then, prohibits the States from committing the wrong when it is attempted *indirectly*, but leaves the States full power to commit the same wrong whenever they choose to do it *directly*. There is the defect of this resolution, and that is the main defect. But there is another defect. It simply prohibits the States from doing these things; it does not prohibit the United States; and under the Constitution of the United States, as it now stands, it is entirely competent to devote lands or impose taxes and appropriate money for sectarian purposes. The amendment, therefore, which should be submitted to meet this entire evil ought to cover the whole ground; it ought to prohibit the Federal Government, as well as the State governments, from doing anything of this kind. I prepared on Saturday last a substitute which I propose to offer and have sent to the committee, which covers the entire ground. It is true I have said nothing in it prohibiting a division, because the language used prohibiting an appropriation or donation for any such purpose covers this ground and would prevent a division if it were raised for public-school purposes; it would prevent a diversion, and, as I may wish to make a remark or two on this as I proceed, I will read the substitute. The first clause is the same as that which passed the House:

No State shall make any law respecting the establishment of religion or prohibiting the free exercise thereof—

"Now follow the distinctive changes—

nor shall Congress nor any State raise by taxation, donate, or appropriate any money or property for the support of any church or religious society, nor

for the support or in aid of any theological school or seminary, or of any school or seminary teaching the peculiar religious doctrines or subject in any respect to the control or direction of any church, religious society, sect, or denomination. And no special or denominational system of religion or religious belief shall in any State or Territory or in the District of Columbia constitute any part of the course of study or instruction in any school or institution of learning supported wholly or in part by taxation or by the donation of any money or property by any State or by the United States.

"This substitute, as I have said, covers the entire ground. It takes up the poisonous tree by the root, while the resolution sent us by the House cuts off but a minor and unimportant branch. I will send the substitute to the Chair and ask to have it referred to the Committee on the Judiciary, with the resolution of the House."

Mr. Morton, of Indiana, said: "I wish to express my surprise at the reading of this resolution as it has come to us. It is very clear that you can drive an omnibus through it. All it provides is that a fund raised for the benefit of the public schools already dedicated and set apart for that purpose cannot be diverted to a sectarian school; but it does not prohibit a State from appropriating money out of its general Treasury that was not raised for school purposes for the support of sectarian schools; and it does not prevent a State from levying an original tax for the support of sectarian schools. It simply protects a school-fund raised as a general school-fund dedicated for that purpose from being afterward diverted to sectarian schools, and leaves every State free to make an appropriation out of the general Treasury, out of moneys raised for all purposes, to the support of sectarian schools or even to create a special tax for that purpose. It is competent, therefore, for any State to appropriate money out of the general Treasury of that State for the support of Catholic schools or Protestant schools, or to levy a tax directly upon the people for that purpose. This amendment would not interfere with any legislation of that kind. I hope it will be properly amended and sent back to the other House in time to be passed, so that it may go before the States next winter."

The joint resolution was referred to the Committee on the Judiciary, with the various amendments proposed.

On August 11th the Committee on the Judiciary reported an amendment to strike out all after the enacting clause of the joint resolution, and in lieu thereof to insert the following:

That the following article be proposed to the Legislatures of the several States as an amendment to the Constitution of the United States, which, when ratified by three-fourths of the said Legislatures, shall be valid as a part of the said Constitution, namely:

ARTICLE XVI.—No State shall make any law respecting an establishment of religion, or prohibiting the free exercise thereof; and no religious test shall ever be required as a qualification to any office or public trust under any State. No public property

and no public revenue of, nor any loan of credit by or under the authority of, the United States, or any State, Territory, District, or municipal corporation, shall be appropriated to or made or used for the support of any school, educational or other institution under the control of any religious or anti-religious sect, organization, or denomination, or wherein the particular creed or tenets of any religious or anti-religious sect, organization, or denomination shall be taught. And no such particular creed or tenets shall be read or taught in any school or institution supported in whole or in part by such revenue or loan of credit: and no such appropriation or loan of credit shall be made to any religious or anti-religious sect, organization, or denomination, or to promote its interests or tenets. This article shall not be construed to prohibit the reading of the Bible in any school or institution; and it shall not have the effect to impair rights of property already vested.

Sec. 2. Congress shall have power, by appropriate legislation, to provide for the prevention and punishment of violations of this article.

The President *pro tempore*: "The question is on the amendment reported by the Committee on the Judiciary as a substitute for the House resolution."

Mr. Randolph, of New Jersey, said: "The amendment proposed by the Judiciary Committee is an altogether different affair from that the people have asked for or the press discussed. It opens, if adopted, many grave questions, good enough for the welfare of the legal profession, but bad enough for the body-politic. It will leave in doubt much that is now deemed settled, and, as it seems to me from the hasty perusal I have been able to give to the paper to-day, instead of disposing of a vexed question, taking it out of politics and contention, its main result, if it is not its object, will be to arouse anew, and unnecessarily, an element of discord.

"I can take no part in any such legislation save to attempt to prevent it. I have labored hard all the session to have an amendment passed substantially like that sent to us from the House. It is reasonable in character, acceptable to most men of all creeds and denominations, has no latent purpose to excite, no new scheme to add to the already dangerous powers of Congress, and, as is believed by most men, would prove a just and peaceful settlement.

"For the House amendment I shall steadily vote; for all alterations of that proposition I shall vote against, as I believe most of the true friends of education should. The adoption of the House amendment concludes congressional action and relegates final action to the States."

The result was announced, as follows:

YEAS—Messrs. Allison, Anthony, Booth, Boutwell, Burnside, Cameron of Wisconsin, Christiancy, Conkling, Cragin, Edmunds, Ferry, Frélinghuysen, Harvey, Hitchcock, Howe, Ingalls, Logan, McMillan, Mitchell, Morrill, Oglesby, Paddock, Patterson, Sargent, Spencer, Wadleigh, and West—27.

NAYS—Messrs. Bogy, Cockrell, Cooper, Davis, Eaton, Gordon, Kelly, Kernan, Key, McCreery, Maxey, Norwood, Randolph, Ransom, and Stevenson—15.

ABSENT—Messrs. Alcorn, Barnum, Bayard,

Bruce, Cameron of Pennsylvania, Clayton, Conover, Dawes, Dennis, Dorsey, Goldthwaite, Hamilton, Hamlin, Johnston, Jones of Florida, Jones of Nevada, McDonald, Merrimon, Morton, Robinson, Saulsbury, Sharon, Sherman, Thurman, Wallace, Whyte, Windom, Withers, and Wright—29.

So the amendment was agreed to.

The joint resolution was reported to the Senate as amended, and the amendment made as in Committee of the Whole was concurred in.

The President *pro tempore*: "The question is on ordering the amendment to be engrossed and the joint resolution to be read the third time."

The result was announced—yeas 27, nays 15; as follows:

YEA—Messrs. Allison, Anthony, Booth, Boutwell, Burnside, Cameron of Wisconsin, Christiancy, Conkling, Cragin, Edmunds, Ferry, Frelinghuysen, Harvey, Hitchcock, Howe, Ingalls, Logan, McMillan, Mitchell, Morrill, Oglesby, Paddock, Patterson, Sargent, Spencer, Wadleigh, and West—27.

NAY—Messrs. Bogy, Cockrell, Cooper, Davis, Eaton, Gordon, Kelly, Kernan, Key, McCreery, Masey, Norwood, Randolph, Ransom, and Stevenson—15.

ABSENT—Messrs. Alcorn, Barnum, Bayard, Bruce, Cameron of Pennsylvania, Clayton, Conover, Dawes, Dennis, Dorsey, Goldthwaite, Hamilton, Hamlin, Johnston, Jones of Florida, Jones of Nevada, McDonald, Merrimon, Morton, Robertson, Saulsbury, Sharon, Sherman, Thurman, Wallace, Whyte, Windom, Withers, and Wright—29.

So the amendment was ordered to be engrossed and the joint resolution to be read a third time.

On August 14th the resolution was taken up for the final passage.

The President *pro tempore*: "The question is on the passage of the resolution upon which the yeas and nays have been ordered."

Mr. Kernan, of New York, said: "Mr. President, the Senate, by a majority vote, has substituted the article reported by the Judiciary Committee for the article proposed and passed in the House of Representatives and sent here.

"That was the proposed article which had been brought to the attention of the public many months ago by a gentleman of distinction (Mr. Blaine) in the party with which he acted, and very well known to the country; and I believe that it met with no considerable opposition in any quarter. It declares that money raised in a State by taxation for the support of public schools or derived from any public fund therefor, or any public lands devoted thereto, shall not be under the control of any religious sect or denomination, nor shall any money so raised be divided among the sects or religious denominations. Were this before the Senate I would support it.

"I should be opposed, if the people of a State were entirely of one denomination, and that the one to which I belong, to placing money raised for the support of public schools under the control of that religious denomination.

"But there has been another article proposed here and adopted by a majority of the

Senate; and as I wish to call the attention of the Senate to this proposed article, I cannot, with my views of what is wise either for the Federal Government or for the people of the respective States, vote for this proposed article. I ask the attention of Senators to the leading principle or idea which the wise men who framed the Constitution of the United States followed in framing it. It was that the Federal Government, which was to be the Government, and to act for the people of all the States, should have those powers which were essential to action by that Government on subjects as to which the people of all the States had a common, general, national interest. It was to be a Government with power to make treaties with foreign countries, to provide for the general defense, to furnish a currency, to regulate commerce, and to have jurisdiction over other matters of like character, in which all the States had a common, general interest, and upon which the people of the several States could not properly act. The framers of the Constitution believed also that it was wiser and better that the people of the several States should reserve to themselves and exercise all those powers of government which related to home rights, if I may use that term, to the internal affairs of the State, to the regulating of the domestic relations, to the title to property, the modes in which it could be transferred; in a word, that the people of each State should have the exclusive power to manage their local and internal affairs as they thought best for their own happiness and prosperity. I think all experience shows how wise this was and is.

"It was and is wise in reference to the perpetuity and strength of the Federal Government, which extends over a very wide section of country, over communities living in different States and having different views as to their local matters and State governments. The Federal Government will be strong and the people contented while the people of each State manage their own local affairs, and the Federal Government in its action is restricted to general national affairs. But when in reference to these local affairs of a State, these home matters, the representatives from Massachusetts or New York have a voice as to what shall be done in California as to local State matters, the people of Ohio shall have a voice in the local affairs of Missouri, we can readily see that there will not be as much contentment, and I do not believe there would be as much of good government and prosperity, as if the people of each State managed these local affairs for themselves. It makes the Federal Government strong to leave local affairs to the people of the State, because the people of different States then do not come in conflict in the Halls of Congress as to local government and policy, in regard to which they may have very different interests and views. The founders of the Federal Government had the wis-

dom to perceive the advantage of leaving to the people of each State the control and management of their local State matters.

"Believing this to be wise, believing that nothing but evil will grow out of allowing the Representatives of one State to have a voice as to the local affairs of another, I have believed, and all my teaching and experience confirm me, that we should have power in the Federal Government only over those matters as to which the people of all the States have a common, general interest, and as to which the people of a State could not act for themselves.

"Now, Mr. President, in my judgment this wise principle which has worked so well in the past is violated by the proposed amendment reported to the Senate by the Judiciary Committee, and which is now under consideration."

Mr. Morton: "I should like to ask the Senator this question, whether the amendment as it came from the House does not violate the principle for which he is contending?"

Mr. Kernan: "I answer with entire frankness that to some extent it does."

Mr. Edmunds: "It does to every extent as far as it goes."

Mr. Kernan: "I will answer frankly that I believe that the matter of educating children may be wisely left to the people of each State. I believe that it is a home right; I believe that it will be exercised best in that way. I believe that our experience shows that there is no serious difficulty in its being exercised wisely and well by the people of each State for themselves. But I recognize that moneys raised to support common public schools are a fund to support a system which pervades the Union; this system is regarded with great interest by a large portion of our people; and it is a single subject. Inasmuch as there was danger that sectarian dissensions would arise in regard to the common-school moneys, inasmuch as it was asserted that efforts were being made to divide these moneys between the religious denominations, and there was great danger that the subject of the common schools would be made a political question, and sectarian prejudices aroused as an element in political contests, I was willing to adopt the Blaine amendment, in the hope and belief that it would quiet these groundless fears as to the common schools, and avert the evils which spring from religious prejudices.

"Therefore I say that while I believe it is wiser and better to leave the people of each State free to maintain their schools as they see fit, and I do not believe there will be any diversion of money raised for the support of common schools to other purposes, especially as in many State constitutions, as in that of New York, there are provisions which forbid the application of money raised for common schools to any other object: yet if it would allay that which I regard as the greatest evil that ever comes among a community, strife and bitterness in reference to religious creed,

I was willing to vote for the Blaine amendment, although, as the Senator from Indiana says, it is against the principles I believe to be wise. But I consider the proposed amendment now before the Senate as going far beyond that proposed by Mr. Blaine; and in my judgment, instead of allaying strife and dissension, it will increase them and bring evil to our schools, to our institutions, and to the people of our country."

Mr. Whyte, of Maryland, said: "Mr. President, Protestant though I am, and sprung from ancestors who belonged to the strictest sect of Irish Presbyterians, and imbibing the prejudices which I must confess attach to such surroundings, nevertheless I fail not to remember that I was born in a State colonized by Roman Catholics, in whose soil the banner of religious toleration was first planted on this American Continent. For the obtension of religious as well as civil liberty the Roman Catholics of Maryland, represented by the patriotic Carroll of Carrollton, pledged their lives, their fortunes, and their sacred honors in the Revolutionary struggle. Should I, as a representative of Maryland, vote for this amendment, I should deem myself faithless to the spirit of the history of my native State. In my judgment the danger is not present which this article, proposed in response to an ephemeral popular demand, is designed to avert; and it seems to me, to use plain words, nearly an accusation against a large body of fellow-citizens as loyal to republican liberty as we proclaim ourselves to be."

Mr. Edmunds: "Will the Senator allow me to ask him a question?"

Mr. Whyte: "I am going to speak but three minutes by the watch, and I beg my friends not to interrupt me. I will yield, however, for a question if the Senator desires to put one."

Mr. Edmunds: "The question I wished to ask was precisely in point to what the Senator was saying, that there was no present danger of the kind to which he alludes, whether he had read the mandate ordinarily called the encyclical letter and the syllabus of errors promulgated by the holy Pontiff in 1864 on this very subject?"

Mr. Whyte: "Yes; but 1864 is not 1876 by a long shot."

Mr. Edmunds: "It lacks twelve years of it."

Mr. Whyte: "And a good many things which people did in 1864 they do not do today, I am happy to add."

Mr. Edmunds: "Does the Senator mean to say that he understands that the principles or declarations of this letter have been changed, or withdrawn, or modified?"

Mr. Whyte: "Yes, sir."

Mr. Edmunds: "I should like to see the proof of it."

Mr. Whyte: "Has the Senator read Archbishop Purcell's recent letter on this very subject?"

Mr. Edmunds: "Archbishop Purcell is not the Pope."

Mr. Whyte: "But Archbishop Purcell, I suppose, would not speak in opposition to the desires of the Pope—"

Mr. Edmunds: "I do not know."

Mr. Whyte: "Any more than some gentlemen here speak in opposition to the will of the Republican party."

"I was about to say that the first amendment to the Constitution prevents the establishment of religion by congressional enactment; it prohibits the interference of Congress with the free exercise thereof, and leaves the whole power for the propagation of it with the States exclusively; and so far as I am concerned I propose to leave it there also."

"Called away from this Chamber, Mr. President, to discharge other duties for my State, and fearing that I may be absent when the vote on this amendment is taken, I desire thus publicly to record my opposition to the passage of any such amendment, whether coming from the House of Representatives or emanating from the Judiciary Committee of the Senate."

Mr. Christiancy, of Michigan, said: "Mr. President, I have already once called attention to the resolution as it came from the House. That resolution proposed to amend the Constitution of the United States so as to prevent any moneys raised for public schools, or lands dedicated for public-school purposes, from being under the control of any religious sect or denomination, or from being divided among them, and that is all there is of it. It did not propose to prohibit any State or the United States from raising any amount of money by taxation, or from voting any amount of property for the support of any religious sect or denomination, or for any sectarian or denominational school, but the diversion of money already raised for public schools or the diversion of property already dedicated to the support of public schools is in the most solemn manner by this resolution of the House declared by the House and every man who voted for it a great public evil; not only an evil, but an evil of such magnitude and of such imminence as to call for a constitutional prohibition. Such is the clear declaration which the House have made to us, and every man who voted for that resolution has made to us, of the evil to be guarded against. What is this evil? In what does the evil consist? Certainly it is no greater evil to do this wrong, for the resolution admits it to be a wrong, indirectly than it would be to do it directly. What, then, is the evil, and what are the principles which would be violated without this constitutional provision? I take it to be this: In a country situated like ours, where the conscience is left free, where religious toleration is universal, where the people are divided into a great number of churches and sects, with a very large proportion, if not a majority, of the population belonging to no

church or sect, and where our public schools could never be maintained unless placed upon a footing of substantial equality among all people who may choose to send to them, it would be wrong to raise money by taxation or to appropriate property belonging to the whole people for the support of any one of those denominations. That I take it is the real principle upon which it becomes wrong to do this very thing which the House proposes to prohibit. The principles, it will be seen, therefore, are much broader than the resolution; and what has been an enigma to me is that those who can go so far as to admit the evil stop so far short of a remedy."

"Now, Mr. President, is the thing itself any worse when done indirectly, by first raising the money or devoting the property to public schools and then dividing it among the various sects for the support of their sectarian schools, than if the same result were accomplished directly by raising the tax or appropriating the money or property directly for the purpose of supporting the same sectarian or denominational schools? If there be any difference, is not the latter the more obvious and manifest, and the one which would naturally first occur to the mind of any man seeking by a constitutional amendment to provide a remedy? What would be thought of the law-makers who should provide carefully for the punishment of aiders and abettors in a crime, but leave the principal offenders to go free and unpunished? Able and honest minds, in attempting to provide an enactment against a direct wrong, or one committed by direct means, do sometimes from a failure to foresee the various methods by which the same wrong may be indirectly committed fail to make sufficient provision against it when committed by indirect means. But this is the most notable instance which has ever come under my observation where the author of an important prohibitory provision has so clearly seen and provided against the wrong when attempted *indirectly* and has yet been utterly oblivious of, and made no provision against, the same wrong when done or attempted *directly*. But such is the fact. While this resolution prohibits the division among sects or for sectarian schools of any money first raised by taxation for or property which may have been devoted to *public* schools, it leaves both the national and State governments at perfect liberty to raise by taxation any amount of money and to appropriate any amount of money or property *directly* to or for the use of any such religious sects or denominations and for any schools or institutions under their control or direction, though the main or entire purpose of such schools may be instruction in and the propagation of the peculiar denominational or sectarian system of religion or religious belief or catechism of such sect or denomination. It does not prohibit even the diversion or division to or among such sects or sectarian schools of any money or pub-

lic property unless raised by taxation for or devoted to *public* schools. Now we all know that as a general thing and in most of the States the various church or denominational schools are private schools and not properly included under the designation of 'public schools' at all.

"But, Mr. President, believing that neither any church nor any denominational school should be supported or aided by taxation or by appropriation of public property, I have from my youth up steadily advocated this view. It is a principle essential to the success of any system of public education in this country, and is, or at least should be, far above all mere party politics, and I am as intensely desirous as any man can be to place it entirely beyond and outside of the field of party politics, where it may always be safe, whatever party may be in power. This is a favorable time to accomplish this desirable end, and I hope we shall avail ourselves of it and ward off at once and forever all the threatened dangers to arise from the violation of this great principle. All this will be accomplished if the resolution reported by the committee shall pass and become a part of the Federal Constitution."

Mr. Stevenson, of Kentucky, said: "Mr. President, I was one of the Committee on the Judiciary who did not concur in this amendment. I should not have voted for it if I had been present in the Chamber when it was adopted. I have seen no necessity for it. While I impugn no man's motives here, a religious discussion, appealing to passions which do not in my judgment belong to a deliberative body, at the end of a long session of Congress, seems to be out of taste, and to be accompanied by no practical good.

"I am not a Catholic; I am a Protestant from head to foot; but I will tell the honorable Senator from Vermont what the doctrine of the Democratic party is on this subject. Long before this Constitution was formed, Mr. Jefferson, who more than any other man deserves the credit of being the father of the Democratic party, was the author of that act of religious freedom in the State of Virginia, adopted in 1785. He would have indorsed all that the Senator from Vermont has said, but he would have accomplished it by a different mode. Friend as he was of religious freedom, he would never have consented that the States which brought the Constitution into existence, upon whose sovereignty this instrument rests, which keep it within its expressly limited powers, should be degraded and that the Government of the United States, a Government of limited authority, the mere agent of the States with prescribed powers, should undertake to take possession of their schools and of their religion; and had the speech of the honorable Senator from Vermont been uttered before Mr. Jefferson, he would have told him that he did not know what free government was.

"No, sir; this power is not in the Federal

Government. Kentucky does not want New England and other States to dictate to her what her schools shall be or what her taxes shall be, and least of all what her religion shall be; and whenever any religious denomination undertakes to interfere with this great right of religious freedom the free people of every State will find themselves potential enough and willing enough and able enough to crush it. There is our safety. But when you undertake to bring to the Federal Government the power of making the States hewers of wood and drawers of water you destroy the whole foundation-stone upon which this Government was reared and upon which only it can be preserved.

"No man can mistake the object of this debate. We all see where it tends. But I hope the great issues of this campaign will not be covered up, however, in such system as this, of in this nineteenth century attempting to go to the Pope of Rome to scare the people of the free thirty-seven States of this confederacy that they cannot manage their schools and their religion and their various instrumentalities within their States, and which was reserved to themselves when the Constitution was formed of managing in their own way."

The President *pro tempore*: "The question is on the passage of the resolution."

The result was announced, as follows:

YEAS—Messrs. Allison, Anthony, Booth, Boutwell, Bruce, Burnside, Cameron of Wisconsin, Christiancy, Clayton, Conkling, Cragin, Edmunds, Ferry, Frelinghuysen, Harvey, Jones of Nevada, Logan, McMillan, Mitchell, Morrill, Morton, Ogleby, Paddock, Patterson, Sargent, Spencer, Wadleigh, and West—28.

NAYS—Messrs. Boggy, Cockrell, Cooper, Davis, Eaton, Gordon, Jones of Florida, Kelly, Kernan, Key, McCreery, McDonald, Maxey, Norwood, Randolph, and Stevenson—18.

ABSENT—Messrs. Alcorn, Barnum, Bayard, Cameron of Pennsylvania, Conover, Dawes, Dennis, Dorsey, Goldthwaite, Hamilton, Hamlin, Hitchcock, Howe, Ingalls, Johnston, Merrimon, Ransom, Robertson, Saulsbury, Sharon, Sherman, Thurman, Wallace, Whyte, Windom, Withers, and Wright—27.

The President *pro tempore*: "Two-thirds of the Senators present not having voted to agree to the resolution, the same is not passed."

In the House, on August 10th, Mr. Lord, of New York, offered the following resolution:

Whereas, The right of suffrage prescribed by the constitutions of the several States is subject to the fifteenth amendment of the Constitution of the United States, which is as follows:

"ARTICLE XV., Section 1.—The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State, on account of race, color, or previous condition of servitude.

"Sec. 2. The Congress shall have power to enforce this article by appropriate legislation."

And whereas the exercise of the right of suffrage so prescribed and regulated should be faithfully maintained and observed by the United States and the several States and the citizens thereof; and whereas it is asserted that the exercise of the right

of suffrage is in some of the States, notwithstanding the efforts of all good citizens to the contrary, resisted and controlled by fraud, intimidation, and violence, so that in such cases the object of the amendment is defeated; and whereas all citizens, without distinction of race, or class, or color, are entitled to the protection conferred by such article: Therefore—

Be it resolved by the House of Representatives, That all attempts by force, fraud, terror, intimidation, or otherwise to prevent the free exercise of the right of suffrage in any State, should meet with certain, condign, and effectual punishment, and that in any case which has heretofore occurred or that may hereafter occur in which violence or murder has been or shall be committed by one race or class upon the other, the prompt prosecution and punishment of the criminal or criminals in any court having jurisdiction is imperatively demanded, whether the crime be one punishable by fine or imprisonment or one demanding the penalty of death.

Mr. Lord: "I move the adoption of that resolution."

Mr. Kasson: "I second the motion."

The Speaker *pro tempore*: "The question is on seconding the demand for the previous question on the resolution submitted by the gentleman from New York (Mr. Lord)."

The House divided; and the tellers reported—yeas 133, nays 18.

So the previous question was seconded.

The main question was then ordered to be put.

The Speaker *pro tempore*: "The question must first be taken upon the resolution and then the preamble."

The question was taken on agreeing to the resolution, and resulted as follows:

YEAS—Messrs. Ainsworth, Anderson, Ashe, Atkins, Bagby, George A. Bagley, John H. Bagley, Jr., John H. Baker, William H. Baker, Ballou, Banks, Banning, Beebe, Blair, Boone, Bradford, Bradley, Bright, William R. Brown, Horatio C. Burchard, Burleigh, Cabell, John H. Caldwell, Cannon, Caswell, Cate, John B. Clarke of Kentucky, John B. Clark, Jr., of Missouri, Clymer, Cochran, Conger, Cook, Cox, Crouse, Cutler, Danford, Darrall, Davis, Davy, Dibrell, Durham, Durham, Eames, Eden, Egbert, Evans, Faulkner, Felton, Finley, Forney, Fort, Foster, Franklin, Freeman, Frye, Garfield, Gause, Goodin, Gunter, Hale, Andrew H. Hamilton, Hancock, Hardenbergh, Benjamin W. Harris, John T. Harris, Hartzell, Haymond, Henderson, Hereford, Goldsmith W. Hewitt, Hoar, Holman, Hooker, Hopkins, House, Hunton, Hurd, Hurlbut, Hyman, Thomas L. Jones, Joyce, Kasson, Kehr, Kimball, King, Franklin Landers, Lane, Lapham, Lawrence, Levy, Lewis, Lord, Luttrell, Lynch, Lynde, Magoon, Maish, MacDougall, McCrary, McDill, McFarland, McMahon, Metcalfe, Miller, Monroe, Morgan, Morrison, Mutchler, Nash, New, Norton, Odell, Packer, Parne, Pierce, Piper, Poppleton, Potter, Pratt, Rainey, Rea, John Reilly, James B. Reilly, Rice, Riddle, John Robbins, William M. Robbins, Roberts, Robinson, Miles Ross, Rusk, Sampson, Savage, Scales, Schleicher, Sheakley, Singleton, Sinnickson, Slemmons, A. Herr Smith, William E. Smith, Spencer, Springer, Strait, Stenger, Stevenson, Stone, Tarbox, Terry, Thomas, Thompson, Thornburgh, Washington Townsend, Tufts, Turney, Van Vorhes, John L. Vance, Robert B. Vance, Waddell, Wait, Erastus Wells, Whiting, Whitthorne, Wigginton, Willard, Alpheus S. Williams, James Williams, James D. Williams, Jeremiah N. Williams, William B. Williams, Willis, Wilshire, James Wilson, and Yeates—174.

NAYS—Messrs. Bland and Reagan—2.

NOT VOTING—Messrs. Abbott, Adams, Bass, Bell, Blackburn, Bliss, Blount, John Young Brown, Buckner, Samuel D. Burchard, William P. Caldwell, Campbell, Candler, Cason, Caulfield, Chapin, Chittenden, Collins, Cowan, Crapo, Culberson, De Bolt, Denison, Dobbins, Douglas, Dunnell, Ellis, Ely, Fuller, Gibson, Glover, Goode, Robert Hamilton, Haralson, Henry B. Harris, Harrison, Hart-ridge, Hatcher, Hathorn, Hays, Hendee, Henkle, Abram S. Hewitt, Hill, Hoge, Hoskins, Hubbell, Hunter, Jenks, Frank Jones, Kelley, Knott, Lamar, George M. Landers, Leavenworth, Le Moynes, Mackey, Meade, Milliken, Mills, Money, Neal, O'Brien, Oliver, O'Neill, Page, Phelps, John F. Phillips, William A. Phillips, Plaisted, Platt, Powell, Purman, Randall, Sobieski Ross, Saylor, Schumaker, Seelye, Smalls, Southard, Sparks, Stowell, Swann, Teese, Throckmorton, Martin I. Townsend, Tucker, Waldron, Charles C. B. Walker, Gilbert C. Walker, Alexander S. Wallace, John W. Wallace, Walling, Walsh, Ward, Warren, G. Wiley Wells, Wheeler, White, Whitehouse, Wike, Andrew Williams, Charles G. Williams, Benjamin Wilson, Alan Wood, Jr., Fernando Wood, Woodburn, Woodworth, and Young—109.

So the resolution was agreed to.

The question was taken on agreeing to the preamble, and resulted as follows:

YEAS—Messrs. Ainsworth, Anderson, Ashe, Atkins, Bagby, John H. Bagley, Jr., William H. Baker, Ballou, Banks, Banning, Blair, Boone, Bradley, William R. Brown, Horatio C. Burchard, Burleigh, Cannon, Caswell, Cate, Conger, Crouse, Cutler, Danford, Davis, Davy, Durand, Eames, Eden, Egbert, Evans, Finley, Fort, Foster, Freeman, Frye, Garfield, Goodin, Gunter, Hale, Andrew H. Hamilton, Hancock, Hardenbergh, Benjamin W. Harris, Hartzell, Haymond, Henderson, Hoar, Hooker, Hopkins, House, Hurlbut, Hyman, Thomas L. Jones, Joyce, Kasson, Kehr, Kimball, King, Franklin Landers, Lane, Lapham, Lawrence, Lord, Luttrell, Lynch, Lynde, Magoon, Maish, MacDougall, McCrary, McDill, McFarland, McMahon, Metcalfe, Miller, Monroe, Morgan, Nash, New, Norton, Packer, Payne, Pierce, Potter, Pratt, Rainey, Rea, John Reilly, James B. Reilly, Riddle, John Robbins, Robinson, Rusk, Sampson, Savage, Singleton, Sinnickson, Slemmons, A. Herr Smith, William E. Smith, Spencer, Springer, Strait, Stenger, Stevenson, Stone, Thompson, Thornburgh, Washington Townsend, Tufts, Turney, Van Vorhes, Robert B. Vance, Wait, White, Whiting, Witthorne, Wigginton, Willard, Alpheus S. Williams, James Williams, William B. Williams, Willis, James Wilson, and Yeates—125.

NAYS—Messrs. Bland, Bradford, Bright, Cabell, John H. Caldwell, John B. Clarke of Kentucky, Clymer, Cook, Dibrell, Durham, Felton, Forney, Franklin, Hereford, Goldsmith W. Hewitt, Hunton, Hurd, Lewis, Mutchler, Piper, Poppleton, Reagan, Rice, William M. Robbins, Tarbox, Terry, Thomas, Throckmorton, John L. Vance, Waddell, and Jeremiah N. Williams—31.

NOT VOTING—Messrs. Abbott, Adams, George A. Bagley, John H. Baker, Bass, Beebe, Bell, Blackburn, Bliss, Blount, John Young Brown, Buckner, Samuel D. Burchard, William P. Caldwell, Campbell, Candler, Cason, Caulfield, Chapin, Chittenden, John B. Clark, Jr., of Missouri, Cochran, Collins, Cowan, Cox, Crapo, Culberson, Darrall, De Bolt, Denison, Dobbins, Douglas, Dunnell, Ellis, Ely, Faulkner, Fuller, Gause, Gibson, Glover, Goode, Robert Hamilton, Haralson, Henry B. Harris, John T. Harris, Harrison, Hart-ridge, Hatcher, Hathorn, Hays, Hendee, Henkle, Abram S. Hewitt, Hill, Hoge, Holman, Hoskins, Hubbell, Hunter, Jenks, Frank Jones, Kelley, Knott, Lamar, George M. Landers, Leavenworth, Le Moynes, Levy, Mackey, Meade, Milliken, Mills, Money, Morrison, Neal, O'Brien,

Odell, Oliver, O'Neill, Page, Phelps, John F. Phillips, William A. Phillips, Plaisted, Platt, Powell, Furman, Randall, Roberts, Miles Ross, Sobieski Ross, Saylor, Scales, Schleicher, Schumaker, Seelye, Sheakley, Smalls, Southard, Sparks, Stowell, Swann, Teese, Martin I. Townsend, Tucker, Waldron, Charles C. B. Walker, Gilbert C. Walker, Alexander S. Wallace, John W. Wallace, Walling, Walsh, Ward, Warren, Erastus Wells, G. Wiley Wells, Wheeler, Whitehouse, Wike, Andrew Williams, Charles G. Williams, James D. Williams, Wilshire, Benjamin Wilson, Alan Wood, Jr., Fernando Wood, Woodburn, Woodworth, and Young—119.

So the preamble was adopted.

In the House, on January 10th, Mr. Randall, of Pennsylvania, moved to suspend the rules and proceed to consider the bill on the Speaker's table known as the amnesty bill.

The Speaker: "The Clerk will read the bill."

The bill, entitled "A bill to remove the disabilities imposed by the third section of the fourteenth article of the amendments of the Constitution of the United States," was read. It proposes (two-thirds of each House concurring) in its first section to remove all the disabilities imposed and remaining upon any person by virtue of the third section of the fourteenth article of the amendments of the Constitution of the United States, and relieves therefrom forever each and every person.

It provides in its second section that whenever any person from whom disabilities are removed by this act shall be elected or appointed to any post or office of honor or trust under the Government of the United States, he shall take the oath prescribed by section 1757 of title 19 of the Revised Statutes of the United States, or such other official oath as may be hereafter prescribed in such cases by any future act of Congress.

The Speaker: "The question is on the motion of the gentleman from Pennsylvania (Mr. Randall) that the rules be suspended, that the House may proceed to the consideration of the amnesty bill."

The question being taken, the rules were suspended (two-thirds voting in the affirmative).

Mr. Randall: "I now demand the previous question."

The question being taken on seconding the demand for the previous question,

The House divided; and the tellers reported—yeas 159, nays 95. So the previous question was seconded.

The Speaker: "The question before the House is, 'Shall the main question be now put?'"

The question was then taken upon ordering the main question; and there were—yeas 164, nays 100, not voting 27.

So the main question was ordered.

The question was taken; and it was decided in the negative—yeas 175, nays 97, not voting 18.

The Speaker: "Two-thirds not having voted in favor of the bill, it is rejected."

Mr. Blaine, of Maine, said: "Mr. Speaker, I rise to a privileged question. I move to reconsider the vote which has just been declared. I propose to debate that motion, and now give notice that if the motion to reconsider is agreed to it is my intention to offer the amendment which has been read several times. I will not delay the House to have it read again."

"Every time the question of amnesty has been brought before the House by a gentleman on that side for the last two Congresses, it has been done with a certain flourish of magnanimity which is an imputation on this side of the House, as though the Republican party which has been in charge of the Government for the last twelve or fourteen years had been bigoted, narrow, and illiberal, and as though certain very worthy and deserving gentlemen in the Southern States were ground down to-day under a great tyranny and oppression, from which the hard-heartedness of this side of the House cannot possibly be prevailed upon to relieve them.

"If I may anticipate as much wisdom as ought to characterize that side of the House, this may be the last time that amnesty will be discussed in the American Congress. I therefore desire, and under the rules of the House, with no thanks to that side for the privilege, to place on record just what the Republican party has done in this matter. I wish to place it there as an imperishable record of liberality, and large-mindedness, and magnanimity, and mercy, far beyond any that has ever been shown before in the world's history by conqueror to conquered.

"With the gentleman from Pennsylvania (Mr. Randall) I entered this Congress in the midst of the hot flame of war, when the Union was rocking to its foundations, and no man knew whether we were to have a country or not. I think the gentleman from Pennsylvania would have been surprised when he and I were novices in the Thirty-eighth Congress, if he could have foreseen, before our joint service ended, we should have seen sixty-one gentlemen, then in arms against us, admitted to equal privileges with ourselves, and all by the grace and magnanimity of the Republican party. When the war ended, according to the universal usage of nations, the Government, then under the exclusive control of the Republican party, had the right to determine what should be the political status of the people who had been defeated in war. Did we inaugurate any measures of persecution? Did we set forth on a career of bloodshed and vengeance? Did we take property? Did we prohibit any man all his civil rights? Did we take from him the right he enjoys to-day, to vote?

"Not at all. But, instead of a general and sweeping condemnation, the Republican party placed in the fourteenth amendment to the Constitution only this exclusion; after considering the whole subject, it ended in simply coming down to this:

That no person shall be a Senator or Representative in Congress, or elector of President and Vice-President, or hold any office, civil or military, under the United States, or under any State, who, having previously taken an oath, as a member of Congress, or as an officer of the United States, or as a member of any State Legislature, or as an executive or judicial officer of any State, to support the Constitution of the United States, shall have engaged in insurrection or rebellion against the same, or given aid or comfort to the enemies thereof. But Congress may, by a vote of two-thirds of each House, remove such disability.

"It has been variously estimated that this section at the time of its original insertion in the Constitution included somewhere from fourteen to thirty thousand persons; as nearly as I can gather together the facts of the case, it included about eighteen thousand men in the South. It let go every man of the hundreds of thousands—or millions if you please—who had been engaged in the attempt to destroy this Government, and only held those under disability who, in addition to revolting, had violated a special, and peculiar, and personal oath to support the Constitution of the United States. It was limited to that.

"Well, that disability was hardly placed upon the South until we began in this Hall and in the other wing of the Capitol, when there were more than two-thirds Republicans in both branches, to remit it, and the very first bill took that disability off from 1,578 citizens of the South; and the next bill took it off from 3,526 gentlemen—by wholesale. Many of the gentlemen on this floor came in for grace and amnesty in those two bills. After these bills specifying individuals had passed, and others, of smaller numbers, which I will not recount, the Congress of the United States in 1872, by two-thirds of both branches, still being two-thirds Republican, passed this general law:

That all political disabilities imposed by the third section of the fourteenth article of amendments of the Constitution of the United States are hereby removed from all persons whomsoever, except Senators and Representatives of the Thirty-sixth and Thirty-seventh Congresses, officers in the judicial, military, and naval service of the United States, heads of Departments, and foreign ministers of the United States.

"Since that act passed a very considerable number of the gentlemen which it still left under disability have been relieved specially, by name, in separate acts. But I believe, Mr. Speaker, in no single instance since the act of May 22, 1872, have the disabilities been taken from any man except upon his respectful petition to the Congress of the United States that they should be removed. And I believe in no instance, except one, have they been refused upon the petition being presented. I believe in no instance, except one, has there been any other than a unanimous vote.

"Now, I find there are widely-varying opinions in regard to the number that are still under disabilities in the South. I have had

occasion, by conference with the Department of War and of the Navy, and with the assistance of some records which I have caused to be searched, to be able to state to the House, I believe with more accuracy than it has been stated hitherto, just the number of gentlemen in the South still under disabilities. Those who were officers of the United States Army, educated at its own expense at West Point and who joined the rebellion, and are still included under this act, number, as nearly as the War Department can figure it up, 325; those in the Navy about 295. Those under the other head, Senators and Representatives of the Thirty-sixth and Thirty-seventh Congresses, officers in the judicial service of the United States, heads of Departments, and foreign ministers of the United States, make up a number somewhat more difficult to state accurately, but smaller in the aggregate. The whole sum of the entire list is about—it is probably impossible to state it with entire accuracy, and I do not attempt to do that—is about 750 persons now under disabilities.

"I am very frank to say that in regard to all these gentlemen, save one, I do not know of any reason why amnesty should not be granted to them as it has been to many others of the same class. I am not here to argue against it. The gentleman from Iowa (Mr. Kasson) suggests "on their application." I am coming to that. But as I have said, seeing in this list, as I have examined it with some care, no gentleman to whom I think there would be any objection, since amnesty has already become so general—and I am not going back of that question to argue it—I am in favor of granting it to them. But in the absence of this respectful form of application, which since May 22, 1872, has become a sort of common law, as preliminary to amnesty, I simply wish to put in that they shall go before a United States court, and in open court, with uplifted hand, swear that they mean to conduct themselves as good citizens of the United States. That is all.

"Now, gentlemen may say that this is a foolish exaction. Possibly it is. But somehow or other I have a prejudice in favor of it. And there are some petty points in it that appeal as well to prejudice as to conviction. For one I do not want to impose citizenship on any gentleman.

"In my amendment, Mr. Speaker, I have excepted Jefferson Davis from its operation. Now, I do not place it on the ground that Mr. Davis was, as he has been commonly called, the head and front of the rebellion, because on that ground I do not think the exception would be tenable. Mr. Davis was just as guilty, no more so, no less so, than thousands of others who have already received the benefit and grace of amnesty. Probably he was far less efficient as an enemy of the United States; probably he was far more useful as a disturber of the councils of the Confederacy than many

who have already received amnesty. It is not because of any particular and special damage that he above others did to the Union, or because he was personally or especially of consequence, that I except him. But I except him on this ground: that he was the author, knowingly, deliberately, guiltily, and willfully, of the gigantic murders and crimes at Andersonville."

A member: "And Libby."

Mr. Blaine: "Libby pales into insignificance before Andersonville. I place it on that ground, and I believe to-day that so rapidly does one event follow on the heels of another in the rapid age in which we live, that even those of us who were contemporaneous with what was transpiring there, and still less those who have grown up since, fail to remember the gigantic crime then committed.

"Sir, since the gentleman from Pennsylvania (Mr. Randall) introduced this bill, last month, I have taken occasion to reread some of the historic cruelties of the world. I have read over the details of those atrocious murders of the Duke of Alva in the Low Countries, which are always mentioned with a thrill of horror throughout Christendom. I have read the details of the massacre of Saint Bartholomew, that stand out in history as one of those atrocities beyond imagination. I have read anew the horrors untold and unimaginable of the Spanish Inquisition. And I here, before God, measuring my words, knowing their full extent and import, declare that neither the deeds of the Duke of Alva in the Low Countries, nor the massacre of Saint Bartholomew, nor the thumb-screws and engines of torture of the Spanish Inquisition, begin to compare in atrocity with the hideous crime of Andersonville.

"Now, I do not arraign the Southern people for this. God forbid that I should charge any people with sympathizing with such things! There were many evidences of great uneasiness among the Southern people about it; and one of the great crimes of Jefferson Davis was that, besides conniving at and producing that condition of things, he concealed it from the Southern people. He labored not only to conceal it, but to make false statements about it. We have obtained, and have now in the Congressional Library, a complete series of Mr. Davis's messages—the official imprint from Richmond. I have looked over them, and I have here an extract from his message of November 7, 1864, at the very time that these horrors were at their acme. Mark you, when those horrors, of which I have read specimens, were at their extremest verge of desperation, Mr. Davis sends a message to the Confederate Congress at Richmond, in which he says:

The solicitude of the Government for the relief of our captive fellow-citizens has known no abatement, but has, on the contrary, been still more deeply evoked by the additional sufferings to which they have been wantonly subjected by deprivation of adequate food, clothing, and fuel, which they were not even permitted to purchase from the prison sutler.

"And he adds that the—

Enemy attempted to excuse their barbarous treatment by the unfounded allegation that it was retaliatory for like conduct on our part.

"Now I undertake here to say that there is not a Confederate soldier now living, who has any credit as a man in his community, and who ever was a prisoner in the hands of the Union forces, who will say that he ever was cruelly treated; that he ever was deprived of the same rations that the Union soldiers had—the same food, and the same clothing."

Mr. Cook, of Georgia, said: "Thousands of them say it—thousands of them; men of as high character as any in this House."

Mr. Blaine: "I take issue upon that. There is not one who can substantiate it—not one. As for measures of retaliation, although goaded by this terrific treatment of our friends imprisoned by Mr. Davis, the Senate of the United States specifically refused to pass a resolution of retaliation, as contrary to modern civilization and the first precepts of Christianity. And there was no retaliation attempted or justified. It was refused; and Mr. Davis knew it was refused just as well as I knew it, or any other man, because what took place in Washington, or what took place in Richmond, was known on either side of the line within a day or two thereafter.

"Mr. Speaker, this is not a proposition to punish Jefferson Davis. There is nobody attempting that. I will very frankly say, I myself thought the indictment of Mr. Davis at Richmond, under the Administration of Mr. Johnson, was a weak attempt, for he was indicted only for that of which he was guilty in common with all others who went into the Confederate movement. Therefore, there was no particular reason for it. But I will undertake to say this, and, as it may be considered an extreme speech, I want to say it with great deliberation, that there is not a government, a civilized government on the face of the globe—I am very sure there is not a European government—that would not have arrested Mr. Davis, and when they had him in their power would not have tried him for maltreatment of the prisoners of war, and shot him within thirty days. France, Russia, England, Germany, Austria, any one of them would have done it. The poor victim Wirz deserved his death for brutal treatment and murder of many victims, but I always thought it was a weak movement on the part of our Government to allow Jefferson Davis to go at large and hang Wirz. I confess I do. Wirz was nothing in the world but a mere subordinate, a tool, and there was no special reason for singling him out for death. I do not say he did not deserve it—he did richly, amply, fully. He deserved no mercy, but at the same time, as I have often said, it seemed like skipping over the president, superintendent, and board of directors in the case of a great railroad accident, and hanging the brakeman of the rear-car.

"There is no proposition here to punish Jefferson Davis. Nobody is seeking to do it. That time has gone by. The statute of limitations, common feelings of humanity, will supersede for his benefit. But what you ask us to do is, to declare, by a vote of two-thirds of both branches of Congress, that we consider Mr. Davis worthy to fill the highest offices in the United States if he can get a constituency to indorse him. He is a voter; he can buy, and he can sell; he can go, and he can come. He is as free as any man in the United States. There is a large list of subordinate offices to which he is eligible. This bill proposes, in view of that record, that Mr. Davis, by a two-thirds vote of the Senate and a two-thirds vote of the House, be declared eligible and worthy to fill any office up to the presidency of the United States. For one, upon full deliberation, I will not do it.

"One word more, Mr. Speaker, in the way of detail, which I omitted. It has often been said, in mitigation of Jefferson Davis in the Andersonville matter, that the men who died there in such large numbers (I think the victims were about 15,000) fell prey to an epidemic, and died of a disease which could not be averted. The record shows that out of 35,000 men about 33 per cent. died, that is, one in three, while of the soldiers encamped near by to take care and guard them only one man in 400 died; that is, within half a mile only, one in 400 died.

"As to the general question of amnesty, Mr. Speaker, as I have already said, it is too late to debate it. It has gone by. Whether it has in all respects been wise, or whether it has been unwise, I would not detain the House here to discuss. Even if I had a strong conviction upon that question, I do not know that it would be productive of any great good to enunciate it; but, at the same time, it is a very singular spectacle that the Republican party, in possession of the entire Government, have deliberately called back into public power the leading men of the South, every one of whom turns up its bitter and relentless and malignant foe; and to-day, from the Potomac to the Rio Grande, the very men who have received this amnesty are as busy as they can be in consolidating into one compact political organization the old slave States, just as they were before the war. We see the banner held out blazoned again with the inscription that, with the united South, and a very few votes from the North, this country can be governed. I want the people to understand that is precisely the movement; that that is the animus and the intent. I do not think offering amnesty to the seven hundred and fifty men who are now without it will hasten or retard that movement. I do not think the granting of amnesty to Mr. Davis will hasten or retard it, or that refusing it will do either.

"I hear it said, 'We will lift Mr. Davis again to great consequence by refusing amnesty.'

That is not for me to consider; I only see before me, when his name is presented, a man who by a wink of his eye, by a wave of his hand, by a nod of his head, could have stopped the atrocity of Andersonville. Some of us had kinsmen there, most of us had friends there, all of us had countrymen there, and in the name of those kinsmen, friends, and countrymen, I here protest, and shall with my vote protest, against their calling back and crowning with the honors of full American citizenship the man who organized that murder."

Mr. Kelley, of Pennsylvania, said: "Mr. Speaker, I voted for the bill of my colleague (Mr. Randall), and not to have done so would have shown me false to cherished and often-expressed convictions. I appreciate my temerity in dissenting from my distinguished friend, the gentleman from Maine (Mr. Blaine), and in attempting to temper the influence of his fervid, eloquent, and magnetic speech, and the terrible array of facts with which it was charged. Yet, sir, I feel it due to myself and to the Republican party to appeal to my friends on this side of the House to vote for amnesty, general and unqualified. My life as a member of this House is a little longer than that of my distinguished friend. I was here throughout the war. Abraham Lincoln's summons brought me here to the extra session of July 4, 1861, which was convened for the purpose of providing means for the preservation of the Union; and while the war lasted I voted for the most urgent and the harshest measures as in my judgment those characterized by the highest degree of benevolence. Nothing is so cruel as protracted and slow-wasting war.

"The report from which the eloquent gentleman from Maine read the terrible story of the horrors of Andersonville was made in 1867. The Government knew then all that he has recited to-day in order to harrow our feelings and sway our judgment. Jefferson Davis was its prisoner. I do not remember just how long he was held in confinement. Then he was bailed, Horace Greeley and other men like him in the North being his bondsmen, and amply responsible for his production for trial at any time. If he were guilty of crime beyond all others, why was he not tried? When Wirz was tried and executed, the Government that sentenced and executed him knew this whole story of Jefferson Davis's relation to his crimes. Why did they not try him then? Shall we Republicans to-day reflect, by an implied vote of censure, upon those who have administered the Government through all the intervening years, from the close of the rebellion until now, by attempting to punish him for that which they, day by day, week by week, month by month, and year by year, have condoned? Do not let this country convey to foreigners the idea that any one man within the broad limit of our country, any one man among the forty millions of our people, is so powerful for evil that we dare not grant him amnesty. The gen-

tleman says that that is not the reason why he would except him. Why, the story he read came to us all almost as news. Many of us had not heard it, and those who had, had forgotten it. The incidents so shocking to humanity had passed into oblivion.

"How, then, can you expect foreigners, who never before heard of these revolting details, to understand your subtle motive? And if they were spread before them they would say, 'How illogical to have let a man who had caused such crimes to be perpetrated enjoy immunity for ten years, and now to constructively punish him for them!' They would all believe that the chief of the Confederacy was deemed so powerful for evil that the American Government dared not formally invest him with rights which he had forfeited in common with the entire white population of the South, and which it had practically restored to him by the force of the reasons which underlie statutes of limitations; knowing that the second officer of the Confederacy can be here and be honored Congress after Congress with the right to select his seat before the drawing for seats is begun, they would believe that this other man is believed to possess such power for evil, is so satanic in his power—and when I use that word I accept it as representing the one power which all the world regards as able to compete in evil with Omnipotence itself—for if his power be not of that kind, then we may well admit him. To thus distinguish Jefferson Davis is to honor him overmuch."

Mr. Hill, of Georgia, said: "Mr. Speaker, nothing could have been further from the desires and purposes of those who with me represent immediately the section of country which on yesterday was put upon trial, than to reopen this discussion of the events of our unhappy past. We had well hoped that the country had suffered long enough from feuds, from strife, and from inflamed passions, and we came here, sir, with a patriotic purpose, to remember nothing but the country and the whole country, and, turning our backs upon all the horrors of the past, to look with all earnestness to find glories for the future.

"The gentleman who is the acknowledged leader of the Republican party on this floor, who is the aspiring leader of the Republican party of this country, representing most manifestly the wishes of many of his associates—not all—has willed otherwise. They seem determined that the wounds which were healing shall be reopened, that the passions which were hushing shall be rekindled. Sir, I wish this House to understand that we do not reciprocate either the purpose or the manifest desire of the gentlemen on the other side, and while we feel it our imperative duty to vindicate the truth of history as regards the section which we represent, feeling that it is a portion of this common country, we do not intend to say anything calculated to aid the gentlemen in their work of crimination and recrimination, and of

keeping up the war by politicians after brave men have said the war shall end. The gentleman from Maine on yesterday presented to the country two questions which he manifestly intends to be the fundamental principles of the Republican party, or at least of those who follow him in that party. The first is what he is pleased to term the magnanimity and grace of the Republican party; the second is the brutality of those whom he is pleased to term 'the rebels.' Upon the first question I do not propose to weary the House to-day. If, with the history of the last fifteen years fresh in the memory of this people, the country is prepared to talk about the grace and magnanimity of the Republican party, argument would be wasted. If with masters enslaved, intelligence disfranchised, society disorganized, industry paralyzed, States subverted, Legislatures dispersed by the bayonet, the people can accord to that party the verdict of grace and magnanimity, may God save the future of our country from grace and magnanimity!

"I advance directly to that portion of the gentleman's argument which relates to the question before the House. The gentleman from Pennsylvania (Mr. Randall) has presented to this House, and he asks it to adopt, a bill on the subject of amnesty which is precisely the same as the bill passed in this House by the gentleman's own party, as I understand it, at the last session of Congress. The gentleman from Maine has moved a reconsideration of the vote by which it was rejected, avowing his purpose to be to offer an amendment. The main purpose of that amendment is to except from the operation of the bill one of the citizens of this country, Mr. Jefferson Davis.

"He alleges two distinct reasons why he asks the House to make that exception. I will state those reasons in the gentleman's own language. First, he says that 'Mr. Davis was the author, knowingly, deliberately, guiltily, and willfully, of the gigantic murder and crime at Andersonville.' That is a grave indictment. He then characterizes in his second position what he calls the horrors of Andersonville. And he says of them:

And I here, before God, measuring my words, knowing their full extent and import, declare that neither the deeds of the Duke of Alva in the Low Countries, nor the massacre of Saint Bartholomew, nor the thumb-screws and engines of torture of the Spanish Inquisition, begin to compare in atrocity with the hideous crimes of Andersonville.

"Sir, he stands before the country with his very fame in peril if he, having made such charges, shall not sustain them. Now, I take up the propositions of the gentleman in their order. I hope no gentleman imagines that I am here to pass in eulogy upon Mr. Davis. The record upon which his fame must rest has been made up, and he and his friends have transmitted that record to the only judge who will give him an impartial judgment—an honest, unimpassioned posterity. In the mean time no

enology from me can help him, no censure from the gentleman can damage him, and no act or resolution of this House can affect him. But the charge is that he is a murderer, and a deliberate, willful, guilty, scheming murderer of 'thousands of our fellow-citizens.' Why, sir, knowing the character of the honorable gentleman from Maine, his high reputation, when I heard the charge fall from his lips I thought surely the gentleman had made a recent discovery, and I listened for the evidence to justify that charge. He produced it; and what is it? To my utter amazement, as the gentleman from Pennsylvania (Mr. Kelley) has well stated, it is nothing on earth but a report* of a committee of this Congress, made when passions were at their height, and it was known to the gentleman and to the whole country eight years ago.

"Now, I say first in relation to that testimony that it is exclusively *ex parte*. It was taken when the gentleman who is now put upon trial by it before the country was imprisoned and in chains, without a hearing and without an opportunity to be heard. It was taken by enemies. It was taken in the midst of fury and rage. If there is anything in Anglo-Saxon law which ought to be considered sacred, it is the high privilege of an Englishman not to be condemned until he shall be confronted with the witnesses against him. But that is not all. The testimony produced by the gentleman is not only *ex parte*, not only exclusively the production of enemies, or at least taken by them and in the midst of passion, but the testimony is mutilated, ingeniously mutilated, palpably mutilated, most adroitly mutilated. Why, sir, one of the main witnesses is Dr. Joseph Jones, a very excellent gentleman, who was called upon to give his testimony in what is called the Wirz trial, and which* is produced before this House and attention called to it by the gentleman. The object of the gentleman was to prove that Mr. Davis knew of these atrocities at Andersonville, and he calls the attention of the House to the report of this committee, and thanks God that it has been taken in time to be put where it can neither be contradicted nor gainsaid, as a perpetual guide to posterity to find out the authors of these crimes.

"One of the most striking and remarkable pieces of evidence in this whole report is found in the report made by Dr. Jones, a surgeon of fine character, and sent to Andersonville by the Confederate authorities to investigate the condition of that prison. That gentleman made his report, and it is brought into this House. What is it? The first point is as to the knowledge of this report going to any of the authorities at Richmond. Here is what Dr. Jones says:

I had just completed the report, which I placed in the hands of the judge-advocate, under orders from

the Government, when the Confederacy went to pieces. That report never was delivered to the surgeon-general, and I was unaware that any one knew of its existence until I received orders from the United States Government to bring it and deliver it to this court in testimony.

"Now, he was ordered by the United States Government, the first time this report ever saw the light, to bring it and deliver it on the trial of Wirz. In accordance with that order he did bring it and deliver it to the judge-advocate-general. And when the report itself, or that which purported to be the report, was presented to him while he was a witness, he discovered that it was mutilated, and he asked permission to state that fact. Hear what he says on that subject:

I beg leave to make a statement to the court. That portion of my report which has been read is only a small part of the report. The real report contains the excuses which were given by the officers present at Andersonville, which I thought it right to embody with my report. It also contains documents forwarded to Richmond by Dr. White and Dr. Stevenson, and others, in charge of the hospitals. Those documents contained important facts as to the labors of the medical department and their efforts to better the condition of things.

"All that part of the report is suppressed; and with that suppression this magnificent receptacle of truth is filed away in the document-room for the information of posterity!

"The committee ask him:

Question. Are your conclusions correctly stated in this extract?

Answer. Part of my conclusions are stated—not the whole. A portion of my conclusions, and also my recommendations, are not stated.

Q. Well, touching the subject of exchange?

A. Yes, sir; the general difficulties environing the prisoners and their officers.

Q. What became of your original report?

A. This is my original report.

"That is, he had there the extract as far as it went.

Q. Did you make this extract yourself?

"The committee seem to suspect that he was the man that simply made the extract and brought it before the committee. Now, here is his answer:

I did not. My original report is in the hands of the judge-advocate. I delivered it into his hands immediately upon my arrival in Washington.

"And this committee of Congress, to which the gentleman refers, absolutely tells us that this mutilated report was the one introduced in evidence against this man Wirz, and it is the one incorporated in this book.

"Now, I want to call attention to another extract from that original report—a part not included in this book. There are a great many such omissions; I have not been able to get all of them.

"Dr. Jones, in his report, is giving an account of the causes of the sickness and mortality at Andersonville, and he says, among other things:

Surrounded by these depressing agents, the postponement of the general exchange of prisoners, and

* Omitted from the extracts of Mr. Blaine's speech.—ED. ANNUAL CYCLOPEDIA.

the constantly-receding hopes of deliverance through the action of their own Government, depressed their already desponding spirits, and destroyed those mental and moral energies so necessary for a successful struggle against disease and its agents. Homesickness and disappointment, mental depression and distress, attending the daily longing for an apparently-hopeless release, are felt to be as potent agencies in the destruction of these prisoners as the physical causes of actual disease.

"Ah! why that homesickness, that longing, and the distress consequent upon it, and its effect in carrying those poor, brave, unfortunate heroes to death? I will tell this House before I am done.

"Now, sir, there is another fact. Wirz was put on trial, but really Mr. Davis was the man intended to be tried through him. Over one hundred and sixty witnesses were introduced before the military commission. The trial lasted three months. The whole country was under military despotism; citizens labored under duress; and quite a large number of Confederates were seeking to make favor with the powers of the Government. Yet, sir, during those three months, with all the witnesses they could bring to Washington, not one single man ever mentioned the name of Mr. Davis in connection with a single atrocity at Andersonville or elsewhere. The gentleman from Maine, with all his research into all the histories of the Duke of Alva and the massacre of Saint Bartholomew and the Spanish Inquisition, has not been able to frighten up such a witness yet.

"Now, sir, there is a witness on this subject. Wirz was condemned, found guilty, sentenced to be executed; and I have now before me the written statement of his counsel, a Northern man and a Union man. He gave this statement to the country, and it has never been contradicted.

"Hear what this gentleman says:

On the night before the execution of the prisoner Wirz a telegram was sent to the Northern press from this city, stating that Wirz had made important disclosures to General L. C. Baker, the well-known detective, implicating Jefferson Davis, and that the confession would probably be given to the public. On the same evening some parties came to the confessor of Wirz, Rev. Father Boyle, and also to me as his counsel, one of them informing me that a high cabinet officer wished to assure Wirz that if he would implicate Jefferson Davis with the atrocities committed at Andersonville his sentence would be commuted. The messenger requested me to inform Wirz of this. In presence of Father Boyle I told Wirz next morning what had happened.

"Hear the reply:

Captain Wirz simply and quietly replied: "Mr. Schade, you know that I have always told you that I do not know anything about Jefferson Davis. He had no connection with me as to what was done at Andersonville. I would not become a traitor against him or anybody else, even to save my life."

"Sir, what Wirz, within two hours of his execution, would not say for his life, the gentleman from Maine says to the country to keep himself and his party in power. Christianity is a falsehood, humanity is a lie, civilization is

a cheat, or the man who would not make a false charge for his life was never guilty of willful murder.

"He who makes a charge must produce his witnesses. They must be informed witnesses. They must be credible witnesses. The gentleman from Maine makes his charge, but produces no witnesses. He says that men sent by Jefferson Davis to Andersonville were his officers, executing his orders, commissioned by him, and he therefore charges Mr. Davis with these atrocities by inference. It was only when the gentleman reached that portion of his argument that I thought I began to discover the real purpose of his movement. I will not charge him with it, but a suggestion came immediately to my mind.

"What was the proposition which the gentleman proposes to establish? It is that those high in authority are to be charged with the sins and treacheries of their agents, commissioned by them and acting under their orders. Is the gentleman artfully—I beg pardon—under the cover of the prejudice and passion against Jefferson Davis, seeking to assault President Grant? If Jefferson Davis sent General Winder to Andersonville, why President Grant sent McDonald and Joyce to St. Louis. (Laughter.) Nay, more, sir; is not the very secretary of the White House, the private, confidential secretary, indicted to-day for complicity in these frauds? Does the gentleman want to establish a rule of construction by which he can authorize the country to arraign General Grant for complicity in the whiskey frauds? (Laughter.)

"Sir, is General Grant responsible for the Credit Mobilier? Was he a stockholder in the Sanborn contracts? Was he a copartner in the frauds upon this District? With all his witnesses, the gentleman never can find a single man who was confidential secretary of Mr. Davis and charged with complicity in crime, that Mr. Davis ever indorsed any man as fit for office who was even gravely charged with any complicity in fraud. Yet the gentleman's President, as I understand it, absolutely sent to the Senate of the United States for confirmation to a high office the very man who stood charged before the country with the grossest speculations and frauds in this District, and that, too, after these charges were made and while the investigation was pending.

"Sir, I am neither the author nor the disciple of such political logic. And I will not, nor would I for any consideration, assume the proposition before this House to punish an enemy which would implicate the President of the United States in the grossest frauds. Yet if the gentleman's proposition be true, General Grant, instead of being entitled to a third presidential term, is entitled to twenty terms in twenty penitentiaries. But, sir, he is not guilty. The argument is false. It is a libel upon the American rule of law and English precedent. You cannot find its precedent anywhere in any civ-

flized country. I acquit General Grant of complicity in the whiskey frauds and revenue frauds, and the facts acquit Mr. Davis of complicity in any atrocity anywhere.

"Now, Mr. Speaker, I pass from the construction of that question to the real facts about Andersonville. First, I want to call the attention of the House to the law of the Confederate Government on the subject of the treatment of prisoners. I read from the act of the Confederate Congress on that subject; it was very simple, and directed—

The rations furnished prisoners of war shall be the same in quantity and quality as those furnished to enlisted men in the army of the Confederacy.

"That was the law; that was the law Mr. Davis approved, and that was the law that he, so far as his agency was concerned, executed.

"The gentleman in his speech has gone so far as to say that Mr. Davis purposely sent General Winder to Andersonville to organize a den of horrors and kill Federal soldiers. I do not quote exactly his language, but I know it is 'to organize a den of horrors;' but I am sure I cannot use any language more bitter than the gentleman used himself. Therefore the next thing I will read is the order given for the purpose of locating this prison at Andersonville, or wherever it should be properly located. The official order for the location of the stockade enjoins that it should be in a 'healthy locality, with plenty of pure water, with a running stream, and, if possible, with shade-trees, and in the immediate neighborhood of grist and saw mills.' That does not look like the organization of a den of horrors to commit murder. That was the official order. That was not all. These prisoners at Andersonville were not only allowed the rations measured out to Confederate soldiers both in quantity and quality in every respect, but they were allowed also to buy as much outside as they desired; a privilege, I am reliably informed, which was not extended to many of the Confederate prisoners. I do not know how that is.

"I do not wish to charge it if the facts were otherwise. But in the book which the gentleman from Maine himself produces we find this testimony, given by a Union soldier. He says:

We never had any difficulty in getting vegetables: we used to buy almost anything that we wanted of the sergeant who called the roll mornings and nights. His name was Smith, I think; he was Captain Wirz's chief sergeant. We were divided into messes, eight in each mess; my mess used to buy from two to four bushels of sweet-potatoes a week, at the rate of \$15 Confederate money per bushel.

"They got \$20 of Confederate money for \$1 of greenbacks in those days.

Turnips we bought at \$20 a bushel. We had to buy our own soap for washing our own persons and clothing; we bought meat and eggs and biscuit. There seemed to be an abundance of those things; they were in the market constantly. That sergeant used to come down with a wagon-load of potatoes at a time, bringing twenty or twenty-five bushels at a load sometimes.

"Now, sir, Mr. Davis himself alluded to that privilege which was allowed to the Federal soldiers. The Confederate authorities not only allowed them to purchase supplies as they pleased outside, in addition to the rations allowed them by law—the same rations allowed to Confederate soldiers—but he says:

By an indulgence perhaps unprecedented, we have even allowed the prisoners in our hands to be supplied by their friends at home with comforts not enjoyed by the men who captured them in battle.

"The Confederate Government gave Federal prisoners the same rations that Confederate soldiers in the field received. Federal prisoners had permission to buy whatever else they pleased, and the Confederates gave their friends at home permission to furnish them the means to do so. And yet, Mr. Speaker, it is true that, in spite of all these advantages enjoyed by these prisoners, there were horrors, and great horrors, at Andersonville. What were the causes of those horrors? The first was want of medicine. That is given as a cause by Dr. Jones in his testimony; that is given by this very Father Hamilton, from whom the gentleman from Maine read. In the very same testimony which the gentleman read Father Hamilton says:

I conversed with Dr. White with regard to the condition of the men, and he told me it was not in his power to do anything for them; that he had no medicine, and could not get any, and that he was doing everything in his power to help them.

"Now, how was it that medicines and other essential supplies could not be obtained? Unfortunately, they were not in the Confederacy. The Federal Government made medicine contraband of war. And I am not aware that any other nation on the earth ever did such a thing before—not even the Duke of Alva, sir. The Confederate Government, unable to introduce medicines according to its right under the laws of nations, undertook to run the blockade, and whenever possible the Federal Navy captured its ships and took the medicines. Then, when no other resource was left, when it was suspected that the women of the North—the earth's angels, God bless them!—would carry quinine and other medicines of that sort, so much needed by the Federal prisoners in the South, Federal officers were charged to capture the women and examine their petticoats, to keep them from carrying medicines to Confederate soldiers and to Federal prisoners, and they were imprisoned. Surely, sir, the Confederate Government and the Southern people are not to be blamed for a poverty in medicines, food, and raiment, enforced by the stringent war measures of the Federal Government—a poverty which had its intended effect of immeasurable distress to the Confederate armies, although it incidentally inflicted unavoidable distress upon the Federal prisoners in the South.

"The Federal Government made clothing contraband of war. It sent down its armies and they burned up the factories of the South

wherever they could find them, for the express purpose of preventing the Confederates from furnishing clothes to their soldiers, and the Federal prisoners of course shared this deprivation of comfortable clothing. It was the war policy of the Federal Government to make supplies scarce. Dr. Jones in his testimony and Father Hamilton in his testimony, which I will not stop to read to the House, explained why clothing was so scarce to Federal prisoners.

"Now then, sir, whatever horrors existed at Andersonville, not one of them could be attributed to a single act of legislation of the Confederate Government or to a single order of the Confederate Government, but every horror of Andersonville grew out of the necessities of the occasion, which necessities were cast upon the Confederacy by the war policy of the other side. The gentleman from Maine said that no Confederate prisoner was ever maltreated in the North. And when my friend answered from his seat, "A thousand witnesses to the contrary in Georgia alone," the gentleman from Maine joined issue, but as usual produced no testimony in support of his issue. I think the gentleman from Maine is to be excused. For ten years unfortunately he and his have been reviling the people who were not allowed to come here to meet the reviling. Now, sir, we are face to face, and when you make a charge you must bring your proof. The time has passed when the country can accept the impudence of assertion for the force of argument or recklessness of statement for the truth of history.

"Now, sir, I do not wish to unfold the chapter on the other side. I am an American. I honor my country, and my whole country, and it could be no pleasure to me to bring forward proof that any portion of my countrymen have been guilty of willful murder or of cruel treatment to poor, manacled prisoners. Nor will I make any such charge.

"Now I call the attention of gentlemen to this fact, that the report of Mr. Stanton, the Secretary of War—you will believe him, will you not?—on the 19th of July, 1866—send to the Library and get it—exhibits the fact that of the Federal prisoners in Confederate hands during the war only 22,576 died, while of the Confederate prisoners in Federal hands 26,486 died. And Surgeon-General Barnes reports in an official report—I suppose you will believe him—that in round numbers the Confederate prisoners in Federal hands amounted to 220,000, while the Federal prisoners in Confederate hands amounted to 270,000. Out of the 270,000 in Confederate hands 22,000 died, while of the 220,000 Confederates in Federal hands over 26,000 died. The ratio is this: More than 12 per cent. of the Confederates in Federal hands died, and less than 9 per cent. of the Federals in Confederate hands died. What is the logic of these facts according to the gentleman from Maine?

"But the great question is behind. Every American, North or South, must lament that

our country has ever impeached its civilization by such an exhibition of horrors on any side, and I speak of these things with no degree of pleasure. God knows if I could hide them from the view of the world I would gladly do it. But the great question is, at last, Who was responsible for this state of things? And that is really the only material question with which statesmen now should deal. Sir, it is well known that, when the war opened, at first the authorities of the United States determined that they would not exchange prisoners. The first prisoners captured by the Federal forces were the crew of the Savannah, and they were put in chains and sentenced to be executed. Jefferson Davis, hearing of this, communicated through the lines, and the Confederates having meanwhile also captured prisoners, he threatened retaliation in case those men suffered, and the sentences against the crew of the Savannah were not executed. Subsequently our friends from this way—I believe my friend before me from New York (Mr. Cox) was one—insisted that there should be a cartel for the exchange of prisoners. In 1862 that cartel was agreed upon. In substance and briefly it was that there should be an exchange of man for man and officer for officer, and whichever held an excess at the time of exchange should parole the excess. This worked very well until 1863.

"In 1863 this cartel was interrupted; the Federal authorities refused to continue the exchange. Now commenced a history which the world ought to know, and which I hope the House will grant me the privilege of stating, and I shall do it from official records. This, I say frankly to the gentlemen on the other side, was in truth one of the severest blows stricken at the Confederacy, this refusal to exchange prisoners in 1863 and continued through 1864. The Confederates made every effort to renew the cartel. Among other things on the 2d of July, 1863, the Vice-President of the Confederacy, the gentleman to whom the gentleman from Maine (Mr. Blaine) alluded the other day in so complimentary terms, Mr. Alexander H. Stephens, was absolutely commissioned by President Davis to cross the lines and come to Washington to consult with the Federal authorities, with a broad commission to agree upon any cartel satisfactory to the other side for the exchange of prisoners. Mr. Davis said to him, 'Your mission is simply one of humanity, and has no political aspect.' Mr. Stephens undertook that work. What was the result? I wish to be careful, and I will state this exactly correctly. Here is his letter:

CONFEDERATE STATES STEAMER TORPEDO,

In James River, July 4, 1863.

SIR: As military commissioner, I am the bearer of a communication in writing from Jefferson Davis, commander-in-chief of the land and naval forces of the Confederate States, to Abraham Lincoln, commander-in-chief of the land and naval forces of the United States. Honorable Robert Ould, Confederate States agent of exchange, accompanies me as secret-

tary, for the purpose of delivering the communication in person and conferring upon the subject to which it relates. I desire to proceed to Washington in the steamer Torpedo, commanded by Lieutenant Hunter Davidson, of the Confederate States Navy, no person being on board but Honorable Mr. Ould, myself, and the boat's officers and crew.

Yours, most respectfully,
ALEX. H. STEPHENS.

To S. H. LEE, Admiral.

"This is directed to S. H. Lee, admiral. Here is the answer:

Acting Rear-Admiral S. H. LEE, Hampton Roads:
The request of Alexander H. Stephens is inadmissible.

GIDEON WELLES, Secretary of the Navy.

"You will acknowledge that Mr. Stephens's humane mission failed. The Confederate authorities gave to that mission as much dignity and character as possible. They supposed that of all men in the South Mr. Stephens most nearly had your confidence. They selected him to be the bearer of messages for the sake of humanity in behalf of the brave Federal soldiers who were unfortunately prisoners of war. The Federal Government would not even receive him; the Federal authorities would not hear him.

"What was the next effort? After Mr. Stephens's mission failed, and after the commissioner for the exchange of prisoners, Colonel Ould, having exhausted all his efforts to get the cartel renewed, on the 24th of January, 1864, wrote the following letter to Major-General E. A. Hitchcock, agent of exchange on the Federal side:

CONFEDERATE STATES OF AMERICA, WAR DEPARTMENT,
RICHMOND, VIRGINIA, January 24, 1864.

SIR: In view of the present difficulties attending the exchange and release of prisoners, I propose that all such on either side shall be attended by a proper number of their own surgeons, who, under rules to be established, shall be permitted to take charge of their health and comfort. I also propose that these surgeons shall act as commissaries, with power to receive and distribute such contributions of money, food, clothing, and medicines, as may be forwarded for the relief of the prisoners. I further propose that these surgeons shall be selected by their own government, and that they shall have full liberty, at any and all times, through the agents of exchange, to make reports not only of their own acts, but of any matters relating to the welfare of the prisoners.

Respectfully, your obedient servant,

ROBERT OULD, Agent of Exchange.

Major-General E. A. HITCHCOCK, Agent of Exchange.

"But, sir, I have read a letter from the Confederate commissioner of exchange, written in 1864, proposing that each side send surgeons with the prisoners; that they nurse and treat the prisoners; that the Federal authorities should send as many as they pleased; that these surgeons be commissioned also as commissaries to furnish supplies of clothing and food, and everything else needed for the comfort of prisoners.

"Now, sir, how did the Federal Government treat that offer? It broke the cartel for the exchange of prisoners; it refused to entertain a proposition, even when Mr. Stephens headed

the commission, to renew it; and then, sir, when the Confederates proposed that their own surgeons should accompany the prisoners of the respective armies, the Federal authorities did not answer the letter. No reply was ever received.

"Then, again, in August, 1864, the Confederates made two more propositions. I will state that the cartel of exchange was broken by the Federal authorities for certain alleged reasons. Well, in August, 1864, prisoners accumulating on both sides to such an extent, the Federal Government having refused every proposition from the Confederate authorities to provide for the comfort and treatment of these prisoners, the Confederates next proposed, in a letter from Colonel Ould, dated the 10th of August, 1864, waiving every objection the Federal Government had made, to agree to any and all terms to renew the exchange of prisoners, man for man, and officer for officer, as the Federal Government should prescribe. Yet, sir, the latter rejected that proposition. It took a second letter to bring an answer to that proposition.

"Then, again, in that same month of August, 1864, the Confederate authorities did this: Finding that the Federal Government would not exchange prisoners at all, that it would not let surgeons go into the Confederacy; finding that it would not let medicines be sent into the Confederacy; meanwhile, the ravages of war continuing and depleting the scant supplies of the South, which was already unable to feed adequately its own defenders, and much less able to properly feed and clothe the thousands of prisoners in Confederate prisons, what did the Confederates propose? They proposed to send the Federal sick and wounded prisoners without equivalent. Now, sir, I want the House and the country to understand this: that in August, 1864, the Confederate Government officially proposed to the Federal authorities that if they would send steamships or transportation in any form to Savannah, they should have their sick and wounded prisoners without equivalent. That proposition, communicated to the Federal authorities in August, 1864, was not answered until December, 1864. In December, 1864, the Federal Government sent ships to Savannah. Now, the records will show that the chief suffering at Andersonville was between August and December. The Confederate authorities sought to avert it by asking the Federal Government to come and take its prisoners without equivalent, without return, and it refused to do that until four or five months had elapsed.

"That is not the only appeal which was made to the Federal Government. I now call the attention of the House to another appeal. It was from the Federal prisoners themselves. They knew, as well as the Southern people did, the mission of Mr. Stephens. They knew the offer of January 24th, for surgeons, for medicine and clothing, for comforts and food, and

for provisions of every sort. They knew that the Confederate authorities had offered to let these be sent to them by their own Government. They knew that had been rejected. They knew of the offer of August 10, 1864. They knew of the other offer, to return sick and wounded without an equivalent. They knew all these offers had been rejected. Therefore they held a meeting and passed the following resolutions; and I call the attention of the gentlemen on the other side to these resolutions. I ask if they will not believe the surgeons of their hospitals, if they will not believe Mr. Stanton's report, if they will not believe Surgeon-General Barnes's report; I beg from them to know if they will not believe the earnest, heart-rending appeal of those starving, suffering heroes? Here are the resolutions passed by the Federal prisoners the 28th of September, 1864:

Resolved, That while allowing the Confederate authorities all due praise for the attention paid to our prisoners, numbers of our men are daily consigned to early graves, in the prime of manhood, far from home and kindred, and this is not caused intentionally by the Confederate Government, but by the force of circumstances.

"Brave men are always honest, and true soldiers never slander. They say the horrors they suffered were not intentional, that the Confederate Government had done all it could to avert them. Sir, I believe this testimony of gallant men as being of the highest character, coming from the sufferers themselves.

"They further resolved:

The prisoner is obliged to go without shelter, and in a great portion of cases without medicine.

Resolved, That whereas in the fortune of war it was our lot to become prisoners, we have suffered patiently, and are still willing to suffer, if by so doing we can benefit the country; but we would most respectfully beg to say that we are not willing to suffer to further the ends of any party or clique to the detriment of our own honor, our families, and our country. And we would beg this affair to be explained to us, that we may continue to hold the Government in the respect which is necessary to make a good citizen and soldier.

"Was this touching appeal heeded? Let any gentleman who belonged to the 'clique or party' that the resolutions condemn answer for his party.

"Now, sir, it was in reference to that state of things exactly, that Dr. Jones reported, as I have already read to the House, in his report which was mutilated before that committee of Congress, and in the trial of Wirz—it was in consequence of that very state of things that Dr. Jones said that depression of mind, and despondency, and homesickness of these poor prisoners carried more to their graves than did physical causes of disease. That was not wonderful at all.

"But, Mr. Speaker, why were all these appeals resisted? Why did the Federal authorities refuse to allow their own surgeons to go with their own soldiers, and carry them medicine and clothing, and comfort and treatment?

Why? Why did they refuse to exchange man for man, and officer for officer? Why did they refuse to stand up to their own solemn engagements, made in 1862, for the exchange of prisoners? Who is at fault?

"Sir, war is always horrible; war always brings hardships; it brings death, it brings sorrow, it brings ruin, it brings devastation. And he is unworthy to be called a statesman, looking to the pacification of this country, who will parade the horrors inseparable from war for the purpose of keeping up the strife that produced the war.

"I do not doubt that I am the bearer of unwelcome messages to the gentleman from Maine, and his party. He says that there are Confederates in this body, and that they are going to combine with a few from the North for the purpose of controlling this Government. If one were to listen to the gentlemen on the other side he would be in doubt whether they rejoiced more when the South left the Union, or regretted most when the South came back to the Union that their fathers helped to form, and to which they will forever hereafter contribute as much of patriotic ardor, of noble devotion, and of willing sacrifice, as the constituents of the gentleman from Maine. Oh, Mr. Speaker, why cannot gentlemen on the other side rise to the height of this great argument of patriotism? Is the bosom of the country always to be torn with this miserable sectional debate whenever a presidential election is pending? To that great debate of half a century before secession there were left no adjourned questions. The victory of the North was absolute, and God knows the submission of the South was complete. But, sir, we have recovered from the humiliation of defeat, and we come here among you and we ask you to give us the greetings accorded to brothers by brothers. We propose to join you in every patriotic endeavor, and to unite with you in every patriotic aspiration that looks to the benefit, the advancement, and the honor of every part of our common country. Let us, gentlemen of all parties, in this centennial year, indeed, have a jubilee of freedom. We divide with you the glories of the Revolution and of the succeeding years of our national life before that unhappy division—that four years night of gloom and despair—and so we shall divide with you the glories of all the future."

Mr. Blaine: "I move the previous question on the motion to reconsider."

The previous question was seconded and the main question ordered; and under the operation thereof the motion to reconsider was agreed to.

The question then recurred on the passage of the bill.

Mr. Banks, of Massachusetts, said: "Mr. Speaker, I gave notice yesterday that if I had an opportunity I should move an amendment to the bill before the House, proposing that some declaration or oath should be made in

case the amnesty was granted to the persons who are now resting under political disabilities; and, as the honorable gentleman from Pennsylvania has yielded me the floor, I understand it will not be an impropriety on my part or an invasion of the privilege which he has granted me, if I propose such an amendment. It is to strike out all after the seventh line of the first section of his bill, and insert, instead of the part stricken out, these words:

And shall be forever relieved therefrom upon their appearing before a judge of any court of the United States or any court of record of the State in which they are resident, and taking and subscribing the following oath, to be duly attested and recorded, to wit: "I, A B, do solemnly swear (or affirm) that I will support and defend the Constitution of the United States against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same, and obey all laws made in pursuance thereof; and that I take this obligation freely, and without any mental reservation or purpose of evasion whatever."

Mr. Randall: "I demand the previous question on my motion."

The Speaker *pro tempore*: "The question before the House is upon the passage of the bill which was rejected and reconsidered. Pending which the gentleman from Pennsylvania (Mr. Randall) moves to commit the bill to the Committee on the Judiciary, with instructions to report it back with the amendment proposed by the gentleman from Massachusetts (Mr. Banks); and upon that motion he moves the previous question."

The previous question was seconded and the main question ordered, and the motion to refer was agreed to.

Mr. Knott, of Kentucky, said: "Mr. Speaker, the Committee on the Judiciary, to which was referred the bill, with an accompanying amendment, have instructed me to report the bill and amendment back to the House in pursuance of the instructions of the House; and I now demand the previous question upon the bill and amendment."

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That all the disabilities imposed and remaining upon any person by virtue of the third section of the fourteenth article of the amendments of the Constitution of the United States, be, and the same are hereby, removed; and each and every person is and shall be forever relieved therefrom upon their appearing before a judge of any court of the United States or any court of record of the State in which they are resident and taking and subscribing the following oath, to be duly attested and recorded, to wit: "I, A B, do solemnly swear (or affirm) that I will support and defend the Constitution of the United States against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same, and obey all laws made in pursuance thereof, and that I take this obligation freely and without any mental reservation or purpose of evasion whatever."

Mr. Randall: "The previous question was seconded."

The question was taken, and it was decided

VOL. XVI.—18 A

in the affirmative—yeas 183, nays 92, not voting 16.

The Speaker: "The main question having been ordered, the question is on the passage of the bill reported from the committee."

The question was then taken; and there were—yeas 184, nays 97, not voting 9; as follows:

YEAS—Messrs. Ainsworth, Anderson, Ashe, Atkins, Bagby, John H. Bagley, Banks, Barnum, Beebe, Bell, Blackburn, Bland, Bliss, Blount, Boone, Bradford, Bright, John Young Brown, Buckner, Samuel D. Burchard, Cabell, John H. Caldwell, William P. Caldwell, Campbell, Candler, Cate, Caulfield, Chapin, John B. Clarke of Kentucky, John B. Clark, Jr., of Missouri, Clymer, Cochran, Collins, Cook, Cowan, Cox, Culberson, Cutler, Davis, De Bolt, Dibrell, Douglas, Durand, Durham, Eden, Egbert, Ellis, Ely, Farwell, Faulkner, Felton, Forney, Franklin, Fuller, Gause, Gibson, Glover, Goode, Goodin, Gunter, Andrew H. Hamilton, Robert Hamilton, Hancock, Haralson, Hardenbergh, Henry R. Harris, John T. Harris, Harrison, Hartridge, Hartzell, Hatcher, Henkle, Hereford, Abram S. Hewitt, Goldsmith W. Hewitt, Hill, Holman, Hooker, Hopkins, House, Ilunton, Hurd, Jenks, Frank Jones, Thomas L. Jones, Kehr, Kelley, Knott, Lamar, Franklin Landers, George M. Landers, Lane, Levy, Lewis, Lord, Luttrell, Edmund W. M. Mackey, Levi A. Mackey, Maish, McFarland, McMahon, Meade, Metcalfe, Milliken, Mills, Money, Morey, Morgan, Morrison, Mutchler, Neal, New, O'Brien, Odell, Parsons, Payne, Phelps, John F. Phillips, Pierce, Piper, Poppleton, Potter, Powell, Randall, Rea, Eagan, John Reilly, James B. Reilly, Rice, Riddle, John Robbins, William M. Robbins, Roberts, Miles Ross, Savage, Sayler, Scales, Schleicher, Schumaker, Seelye, Sheakley, Singleton, Slemmons, William E. Smith, Southard, Sparks, Springer, Stenger, Stevenson, Stone, Swann, Tarbox, Teese, Terry, Thompson, Thomas, Throckmorton, Tucker, Turney, John L. Vance, Robert B. Vance, Waddell, Charles C. B. Walker, Gilbert C. Walker, Walling, Walsh, Ward, Warren, Erastus Wells, Whitehouse, Whitthorne, Wigginton, Wike, Alpheus S. Williams, James Williams, James D. Williams, Jeremiah N. Williams, Willis, Wilshire, Benjamin Wilson, Fernando Wood, Woodburn, Yeates, and Young—184.

NAYS—Messrs. George A. Bagley, John H. Baker, William H. Baker, Ballou, Blaine, Blair, Bradley, William R. Brown, Horatio C. Burchard, Burleigh, Cannon, Cason, Caswell, Conger, Crapo, Cronrue, Danford, Darrall, Davy, Denison, Dobbins, Dunnell, Eames, Evans, Fort, Foster, Freeman, Frost, Frye, Garfield, Hale, Benjamin W. Harris, Hathorn, Haymond, Hendee, Henderson, Hoar, Hoge, Hopkins, Hubbell, Hunter, Hurlbut, Hyman, Joyce, Kasson, Ketchum, King, Lapham, Lawrence, Leavenworth, Lynch, Magoon, MacDougall, McCrary, McDill, Miller, Monroe, Nash, Norton, Oliver, O'Neill, Packer, Page, William A. Phillips, Plaisted, Platt, Pratt, Purman, Robinson, Sobieski Ross, Rusk, Sampson, Sannickson, Smalls, A. Herr Smith, Starkweather, Strait, Stowell, Thornburgh, Martin I. Townsend, Washington Townsend, Tufts, Van Vorhes, Waldron, Alexander S. Wallace, John W. Wallace, Walls, G. Wiley Wells, Wheeler, White, Whiting, Willard, Charles G. Williams, William B. Williams, James Wilson, Alan Wood, Jr., and Woodworth—97.

NOT VOTING—Messrs. Adams, Banning, Bass, Chittenden, Hays, Kimball, Lynde, Rainey, and Andrew Williams—9.

So (two-thirds not having voted in favor thereof) the bill was not passed.

In the House, on January 6th, Mr. Hopkins, of Pennsylvania, said: "I am instructed by

the Committee on the Centennial Celebration to report the bill which I send to the Clerk's desk, and to move that the bill and report be printed and referred to the Committee of the Whole on the state of the Union."

The preamble of the bill states that by an act of Congress entitled "An act to provide for the celebrating of the one hundredth anniversary of American independence by holding an international exposition of arts, manufactures, and products of the soil and mines in the city of Philadelphia and State of Pennsylvania in 1876," approved March 3, 1871, provision was made for the celebration of the centennial anniversary of the Declaration of American Independence by an exhibition of American and foreign arts, products, and manufactures, to be held under the auspices of the Government of the United States, in the city of Philadelphia, in the year 1876; that by an act of Congress entitled "An act relative to the centennial international exhibition to be held in the city of Philadelphia, State of Pennsylvania, in the year 1876," approved June 1, 1872, the centennial board of finance was incorporated, with authority to raise the capital necessary to carry into effect the provisions of the said act of March 3, 1871; that the President of the United States, in compliance with a joint resolution of Congress approved June 5, 1874, did extend, in the name of the United States, a respectful and cordial invitation to the governments of other nations to be represented and to take part in the international exposition to be held at Philadelphia under the auspices of the Government of the United States, and the governments so invited, to the number of thirty-eight, have accepted such invitation, and many of them are making extensive preparations to embrace the courtesies so extended to them, thereby rendering proper arrangements for the coming ceremonies on the part of the Government of the United States a matter of honor and good faith; and that the preparations designed by the United States Centennial Commission, and in part accepted by the centennial board of finance, are in accordance with the spirit of acts of Congress relating thereto, and are on a scale creditable to the Government and people of the United States.

The bill appropriates the sum of \$1,500,000 for completing the centennial buildings and other preparations, which shall be paid on the drafts of the president and treasurer of the centennial board of finance, one-third immediately after the passage of the act and the remaining two-thirds in four equal monthly parts, provided that in the distribution of any moneys that may remain in the treasury of the centennial board of finance after the payments of its debts, as provided for by the tenth section of the act of Congress, and approved June 1, 1872, incorporating said centennial board of finance, the appropriation herein made shall share equally with the holders of

the said centennial stock, and the like percentage be paid into the Treasury of the United States as may be paid to the holders of said stock; and provided further that the Government of the United States shall under no circumstance be liable for any debt or obligation of the United States Centennial Commission or centennial board of finance, or any payment in addition to the foregoing sum.

The bill with the accompanying report was ordered to be printed and referred.

Mr. Hopkins: "I move that the rules be suspended, and that the House resolve itself into Committee of the Whole on the state of the Union."

The motion was agreed to.

The House accordingly resolved itself into Committee of the Whole on the state of the Union, Mr. Wood, of New York, in the chair, and resumed the consideration of the Centennial appropriation bill.

On January 18th the bill was considered.

Mr. Hopkins said: "Mr. Chairman, I do not know that any argument is needed to secure the passage of this bill; but, inasmuch as I am, to some extent, intrusted with its advocacy, I beg leave to submit some of the reasons which I think not only justify but imperatively demand the granting of this appropriation.

"Our aid is invoked in behalf of an international exhibition conceived by patriotic men as a fit way to commemorate the first centenary of American Independence. This undertaking was commenced when the busy hum of cheerful industry echoed throughout the land, when wealth and prosperity abounded in the North, and returning cheerfulness illumed the hitherto desolate South. But the storm of 1873 which swept over the country left its pathway black with general ruin and universal gloom. The wheels of industry stood still, trade became lifeless, human energies were palsied because confidence and hope were crushed. From that day until this there has been no break in the overhanging clouds. The enterprise under consideration, begun under such happy auspices, could not escape the mildew which blighted all things. Under adverse circumstances its officers and managers have struggled on with unflagging zeal, untiring energy, and recognized discretion and ability, to complete the original designs in a manner worthy of the grand event. The treasury of the commission is almost empty; individual effort has been exhausted; the centennial year has already dawned; but a few months remain until the exposition should be opened, and yet the buildings are not completed. In this extremity the Government is asked to lend its helping hand to save the undertaking from failure and the country from disgrace.

"If it can be shown that the national honor is involved in the success of this exhibition, I apprehend all opposition will be silenced and this bill will receive a unanimous and cordial support. Surely, no gentleman upon this floor

would stop to calculate the cost of preserving the good name of his country. Millions of money have been promptly voted, and lives, of far more value than all those millions, have been freely given in various wars to preserve the dignity and integrity of the nation; and there can be no extremity of financial distress which will cause a Congress of the United States to falter in appropriating money to save the Government from reproach. National unity is valueless without national honor. Would it not be better that these States should be dismembered, that this great and beautiful fabric of government should crumble into utter and irretrievable ruin, than the Union should be preserved unbroken and be subject to the well-deserved sneers of sister-nations? Are we liable to stand dishonored before the world by the failure of the centennial exposition? To answer that question we must examine the history of the enterprise.

"The first legislative act relative to this exhibition was passed March 3, 1871, and from the title to the concluding section the General Government is recognized as its sponsor and the guarantor of its success. The act is entitled 'An act to provide for celebrating the one hundredth anniversary of American Independence by holding an international exhibition of arts, manufactures, and products of the soil and mine in the city of Philadelphia and State of Pennsylvania in the year 1876.'

"Here the object and the method are clearly indicated. The object is national, the mode of celebrating it is international. No act of Congress was needed to cause a spontaneous outburst of patriotic enthusiasm upon the part of American citizens during this eventful year. But in the exuberance of our pride we wanted all the nations of the world to come and compare their products and their progress with ours, and then go home filled with amazement and admiration. That seems to be the spirit which pervades this act. The very nature of the contemplated celebration made it subject to governmental control and entitled to Government aid.

"The first section of the act provides—

That an exhibition of American and foreign arts, products, and manufactures shall be held under the auspices of the Government of the United States.

"Here, again, the international character of the celebration appears; and it is distinctly stated under whose auspices it will take place.

"Section 2 provides for commissioners 'to prepare and superintend the execution of a plan for holding the exhibition.'

"Sections 3, 4, and 5, provide that these commissioners 'shall be appointed by the President of the United States, and shall hold their meetings in the city of Philadelphia.'

"Section 6 enacts that this commission shall report to Congress, among other things, 'a plan or plans of buildings' for the exhibition. Here, then, we have a commission created by Congress, required to report to Congress, ap-

pointed by the President, and charged with the duty of preparing buildings and regulations for the reception and exhibition of foreign as well as domestic products. In addition to all this, the President is directed to notify all nations of the time and place for holding the exhibition.

"It seems to me that it would be impossible to frame a statute whereby the United States Government could be more fully identified with and made responsible for any enterprise than is done by the language of this act.

"Nor is its force weakened by the only section to which I have not yet referred. It is therein provided—with amazing inconsistency—that 'the United States shall not be liable for any expenses attending such exhibition or by reason of the same.' This act, in a spirit of exultation which was natural and proper, had declared in its preamble that it 'behooves the people of the United States to celebrate, by appropriate ceremonies, the centennial anniversary of this memorable and decisive event which constituted the 4th day of July, A. D. 1776, the birthday of the nation;' and, having determined what would be a fitting celebration of the great event, having appointed agents to prepare a world's fair, and having secured to the Government exclusive control thereof, it reaches this feeble and petty anti-climax that the Government shall bear none of the burden. All of the glory, but none of the expense! A national anniversary to be celebrated within our borders by all the nations of the earth, and this great Government inaugurating and controlling it, and yet refusing to contribute to the necessary expense! The spectacle is indeed humiliating.

"Following up the history of this celebration, we find an act relative to the centennial international exhibition was passed on June 1, 1872, by which a board of finance was incorporated. The Secretary of the United States Treasury was required to prepare certificates of stock for this corporation, and counterfeiting these certificates was made a crime of equal enormity with counterfeiting the currency of the United States. This act also requires that reports of the progress of the work, from time to time, shall be made to the President of the United States. Here again we encounter the guardian angel of the Treasury, with drawn sword, declaring that we shall have an international celebration of a national event, but that no money shall be taken from the national Treasury to defray the necessary expense thereof. The Government will sanction this enterprise, gotten up for its glory and for its benefit, but not a dollar of its funds shall be expended in the cause. It seems impossible to reconcile such inconsistencies and harmonize such parsimony with a spirit becoming to this great commemoration.

"The act of June 5, 1874, contains this same inharmonious provision, which is made utterly nugatory by the context. That act directs the

President to 'extend, in the name of the United States, a respectful and cordial invitation to the governments of other nations to be represented and take part in the international exposition to be held at Philadelphia under the auspices of the Government of the United States.'

"The international character of the exhibition is again affirmed; the jurisdiction of the General Government over it is again distinctly avowed; provision is made for invitations to foreign powers 'in the name of the United States.'

"Still further, Congress directed that an appropriate medal should be struck at a Government mint for the centennial board of finance. It also provided for the free importation of goods intended to be placed on exhibition.

"Mr. Chairman, in view of all this legislation, can Congress escape from the responsibility which it has again and again assumed in regard to this international exhibition? Will the mere declaration of a purpose to withhold pecuniary aid relieve it from the odium which a failure would incur, especially in view of all it has done to encourage and patronize the enterprise and give it a national character at home and abroad?

"The success or failure of this exposition would not be so grave a matter if its effects could be confined to our own citizens and their relations to our own Government. But the dignity and honor of the United States among other nations is involved. In July, 1873, the President issued his proclamation that 'an international exhibition' would be held, and 'in behalf of this Government and people cordially' commended it to all nations. The Secretary of State promptly communicated the proclamation to foreign powers, and conveyed to each one the President's hope that an active interest would be aroused, and that the occasion would be improved by 'the interchange of national sentiment and friendly intercourse.'

"This diplomatic circular and presidential proclamation were construed by some into an invitation, which a number of foreign governments accepted promptly, heartily, and, as one of the greatest and most powerful of them said, 'with sincerest thanks.' When the more cordial invitation of 1874 went out by authority of Congress it awakened an interest which hitherto had languished; and now thirty-eight foreign governments have declared their purpose of participating in this our national anniversary. Commissioners have been appointed from among their most distinguished men, and several of these governments have made generous appropriations, that they may be creditably represented.

These are nations from all parts of the habitable globe; some of them almost older than history; many of them venerable with the gray of centuries; most of them habituated to and believing in monarchical government; but all coming to do honor to the young Re-

public. From the Orient and the Occident, from the Arctic and the Antarctic, they will come. But of them all there will be no sublimer spectacle than the presence of Great Britain, with the most amazing and most admirable magnanimity, joining in the celebration of an event which lost her these vast possessions. The benignant mother comes to honor the refractory child and to rejoice in her growth and prosperity. Second only to this will be the presence of the mighty monarchy of Russia, whose august and liberal-minded emperor boldly declares to all the world that he regards the event which we are about to celebrate as 'one of the grandest facts in the history of humanity.'

"All of these thirty-eight nations will come bearing in their hands the 'cordial invitation' of the United States. This being so, is not this Government bound by every consideration of hospitality, of honor, and of self-respect, to make suitable provision for their entertainment?

"Mr. Chairman, the question has been asked, Where do we derive the power to make this appropriation? I answer by asking, Where did Congress derive the power to embellish and decorate the grounds and buildings of the Government? Where did it derive the power to purchase the works of art which adorn these Halls and add to their attractiveness? Where did it derive the power to purchase the magnificent library of which we boast? Where did it derive the power to fit out expeditions to explore the polar seas and to travel to foreign countries to observe the transit of Venus? Where did it derive the power to appropriate money on three different occasions to promote international exhibitions held in other countries? Where did it derive the power to encourage art, to promote science, to advance practical and useful industry, to maintain an Agricultural Department or a horticultural garden, a National Observatory, or a Signal Corps?

"I might further answer this question by asking one which was frequently suggested during the recent eventful years of our country's history, and whose most satisfactory answer was found in the patriotic impulses of the people. Many things have been done perhaps not within the strict letter of the Constitution; but we have high authority for saying, 'The letter killeth, the spirit giveth life.' The power which saved a nation's life can save a nation's honor.

"But, Mr. Chairman, I do not admit there is the slightest doubt about the constitutional power to make this appropriation. I do not propose to go into any extended argument on that point, but I hold in my hand a volume containing the messages of the early Presidents of this country, the fathers and founders of the Republic, the men whose great brains conceived and whose hands draughted this Constitution and transmitted it to us as the

most priceless legacy they could leave to posterity. These men were familiar with the powers delegated to Congress, and the extent and scope of those powers, and yet we find that Washington, who presided over the Constitutional Convention; Madison, who of all others was most conspicuous in draughting it; and Jefferson, who understood it quite as well as either, all concurred in asking and recommending to Congress appropriations analogous to this."

Mr. Tucker, of Virginia, said: "Mr. Chairman, what do you propose to celebrate in this centennial year? Do you propose to have a material exhibition only, or an exhibition worthy of the great moral principles which are illustrated by the anniversary of our independence?"

"If I mistake not, three great principles underlie or are involved in the Declaration of Independence: the principle of individual liberty, the principle of local government in its struggle against centralized power, and the exemption of the American destiny from the controlling influence of European polity. I will cordially unite with gentlemen anywhere, North or South, East or West, in celebrating the centennial anniversary in the maintenance and illustration of these three principles, so vital and essential to the full success of our republican institutions.

"Let me feel that the liberty of the citizen is secured against despotic power; let me be assured that the freedom and independent action, the autonomy of the States, as Chief-Justice Chase has expressed it, is well guarded against the arbitrary and usurping exercise of Federal authority; let me see that American destiny is guided alone by its own polity, and free from the interference and intrusion of European counsels; and then, indeed, sir, we may have a real centennial anniversary!"

"The gentleman who preceded me (Mr. Frye) has said that the Constitution and constitutional questions are an enigma to him. I am not surprised at it, looking at his mode of interpreting it. Any gentleman who will ever raise a constitutional question after this bill shall have passed upon the interpretation adopted to sustain its constitutionality, will really be worthy of commiseration.

"I say, sir, that the spirit of the centennial is obedience to the Constitution. And when gentlemen tell me that the centennial exhibition is to be a manifestation of the inventive power of the American mind, I answer that the greatest invention of American genius has been left out of view entirely. And what is that? The greatest invention of American genius is this: the absolute subordination of governmental power to the rigid, inflexible, and unbending rule of the Constitution. In no other country on the earth has this principle of one inflexible law, supreme over all ordinary acts of legislation, ever been inaugurated among men. And I say that the gentlemen around me will better keep the centennial an-

niversary by a strict and honest adherence to the Constitution of the country than by all the material exhibition that can be aggregated in Philadelphia.

"Mr. Chairman, I have said that one of the great principles which are illustrated in this centennial year is, jealousy of the centralization of power. In the great preamble and resolutions of 1774, which were adopted by the Continental Congress assembled in Philadelphia, the language used has the true old English ring in its bold assertion of right against power: The deputies of the colonies do, 'As Englishmen, their ancestors, in like cases have usually done, for asserting and vindicating their rights and liberties, declare that the inhabitants of the English colonies in North America, by the immutable laws of Nature, the principles of the English Constitution, and the several charters and compacts, have the following rights,' etc.

"Then follow the cardinal rights of life, liberty, and property; the trial by jury; exemption from standing armies; and they place preëminently among these cardinal rights the right of the people of each colony to determine its own internal policy by its own provincial Legislature, without interference on the part of the Imperial Government of Great Britain.

"These were the institutional rights and liberties which they claimed, demanded, and insisted on, as indubitable, and 'which could not be legally taken from them, altered, or abridged by any power whatever, without their own consent by their representatives in their several provincial Legislatures.'

"It is thus clear that jealousy of centralizing power was the key-note of our Revolution. It was embodied in the Articles of Confederation. It was not lost sight of in the Constitution of the United States. And gentlemen will find, although they seem to think that a constitutional question is unworthy of deliberation on this floor, that the great distinction between delegated and reserved powers is contained in that tenth amendment: 'All powers not delegated to the United States by this Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.' This is, therefore, a Government of granted and enumerated, not of original and unlimited, powers. It is not like the governments of the countries to which gentlemen refer for precedents. It is not like the Government of Great Britain, whose Parliament is omnipotent. It is a Government of granted and enumerated powers. And I claim this, not upon reference to any of the doctrines of 1798 and 1799, which I suppose are not in very good odor in some portions of this Hall, but I do it upon grounds stated by the Supreme Court of the United States. Mr. Justice Story, in the case of *Martin vs. Hunter* (1 Wheaton, 304), uses this language:

The Government of the United States can claim no powers which are not granted to it by the Con-

stitution, and the powers actually granted must be such as are expressly given, or given by necessary implication.

"And again, in *Gibbons vs. Ogden* (9 Wheaton, 1), Chief-Justice Marshall says:

This instrument contains an enumeration of the powers expressly granted by the people to their Government.

"And Mr. Justice Story, who certainly is not authority for any State-right view of the Constitution, uses this language in his Commentaries on the Constitution:

That powers to be implied must be *bona fide*, appropriate to the end in view.

"The same doctrine is stated by Chief-Justice Chase in the great case of *Hepburn and Griswold*, known as the legal-tender case; and he sanctions the doctrine stated by the authorities already quoted.

"If this be the mode of interpretation, and I think it must be the true canon of construction, then the question arises, Where is the express grant of power to appropriate for this Centennial? Gentlemen admit there is no express grant of power; then where in this appropriation for the Centennial is there to be found the essential element of its being a necessary incident to any express grant of power? What granted power needs to be carried out by the passage of this bill?

"There is no need for it in order to carry out any granted power, and none has been or can be shown. Then the bill must be rejected or the oath we have taken violated. I ask gentlemen to observe that oath. I took it in good faith, and I hope all gentlemen did:

I swear that I will support the Constitution of the United States, and that I take this oath without any mental reservation—

"That is, I suppose, a mental reservation to break it—
or evasion.

"That is, without any intention to evade it. I meant what I said; and if this House meant what it said, as I have no doubt it did, how can its members vote for the passage of a bill for which there is no express grant of power, and when the bill is not an essential incident to the carrying into execution of any express grant of power?

"When Mr. Clay, I think, was discussing the bank bill in 1811, he is reported to have said that, whenever any one was in want of some clause of the Constitution on which a doubtful bill might light and rest, he referred it to the power to regulate commerce with foreign nations and among the States. Now, nobody has claimed that this centennial bill regulates commerce with foreign nations or among the States, that I have heard. The truth is, I may say in passing, that of all the powers granted by the Constitution, that power alone was granted by the convention which adopted it *nemine contradicente*, so clear were the framers of the Constitution that *that* power,

in the sense in which they granted it, did not involve any danger to the reserved powers of the States."

Mr. Hoar, of Massachusetts, said: "I have been very much interested in the very able and clear statement made by the gentleman, and I desire to call his attention to one point, with the view of receiving his answer to it, which I can state in a single sentence. When the Constitution of the United States delegated to Congress certain national powers, among them the taking of a national attitude toward foreign nations, did it not intend that such expenditures for national dignity as are usual to nations wielding those powers should be made by Congress? As, for instance, the ornamenting the national Capitol with a dome costing \$10,000,000; the building of a tomb for General Washington, which Congress undertook to do at one time; the receiving of Lafayette, the national benefactor, in a national ship, and providing for the expense of inviting him and bringing him here. Are not those expenditures within reasonable and suitable limits contained in the grant of the national powers, to the exercise of which with suitable dignity those expenditures are necessary? And is not the celebration of the centennial once in a hundred years one of its properly attendant and implied expenditures?"

Mr. Tucker: "I am very much pleased, sir, to respond, as I shall do before I am done fully, I think, to the elaborate question of the gentleman from Massachusetts.

"Now, sir, there is one element which is wanting as a basis for the whole hypothesis of the gentleman from Massachusetts. I would say that it is a *substantive* element, except that it is an *adjective*; it is the word 'national.' I want the learned gentleman from Massachusetts to point out to me—and I will give him until night to do so—the word 'national' in respect to power or in respect to anything else in the Constitution of the United States."

Mr. Hoar: "The powers to levy war, to conclude peace, to establish commerce, imply a nation in every line where they are granted."

Mr. Tucker: "If that, Mr. Chairman, is what the gentleman calls national power, very well. I understand him now. The gentleman quotes the power to levy war. By-the-by, there is no such power. There is the power to 'declare' war (I desire to be a little accurate), and the power 'to raise and support armies.'"

Mr. Hoar: "We can levy war after we declare it."

Mr. Tucker: "That word 'levy,' however, is not in the Constitution. The Constitution also gives the power to Congress—

To provide and maintain a navy; to make rules for the government and regulation of the land and naval forces.

"That covers the whole of the question which gentlemen have sometimes asked me: 'How can you fire a salute?' It can be done under the power of Congress—

To make rules for the government and regulation of the land and naval forces.

"Now, sir, in reference to the power to pass this bill, there is one phrase which is greatly relied upon; and if I can show that it fails to give constitutionality to this bill, then I think I will have cleared up all difficulties. Gentlemen have said that there is power given to Congress 'to provide for the common defense and general welfare.' I deny it *in toto*. I say there is *no grant of power* to provide for the common defense and general welfare. The language of the Constitution in connection with that phrase, its origin and adoption into the Constitution, and the debates in the Federal Convention, show conclusively that they indicate the object of the previously delegated tax-power, and are not in themselves a substantive grant of power. This has been shown by what was said by my able friend from Pennsylvania (Mr. Cochrane). He showed that Judge Story had interpreted the clause as if the words 'in order' were inserted before the words 'to pay debts,' etc.; so that the clause would read:

Congress shall have power to lay and collect taxes, duties, imposts, and excises [in order] to pay the debts and provide for the common defense and general welfare; . . . but all duties, imposts, and excises shall be uniform throughout the United States.
—*Constitution United States*, Article I., § 8.

"That this is the true interpretation will appear from the grammatical construction of the sentence. It consists of three branches: the first as to laying and collecting, the second as to paying debts and providing for common defense and general welfare, and the third a qualification on the power in the first branch of the sentence. To suppose the learned men of the convention would have interjected as a substantive *power* the words in the second branch of the sentence, and then in the third branch qualified the first branch, would be to attribute to them a lamentable lack of knowledge of the rules of grammar and of style.

"Hence the usual and generally-conceded construction of the second clause has been that it is attached to the first clause as a definition of the objects of the tax-power, limiting its use only to such objects, and that the second clause cannot be fairly held to contain a new and substantive grant of power.

"Now, sir, it is a very curious fact (and I beg to call the attention of the distinguished gentleman from Massachusetts to it) that this clause, 'to provide for the common defense and general welfare,' finds its origin in a Constitution which confessedly gave so little power to Congress that Congress had to beg from the States additional grants of power in order to perpetuate its own frail and precarious existence.

"You will find that in three clauses of the Articles of Confederation, not adopted finally until March, 1781, and which were in force thereafter until the adoption of the Federal

Constitution in 1789, the words are to be found. Thus, in the eighth article, the following words occur: 'All charges of war, and all other expenses that shall be incurred for the common defense or general welfare . . . shall be defrayed out of a common treasury, which shall be supplied by the several States,' etc. The same phrase occurs in two other clauses of the same instrument.

"Now, sir, if these words give the power which gentlemen claim they give under the present Constitution, how was there any lack of power in the old Congress of the Confederation? And yet its lack of power was so notorious, so inconvenient, and so alarming, that Congress came again and again to the very footstool of the States and begged for additional grants of power to save the Confederation from perishing.

"When, afterward, these words were transferred from the Articles of Confederation into the Federal Constitution, they were brought with their original meaning, which cannot be changed without violating well-settled principles of interpretation and the dictates of common-sense. In their original use they did not define a grant, but the objects of a previous grant of power; and, when put into the present Constitution in a like connection to the same power as when originally used, we are bound to refer them to the previous grant of the tax-power as merely defining the object and purpose of its delegation, and they cannot now be interpreted to constitute a separate and distinct grant of power.

"Now, it is a remarkable fact that, in the convention which formed the Constitution, Alexander Hamilton, whose early fate was a cause of lament at least to one portion of the old Federal party, proposed, as Mr. Madison reports it, that Congress should have power 'to pass all laws which they shall judge necessary to the common defense and general welfare of the Union.' I hope the advocates of this measure will hear this; for the proposition made by Hamilton in reference to the powers of Congress, and which was rejected, is your only show of authority to pass this centennial appropriation. Mr. Hamilton proposed that Congress should have power to pass all laws which they should judge necessary to the common defense and general welfare of the United States. Now suppose that proposition had been adopted in that form. But, instead of being adopted, it was rejected, and the present formal enumeration of powers was inserted in lieu of this general and sweeping clause.

"If this Congress has the sweeping power to provide for the general welfare and to do whatever it may judge to be necessary therefor, this Government becomes at once vested with unlimited power. We may then throw up our hands and never say again that Congress has not the power to do anything it pleases. I know no other limitation, no other breakwater to the unrestricted authority of

Congress to absorb all the reserved powers of the States and to become a centralized despotism, if such a construction of these words be admitted. My only hope to arrest consolidation is in limiting the power of Congress to the specifications of the grants contained in the Federal Constitution.

"But gentlemen, despairing of finding any particular clause of the Constitution for their purpose, have asked me how we could build this beautiful dome to the Capitol. Now, if gentlemen will read the Constitution of the United States, and study it, and, as the Prayer-Book says, 'inwardly digest it,' they will find this provision in the sixteenth clause of the eighth section of Article I. of the Constitution:

To exercise exclusive legislation in all cases whatsoever, over such district (not exceeding ten miles square) as may, by cession of particular States, and the acceptance of Congress, become the seat of the Government of the United States, and to exercise like authority over all places purchased by the consent of the Legislature of the State in which the same shall be, for the erection of forts, magazines, arsenals, dock-yards, and other needful buildings.

"Thus there is a clear implication of a grant of power to erect a Capitol. But gentlemen say, 'Why did you not build a brick building? Would not that have done?' Well, I might say, Why did you not build it of weather-boards? Somebody else might say, 'Why did you not build merely a log-house? Why do you not live like the old patriarchs, in tents? What is the use of having any house at all?' I answer that the power being given to build 'needful buildings,' the discretion as to what is the necessity of the Government is of course left to Congress. And in reference to that I will answer, as poor old Lear did to his miserable daughters when they undertook by reasoning to deprive him of his royal dignities and reduce him to dependence upon the mercies of 'a thankless child:'

'Oh, reason not the need: . . .
Allow not Nature more than Nature needs,
Man's life is cheap as beast's.'

"And when gentlemen ask how these pictures can come here, I will say to them that if they will read the later decisions of the higher courts of Great Britain they will find that the doctrine held by those courts is that pictures and statuary, intended as parts of the general plan of a building, are a part of the realty. Pictures are fixtures, and are as much needed to a public building as a cornice, a portico, or a dome. That is the way in which the picture of George Washington is constitutionally a part of this Capitol—this needful building.

"Somebody has asked about ambassadors; I think somebody on the street the other day asked me the question. I do not know that it has appeared in this debate. What authority was there for expenditures for the entertainment of the Chinese and Japanese ambassadors? I will say to gentlemen that if they will read the Constitution carefully they will

find that power is given in it to the President of the United States 'to receive public ministers and ambassadors.'—*Constitution United States*, Article II., § 8.

"Then the power is given to Congress—

To pass all laws necessary and proper to carry into execution the foregoing powers—

"That is, the powers granted to Congress—and all other powers vested by this Constitution in the Government of the United States or in any department or officer thereof.

"So that the power of Congress to pass a law necessary and proper for giving the President authority to receive ambassadors in an appropriate way is clearly within the very letter of the Constitution.

"Now I look at another point. One gentleman asked about the exploration of the Polar Sea, the observation of the transit of Venus, and the support of a Government Observatory. These things are clearly done under the power to provide and maintain a navy, because the provision and maintenance of a navy require that these scientific matters as to the geography of the earth and the celestial mechanism, having obvious relation to the navigation of the great deep, may be known, in order that our navy may traverse the seas and oceans of the world safely to itself, and as a security to our vast foreign and home commerce. The exploration of the Polar Sea is legitimate either under the power to provide and maintain a navy or the power to regulate commerce with foreign nations. Wherever the enterprise of American seamen carries them, there must be safety for the Navy of the United States, and it is the business of the Government to protect the American shipper the world over from the dangers incident to those who do business on the great waters.

"I wish to remind my Democratic friends that this Government *has no mission except to execute its powers and perform its duties under and in subjection to the supreme law of the land, the Constitution of the country.* In that connection my friend referred to grants of land for educational purposes. I think the gentleman will find that wherever that has been a conceded power, it has been upon the ground that as the public lands were granted or have been acquired for the common benefit of all the States of the Union, and as the duty is devolved upon Congress of forming out of these Territories new States that they may come into the Union, it is essential that in building up these nurseries of States—in training that foster-child of the Government, the Territory, until it shall be a full-grown State, it is essential that there should be grants of public lands to the Territory for purposes of education; and those grants of public lands being made in the State wherein they lie, I suppose it was considered fair on the part of the Government that there should be grants of land to the old States for like purposes, in order that thus the donations of land should be

made among the old and new States for the equal and common benefit of all. That is my answer to that question.

"I have done with the constitutional question, as my time will not allow me to go into it further. I put it upon this ground: Show me the granted power of how this bill is necessary and proper to carry into effect an expressly granted power, or before God and under my oath I cannot vote for it.

"Talk about sentimental patriotism! I have as much of it as most people, but my sentimental patriotism will not allow me to trifle with the solemn obligation I took at the Speaker's desk when I was sworn in as a member of this House.

"Now, sir, I put it on another ground—and I beg my Democratic friends around me to hear me, and I beg the gentlemen on the Republican side of this Chamber to hear me—I put it on the ground *that the only limit to this growing corruption in the country is a limitation upon the power of the Government.* If you would advertise to this country that any scheme that a plausible committee or commission can induce gentlemen to strain themselves up to the point of believing to be for the general welfare is open to the exercise of power by this Congress, I tell you, sir, it will be an advertisement for jobbers; and the lobby will be so filled that its agents 'will push us from our stools,' and drive its members from this House. But whenever it comes to that, the people of the country will say, 'Thank God, they shall not sit here any longer!' Whenever you claim power to do anything which you may judge for the general welfare, you proclaim to the country and to all its schemers and jobbers this invitation: 'Have any of you any scheme you think for the general welfare? If so, bring it forward!' There will be no lack of them, sir, and the lobbyists out there will corrupt this body if it is corruptible. Your Credits Mobiliers, your railroad schemes, and all your other thousand plans for plunder upon the public Treasury and upon the tax-paying and the tax-burdened people of the land, will be without remedy. There is only one remedy, and that is *to limit power*; but there is no limitation of power, if this Government can do anything it pleases upon the ground of 'general welfare.'"

Mr. Springer, of Illinois said: "I move to amend the bill by striking out the words 'share equally with the holders of the said centennial stock, and a like percentage thereon be paid into the Treasury of the United States as may be paid to the holders of the said stock,' and inserting in lieu thereof the words 'to be paid in full into the Treasury of the United States before any dividend or percentage of the profits shall be paid to the holders of said stock.'

"The object of this amendment is to provide that, if there should be a dividend when this exhibition is over, the United States shall come in as a preferred creditor, instead of sharing

equally, as this bill now provides, with the stockholders of this corporation. In other words, the United States having made a voluntary contribution, as this bill provides, we shall be first entitled to have the people's money back before any of it goes into the pockets of private individuals as a dividend.

"Before I sit down I desire to say that, while I am anxious for the full success of this centennial exhibition, at the same time I regard this bill as simply a proposition to place in the treasury of the finance board \$1,500,000 to be divided among the stockholders after this exhibition is completed. If we pass this bill, they will have \$1,500,000 more to divide; if we do not pass it, they will have \$1,500,000 less.

"We have farmed out this exhibition to a corporation which is rich enough to pay its own way, and is to receive all the advantages and receipts of the exhibition."

The bill having been reported from the Committee of the Whole, the Speaker said:

"The first question is on the amendment of the gentleman from Illinois."

The question being put on the amendment, it was agreed to.

The Speaker: "The question is next on the amendment of the gentleman from Iowa (Mr. Kasson)."

The Clerk read as follows:

Add to the bill the following:

Sec. 2. That the money by this act appropriated shall be paid to the treasurer of the centennial board of finance, only after he and the president of the board shall execute a bond in the sum of \$500,000 to the United States, with sufficient security, to be approved by the Secretary of the Treasury, for the safe-keeping and faithful disbursement of the sum hereby appropriated.

The amendment was agreed to.

The bill, as amended, was ordered to be engrossed and read a third time; and being engrossed, it was accordingly read the third time.

The question was taken, and resulted as follows:

YEAS—Messrs. Adams, George A. Bagley, William H. Baker, Ballou, Banks, Banning, Barnum, Bass, Blaine, Blair, Bliss, Bradley, William R. Brown, Burleigh, Cason, Caswell, Chapin, Chittenden, Clymer, Crapo, Crouse, Cutler, Danford, Darrall, Davy, Denison, Dobbins, Dunnell, Eames, Egbert, Ellis, Farwell, Forney, Foster, Freeman, Frost, Frye, Garfield, Gause, Gibson, Hale, Hancock, Haralson, Hardenbergh, Benjamin W. Harris, Harrison, Hathorn, Abram S. Hewitt, Hill, Hoar, Hoge, Hopkins, Hubbell, Hunter, Hurlbut, Hyman, Jenks, Thomas L. Jones, Kasson, Kelley, Ketchum, King, Lamar, George M. Landers, Lane, Lapham, Lawrence, Leavenworth, Levy, Luttrell, Edmund W. M. Mackey, Levi A. Mackey, Magoon, Maish, MacDougall, McCrary, McDill, Meade, Miller, Money, Monroe, Morey, Morgan, Mutchler, Nash, Norton, O'Brien, Oliver, O'Neill, Page, William A. Phillips, Pierce, Piper, Plaisted, Platt, Powell, Pratt, Purman, Rainey, Randall, Reagan, John Reilly, John Robbins, William M. Robbins, Roberts, Miles Ross, Sobieski Ross, Sampson, Schleicher, Schumaker, Seelye, Sinnickson, Slemons, Smalls, A. Herr Smith, Strait, Stowell, Swann, Tarbox, Teese, Thompson, Throckmorton, Martin I. Townsend, Washington Townsend, Van Vorhes, Waddell, Alexander S. Wallace, John

W. Wallace, Walls, Ward, Warren, Erastus Wells, G. Wiley Wells, Wheeler, Whitehouse, Whiting, Wigginton, Andrew Williams, Alpheus S. Williams, Charles G. Williams, Wilshire, Alan Wood, Jr., Fernando Wood, Woodburn, Woodworth, and Young—146.

YAYS—Messrs. Ainsworth, Anderson, Ashe, Atkins, Bagby, John H. Bagley, Jr., John H. Baker, Beebe, Bell, Blackburn, Bland, Blount, Boone, Bradford, Bright, John Young Brown, Buckner, Horatio C. Burchard, Samuel D. Burchard, Cabell, John H. Caldwell, William P. Caldwell, Campbell, Candler, Cannon, Cate, Caulfield, John B. Clarke of Kentucky, John B. Clark, Jr., of Missouri, Cochran, Collins, Conger, Cook, Cowan, Cox, Culberson, Davis, De Bolt, Dibrell, Douglas, Durham, Eden, Evans, Faulkner, Felton, Fort, Franklin, Fuller, Glover, Goode, Goodin, Gunter, Andrew H. Hamilton, Henry R. Harris, John T. Harris, Hartridge, Hartzell, Hatcher, Haymond, Hendee, Henderson, Henkle, Hersford, Goldsmith W. Hewitt, Holman, Hooker, Hoskins, House, Hunton, Hurd, Frank Jones, Joyce, Kehr, Kimball, Knott, Franklin Landers, Lewis, Lord, Lynde, McFarland, McMahon, Metcalfe, Milliken, Mills, Morrison, Neal, New, Phelps, John F. Phillips, Poppleton, Potter, Rea, Rice, Riddle, Robinson, Rusk, Savage, Saylor, Scales, Sheakley, Singleton, William E. Smith, Southard, Sparks, Springer, Stenger, Stevenson, Stone, Terry, Thomas, Thornburgh, Tucker, Tufts, Turney, John L. Vance, Robert B. Vance, Waldron, Gilbert C. Walker, Walling, Walsh, Whitthorne, Wike, Willard, James Williams, James D. Williams, William B. Williams, Willis, Benjamin Wilson, James Wilson, and Yeates—130.

NOR VOTING—Messrs. Durand, Ely, Robert Hamilton, Hays, Lynch, Odell, Packer, Parsons, Payne, James B. Reilly, Starkweather, Charles C. B. Walker, White, and Jeremiah N. Williams—14.

So the bill was passed.

In the Senate, the bill was considered on February 9th.

Mr. McCreery, of Kentucky, offered a substitute.

The Chief Clerk: "The proposed amendment is to strike out the preamble and all after the enacting clause of the bill, and in lieu thereof to insert:

That it be recommended to the people of the United States to assemble on the 4th of July next, in such numbers and in such manner as may be convenient, in their respective cities, towns, villages, neighborhoods, or wherever they may be, publicly to testify their joy at the one hundredth return of that auspicious day by suitable eulogies, orations, and discourses, or by public prayers and such religious exercises and ceremonies as may be appropriate to the occasion and sanctioned by their own consciences."

The Secretary proceeded to call the roll.

The result was announced, as follows:

YAYS—Messrs. Alcorn, Cooper, Eaton, Goldthwaite, Kernan, Key, McCreery, Stevenson, Thurman, Wadleigh, White, and Withers—12.

NAYS—Messrs. Allison, Anthony, Bayard, Booth, Boutwell, Bruce, Cameron of Pennsylvania, Cameron of Wisconsin, Caperton, Clayton, Conkling, Conover, Cragin, Dawes, Dennis, Dorsey, Edmunds, English, Ferry, Frelinghuysen, Hamlin, Harvey, Hitchcock, Ingalls, Jones of Florida, Jones of Nevada, McDonald, McMillan, Maxey, Mitchell, Morrill of Maine, Morrill of Vermont, Morton, Oglesby, Paddock, Patterson, Randolph, Ransom, Robertson, Sargeant, Spencer, Wallace, West, Windom, and Wright—45.

ABSENT—Messrs. Boggy, Burnside, Christiancy,

Cockrell, Davis, Gordon, Hamilton, Howe, Johnston, Kelly, Logan, Merrimon, Norwood, Saulsbury, and Sherman—15.

So the amendment was rejected.

The bill was reported to the Senate without amendment.

The President *pro tempore*: "The question is on the passage of the body of the bill."

The Secretary proceeded to call the roll.

The result was announced, as follows:

YAYS—Messrs. Allison, Anthony, Bayard, Boutwell, Cameron of Pennsylvania, Caperton, Clayton, Conkling, Conover, Cragin, Dawes, Dennis, Dorsey, Edmunds, Ferry, Frelinghuysen, Hamlin, Harvey, Hitchcock, Ingalls, Jones of Florida, Jones of Nevada, Kelly, Logan, McDonald, McMillan, Maxey, Mitchell, Morrill of Maine, Morrill of Vermont, Morton, Oglesby, Paddock, Patterson, Randolph, Ransom, Robertson, Sargeant, Spencer, Wallace, and Windom—41.

NAYS—Messrs. Alcorn, Cooper, Eaton, Goldthwaite, Hamilton, Howe, Kernan, Key, McCreery, Merrimon, Stevenson, Thurman, Wadleigh, Whyte, and Withers—15.

ABSENT—Messrs. Boggy, Booth, Bruce, Burnside, Cameron of Wisconsin, Christiancy, Cockrell, Davis, English, Gordon, Johnston, Norwood, Saulsbury, Sherman, West, and Wright—16.

So the bill was passed.

The President *pro tempore*: "The question is next on the passage of the preamble."

The question, being put, was decided in the affirmative, there being, on a division, yeas 37, nays 16.

In the House, on March 27th, the following bill to redeem fractional currency was reported from the Committee on Appropriations:

A BILL to provide for a deficiency in the Printing and Engraving Bureau in the Treasury Department, and for the issue of silver coin of the United States in place of fractional currency.

Be it enacted, etc., That there be and hereby is appropriated, out of any money in the Treasury not otherwise appropriated, the sum of \$48,000, to provide for engraving, printing, and other expenses of making and issuing United States notes.

Sec. 2. That the Secretary of the Treasury is hereby directed to issue silver coins of the United States of the denomination of ten, twenty, twenty-five, and fifty cents, of standard value, in redemption of an equal amount of fractional currency, whether the same be now in the Treasury awaiting redemption; or wherever it may be presented for redemption; and the Secretary of the Treasury may, under regulations of the Treasury Department, provide for such redemption and issue by substitution at the regular sub-Treasuries and public depositories of the United States, until the whole amount of fractional currency outstanding shall be redeemed.

Notwithstanding several amendments were adopted in the House and Senate, the only ones retained on the final passage were as follows:

The word "whether," in section 2, was changed to "whenever," and the following was added to section 2:

And all fractional currency redeemed under this act shall be held to be a part of the Sinking-Fund, provided for by existing law, the interest to be computed thereon, as in the case of bonds redeemed under the acts relating to the Sinking-Fund.

On June 10th, Mr. Cox, from the Commit-

tee on Banking and Currency, introduced a joint resolution relative to the issue of silver coin, which finally passed both Houses in the following form:

Be it enacted, etc., That the Secretary of the Treasury, under such limits and regulations as will best secure a just and fair distribution of the same through the country, may issue the silver coin at any time in the Treasury to an amount not exceeding \$10,000,000, in exchange for an equal amount of legal-tender notes; and the notes so received in exchange shall be kept as a special fund, separate and apart from all other money in the Treasury, and be reissued only upon the retirement and destruction of a like sum of fractional currency received at the Treasury in payment of dues to the United States; and said fractional currency, when so substituted, shall be destroyed and held as part of the Sinking-Fund, as provided in the act approved April 17, 1876.

SEC. 2. That the trade-dollar shall not hereafter be a legal tender, and the Secretary of the Treasury is hereby authorized to limit, from time to time, the coinage thereof, to such an amount as he may deem sufficient to meet the export demand for the same.

SEC. 3. That, in addition to the amount of subsidiary silver coin authorized by law to be issued in redemption of the fractional currency, it shall be lawful to manufacture, at the several mints, and issue, through the Treasury and its several offices, such coin to an amount that, including the amount of subsidiary silver coin, and of fractional currency outstanding, shall, in the aggregate, not exceed, at any time, \$50,000,000.

SEC. 4. That the silver bullion required for the purposes of this act shall be purchased, from time to time, at market rate, by the Secretary of the Treasury, with any money in the Treasury not otherwise appropriated; but no purchase of bullion shall be made under this act when the market rate for the same shall be such as will not admit of the coinage and issue, as herein provided, without loss to the Treasury; and any gain or seigniorage arising from this coinage shall be accounted for and paid into the Treasury, as provided under existing laws relative to the subsidiary coinage: *Provided*, That the amount of money at any one time invested in such silver bullion, exclusive of such resulting coin, shall not exceed \$200,000.

The act known as the homestead law was also repealed, so far as it operated on certain of the Southern States, as follows:

AN ACT to repeal section 2,308 of the Revised Statutes of the United States, making restrictions in the disposition of the public lands in the States of Alabama, Mississippi, Louisiana, Arkansas, and Florida, and for other purposes.

Be it enacted, etc., That section 2,308 of the Revised Statutes of the United States, confining the disposal of the public lands in the States of Alabama, Mississippi, Louisiana, Arkansas, and Florida, to the provisions of the homestead law, be, and the same is hereby, repealed: *Provided*, That the repeal of said section shall not have the effect to impair the right, complete or inchoate, of any homestead settler, and no land occupied by such settler at the time this act shall take effect shall be subject to entry, preemption, or sale: *And provided*, That the public lands affected by this act shall be offered at public sale, as soon as practicable, from time to time, and according to the provisions of existing law, and shall not be subject to private entry until they are so offered.

During this session of Congress, the Secretary of War, William W. Belknap, was impeached by the House, and tried before the Senate and acquitted. (For the details, see PUBLIC DOCUMENTS in this volume.)

A large amount of business, unimportant

generally, and not involving any special political principle, was transacted, and the session closed on the 15th of August.

CONNECTICUT. At the election held on October 2, 1875, in this State, the following two amendments to her constitution were submitted to the people for adoption or rejection:

1. For annual elections on the Tuesday after the first Monday in November in each year, commencing in November, 1876. Sessions of the General Assembly annually in January. State officers elected biennially.

2. For conferring power on the General Assembly to restore forfeited electoral privileges.

Both were adopted by majorities of 39,334 and 19,919 respectively, and are now parts of the organic law of the State. The whole number of votes then polled was, on amendment number one, 44,734—yes, 42,034; no, 2,700. On amendment number two it was 42,509—yes, 31,214; no, 11,295.

STATE SEAL OF CONNECTICUT.

A United States Senator from Connecticut, Orris S. Ferry, of Norwalk, having died on November 21, 1875, Governor Ingersoll appointed James E. English, of New Haven, to occupy the vacant seat until the State Legislature, at its next session, should have chosen a successor.

JAMES E. ENGLISH was born at New Haven; received a common education; and served an apprenticeship in a carpenter's shop, in which pursuit his energy and capacity raised him to the position of master-builder before he had attained his majority. From building he turned his attention to the lumber-trade, in which he accumulated a fortune. This, together with subsequent additions derived from shrewd investments in real estate, manufacturing, and banking institutions, has made him, it is believed, one of the richest capitalists in Connecticut. His public life began in 1855, when he was elected a member of the House of Representatives in the State General Assembly. In the next year he served in the Senate, but declined a renomination in 1857. From 1860 to 1864 he represented the State from the Second District as a member of the

Lower House of Congress; and the course which he there pursued in regard to questions relating to the civil war was highly commended by his political opponents. He was elected Governor over Joseph R. Hawley, and then twice—1868 and 1870—over Marshall Jewell, who, in turn, defeated him in 1869 and 1871. At the congressional election held in April, 1873, Mr. English was the Democratic candidate in the Second District in opposition to Stephen W. Kellogg, the Republican candidate, who was elected. He has since served again in the Lower House of the State Legislature. Mr. English has always been a steadfast Democrat.

An association was recently formed in Connecticut by a number of citizens, and designated as "Greenback men," or party, comprising all who are in favor of paper currency under certain conditions. They met in convention at New Haven on February 22, 1876. Some two hundred members were present, about one-half of that number being residents of the city of New Haven or its vicinity.

The following declaration of principles was reported, and adopted by the convention:

Whereas, The present financial condition of the country requires immediate, wise, and careful legislation on the great questions which are of such vital importance to the welfare of the people: believing the national finances to be in a deplorable condition, the friends of currency reform of Connecticut recommend the following principles as important to the welfare of the nation:

We earnestly invite a severe scrutiny of the principles and measures which we think would restore the country to prosperity, and ask a candid consideration of the grave problems that now challenge the attention of every thoughtful citizen.

Under a government based on universal suffrage it is essential that all important public questions be fully and openly debated. The financial issues of the hour have never been truthfully presented to the American people. We have been denied a fair hearing by the majority of the press, and falsely called inflationists and repudiators by men who are incited by ignorance, by love of political party, or by those who, in order to fatten on the misfortunes of others, wish the people deceived. As the intelligent union of labor and capital is the only legitimate source of wealth, government should foster industry and carefully guard the rights of producers. It should set an example of wise economy, discourage all forms of monopoly, and enact laws for the benefit of the whole people. Class legislation should not be tolerated in a free nation. To suppose that a financial system is perfect merely because it has hitherto been generally so considered is as fallacious as a belief that medicine, law, or the mechanic arts, have reached perfection. Mankind is steadily progressing in knowledge, and all arts and sciences are sharing in the general advance.

1. We oppose the act fixing an arbitrary time for the resumption of specie payments, not because we have any objections to our paper-money being made worth its face in gold, but because that act, by creating distrust of the future, has paralyzed enterprise, thrown the producers of wealth out of employment, and thus postponed the day when it shall become possible to maintain our paper-money at par with coin without creating the wide-spread bankruptcy which an attempt to enforce the resumption act will inevitably produce. Our paper-money should be appreciated to par with coin by rectifying the de-

fects in our monetary system, and by producing general prosperity, not by creating general prostration of business and by robbing debtors to enrich creditors under the hypocritical cry of "honesty." We want immediate and practical measures which will create confidence in the future and supply the conditions under which time, industry, and economy will place our country in a sound financial condition, and make a paper dollar equal in value to a gold dollar at the earliest practical period. To fix an arbitrary time for specie payments is as absurd as it would be to fix a day for a patient's recovery. We therefore ask for the immediate and unconditional repeal of the resumption act, and demand that all similar trifling with the interests of the nation for political purposes be branded as a crime against humanity.

2. The Government should not dishonor its own promises as it now does. In the language of Thaddeus Stevens, "The greenbacks were discredited before they were issued." The national note should be made a full legal tender for all public dues, and for the purchase of Government bonds at par with gold coin.

3. We should have a stable currency, as uniform as is possible in its rate of interest and exchangeable value. The issue of money and the regulation of the value thereof is a matter of national concern—a prerogative of sovereignty which should not be delegated either directly or indirectly to corporations. The national-bank notes should be gradually retired from circulation, and the General Government should have nothing whatever to do with banking; banking should be entirely free, but no paper-money should be allowed in circulation except that issued directly by the United States. The national paper-money should be issued by a bureau of the United States Treasury only when paid for by Government banks. Congress should simply adopt a system under which the volume of the currency would automatically regulate and limit itself. No one can tell how much currency is needed at any particular time. Its volume should be left like that of everything else, entirely free to contract or expand in response to the requirements of trade. This would facilitate cash sales and discourage an undue expansion of private credit.

4. As all the national currency is a part of the national debt, the Government should at all times be ready to exchange its interest-bearing notes for its non-interest-bearing notes. The legal tenders should, therefore, be exchangeable for interconvertible bonds bearing a low rate of interest, but sufficiently high to maintain them at par with gold-coin. We are opposed to the present policy of increasing the amount of our foreign debt, which steadily drains our country of gold, menaces our financial stability, and is a far more serious burden than a domestic debt. A policy should be adopted, the tendency of which would be to diminish our foreign obligations, and to have the American debt owed to American citizens.

5. We believe that a national policy in accordance with our principles would soon extinguish the premium on gold; would give us a stable currency unaffected by foreign wars and panics; immediately revive our drooping industries and give labor employment at just wages, and rescue our country from the unfortunate position in which it has been placed by an extravagant Administration and incompetent legislators. We invite every good citizen, irrespective of previous party affiliations, to unite with us for political resistance against the ignorant war now being waged on the many for the benefit of the few, and to this end we counsel our friends to cast every vote for that party whose platform shall be most in accord with the sentiment of justice and the principles herein set forth.

In case both of the existing parties refused

to accept its peculiar views, the convention instructed and authorized its Executive Committee to take independent action and nominate State officers.

The Democratic-Liberal party assembled in State Convention at New Haven, on February 23d, to nominate their candidate for Governor, and also to appoint delegates to the General Democratic Convention, to be held in the following summer at St. Louis, Mo., for nominating candidates for President and Vice-President of the United States. Delegates were present from every town in the State.

After the convention had been permanently organized, and a numerous State Central Committee appointed, a delegate moved, "that the old State ticket be renominated by acclamation." The motion was seconded, and unanimously passed. (The names presented in the renominated ticket, with Charles R. Ingersoll, of New Haven, at their head, as Governor, are set down in the CYCLOPEDIA for 1875 under this article.)

These delegates were empowered to appoint substitutes.

The chairman of the Committee on Resolutions reported the following, which were adopted by the convention unanimously:

The Democratic-Liberal party of Connecticut, in convention assembled, on this 23d day of February, 1874, pledge themselves anew to the principles which they have repeatedly adopted, and which the people of this State have approved.

1. The Constitution of the Union shall be maintained, with the supremacy of the civil over the military authority; and we demand for the individual the largest liberty consistent with public order; for the State self-government; and for the Federal Administration a return to the methods of peace and the constitutional limitations of power.

2. The civil service of the Government has become alarmingly corrupt. It is an instrument of personal ambition and an object of selfish greed. It has become a reproach to free institutions. We, therefore, regard thorough reform of the civil service as one of the most pressing necessities of the hour, and believing that honesty, capacity, and fidelity, constitute the only valid claim to public employment, we demand that public station shall become again a post of purity and honor.

3. The public credit of the Union must be maintained. Federal taxation should provide means necessary to pay the expenses of the Government, economically administered, and for a steady reduction of the national debt; while the tariff laws should be adjusted for the purpose of revenue only.

4. The public lands must be preserved for actual settlers; and subsidies of money or lands to corporations and speculators should cease entirely.

5. The Democratic majority in the House of Representatives are especially deserving of popular support in their policy of reducing the expenditures of the Federal Government to the actual needs of the public service, thus cutting off the supplies which have for eleven years invited corruption and fed an army of plunderers.

6. That the only currency known to the Constitution of the United States is gold and silver; and coin forms the only stable basis for the commercial necessities of the world. The Democratic party of the Union has never failed to recognize and support this essential principle. But, following a great and costly war, we find an irredeemable currency at our doors. It is, therefore, the duty of Congress to

adopt such measures as shall lead to an early resumption of specie payments, while guarding its acts by that prudence which the interests of commercial, manufacturing, and industrial pursuits imperatively demand.

7. That the act of the last Congress passed by the Republican majority, declaring that there shall be specie payments on the first day of January, 1879, was a scheme of mere party expediency. Supported by no measure tending to secure resumption, it was a deception and a fraud. Its results have been injurious, as the business interests of the country could not be shaped and conducted to harmonize with an ineffective and deceptive act. We respectfully ask Congress to substitute for it well-defined and practical legislation, tending to an accumulation of coin as a basis for resumption, or the funding and cancellation of a portion of the greenback circulation in a convertible bond, bearing a low rate of interest.

8. That this convention, having confidence in the ability and integrity of the Senators and Representatives in Congress from this State, rely upon such action at their hands as will aid in placing the finances of the country upon the constitutional basis.

Upon the conclusion of the reading of the foregoing platform, a delegate from New Haven offered a resolution in favor of greenbacks, and set forth the reasons for its adoption at length. A delegate from Hartford spoke against the passage of the resolution, which was lost.

The two following resolutions were also offered, and adopted:

Resolved, That the Democratic Legislatures and administrations in this State have been economical, prudent, and in the interests of the people; and this policy we demand at the hands of future Legislatures and executive officers.

Resolved, That in our present Executive, Governor Charles R. Ingersoll, we recognize a public officer of commanding ability and purity of character. Rising above the level of partisan conflicts, he is guided by just principles, and the welfare of the people, whose interests he serves with unflinching fidelity; and Messrs. Sill, Sanger, Raymond, and Goodrich, are faithful public officers, who are deserving the continued confidence of the people.

The Republicans met in convention at Hartford, on February 29th. There was a large attendance of delegates from all parts of the State.

The following is the ticket: For Governor, Henry C. Robinson, of Hartford; Lieutenant-Governor, Frederick J. Kingsbury, of Waterbury; Secretary of State, Francis A. Walker, of New Haven; Treasurer, Jeremiah Olney, of Thompson; Controller, Eli Curtis, of Water-town.

Upon the selection of delegates to the National Republican Convention at Cincinnati, it was agreed, after some discussion, that they should be chosen by district conventions composed of the delegates present from the several districts. The convention then resolved itself into district conventions, who chose their respective delegates.

The following platform was reported by the chairman of the Committee on Resolutions, and adopted:

The Republican party in Connecticut reaffirms its devotion to the Union and the Constitution, and its

continued faith in the foundation-truths declared by the fathers. It speaks for retrenchment and reform, for a speedy return from extravagance to simplicity, for the untiring pursuit and punishment of public fraud and crime wherever existing, for the preservation inviolate of the great lessons of the war, and for the hearty welcome of all citizens of the whole country to our common privileges and blessings.

It honors the unpretentious fidelity of Secretary Bristow, and the wholesome activity of Secretary Jewell, in their endeavors to protect the public purse, and to punish public criminals; and it gives a hearty response to the declaration of the President, "Let no guilty man escape."

It charges upon the Democratic majority in the Lower House of Congress selections for office which are an insult to national honor, and displacements which are marked with ingratitude; with subordinating, as in the days of our national extremity, the welfare of the public to party success; with applauding, upon the floor of the House, sentiments which are in open defiance of the nation, and insulting to its history; with halting upon the great financial questions in a time when the industries of the people are prostrate.

We declare that the commission of the national Legislature to the Democracy has been a signal failure, and believe that the Republican party is the best hope of the country in peace, as it was the preserver of its honor in war.

We charge upon the Democratic party in the Connecticut Legislature action which invades the purity of the ballot-box, and opens the doors to frauds upon the sacred right of suffrage; and we charge upon it unworthy appointments to office.

We speak for the total abandonment of barter and trade in the State Legislature; for short legislative sessions; for the unsullied purity of the judiciary; for the encouragement of State industries, and for the support of State education.

The safety of the republic depends upon the intelligence as well as the virtue of its citizens; and in order that the unity of the nation, preserved at the cost of war, may be maintained in peace, it is essential that the State schools shall continue to be common schools, where every child in the State may receive such education as will befit him to be useful in the community, happy in his home, and absolutely removed from that ignorance which is the mother of crime; and we are unutterably opposed to any diversion of the school-money for any purpose whatever.

The Republican party, which issued the greenbacks under the pressure of a temporary necessity, to support the national Government against treason and rebellion, is pledged to redeem them, and to make them as good as gold to the holders, and that no stain may rest in history upon any one of the patriotic efforts of the people during the war. We approve of the resumption act, as a new expression of this pledge and determination. We point to the efforts now made by the Democratic party to repeal that act, and to commit the country to the permanent use of irredeemable paper currency, as a proof of what might be expected of them if they had greater power. We believe that the welfare of the country demands that necessary legislation be passed to carry the resumption act into effect, at the time specified, either by funding the greenbacks into long bonds, at the lowest practicable rate of interest, or by using any available means to pay and cancel them.

We believe in the unwritten law of the land, which declares it unwise for a Chief Magistrate to hold his office beyond two terms; and we accept the declaration of President Grant, in harmony with this law, as but another claim to our admiration and gratitude.

We present to the electors of this State the names of the Hon. Henry C. Robinson, the Hon. Frederick

J. Kingsbury, General Francis A. Walker, Hon. Jeremiah Olney, and Hon. Eli Curtis, as men qualified by their ability, integrity, and character to fill any official position in the gift of the people.

The convention then adjourned without day.

The Greenback party, seeing that neither the Republicans nor the Democrats would endorse their views, assembled in State Convention by themselves, at Meriden, on March 9th, and nominated a State ticket of their own, as follows: For Governor, Charles Atwater, of New Haven; for Lieutenant-Governor, Francis Gillette, of Hartford; for Secretary of State, Linden V. Perry, of Winsted; for Treasurer, Loren F. Judd, of New Britain; for Controller, John A. Peek, of Naugatuck.

Upon the report of the chairman from the Committee on Resolutions, they also adopted a platform in accordance with the principles declared at their convention of the preceding February, demanding the unconditional repeal of the specie-resumption act; the practical abolition of the national-bank system; the receipt of greenbacks for customs duties; the issue of bonds interconvertible with greenbacks, so as to keep greenbacks at par with gold; and strongly opposing the thirty-year bond bill, which had passed the Senate on the preceding February 25th.

The Liquor Prohibition party renominated this year the same State ticket which they had presented in 1875, namely: For Governor, Henry Smith; Lieutenant-Governor, J. G. Baldwin; Secretary of State, Buell P. Cowles; Treasurer, John H. Rockwell; Controller, Dubney Carr.

The result of the popular vote, at the election of April 3d, was the reflection of the Democratic ticket by a considerable majority over the Republicans. The aggregate number of votes cast for Governor was 98,619, of which the Democratic candidate received 51,188; the Republican, 43,510; the Greenback party's, 1,974; the Temperance, 1,988. The entire number of votes cast in the State this year was 2,347 less than in 1875, when it reached 100,966, the largest ever polled in Connecticut.

With regard to members of the State Legislature, the Democrats made such gains as to more than double their previous majority over the Republicans in either House, the respective numbers in the new General Assembly being as follows: In the Senate, Democrats 18, Republicans 8; in the House of Representatives, Democrats 163, Republicans 82, Independent 1; showing a Democratic majority of 15 in the Senate, of 81 in the Lower House, and of 96 on joint ballot. In the last Legislature their majority on joint ballot was 42.

A special election for Congressman in the Third District was also held on April 3, 1876, the candidates being David A. Wells, Democratic-Liberal, and John T. Waite, Republican. The latter was elected, having received 8,436 votes, against 7,783 cast for the former.

The members of the General Assembly met

at Hartford on May 8, 1876. It was the last session held by the Connecticut Legislature in the spring; a recent amendment to the constitution having fixed the opening of its sessions thereafter on the first Wednesdays in January, to begin in the year 1877. Both Houses were promptly organized. At the ballot taken for Speaker in the House of Representatives, the whole number of votes being 234, Thomas M. Waller, Democrat, was declared elected, he having received 151 votes, against 71 cast for his Republican competitor, H. Lynde Harrison.

The aggregate amount of taxable property assessed in the State for 1875 shows a decrease of nearly \$7,000,000 from the assessment for 1874; it being, in 1875, \$351,785,469. This unprecedented decrease is owing to the general depression of values which has prevailed for these three years. The diminution is chiefly in dwelling-houses and land; real-estate property in general having largely depreciated. In the city of Hartford, the assessment-list shows an increase of nearly half a million dollars (\$449,252); in the city of New Haven, a decrease of something more than four millions and a half.

The financial condition of the State appears to be satisfactory. Her revenues, during the last year, had an increase of over \$107,000, their aggregate amount from all sources having been \$1,761,533.53. The public expenditures, on account of the civil list, were some \$35,000 less than in the preceding year; although their total sum, including nearly half a million expended in the new State-House building, amounted to \$1,833,335.67. The balance of available cash in the Treasury on April 1, 1876, was \$711,725.88. In 1875 the balance to the credit of all accounts, at the same date, was \$771,544.41, showing a decrease in 1876 of little less than \$60,000.

For the construction of the new State-House, thus far, the sum of \$1,173,156.14 has been expended. Of this amount, \$922,500 have been paid by the State, and \$256,500 by the city of Hartford. The amount required to finish the building, and already appropriated by previous Legislatures, is \$1,077,500.

The bonded debt of the State remains as it was, \$5,014,500.

The school-fund amounts to \$2,043,960.91; of which more than four-fifths are invested in real-estate mortgages.

There are in Connecticut eighty-seven savings-banks, their aggregate deposits amounting to over \$76,000,000. The number of depositors severally owning that sum is 208,000, or considerably more than one-third of the entire population of the State, according to the last census. At the end of the year the number of depositors exceeded that of the preceding by about 1,800, but the number of accounts closed during the last year has been less than in the previous one.

The fire and marine insurance companies

doing business in Connecticut number 128, classified as follows: 13 Connecticut stock companies and 18 mutual; 85 companies chartered in other States, and 14 foreign. The aggregate amount of their assets exceeds \$100,000,000. The losses paid by the Connecticut companies during the year absorbed 57 per cent. of the premiums received, which was a less favorable proportion than that of the previous year, but is considered satisfactory.

The eight life-insurance companies of Connecticut hold assets of over \$97,000,000, or nearly as much as the assets of the 128 fire-insurance companies put together. The increase in the assets of the life-insurance companies last year was little less than \$6,000,000. They insure over \$438,000,000, represented by nearly 207,000 policies. They paid, during the last year, little less than \$6,500,000 of death-claims and endowments. Their income from all sources, in 1875, was nearly \$25,000,000, or about \$1,000,000 less than in the preceding year. Their expenditures, also, were less in about the same proportion.

The funds accumulated in the hands of these companies being of a fiduciary character, not unlike the deposits held by savings-banks, the Governor suggested, in the interest of the insured and their families, "that the trust should be guarded by law against the powerful temptations to which the managers of such vast sums are always exposed, in a similar manner to that which has been found wholesome in the case of savings-banks."

There are twenty-seven railroad companies operating their roads in Connecticut; eight among them paying dividends at the average rate of 9.24 per cent. on their capital. The stock and debts of all the companies amount in the aggregate to about \$76,000,000; the cost and equipment of the roads represent about the same sum. Their gross receipts during the year show some increase over those of the previous year, and a still greater proportional increase in the net earnings, owing to a diminution made in the current expenditures.

The number of passengers transported by all the railroads of Connecticut in the course of the year was 10,750,000, or above 300,000 more than in the preceding year. No fatal accident happened to any one of the said number.

The various industrial interests in the State could not escape being affected by the general and long-continued depression of business in the country; yet they appear to be in as good a condition as could be expected. The seasons have been propitious for the cultivation of the soil, and its fruitfulness abundant. The State has been exempt from public calamity during the year. A severe freshet in her eastern counties caused serious loss, especially by the destruction of mill-property, roadways, and bridges, in the manufacturing town of Sprague.

The condition of the public schools, in regard to attendance, instruction, and means of

support, is shown by the following summary statements taken from the official report for 1875, presented by the State Board of Education to the General Assembly at its session of 1876:

There are 1,650 public schools in the State, an increase of eight during the year. Number of children between four and sixteen years of age, January, 1875, 134,976; increase during the year, 1,448; number of different scholars in public schools, 119,489—increase, 191; number in private schools, 9,145, an increase of 723. There are 12,970 between four and sixteen years of age who are in no school—a less number by 60 than that of the year before. The winter attendance is, as usual, much the largest. Of teachers, there are in winter 721 males and 1,910 females, and in summer no fewer than 2,324 of the latter, to 272 of the former. There are 264 graded schools.

There are still a good many school-houses in poor condition, which it is the effort of the board to improve.

The dividend per child from the school-fund last year was \$1.10, and nearly \$150,000 was thus used, besides \$202,119 paid for schools from State tax. Town taxes raised \$668,167; district taxes, \$468,775. Income of town deposit-fund, \$46,534.97; of local funds, \$15,614.79. Voluntary contributions for public schools, \$6,881.26; from other sources over \$41,500 was received; and the total amount received from all sources was \$1,592,858.11.

The aggregate amount of money paid from the Treasury during the year for the support of State beneficiaries in the various charitable institutions, not including the reformatory or penal, was \$173,521. This charitable aid was afforded through the Governor's office in 1,136 cases during the year, and its recipients were as follows: 630 insane, 386 sick soldiers, 61 deaf-mutes, 17 blind, and 42 imbeciles.

The State Hospital for the Insane, at Middletown, had 616 patients under treatment during the year, of whom there remained 460 at the end of April, 1876. Of this number 302 are town or State paupers, and 135 indigent—that is, able to pay one-half of the five dollars charged for weekly support.

This hospital is filled to its utmost capacity. Besides the above-mentioned number of patients within it, 68 insane persons have been kept under treatment by State aid in the Retreat at Hartford, and in hospitals of neighboring States; there were probably 50 applicants for admission to the Middletown hospital, who were not provided for in other hospitals.

In the State Reform School, at Meriden, there were, during the year, 466 boys for correction and instruction, of whom 845 were remaining in the institution on the 1st of April; a larger number than ever before. In consequence of the unfavorable condition of business prevailing, the receipts from labor-contracts last year were less than before, and not quite sufficient to cover the expenses of the institution.

In the Industrial School for Girls, the labor of its inmates has made a net earning in the past year. Private donations have also been made to it during that period.

In the State penitentiary there were at the

end of April, 1876, 252 convicts in confinement, being 40 more than the cells of the prison can receive.

The contract price for convicts' labor having been diminished by about one-third on account of the commercial depression, the earnings for the last year were proportionately less. The expenditures of the prison during the twelve months exceeded its receipts by \$2,874.87.

Among the first transactions of this session was the election of a United States Senator in the place of the late Orris S. Ferry, of Norwalk. In accordance with a concurrent resolution previously adopted, the two Houses separately balloted on May 16, 1876, the candidates voted for in both Houses being Henry B. Harrison, Republican, James E. English and William H. Barnum, Democrats; with the addition, in the Lower House, of Charles R. Ingersoll, also a Democrat. The results were as follows: In the Senate, the whole number of votes being 21—Barnum, 17; English, 1; Harrison, 3. In the House of Representatives, the whole number of votes being 246—Barnum, 151; Harrison, 81; English, 5; Ingersoll, 2. The presiding officer in each House declared William H. Barnum elected. On the next day, May 17th, the members of the two Houses met in joint convention to finish the work of the United States Senator's election, when, the results of each House's vote on the previous day having been added together, the joint vote stood as follows:

William H. Barnum, Democrat.....	168
Henry B. Harrison, Republican.....	84
James E. English, Democrat.....	6
Charles R. Ingersoll, Democrat.....	2
	260

There were seven absentees. The president announced the result of the concurrent votes, and formally declared William H. Barnum duly elected United States Senator for the unexpired term of the late Orris S. Ferry, ending March 4, 1879.

The General Assembly closed its session on June 28th.

The May session of 1876 was the shortest ever held in Connecticut since 1860. It was also regarded as an economical one, and the new enactments passed in it were less numerous than usual. Among its acts were six amendments to the State constitution passed in 1875, and continued to the present session. Having been approved by the requisite two-thirds of each House, they were submitted to the people's vote at the election of October 2, 1876, for their adoption or rejection. The amendments were as follows:

1. That any new town, hereafter incorporated, shall not be entitled to a representative in the General Assembly "unless it has at least 2,500 inhabitants, and unless the town from which the major part of its territory is taken has also at least 2,500 inhabitants," etc.

2. The "provisions of section 2, Article IV. of

the constitution and the amendments thereto, shall apply, *mutatis mutandis*, to all elections held on the Tuesday after the first Monday of November, 1876, and annually thereafter."

2. Judges of the courts of Common Pleas and of the district courts shall be appointed for terms of four years; judges of the city courts and of police courts shall be appointed for terms of two years.

4. That the judges of probate shall be elected on the Tuesday after the first Monday of November, 1876, and biennially thereafter; that judges so elected shall hold their offices for two years from and after the Wednesday after the first Monday of the next succeeding January; and that the judges of probate elected on the first Monday of April, 1876, shall hold their offices only until the Wednesday after the first Monday of January, 1877.

5. The compensation of members of the General Assembly shall not exceed \$300 per annum, and one mileage each way for each session, at the rate of 25 cents per mile.

6. That Article VIII. of the amendments to the constitution be amended by erasing the word "white" from the first line.

The following amendments to the constitution were passed at this session for continuance to next year: Increasing the senatorial districts of the State by an addition of from six to ten; increasing the number of judges; prohibiting the voting of town aid to railroads; providing for biennial elections of the Legislature; and prohibiting the use of money in elections.

A constitutional amendment was proposed purporting expressly "to prevent bribery in elections," and another "to prohibit the use of public money for Catholic schools," both of which were rejected.

A resolution to encourage the resumption of specie payment, by the Federal Government, was indefinitely postponed by the House of Representatives on June 28th, and by the Senate in concurrence on the same day.

In preparation for the general election of November 7, 1876, when, in accordance with the new order of things, the people of Connecticut should for the first time elect their State officers to be installed in January next ensuing, the political organizations in the State severally met in convention again, for the purpose of nominating their respective State and electoral tickets.

The Republican party assembled at New Haven on August 30th, when the following named presidential electors were nominated: At large—Theodore J. Woolsey, the ex-President of Yale College, and Marshall Jewell. By districts—first, George Maxwell, of Vernon; second, John Allen, of Saybrook; third, George S. Moulton, of Windham; fourth, Donald J. Warner, of Salisbury.

Concerning the nomination of State officers, it was moved "that the ticket of last spring, with Henry C. Robinson at the head, be nominated by acclamation," which finally prevailed. The following platform was adopted by the convention:

1. The Republican party of Connecticut renews its declaration of implicit allegiance to the Constitutions of the United States and of the State of

Connecticut, and its devotion to the inspiration in which the party was born, and by which it carried the nation in triumph through the period of the civil war.

2. It declares that the lesson taught by the late rebellion must be honored in the policy and conduct of our Government, and indignantly protests against the unblushing avowal by the Democratic leaders of theories of State sovereignty which were the legitimate parent of the infamous attempts at secession and the immediate cause of the terrible war through which the republic has passed; and against the outrages of fraud, intimidation, and violence, by Democratic politicians in the reconstructed States upon the free suffrage and citizenship of the people of those States.

3. It declares for reformation in the civil service and in the administration of all public affairs, as set forth in the letter of acceptance of Rutherford B. Hayes; for economy and retrenchment in public expenses; for the speedy resumption of specie payment, and the prompt fulfillment of the obligations of the Government written upon its paper currency; and protests against the repeal by the Democratic House of Representatives of the clause of the law of 1875 for the resumption of specie payment in 1879, to which the national faith is pledged, and by whose repeal the national faith is dishonored.

4. It declares for generosity and good-will to the people of the South, for harmony and peace throughout the land; but protests against rewarding with honors and emoluments the services of rebellion and treason, and insists upon the protection of every citizen in the exercise of his civil rights as granted in the amendments to our Constitution.

5. It declares its unqualified love of law and liberty, its welcome to improvement and progress, and seeks for its supreme objects the comfort and elevation of the people, and the preservation, unattained, of the national honor.

6. In matters of State policy, it declares for economy and simplicity; for the encouragement of industry; for a universal system of unsectarian education, secured by legislation; for short legislative sessions; for general laws, and against special legislation; for the limitation of municipal indebtedness, and public appropriations to the legitimate objects of support by taxation; against bribery and corruption of elections; against bargains and trades in appointments, and for reduced expenses and lower rates of taxation.

7. It charges the Democratic party with subservience to the men who have but just laid down rebellious arms; with evasion and dishonesty in its treatment of the financial question; with studied insult to the Union soldiers; with an utter disregard of the honor and fair name of the republic; and with the purchase of power in this State by bribery and corruption at elections.

8. It charges that the Democratic party is true to its record in proposing for Chief Magistrate of a restored Union a man who withheld from the friends of that Union his sympathy and support when the nation's existence was in peril; and, as a model reformer, a man who reached his first political prominence by associating with the most corrupt and unscrupulous politicians who ever disgraced our land.

9. It accepts and most cordially indorses the platform and principles of the party as established by the Cincinnati National Convention, and in the nomination of General Rutherford B. Hayes and William A. Wheeler for President and Vice-President it finds assurance of the elevation to those high places of men whose lives and records and letters of acceptance furnish a guarantee that the principles of the party will be enforced in the administration of our Government. It declares that President Grant is entitled to our thanks for his patriotic services to the country, and that his name will be deservedly

enrolled among the honored sons of the republic; and it is

Resolved, That the candidates nominated by this convention deserve the unanimous and enthusiastic support of the citizens of Connecticut.

The Democratic-Liberal Convention, pursuant to a call issued by their State Committee on August 15th, was held at Hartford on September 6th. The names presented in the ticket were as follows: For Governor, Richard D. Hubbard, of Hartford; for Lieutenant-Governor, Francis B. Loomis, of New London; for Secretary of State, Dwight Morris, of Bridgeport; for Treasurer, Edwin A. Buck, of Windham; for Controllor, Charles C. Hubbard, of Middletown.

The nomination of presidential electors was made. The ticket was as follows: At large—Charles R. Ingersoll, of New Haven, and William B. Franklin, of Hartford. By districts—first, John S. Dobson, of Vernon; second, Geo. E. Elliot, of Clinton; third, Charles Osgood, of Norwich; fourth, George Taylor, of New Milford.

Unusual interest and importance was attached by this convention to the platform. Its reading was frequently interrupted by noisy applause, and a great demonstration was made in its favor at the conclusion. It was adopted unanimously, and was as follows:

Resolved, That we cordially approve of the nominations, by the Democratic National Convention, of Samuel J. Tilden for President, and Thomas A. Hendricks for Vice-President—statesmen in whose purity of character, and ability to discharge the duties of the highest positions in our Government, the people may implicitly confide.

Resolved, That in the platform adopted by the late Democratic National Convention, and in the views expressed by Governors Tilden and Hendricks in their letters of acceptance, we recognize the principles which are necessary for the preservation of our free institutions, and essential to bring back the administration of the Government to honest and economical service.

Resolved, That a political party continued in power for a long period of time becomes arrogant, selfish, and corrupt; and that recent official investigations have proved that sixteen years of power in the Federal Government by the Republican party have brought steadily-increasing impurities into the public service; and combinations to deplete the public Treasury have grown so powerful, and their partisan influences so strong, that the Republican party is unable to reform existing abuses. That party having utterly failed to redeem its promises of reform within its own ranks, so earnestly made four years ago, and the abuses becoming day by day more general and alarming, a complete change of parties in the administration of public affairs is essential to secure a radical reform in the civil service, where demoralization has become a scandal and reproach to our free institutions. But now the chief actors in scenes of national shame seek to shift responsibility upon the heavily-burdened shoulders of a retiring President, and ask that they may be continued in power for the sake of self-reformation. All history teaches that reformation does not begin with continued reward.

Resolved, That while one great cause of the prostration of business, with its resulting ruin of capable business-men and the idleness and suffering of tens of thousands of laborers, may be found in the unparalleled official corruption and extravagance of

the Republican party, and its accompanying unbearable taxation by the Federal Government of more than \$4,000,000,000 during the past eleven years, we nevertheless find the Administration and the entire Republican party in Congress earnestly opposing the retrenchment and the economic policy of the Democratic party.

Resolved, That the Democratic-Liberal party of Connecticut, which has controlled the administration of the State for four years, to the satisfaction of the people, demands:

1. That there shall be rigid economy in the public expenditures; and we thank the Lower House of Congress for its zealous work, by which retrenchment to the amount of \$30,000,000 in this fiscal year was accomplished, over the combined opposition of the Republican minority in the House, the Senate, the President, and the entire Administration.

2. That every dishonest incumbent of public office, and every official who tolerates and does not sternly oppose corrupt practices in the civil service, shall be removed; and that none except competent, honest, and faithful officers shall be intrusted with public duties.

3. That the military shall be subordinate to the civil authority; and that the array of Federal bayonets around the polls, when peaceable citizens are voting, shall cease. The Federal Government has no right to send its standing army into a State to interfere with its local affairs, except when called upon, under the provisions of the Constitution, by the Governor or Legislature; and the recent order of the War Department, by direction of the President, to place Federal soldiers under the control of United States marshals around the polls in the Southern States, when no disturbance has occurred or occasion transpired for their presence, and no State authority has constitutionally called for them, is an outrage upon the people, and a violation of the principles of our Government. Its menace is, that a Federal Administration desiring to perpetuate its power may do so by silencing the sovereignty of the ballot by the use of the sword.

4. That there shall be a wiser policy in regard to our system of taxation; that our commerce, now nearly extinct, shall be relieved from ruinous restrictions, and fresh life infused into the important interests dependent upon it, thus strengthening the revenue, sustaining the national credit, and giving employment to many thousands of deserving laborers who are idle and suffering.

5. That the interference of the Federal Government to control the elections shall cease; that the Government shall not impose revengeful acts upon any section of our common country—for such a policy is at war with the principles of our Government, and tends to paralyze all business interests. In the language of the enlightened statesman, Samuel J. Tilden, it is the duty of every good citizen and governmental authority to establish "cordial fraternity and good-will among citizens, of whatever race or color, who are now united in one destiny of a common self-government."

6. That there shall be a return to specie payments, by the most speedy and practical methods; and we have entire confidence that under the wise statesmanship and large business experience of Samuel J. Tilden and the counselors he will bring about him, such a result will be surely effected without shock or detriment to any industrial, commercial, or financial interest of the country. The charge that the Democratic party is incapable of dealing efficiently with this problem, comes with ill grace from a party that is responsible for all the currency shams of the last ten years, and with unlimited powers has utterly failed during all that period to make the money of the people as good as the money of the bondholders.

Resolved, That four years of economical Democratic administration in Connecticut have left the

finances of the State in a sound and satisfactory condition, upon a reduced rate of taxation; that the conservative action of the Legislature, during this period, in adopting just measures and in observing rigid economy, merits the approbation of the people; and we confidently appeal to them for continued support of the same Democratic and Liberal party and policy.

Resolved, That we invite and welcome the co-operation of all electors, without regard to their previous party affiliations, in our struggle to accomplish needed reforms in the administration of the Government, and the full reestablishment of the authority of the Constitution and laws of the Union.

The Greenback party, which convened at New Haven, on September 12th, renominated the State ticket which they had nominated at their convention of the preceding March 9th, as stated above.

For presidential electors they nominated the following: At large—John P. Phillips, of New Haven, and Henry S. Pratt, of Hartford. By districts—first, George Hibbard, of Hartford; second, Henry E. Jackson, of New Haven; third, Charles G. Beebe, of Stonington; fourth, Otto F. Porter, of Bridgeport.

The platform adopted by the Greenback party at this convention indorses the nominations of Peter Cooper and Samuel F. Cary for President and Vice-President of the United States; demands the unconditional repeal of the resumption act; recommends the exchange by the Government of its interest-bearing bonds for non-interest-bearing notes, and that legal tenders should be made exchangeable for its inconvertible bonds bearing a low rate of interest; condemns the policy of increasing the foreign debt, and the demonetization of silver; and arraigns the two political parties of the State for their failure to protect the industrial classes.

At the election held on October 2, 1876, the proposed six amendments to the State constitution were separately voted upon by the people, and each of them approved by an average majority of something more than fifteen yeas to one nay. The average whole number of votes cast in the State on each amendment was about 80,000. Governor Ingersoll, on the 18th, issued a proclamation declaring that a majority of the electors had approved each and all of the proposed constitutional amendments, and that the same had become valid, to all intents and purposes, as a part of the constitution of the State.

The general election of November 7, 1876, resulted favorably to the Democrats. For the presidential electors the Democratic ticket received 61,934 votes; the Republican, 59,034; the Greenback party's, 774; the Temperance, 378.

As to the State ticket, the votes cast for Mr. Hubbard, the Democratic candidate for Governor, numbered 61,934; for Mr. Robinson, the Republican nominee, 58,514. The candidates of the Greenback and Liquor Prohibition parties received 630 and 740 votes respectively.

Of the four Congressmen voted upon in their respective districts, the Democrats elected three, namely, Mr. Landers in the first district, Mr. Phelps in the second, and Mr. Warner in the fourth. In the third district the Republican candidate, Mr. Wait, was elected.

In the fourth district there was an additional election held for Congressman to fill the vacant seat during the remaining term of the present Congress. The candidates were the same, and the same was the result of the voting; Mr. Warner, the Democratic candidate, having here also been elected, and by a somewhat increased majority over the Republican.

With reference to the members of the State Legislature, the Republicans obtained in the November election very considerable gains over the Democrats, so as to reverse the result of the election held for that purpose in the preceding April, and change the political complexion of that body from Democratic to Republican, as follows: Senate, Republicans 10, Democrats 11; House of Representatives: Republicans 141, Democrats 105; giving the Republicans a majority of 35 over the Democrats on joint ballot. In the last General Assembly the Democrats had a majority of 96 over the Republicans on joint ballot.

The whole number of votes polled on the electoral and State tickets in Connecticut, at the November election in 1876, was 122,156 and 121,824 respectively. This exceeds by above 20,000 the largest number of votes cast in the State at any former election.

Besides the change in the time of electing the State executive officers and members of the Legislature from April to November, the opening of the sessions of the Legislature was required to take place in January instead of May, to begin with January, 1877, and the fiscal year to be reckoned from December 1st to November 30th, commencing with December, 1876, instead of from April 1st to March 31st, as heretofore. These changes have been carried into practical execution. The members of the Legislature elected on November 7, 1876, met and opened its session on January 3, 1877, the appointed day, when also the State officers, returned at the same election, having taken the constitutional oath, were installed in their respective offices, and the new Governor read to the General Assembly his inaugural message.

A summary statement of the financial affairs of the State during the eight months is as follows:

Balance in the Treasury on April 1, 1876	\$598,889 51
Receipts from April 1 to November 30, 1876..	755,261 80
Total	\$1,354,151 31
Expenditures during the same period.....	1,204,685 21
Balance in Treasury on December 1, 1876.	\$177,415 60
The estimated revenue for the fiscal year ending November 30, 1877, is.....	\$1,892,415 60
The estimated expenditure.....	1,736,500 00
Estimated surplus in the Treasury on December 1, 1877.....	\$99,615 60

CONYNGHAM, FRANCIS NATHANIEL, Marquis of, an Irish nobleman, born June 11, 1797; died July 17, 1876. He was educated at Eton, where he had among his school-fellows and form-fellows Lords Feversham, Bayning, Harborough, Camden, and Ellesmere. In 1821 he entered the army, obtaining a commission as ensign in the Life Guards. He rose by steady and regular promotion, becoming captain in 1823, major in 1827, colonel in 1854, and, attaining field rank in 1858, he was promoted to lieutenant-general in 1866. Having served an apprenticeship of three years (in 1823-'26) as Under Secretary of State for Foreign Affairs, he entered the Lower House of Parliament in 1825, while bearing the courtesy-title of Lord Mount Charles, as M. P. for the county of Donegal, which he represented in the Tory interest down to the period of the first Reform Bill, holding office as one of the Lords of the Treasury under the Duke of Wellington's administration in 1827-'30. He succeeded to his father's title and a seat in the Upper House at the close of 1832. About this time he changed his politics, as he held the postmaster-generalship twice—though on each occasion only for a short time—under Lord Melbourne, and subsequently for four years (1835-'39) held a high office about the court as Lord Chamberlain of the Household. In 1849 he was appointed Vice-Admiral of the coast of Ulster, and in 1869 Lord-Lieutenant of Meath. He was an ardent sportsman, having one of the finest studs of race-horses in Ireland. He was also Commodore of the Irish Yacht Club, and Vice-Commodore of the Royal Yacht Squadron. He is succeeded by his son George Henry, Earl of Mount Charles.

COOPER, PETER, an American philanthropist, born in New York, February 12, 1791. At the age of seventeen he was apprenticed to the trade of coach-making, in which he continued for some time. He next engaged in the manufacture of patent machines for shearing cloth, which were in great demand during the War of 1812, but lost all value on the declaration of peace; then in the manufacture of cabinet-ware; then in the grocery business in the city of New York; and finally in the manufacture of glue and isinglass, which he carried on for fifty years. His attention was early called to the great resources of this country for the manufacture of iron, and in 1830 he erected extensive works at Canton, near Baltimore. Disposing of these, he subsequently erected a rolling and wire mill in the city of New York, in which he first successfully applied anthracite to the puddling of iron. In 1845 he removed the machinery to Trenton, N. J., where he erected the largest rolling-mill at that time in the United States for the manufacture of railroad-iron, and at which, subsequently, he was the first to roll wrought-iron beams for fire-proof buildings. These works have grown to be very extensive, including mines, blast-furnaces, and water-power, and are now carried

on by Mr. Cooper's family. While in Baltimore he built, after his own designs, the first locomotive-engine constructed on this continent, and it was used successfully on the Baltimore & Ohio Railroad. He took great interest in the extension of the electric telegraph, in which he invested a large capital. He served in both branches of the New York Common Council, and was a prominent advocate of the construction of the Croton Aqueduct. His great object was to educate and elevate the industrial classes of the community. He early became a trustee of the Public School Society, and at the time of its being merged in the Board of Education was its vice-president. He subsequently became a school commissioner, but, feeling that no common-school system could supply a technological education, he determined to establish in his native city an institution in which the working-classes could secure that instruction for which he, when young and ambitious, sought in vain. In furtherance of this object, the "Union for the Advancement of Science and Art," commonly called the "Cooper Institute," was erected in New York at the junction of Third and Fourth Avenues, between Seventh and Eighth Streets, covering the entire block, at a cost of \$650,000, to which Mr. Cooper has since added an endowment of \$150,000 in cash. This building is devoted by a deed of trust, with all its rents, issues, and profits, to the instruction and elevation of the working-classes of the city of New York. The plan includes regular courses of instruction at night, free to all who choose to attend, on social and political science, on the application of science to the useful occupations of life, and on such other branches of knowledge as will tend to improve and elevate the working-classes. It includes also a school of design for females, now attended by 200 pupils; a free reading-room and library, resorted to daily by about 1,500 readers; galleries of art, collections of models of inventions, and a polytechnic school. The evening schools are attended by 2,000 pupils, mostly young mechanics, who study engineering, mining, metallurgy, analytic and synthetic chemistry, architectural drawing, and practical building. There are also for women a school of telegraphy, which in four years has sent out more than 300 operators, a school of wood-engraving, and a school of photography, all of which are free and are well attended. These schools employ upward of thirty instructors. In May, 1876, Mr. Cooper was nominated as a candidate for President of the United States, by the "Independent Greenback party," which met in convention at Indianapolis, Ind. (For the result of the election, see UNITED STATES.)

COSTA RICA (REPÚBLICA DE COSTA RICA), one of the five independent states of Central America, extending from 8° to 11° 5' of north latitude, and from 81° 20' to 85° 53' west longitude. Its boundaries are: On the north, Nicaragua; on the east, the Caribbean Sea; and on

the south and west, the Pacific Ocean. The territory of the republic comprises an area of 21,490 square miles; and the population is estimated at 185,000, of whom some 5,000 are civilized and 10,000 uncivilized Indians.

The President (*provisional*) of the Republic is Dr. Vicente Herrera. The Minister of Foreign Affairs is Señor Rafael Machado; and the Minister of Public Works, Señor D. Saturnino Lizano. (No definite returns of the complete formation of the new cabinet have been received up to the end of December, 1876.)

The following tables exhibit the national revenue and expenditure for the fiscal year ending April 30, 1876 :

REVENUE.		
National Bank.....		\$208,898
Custom-house of Puntarenas.....		411,472
Government monopolies:		
Brandy.....	\$811,850	
Tobacco.....	878,902	
Powder.....	5,107	
		1,194,759
National property:		
Government lands.....	\$18,181	
Government printing-office.....	3,329	
National Institute.....	3,376	
Post-Office.....	24,511	
Telegraphs.....	6,873	
Railway.....	100,851	
Public works.....	1,564	
		152,934
Taxes, etc.:		
Subsidies.....	\$17,458	
Stamp-duty.....	27,597	
Judicial fees.....	14,428	
Mortgage fees.....	15,327	
Spirit-license.....	23,032	
		93,842
Sundry receipts.....		186,068
Deposits in National Bank.....		807,277
Total.....		\$2,560,045
EXPENDITURE.		
Ministry of the Interior.....	\$195,787	
Ministry of Justice.....	74,644	
Ministry of Foreign Affairs.....	11,497	
Public Instruction.....	102,430	
Public Worship.....	18,498	
Ministry of War and the Navy.....	861,218	
Ministry of Public Works.....	128,190	
Finance and Commerce.....	128,494	
Police.....	22,225	
Industry.....	787	
Benevolent institutions.....	595	
Railway.....	867,867	
Government monopolies.....	58,005	
National debt *.....	1,098,868	
Total.....		\$2,564,045

From an official report, under date of May 8, 1876, it would appear that the aggregate revenue for the five years 1871-'76 exceeded by \$6,489,754 that for the five years immediately preceding.

In the estimated budget for the fiscal year ending April 30, 1877, the revenue and expenditure were set down at \$2,236,000 and \$2,626,427, which would constitute a deficit of \$390,427.

The total value of the exports for the year 1875 was \$4,259,333, of which coffee alone represented \$4,116,902; and that of the imports \$2,850,000.

In the course of 1876 some further progress

* For details relative to the national debt, see the ANNUAL COLONIALIA for 1875.

was made toward the completion of the Atlantic division of the railway; but several interruptions were caused in the work by lack of funds.

The line of telegraph across the republic, from Puntarenas to Limon, was nearly completed.

Señor Aniseto Ezquivel, duly elected President of the Republic of Costa Rica, was inaugurated in office on May 8, 1876; but early in August following a revolution broke out, by which he was overthrown, Dr. Vicente Herrera having been appointed as provisional President. The movement appears to have been of a purely military character. The *pronunciamientos* were made at San José and Alajuela, by General Quiroz and his brother, both partisans of General Guardia, Ezquivel's predecessor. It was presumed that Guardia, at the time absent in a neighboring republic, would soon return to resume his position at the head of the Government.

The following extract from a public correspondent's letter, dated December 13, 1876, will serve as a fair summary of the situation of affairs in Costa Rica at that time:

Coffee-picking in the interior had been suspended on account of rains. The planters had held a meeting, at which they decided that, if they could not get the prices they thought just, they would ship on their own account to whatever market suited them best.

Politically, matters in Costa Rica are in a most deplorable condition. General Guardia has again gone up the coast, accompanied by a batch of Costa-Rican politicians, intended to lend significance to his mission, it is generally understood, for the purpose of obtaining the assistance of Guatemala and Salvador in making war against Nicaragua. Guardia is not in odor of sanctity in either Guatemala or San Salvador, nor is it probable that, even with the influence of his political companions, he will succeed in inducing either to assist him. An embargo has been laid upon all communication with Nicaragua. No mails are received and no freight is shipped or entered. Sugar and cheese that came down by last steamer to Puntarenas lie there rotting in the heat, and are not permitted to pass the custom-house. Letters from Nicaragua bearing the postal stamp of that republic are retained, and persons wishing to correspond with Nicaragua must intrust their letters to private hands, or send them to Salvador to have them forwarded from there. Steamers get no clearance for Nicaraguan ports, and when they enter Puntarenas on the down-trip they are received as coming from Salvador.

This hostility against Nicaragua, it is generally understood, is wholly a matter of pecuniary interest on the part of Guardia. It is only a few weeks since Nicaragua abolished the state of war in which that republic had been for months previous, and reestablished constitutional government.

COTTON. According to the statement of the New York *Commercial and Financial Chronicle*, for the year ending August 31, 1876, the cotton-crop of the United States reached 4,669,288 bales, while the exports were 3,252,994 bales, and the spinners' takings 1,856,598 bales, leaving a stock on hand, at the close of the year, of 120,380 bales. The gross weight of the crop was 2,201,410,024 pounds, the average weight of the bales being 471.46 pounds. The production by States was as follows:

CROP OF	YEAR ENDING SEPT. 1, 1876.		Average Weight.
	Number of Bales.	Weight, Pounds.	
Texas	493,640	245,868,988	508.17
Louisiana	1,415,950	659,384,394	466.00
Alabama	374,673	190,089,580	507.35
Georgia	524,325	243,634,261	464.32
South Carolina	416,373	134,889,168	444.00
Virginia	529,126	241,810,563	457.00
North Carolina	107,836	47,232,168	438.00
Tennessee, etc.	811,853	398,068,124	478.00
Total crop	4,649,288	2,201,410,024	471.46

YEARS.	Bales.	YEARS.	Bales.

1856-'57	2,930,027	1830-'31	1,083,549
1855-'56	3,892,822	1829-'30	974,345
1854-'55	3,015,049	1828-'29	570,415
1853-'54	2,355,257		

The production of Sea-Island cotton was 14,996 bales, as follows: Florida, 8,950 bales; Georgia, 1,213 bales; South Carolina, 4,756 bales; Texas, 77 bales. In previous years the production of Sea-Island cotton was as follows: 1874-'75, 17,027 bales; 1873-'74, 19,912; 1872-'73, 26,289; 1871-'72, 16,845; 1870-'71, 21,609; 1869-'70, 26,507.

The annual cotton-crop since 1829 has been as follows:

The total exports to foreign ports, for six years ending August 31st, have been, with the points of shipment, as follows:

FROM--	1871.	1872.	1873.	1874.	1875.	1876.
New Orleans	1,302,535	853,976	1,177,058	1,147,214	995,270	1,903,005
Mobile	257,074	187,977	182,180	132,867	181,241	243,659

Boston	3,005	18,128	17,128	25,899	34,259	56,073
Philadelphia	1,390	2,106	6,792	25,248	24,090	40,007
Baltimore	37,667	14,311	20,943	41,628	44,567	29,114
Portland, Maine	475	2,257	369
San Francisco	12	824	468	431	396
Total from United States	3,166,743	1,957,814	2,679,956	2,840,931	2,684,410	3,232,994

The home consumption has been:

YEARS.	Northern Mills.	Southern Mills.	Total.
1871	1,068,956	91,340	1,160,196
1872	977,540	120,000	1,097,540
1873	1,068,465	187,663	1,256,128
1874	1,177,417	125,526	1,302,943
1875	1,062,522	145,079	1,207,601
1876	1,211,593	145,000	1,356,593

was estimated at 1,227,453,000 pounds in 1872-'73; 1,259,836,000 pounds in 1873-'74; 1,224,377,000 pounds in 1874-'75; and 1,270,287,000 pounds in 1875-'76. The number of spindles in the United Kingdom, at the end of 1874, was 37,515,000, exclusive of doubling spindles. From 1,250,000 to 1,500,000 have since been added, and a large number of old spindles have been replaced by new ones.

The consumption of cotton in Great Britain

was estimated as follows:

COUNTRIES.	Number of Spindles.	Pounds per Spindle.	Total Pounds.	Bales of 400 Pounds.	Average per Weir.
Russia and Poland	2,500,000	60	150,000,000	375,000	7.211
Sweden and Norway	805,000	65	52,325,000	130,812	2.800
Germany	4,650,000	55	255,750,000	639,375	12.294
Austria	1,555,000	67	104,185,000	260,462	5.000
Switzerland	1,850,000	25	46,250,000	115,625	2.222
Holland	290,000	60	17,400,000	43,500	6.68
Belgium	800,000	50	40,000,000	100,000	1.922
France	5,000,000	42	210,000,000	525,000	10.094
Spain	1,750,000	46	80,500,000	201,250	3.570
Italy	800,000	56	44,800,000	112,000	2.154
Total	19,440,000	49.6	985,110,000	2,412,775	46.369

The rate of increase in the Continental consumption in 1873-'75 was about five per cent. per annum. A year ago it was thought that the increase in 1875-'76 would not exceed three per cent., but it has reached about five per cent.

Ellison & Co.'s *Annual European Cotton Review* gives the following particulars of the imports, deliveries, and stocks of cotton for Great Britain and the Continent during the past two seasons:

GREAT BRITAIN.

DESCRIPTIONS.	Stock, October 1st.		Import.		Export.		Net Import.		Net Supply.		Stock, Sept. 30th.		DELIVERIES TO CONSUMERS.

CREMATION. Cremation, or the burning of the dead, has been practised among many nations, and from very early times. The relics of the Bronze age in Great Britain and Denmark show that it was usual in that period, and its prevalence among the ancient Britons is known from history. It was practised from a very ancient date among several other Western nations, and among the people of Eastern Asia. It was general among the ancient Greeks, and must have been adopted by them at a very remote period. Numerous instances of cremation are described in Homer's poems and in Virgil's "*Æneid*," as occurring about the time of the Trojan War. Cremation was borrowed by the Romans from the Greeks, and was not generally practised among them till toward the end of the republic. The custom gradually went into disuse under the empire, and appears to have been abandoned about the end of the fourth century. There is no record that it was ever practised by any Christian nation. Cremation still prevails among many of the nations of Eastern Asia. In India, until recently, the living widow was burned upon the pyre with the body of her deceased husband.

Cremation, with the ancient Greeks and Romans, was performed upon a pile of wood, or funeral-pyre, built in the form of an altar in the open air, and with elaborate ceremonies, and the offering of gifts and sacrifices, strong perfumes being added to neutralize the odors. After the process was completed, the ashes were gathered up and carefully deposited in urns. A proposal was made during the French Revolution to revive the practice, but it was never adopted.

Within a few years new attempts have been made to commend cremation. Several plans have been devised for consuming corpses in furnaces specially made for the purpose, or in close retorts. Prof. H. C. Richter described one in the *Gartenlaube* of Leipsic, in 1856. More recently Polli and Clericetti invented an apparatus, by means of which the body of Baron von Keller was burned at Milan. Processes suggested by Friedrich Siemens and Prof. Reclam, of Breslau, have been tested experimentally with satisfactory results. Dr. L. Brunetti, Professor of Pathology in the University of Padua, exhibited, at the Vienna Exposition of 1873, the residue from bodies and parts of bodies on which he had practised cremation by various methods. He had found, by his latest experiments, that the whole process of incineration of an adult human body occupied three and a half hours. The resultant ashes and bone-earth weighed 1.70 kilogramme, or about three pounds and three-quarters avoirdupois. The quantity of wood required to insure a perfect process was about one hundred and fifty pounds, and cost one florin and twenty kreutzers, or about two shillings and fourpence English. Other apparatus have been invented by William Siemens and Engineer Steinmann, of Leipsic.

The attention of the English and American people was directed to cremation by means of an article advocating it, published by Sir Henry Thompson, in the *Contemporary Review* for January, 1877. This writer argued in favor of burning in preference to burial on grounds of utility and economy, and of sentiment. He held it to be desirable to expedite the decomposing process of Nature, and render it inoffensive, and to return speedily the elements into which the body is resolved to their destined function of furnishing food to plants. These processes, he represented, are retarded by burial; the ground is made noxious during the process of decomposition, wells are liable to be poisoned, and the health, particularly of crowded districts, is endangered. He referred to the economical aspect of the question in the light of the value of the organic remains, as manure. All of this, he held, was lost to agriculture for an unreasonably long period by the present method of disposing of dead bodies. On the other hand, by cremation in a properly-constructed furnace, the gases of the body would be driven off without offensive odor, and would ere night be consumed by plants and trees, while the mineral constituents—the bones and ashes—would remain in a crucible, and could be preserved in a funeral urn, or scattered in the fields. No scents or balsams would be required, as in the ancient open-air burnings, to neutralize odors. Regarding sentiment, Sir Henry referred to the repulsive appearance assumed by bodies during decay, and to the horrors of being buried alive, both of which would be avoided by a thoroughly-conducted process of burning. He assumed that cremation is as susceptible as burial of association with religious funeral rites, that it affords escape from unpleasant ceremonials connected with burial, and equally permits the preservation of concrete remains and the erection of a shrine of affection. The body of Lady Dilke, an Englishwoman, was burned in Germany a few months after Sir Henry Thompson's article appeared.

In Holland a number of societies for the promotion of cremation have been organized into an association. Several societies for the same object have been formed in Germany, but they made little progress in spreading their views until the summer of 1876. Recently it was announced that cremation would be permitted in the duchy of Gotha without the interposition of legal obstacles. Immediately Dr. Küchenmeister, President of the Urne Union at Dresden, proposed to enter into a correspondence for the purpose of calling a convention of the German unions to consider the subject of erecting at Gotha a furnace for cremation after the system of Friedrich Siemens. The result of the correspondence was that a congress of the friends and societies for cremation of all countries met at Dresden on the 6th and 7th of June. At this meeting the following countries were represented: Eng-

land, by Dr. Cassie, secretary of the Cremation Society in London; France, by Prof. Müller, of Paris; Holland, by Dr. Egeling, medical director for the province of South Holland, and Prof. Hoogewerff, Ph. D., of Rotterdam; Switzerland, by Gottfried Kinkel; Germany, by members of the unions of the cities of Berlin, Bremen, Chemnitz, Gotha, Hamburg, and Leipsic, and the Urne Union of Dresden. At the introductory meeting, held on the 6th, reports were made by the delegates of the condition of the unions in their several dwelling-places and countries. The public meeting, on the morning of the 7th, was attended by about six hundred citizens, among whom were several ladies of the most cultivated circles of the city. Gottfried Kinkel, of Switzerland, made an address, in which he spoke of the æsthetics of cremation, of the pious exercises for which its ceremonies would give opportunity, and of its advantages in a sanitary point of view, and replied to the arguments which had been brought against it. He declared that, though he held that every one had a right to cremation, of which not even the state could deprive him, it was proposed, in introducing it, not to make it obligatory, only permissive. Engineer Schneider described the various methods which had been proposed for performing the process. It was understood, as of course, that the ancient funeral-pyres would not be revived, but closed apparatus would be substituted for them. It was decided to erect, by the united efforts of the friends of cremation in Germany and other lands, a building for conducting the process, either at Coburg or Gotha. Liberal subscriptions were offered, and the sum of 10,000 marks were secured in the meeting. With this sum the erection of a suitable building was considered pecuniarily assured. The establishment of a journal to advocate the cause was determined upon, and an international commission was appointed to carry that purpose into effect, consisting of Gottfried Kinkel, of Zurich; Sir Henry Thompson, of London; Prof. Émile Müller, of Paris; Baron von Stockhausen and Dr. Küchenmeister, of Dresden; and Herr Stier, of Gotha. Plans for a large building, or "temple," for cremation, by Carl Pieper, engineer, of Dresden, and G. Liebenthal, architect, of Berlin, were inspected by the congress. They represent a building of elegant architectural appearance, surrounded with gardens and groves. It is provided with ante-rooms and a chapel, in which the religious rites may be celebrated in the presence of the friends of the deceased. The body, adorned with garlands and flowers, rests upon a catafalque, which after the services is noiselessly sunk into the furnace-room below. Here it is taken by the attendants and placed in its appropriate cell or retort, where it is consumed. In another room, or crypt, below the furnaces, is arranged a series of cells, each corresponding to a furnace-cell above it, into which the

ashes of the deceased are carefully turned after the burning is completed. This room is reached by spacious staircases from the chapel. At the proper time the friends are called down to witness the ceremonial collection of the remains and the deposition of them in the urn, and finally in the columbarium. In places where several funerals are to be expected daily, the temple will be furnished with a corresponding number of furnace-cells, each with its corresponding cell for ashes in the crypt. A conspicuous feature of the plan is exhibited in the long rows of urn-houses, or columbaria, appearing as wings to the main building.

The first furnace for cremation in the United States has been built at Washington, Pa., by Dr. F. J. Le Moine. The building is small and entirely plain, and with the furnace cost \$1,600. It contains two rooms, a reception-room, with a table for the reception of the corpse, and a columbarium for the temporary deposit of the ashes, and a room for the furnace. The furnace is constructed on the Martin-Siemens principle, and consists of a structure of brick and fire-brick, ten feet long, six feet wide, and six feet high, inclosing a semi-cylindrical retort of fire-clay, seven feet long, twenty-four inches wide, and twenty inches high, its lid accessible from the outside at the door of the furnace. The body is thrust into this retort after the latter has been properly heated from below. The gases formed during the process of burning are carried off by a chimney. The required degree of heat is obtained by means of a fan-blast. At this furnace the first public cremation in the United States was conducted, on the 6th of December, 1876, when the body of Joseph Henry Louis Charles, Baron de Palm, was burned in it. Baron de Palm, a man of considerable social distinction, and a member of several honorable societies and orders, died in the city of New York on the 20th of May, 1876. He made the request of his executors that his body should be burned whenever the use of a furnace could be obtained. It was embalmed, to await the building of such a furnace. The process of the cremation was witnessed by a number of persons invited for the purpose, representing the Boards of Health of the State of Massachusetts and of the cities of Brooklyn and Pittsburg, physicians of several cities, correspondents of newspapers, and other persons. The fire was kindled in the furnace at seven o'clock on the morning of the day previous to that of the cremation. At half-past eight o'clock on the morning of the 6th, the body was placed in the retort. It had been deprived of its fluids during the process of embalming and was in very fit condition for a favorable operation. It was wrapped in a sheet which was saturated with alum to prevent exposure after the cloth was burned away, and was surrounded with flowers and evergreens. The evergreens were burned quickly, but their forms, as well as that of the sheet, could be plainly seen during

nearly the whole time occupied by the process. About an hour after the burning began, a rose-colored, misty light surrounding the body was observed; in another hour the body had become red-hot, and the rosy mist had turned to a golden color. At 10.40 o'clock the cremation was declared practically complete; at 11.12 o'clock the remains had quite lost the form of a body; at 12 o'clock the fires were drawn and the ashes were left to cool. No odors were noticeable during the process, except immediately at the lid of the retort. The ashes of the deceased were collected the next day and placed in a Hindoo urn. A public meeting was held on the 6th at Washington, at which addresses were made advocating cremation, and reciting the history of the movement in its favor. It is stated that forty bushels of coke were consumed in the burning, and that the whole direct cost of the operation was \$7.04.—Little progress has been made in commending cremation to the American people. It is generally objected to on various grounds of custom, religion, association, or prejudice. It is opposed by ministers of most of the religious denominations, a large number of whom believe it to indicate a belief inconsistent with the doctrine of the resurrection of the body.

CREMER, CAMILLE, a French general, born August 6, 1840; died April 2, 1876. He entered the Military School of Saint-Cyr in 1857, graduated in 1861, second in his class, distinguished himself in Mexico as lieutenant of Zouaves, and was appointed captain of the general staff in 1866. He took part in the German-French War as aide-de-camp of General Clinchant, of the Third Army Corps, commanded by Marshal Bazaine. He served before Metz until after the fall of that city. The *Moniteur Officiel* of Versailles of February 7, 1871, published an agreement dated October 31, 1870, by which Captain Cremer gave his word of honor not to take arms against Germany during that war. However that may be, he placed himself at the disposal of the government at Tours, and received in November, 1870, the command of a newly-formed army corps, with the rank of general of division. He supported the movements of Bourbaki on Belfort, and with him was forced to retreat. When the insurrection broke out in Paris on March 18, 1871, he immediately repaired thither. On the 21st he had an interview with the Central Committee, which offered him the chief command, afterward reserved for Garibaldi. He did not accept it, and left the capital, after having actively contributed to the liberation of General Chanzy. At the revision of the grades, the committee of the Assembly accorded to him the title of chief of battalion only. He refused it, and sent in his resignation in a letter addressed to the Minister of War, couched in strong language, which was afterward published. In January, 1872, he was summoned before the

judge of instruction of Beaune, for the summary execution of a grocer of Dijon in January, 1871, on a charge of espionage. This affair, after creating considerable excitement, seemed to terminate in the incompetency of the court. But in April, 1872, it was carried before the first council of war sitting at Lyons, which, with some regard to the former rank of the accused, was composed of three marshals and four generals of division. He was found guilty of homicide through imprudence, and was sentenced to one month's imprisonment.

CUMMINS, the Right Reverend GEORGE DAVID, was born in Smyrna, Del., December 11, 1822; died at Lutherville, near Baltimore, Md., June 26, 1876. He graduated at Dickinson College, Carlisle, Pa., in 1841, and was ordained deacon by Bishop Lee of Delaware in 1845, and presbyter in 1847. He was a pastor in Norfolk, Va., Richmond, Washington, Baltimore, and Chicago. In 1866 he became Assistant Bishop of Kentucky. On October 8, 1873, Bishop Cummins made a memorable address before the Evangelical Alliance, then in session in New York, and on the 12th assisted in the administration of the holy communion in Dr. John Hall's church (Presbyterian). Soon after appeared Bishop Tozer's letter of appeal and complaint to Bishop Potter of New York, and on the 10th of December Bishop Cummins resigned his position as Assistant Bishop of Kentucky, and soon after received a formal notice from Bishop Smith of Kentucky, the senior member of the House of Bishops of the Protestant Episcopal Church, that he (Cummins) would be deposed from his office in six months. On December 2, 1873, the Reformed Episcopal Church was organized in New York City by seven clergymen and seventeen laymen, and Bishop Cummins was elected the presiding bishop. Subsequently he traveled from Canada to the Southern States, endeavoring to extend and strengthen the Reformed Episcopal Church. In 1856 Princeton College conferred on him the degree of D. D.

CUSHMAN, CHARLOTTE SAUNDERS, an American actress, born in Boston, Mass., July 23, 1816; died there, February 18, 1876. At the age of twelve she contributed to the family support. Possessing a fine contralto voice, she studied for the stage, and made her *début* at the Warren Theatre, Boston, April 18, 1835. Shortly after she sang in English opera at New Orleans, but her voice failing her she became an actress, and made her first appearance as *Lady Macbeth*. She returned to New York, and for three years was a member of the Park Theatre company. She assisted her younger sister Susan, and appeared with her for several seasons at Philadelphia and New York. Miss Cushman was accustomed to take the chief male characters in the plays in which her sister appeared. She afterward assumed the management of one of the Philadelphia theatres, which she retained until 1844,

when she accompanied Mr. Macready on a tour in the Northern States, in the course of which she undertook the higher range of tragic parts with great success. In 1845 she went to England, and made her first appearance at the Princess's Theatre as *Bianca* in Milman's tragedy of "Fazio." Her reception was enthusiastic, and for eighty-four nights she appeared in a variety of characters, including *Lady Macbeth*, *Julia* in "The Hunchback," *Mrs. Haller*, *Beatrice*, *Lady Teazle*, and *Juliana* in the "Honeymoon." Her sister having joined her, they acted for several years at the Haymarket Theatre, and in various towns of Great Britain. In 1849 she revisited the United States, and assumed the part of *Meg Merrilies* in the play of "Guy Mannering," which, with *Queen Katharine*, *Lady Macbeth*, *Bianca*, etc., constituted the rôles in which she gained her greatest celebrity. After another tour in England she returned to America, and, having accumulated a fortune, took a formal leave of the American stage. She subsequently acted in England, and again in the United States in 1857-'58, after which she returned to Rome, where she had previously resided. In 1860 she again acted in New York, and appeared on several occasions for the benefit of the Sanitary Commission. In 1871, after a residence in Europe, she resumed her career in the United States as a reader, besides fulfilling several dramatic engagements. Her final performances in New York at Booth's Theatre were signalized by great social and literary demonstrations. Her career closed in Boston at the Globe Theatre, on May 15, 1875. Her estate was estimated at \$600,000.

CUSTER, GEORGE A., was born at New Rumley, Harrison County, Ohio, December 5, 1839; killed in a battle with the Sioux, on the Little Big Horn, June 25 or 26, 1876. He graduated at West Point in 1861, and was made second-lieutenant of a company of the United States Cavalry, with which he was present at the first battle of Bull Run. After the appointment of McClellan to the command of the army, Lieutenant Custer was chosen as a staff-officer by Brigadier-General Kearney. He soon left this position and marched with his company, which was in that part of the Army of the Potomac which moved upon Manassas after

its evacuation by the Confederates. Here he made his first cavalry charge upon a Confederate force, which he drove across Muddy Creek. When the Army of the Potomac settled down before Yorktown, Custer was detailed as assistant engineer of the left wing under Sumner. He planned and erected the earthworks nearest the enemy's lines, and accompanied the advance under General Hancock in pursuit of the enemy from Yorktown. When the army reached the Chickahominy, he was the first to cross the river, and was soon after made captain and one of General McClellan's aides. In this capacity he served during most of the Peninsular campaign, and took part in all its battles. He was also engaged in the campaign which ended in the battles of South Mountain and Antietam. For a time after the retirement of General McClellan from the command of the army, Custer was not in active service. He was next engaged in the battle of Chancellorsville, and soon after became aide to General Pleasanton, then commanding a division of cavalry. In this capacity Custer distinguished himself as a dashing cavalry-officer in a number of hot contests. He was made brigadier-general of cavalry, and rendered important service in the battle of Gettysburg, where he routed Hampton's cavalry, and had two horses shot under him. He took part in the battle of the Wilderness in 1864, and in the same year his brigade led the column in Sheridan's raid toward Richmond. He rejoined Grant's army on the Pamunkey. He rendered important service in the battle of Fisher's Hill, after which he remained in command of a division until after Lee's surrender. He led his division in the battle of Cedar Creek with such bravery and success that he was brevetted major-general of volunteers. When the Confederates fell back to Appomattox, Custer led the advance of General Sheridan's command. In July, 1866, Custer was made lieutenant-colonel of the United States Cavalry, with the brevet rank of major-general, and was thereafter engaged in frontier service. (For an account of the operations in which he lost his life, see ARMY.) General Custer was one of the most courageous and dashing cavalry leaders in the service. His achievements during the war were of the most brilliant kind.

D

DAKOTA. The Legislature assembled in biennial session January 9, 1877. There has been a steady increase in population and wealth in the Territory. The crop of 1875 was unprecedentedly large, and while that of the succeeding year was not so great, owing to its partial destruction by locusts, there was enough to supply all wants, and make another crop. Millions of bushels of wheat were also shipped to Eastern markets.

The only drawback to agriculture in Dakota seems to be the grasshoppers, or migratory locusts, that come in swarms, and generally in the latter part of June, or early in July, when they come at all, and devour the corn and other crops. As probably the best protection against the devouring insects, there are recommended to the farmers fall ploughing, early seeding of grain in the spring, and the cultivation of those crops least likely to be injured by the

grasshoppers in case they do come. Barley, oats, and wheat, can be raised, by early sowing, in spite of them, unless they make their appearance earlier in the season than heretofore; and it is suggested to the farmers that they put a larger portion of their land in these, and less in corn. Corn suffers most of all, and is, in fact, about the only crop that is, even under the most favorable circumstances, entirely destroyed. Potatoes never fail entirely.

On the subject of finances and taxation the Governor says: "As by statute the Auditor and Treasurer are allowed to keep their offices at places remote from the capital, it is impossible for me to state accurately the financial condition of the Territory. The law, as it now stands, constitutes the Governor, Auditor, and Treasurer a board for the assessment of the Territorial tax." For 1875 only two mills on the one-dollar valuation was assessed; but, this proving inadequate, the rate for 1876 was fixed at four mills on the dollar. He recommends that the Legislature fix by statute the rate of taxation for the next two years; that the law authorizing the payment of interest on warrants be repealed; that more rigid laws for the collection of taxes be enacted; and that the Auditor and Treasurer be required to keep their offices at the capital. He also recommends the reduction of the rate of interest from 12 to 10 per cent. Immigration of an excellent character continues to pour into the Territory, much the larger portion of which is from Europe, especially from Russia. Continued improvement is observed in the public schools. The Dakota Southern Railroad Company have become the proprietors of what was formerly known as the Sioux City & Pembina Railroad; and have completed and in operation seventeen miles of road, extending from a point on their main line near Jefferson, in the county of Union, to Portlandville, on the east bank of the Big Sioux River. Fourteen miles more are ready for the iron. Another road, branch of the St. Paul & Sioux City road, is being constructed from Worthington to Sioux Falls, which, it is believed, will reach the latter place during the present year. It is in operation to Luverne, within thirty miles of Sioux Falls.

A codification of the laws has been made, and its adoption is recommended. The message recommends legislation concerning the Black Hills in the following terms: "Most or all of that region of the country known as the Black Hills, where rich mineral deposits have recently been discovered, is in Dakota, and the fact that it is probably one of the richest gold-bearing regions yet discovered on this continent, and the further fact that the early consummation of an agreement with the Indians for its relinquishment will soon open it up to settlement, render legislation in relation thereto of the greatest importance."

A bill has passed the United States Senate for the creation of the Territory of Huron out

of that portion of Dakota north of the 46th parallel of north latitude; this bill is now (January, 1877) pending in the House of Representatives. At the election in 1876, Jefferson P. Kidder (Republican) was chosen delegate to Congress, over Moses K. Armstrong (Democrat), by a vote of 6,199 to 2,413. The Legislative Council has 12 Republicans and 1 Democrat, and the House of Representatives 20 Republicans and 4 Democrats, one district not being canvassed on account of irregularities.

DAVID, FÉLICIEN CÉSAR, a French composer, born March 8, 1810; died August 30, 1876. He showed considerable musical talent at an early age, and in his eighth year was sent to Aix, where he entered the choir of the cathedral, and pursued his studies in the Jesuit College of that place. At nineteen years of age he took the place of his former teacher as director of the choir. Having held the position for a year he went to Paris, where he entered the Conservatory, studying under Fétis. At this time he joined the St.-Simonists, and soon was one of their most devoted supporters. When the sect retired to Ménilmontant, he was one of the forty who tried to establish at that place a home for the new religion. When, in 1833, the sect dissolved, he with several others of the members went to Constantinople, where they were arrested and brought to Smyrna; thence they went to Egypt. Driven from there by the plague, they traveled through the desert to the coasts of Syria. On all these journeys he carried a piano with him, and often when they rested from their toilsome marches David refreshed his comrades with his music, until finally the instrument was broken by superstitious Bedouins. Having returned to France in 1835, he lived very retired until 1844. The works which he composed during this time, although quite numerous, attracted very little attention. In 1844 he published his large choral symphony, "The Desert," a work in which he seemed to combine his recollections as in a picture. When it was first produced in the Paris Conservatory it was received with great enthusiasm, and transformed the obscure composer at one stroke into a musical celebrity. Encouraged by his success in Paris, he set out on a journey through Europe, and, although severely criticised at some places, was generally well received. He afterward produced several operas in Paris, among them "La Perle du Brésil" (1851), "Herculanum" (1859), and "Lalla Rookh" (1862). Of these the second is the most important, for which he received from the Ministry of Arts and Sciences the prize of 20,000 francs. After the death of Berlioz, in 1869, he was appointed librarian of the Conservatory, and shortly after became a member of the Institute. He produced his last large opera, "L'Indien," in 1874.

DAVIES, CHARLES, an American mathematician, born at Washington, Litchfield County, Conn., January 22, 1798; died at Fishkill Land-

ing, N. Y., September 17, 1876. He entered the Military Academy at West Point in 1818, graduated in 1815, and was made lieutenant of artillery. After a brief service with his regiment he was transferred to the Corps of Engineers, and assigned to duty as teacher in the Academy in August, 1816. In December of the same year he resigned his commission, and accepted the appointment of Assistant Professor of Mathematics, and in 1821 of Natural Philosophy; and in 1823 he was commissioned Professor of Mathematics. While he was engaged in preparing a series of mathematical text-books, his health failed, and he resigned his post, and in 1837 visited Europe. After his return he became Professor of Mathematics in Trinity College, Hartford; but in consequence of a bronchial affection he relinquished this post for that of paymaster in the army and treasurer of West Point Academy. These offices he resigned in 1845, and became Professor of Mathematics and Natural Philosophy in the University of the City of New York. He afterward retired to Fishkill Landing, on the Hudson, to complete his series of text-books, but soon resumed his professional duties, first in the Normal School at Albany, and afterward in Columbia College, New York, of which institution he was at the time of his death Emeritus Professor of Higher Mathematics. His works, considered as a series, present a natural order of sequence, extending from a primary arithmetic to the higher mathematics, and including editions of Bourbon's "Algebra" and Legendre's "Geometry." He also published treatises on surveying and trigonometry, a work on the "Logic of Mathematics," and a "Mathematical Dictionary and Cyclopædia of Mathematical Science," written in conjunction with Prof. G. W. Peck, of Columbia College.

DEAK, FRANCIS, an Hungarian statesman and patriot, born October 17, 1803; died January 28, 1876. He studied law in the Academy of Raab, and soon gained considerable renown as an orator. Having been elected to the Diet for the years 1832-'36, he soon became the leader of the Opposition by his parliamentary talent and his devoted patriotism. He retained this position in the Reichstag of 1839, and his ability was not only recognized by his own, but also by the Government party. It was mainly due to him that the Diet of 1840, which had opened very inauspiciously, closed with a reconciliation of the King and the people, while the interests of the people had been preserved in every respect. In 1840 he was one of a committee which prepared a penal code for Hungary, which was highly praised by the most prominent jurists for its clearness and precision. In 1843 he demanded general taxation, including the nobility. This demand enabled the Opposition, by most disreputable means, to cause his defeat. His friends then used the same means, and at a second ballot succeeded in electing him. Deak had declared in advance

that he would not accept an election secured by unfair means, and he kept his word. He declared that he had but one measure for what was right. What he had declared as wrong in his opponents he could not permit to be used for his own interests, not even for the welfare of his country, for he placed justice above his country. The moral effect of these words was very great. The Reichstag resolved to leave Deak's seat vacant, and to admit but one representative from his county, until he would again take it. Through this act the Reform party gained great strength in Hungary, the briberies at elections ceased, and the cause of reform made general progress. In the Reichstag of 1846 he could not take his seat on account of continued illness. In his place, Kossuth appeared, and the Deak party changed into the Kossuth party. In 1848, after long deliberations, he accepted the position of Minister of Justice in the first cabinet of Count Louis Batthyany. He always voted on political questions with Batthyany for a peaceful settlement with Austria. When Kossuth took charge of the ministry in 1849, Deak retired from the cabinet, keeping only his seat as member of the Reichstag. Upon the approach of Prince Windischgrätz, at the head of an army, in 1849, Deak voted for another attempt at mediation, and was a member of the deputation which was to meet the prince. When the latter refused to treat with rebels, Deak retired to his estates. For ten years Deak lived entirely devoted to his studies, on his estate Kehida, and when he sold this estate he moved to Pesth, where he was not troubled by the Government, while the other leaders of his party were forced to leave the country to avoid arrest. Here he spoke with everybody, and on every subject, except on politics; and when the minister Bach made proposals to him to take part in the Government, his only answer was: "Excellency, as long as the Hungarian Constitution does not exist, I do not exist; I personally am nothing." When the Government was finally forced, from sheer necessity, to recognize the Hungarian Constitution, and to decree an election for an Hungarian Diet, Deak accepted office immediately. The demand made by the Left for the restoration of the unchanged Constitution of 1848 was embodied by Deak in his famous address to the throne of May 13, 1861, which was almost unanimously adopted by the Chambers on June 5th. The principal point of this address was: "A man can be Emperor of Austria, ay, even of all Europe, and even actual master of Hungary, but no one can become King of Hungary who does not restore, and swear to preserve, the Constitution of Hungary." This address was not accepted in Vienna, and the Diet was dissolved. In the year 1866, after the disastrous war with Prussia, the Emperor again called upon Deak for his services. The latter insisted upon his conditions, and the settlement of 1867 was brought about. The Constitution

of 1848 was restored, with this change, that the Minister of War and Finances should be common to both parts of the empire. The Emperor accepted this constitution, and was crowned King of Hungary. The restoration of the independent Hungarian ministry was brought about on March 18, 1867. The new Government secured all offices for itself, and declared the members of the Left to be traitors. To this Deak replied, "In this House there are no traitors; here there are only patriots, and every one has a right to speak his mind publicly." This sufficed, and after that the Government adopted a more conciliatory policy. But he had been ailing since 1868, and in 1873, being hardly able to speak, he delivered his last speech on the separation of Church and state, and on civil marriage. Since that time he took no part in public affairs. But how much he was honored, both by the people and by the Government, was seen at the time of his death. When it became known that he was dying, the House immediately adjourned. The Diet voted that the expense of his funeral should be borne by the country. The body lay in state in the vestibule of the Academical Palace, and thousands went to look at his remains, while they were guarded by members of the Hungarian Diet. Letters of condolence were sent by the Emperor, and high officers of the Government, while the Empress came herself and deposited on the coffin a magnificent wreath, on the white ribbons of which these words were inscribed in gold: "To Franz Deak — Queen Elizabeth." Then, kneeling down, she remained for some time in prayer. From the time of his death till after his funeral the whole city of Pesth went in mourning. At his funeral every town and county of Hungary was represented. The Archduke Joseph, the Archduchess Clotilde, and an aide-de-camp of the imperial staff, represented the Emperor. Both Houses of the Austrian Reichsrath had sent delegations, while Count Andrassy attended in person. Members of the Hungarian Diet were the pall-bearers. Ghiczy, the President of the Diet, delivered the funeral oration, while the Primate of Hungary performed the services.

DECATUR, Commodore STEPHEN, was born in New Jersey in 1815; died in Boston, Mass., January 9, 1876. He was appointed a midshipman from New Hampshire in 1829, served in the Mediterranean squadron till 1833, when he was detailed to duty on the sloop Vincennes in the Brazilian fleet. In 1840 he was made a lieutenant, and was subsequently assigned to the West Indian squadron. In 1851 he was ordered to the sloop Saratoga in the East Indies, where he remained till 1854, and in 1857 was relieved from service. He was commissioned commander in July 1861, captain in 1867, and commodore in 1869. He was a grandson of Stephen Decatur, who captured several English ships in the War of the Revolution, and a nephew of the famous Stephen De-

cat, the hero of Tripoli and the War of 1812. He leaves a son, also named Stephen, who graduated from the Naval Academy, and has been for several years in service.

DEGENFELD - SCHONBURG, AUGUST, Count von, an Austrian general, born December 10, 1798; died December 5, 1876. He entered the Austrian army at an early age, took part in the campaign of 1815, as well as in that of 1821 against Piedmont. He became a major in 1835, colonel in 1843, and major-general in 1848. In the Italian campaign of 1848 he had but little chance to distinguish himself, taking a prominent part in the campaign in Piedmont in the following year. Commanding at Novara the advance-guard of the Fourth Army Corps, under Count Thurn, he contributed essentially to the Austrian victory, by a timely attack on the right flank of the Piedmontese. In 1849 he was created lieutenant-field-marshal, and was appointed lieutenant-governor of the fortress Mayence, belonging to the German Confederation. Distinguishing himself by his administrative and organizing talent, he occupied from 1851 to 1858 several of the highest offices in the War Department. At the breaking out of the Italian War in 1859 he was in command of the Eighth Army Corps, stationed in Bologna, and after the battle of Magenta was appointed to the chief command of the Venetian Littoral, to oppose any attempts which the French might make to land. After the treaty of Villafranca, he took the place of General Schlick as commander-in-chief of the Eighth Army Corps. Having been promoted to the rank of general of ordnance (*Feldzeugmeister*), he was appointed Minister of War on October 20, 1860, which office he resigned in 1864.

DELAWARE. The financial condition of the State of Delaware appears to be very satisfactory. The total bonded debt on the 1st of January, 1877, was \$1,201,000, classified as follows:

War bonds due January 1, 1885.....	\$76,000
Balance of bonds loaned to Junction & Breakwater Railroad Company, due January 1, 1890.....	280,000
Bonds loaned to Breakwater & Frankford Railroad Company, due January 1, 1898.....	176,000
Total.....	\$1,201,000

The reduction in two years had amounted to \$68,660. There was, January 1, 1877, in the Treasury applicable to the redemption of bonds, \$90,000; the investments of the State outside of the school-fund amounted to \$671,800; and there was due from interest, taxes, and other sources, \$100,462. This showed an excess of liabilities over assets of \$338,738, not taking into account the investments of the State devoted to the support of public schools, which amounted to \$449,000. The average annual expense of the State government for the two years 1875 and 1876, exclusive of payments on account of the debt, was \$105,000, while the annual receipts of the Treasury amounted to \$195,000.

The number of deaf, dumb, blind, and feeble-minded children provided for by the State is as follows:

In the Pennsylvania Institution for the Deaf and Dumb.....	7
In the Columbia Institution (Washington) for the Deaf and Dumb.....	2
In the Pennsylvania Institute for Instruction of the Blind.....	3
In the Pennsylvania Training-School for Feeble-minded Children.....	2
Total.....	14

STATE SEAL OF DELAWARE.

The convention of the Republicans of Delaware for the appointment of delegates to the National Convention of the party was held at Dover, on the 18th of May. The following resolutions were adopted:

The Republicans of Delaware, in State Convention assembled, pledging their unalterable devotion to the cardinal principles upon which their party is founded; and desiring that the integrity of the Government shall be maintained; that its obligations shall be honestly and fully paid in coin, or obligations convertible into coin at the pleasure of the holder; that its administration shall be honestly and faithfully conducted in all the various branches and departments thereof; and that home industries shall be properly protected, so that the skill and resources of our common country shall be rendered remunerative and productive, do declare that in our opinion the national standard-bearer in the centennial campaign must be an exponent of the principles herein set forth; and believing that by a long-continued and active public life, and enlarged experience as a national legislator and otherwise, and an uncompromising integrity, preserved despite the most persistent and malignant attacks, the Hon. James G. Blaine, of Maine, meets these requirements: therefore—

Resolved, That our preference be, and the same is hereby, expressed in his favor as an eminently proper person to become a presidential candidate, and our delegates to Cincinnati are hereby instructed to observe this preference so long as in their judgment and discretion it may be possible to secure his nomination.

Resolved, That in the judgment of this convention the delegates from this State to the National Convention, to be held at Cincinnati, should be representative of the people, disconnected from official position under the Government of the United States.

A warm discussion was occasioned by the last resolution, which was understood to be aimed at Dr. J. S. Prettyman, as he held a Federal office, and had been designated as a delegate to the National Convention by a

caucus of Sussex County. The opposition to him was believed to arise not so much from the fact that he held a Federal office as from his known opposition to Mr. Blaine, and preference for Mr. Bristow, as the candidate for President. After a heated debate, the Sussex delegation withdrew; and agreed upon another candidate in place of Dr. Prettyman.

The Democratic State Convention for the choice of delegates to the National Convention at St. Louis was held at Dover, on the 13th of June. The sense of the gathering was expressed in the following resolutions:

The Democratic party of Delaware, strong in its ancient faith, and loyal to those principles of free government upon which the Federal Union was formed, declares—

1. That a strict adherence to, and maintenance of, the limitation of power, contained in the Constitution of the United States, is the sheet-anchor of our institutions, on which the safety of our future depends.

2. That the attempt of the Federal Administration, now in radical hands, to absorb the police power of the State, to control the election to office by congressional legislation and executive interference, and to substitute a centralized government for the "home rule" of the Constitution, is viewed with alarm, and should be met with the rebuking ballots of a free people.

3. That the Republican party now in power has prostituted its high trusts to personal and party ends, and, by its flagrant corruption, wrought upon us a national humiliation and disgrace.

4. That the attempt of President Grant and his advisers to thwart the Democratic House of Representatives in the exposure of official fraud and malfeasance is an outrage upon the whole people whose servants they are.

5. That the necessities of the times imperatively demand a return to those home-bred virtues of our ancestors, honesty and economy in the administration of public affairs, and to those methods of government which will secure a real civil-service reform, by cutting off a multitude of unnecessary offices, and making preferment in the public service no longer a reward of partisan zeal.

6. That the currency of a people should constitute in itself a standard and measure of values as well as a calculating medium of exchange, and that to coin money out of gold and silver was the only power on the subject delegated to Congress by the Constitution; that the disregard of this wise limitation of power, and the introduction of an irredeemable paper currency among the people, has caused an enormous increase of the public debt, and has been the prolific parent of wild speculation with the consequent bankruptcy and ruin; that wisdom and obedience to the charter of our Government alike demand a restoration, at the earliest possible day, to a money of value—of gold and silver coin—and a currency convertible therewith at the will of the holder.

7. That a tariff whose object is to raise revenue, and not to favor special classes, is demanded by the interests of the whole people.

8. That the people of Delaware recognize the eminent public services of the Hon. Thomas F. Bayard; that in all public trusts he has been faithful to duty, and in his public and private life pure and without blemish. We, therefore, declare that he be our unanimous choice for the presidency of the United States.

9. That the delegates to the Democratic National Convention, this day appointed, are hereby instructed to cast the vote of this State in said convention as a unit for the Hon. Thomas F. Bayard, and to use all possible means to secure his election.

Six delegates to the St. Louis Convention were then chosen.

The Democrats of the State held a convention at Dover on the 7th of September, for the nomination of a candidate for member of Congress. The Hon. James Williams was renominated, and the following was adopted as the platform of the party:

The Democracy of Delaware, represented by the delegates of this convention, reaffirm the attachment of the party to the principles of republican government as established by the men who framed the Federal Constitution, and insist that only by a faithful observance of those principles can the just powers of the General and State Governments be maintained and the rights of all the people be assured.

Resolved—1. That all attempts on the part of the Executive Department of the Federal Government to interfere with elections in the States is a usurpation of power, subversive of the rights of the States and the liberties of the people. We therefore denounce the recent military order of the Secretary of War directing the General of the Army to distribute soldiers in the Southern States as indicative of a purpose on the part of the Administration and its supporters to prevent, if possible, a free and fair exercise of the elective franchise in those States.

2. That the late circular of the Attorney-General of the United States to the United States marshals is an attempt to usurp the authority of the governments of the States and to place the control of the elections in the hands of unscrupulous United States marshals, and thereby to force the election of a Republican Executive against the will of the people.

3. That the extravagant and wasteful expenditure of the public money since the termination of the war has entailed oppressive taxation and brought financial distress upon the country; and demands, no less than the corruptions that have existed under Republican rule, a change in the management of public affairs.

4. That we charge that much of the embarrassment under which the business and industries of the country are suffering is attributable to the exhaustive drain of Federal taxation upon the resources of the people, and that much of the money extorted by taxation from the people of the country has been squandered in political jobs and not appropriated to advance the interests of the country.

5. That the Administration of President Grant has been marked by a disregard and contempt for constitutional and legal obligations and the rights and interests of the people; that the prolongation of Republican rule would be a continuation of the oppression, corruption, and extravagance, which have existed for the last eleven years.

6. That the true interests of the American people demand a change in the administration of public affairs, which can only be effected by a defeat of the party controlling the Government; that the election of Mr. Hayes, influenced as he would be by the men who have surrounded President Grant and shaped his Administration, would fail to secure purity or economy in the administration of the Government.

7. That in the candidates for President and Vice-President, nominated by the National Democratic Convention at St. Louis, and the platform of principles enunciated by said convention, as well as in the letters of acceptance both of Mr. Tilden and Mr. Hendricks, we have the assurance, pledge, and guarantee that the success of the Democratic party in the present canvass will insure reform in the civil service of the country, purity in the administration of the Government, economy in the expenditures of the public money, reduction in taxation, prosperity to the country, and happiness to the people of every section of our common country.

The following resolution was unanimously adopted, on motion of James L. Walcott, of Kent County:

Resolved, That we are, and always have been, in favor of the white men of the country controlling the Government; and therefore we appeal with confidence to the white voters, *only*, for the success of the principles enunciated in the foregoing resolutions.

The Republicans met in convention at Dover on the 13th of September, and nominated Levi C. Bird for Congress, besides presenting a ticket for presidential electors. They also adopted the following resolutions:

Resolved, That we declare our hearty concurrence in the declaration of principles adopted by the National Republican Convention of June 14, 1876, and congratulate the country on the nomination of Rutherford B. Hayes and William A. Wheeler, and accept their lives, services, and communications as the evidence of the determination of the Republican party to secure the blessings of good government, pure public service, and the equal and constitutional rights of every citizen of the United States.

Resolved, That recognizing the duty of the national Government to aid in the restoration of harmonious relations in every part of our common Union upon the basis of the amended Constitution, we unqualifiedly affirm that this duty can be better performed by those to whom the nation is indebted for its preservation than those who were so lately banded for its destruction, and whose continued persecution of their fellow-citizens and denial of their civil rights demonstrate that they either do not understand the true principles of republican government, or that they are unwilling to yield obedience to the obligations imposed by the fundamental law; and that the declared purpose of the President, Secretary of War, and the Attorney-General, in conformity with the resolution adopted by the Democratic House of Representatives, to use the military power of the Government so far as is necessary to secure a free ballot to all citizens of whatever party or race in the coming presidential election, deserves and will receive the indorsement and gratitude of the people of the United States.

Resolved, That the recent Republican victories in Vermont and Maine afford conclusive and most gratifying evidence that the people understand what party is the safe depository of the public good, and of their determination not to withdraw the faculties of government from those by whom they have been so faithfully administered, but to continue the manifestation of their confidence in those by whom the republic was preserved, until there shall be no right unsecured and no wrong unredressed.

Resolved, That our thanks are due to our fellow-citizens of Wilmington for the recent vindication of the principles of honesty and economy in public service, and we confidently rest in the assurance that the action of the new council will afford a marked contrast to the extravagance and corruption of its predecessor.

Resolved, That we arraign the Democratic party of this State as being organized and conducted in utter disregard of the interests of the people, and especially in the matter of levying taxes; that it is actuated for the purpose of the preservation of its power, rather than collection of revenue.

Resolved, That we renew the demand of the Republican party of Delaware for an improved school system, and we equally demand that the schools be kept free from any and every sectarian and ecclesiastical influence.

Resolved, That we renew the pledges of the Republican party in favor of equality of representation to the General Assembly.

A Prohibitory Convention, consisting partly of women, was held in Wilmington on the 10th of October. It nominated Charles Moore for Congress, and adopted a series of resolutions, denouncing the liquor-traffic, condemning the license law of the State, and declaring in favor of local option.

At the election on the 7th of November, Mr. Williams was elected to Congress, the vote being, for Williams, 13,169; for Bird, 10,592; for Moore, 236: total, 23,997; Democratic majority, 2,841. The total vote for presidential electors was 24,135, of which the Democratic candidates received 13,881, and the Republican 10,752, making the majority of the former 2,629. The State Legislature, chosen on the same day, was unanimously Democratic in both branches. In the preceding Legislature there was one Republican. The Legislature consists of nine Senators, three from each county, and twenty-one Representatives, seven from each county.

The Delaware Association for the Improvement and Education of the Colored People gave assistance during the year to 29 schools, with 1,197 pupils. The schools are supported wholly by private subscription.

At the close of the year, a case was pending which involved a conflict between the State and United States Courts. William L. Heal, a deputy-marshal of the United States on election-day, was prosecuted in the State court for an alleged assault on John O'Byrne, at the door of the United States Court room. The case was removed to the Federal Court by the United States District Attorney, but Judge Conneys refused to allow the transfer. In his annual message, Governor Cochran recommended that the Attorney-General be authorized to prosecute the case to the end, that there may be a thorough and deliberate presentation for judicial determination of a question of such grave constitutional importance and vital moment to the sovereignty, integrity, and very existence of the State.

Chief-Justice Edward Woodward Gilpin, of the courts of Delaware, died on the 29th of April. He was born in Wilmington, July 15, 1805. In his youth he was in narrow circumstances, and learned the trade of a currier. He afterward became a clerk in a store, but finally studied law, being admitted to the bar in 1827. From 1840 to 1850 he was Attorney-General of the State, and was appointed Chief-Justice in May, 1857, holding the position from that time to his death. In early life he was a Whig, but, in 1856 and later, became associated with the Democratic party. During the war he was an ardent supporter of the Union cause.

DELITZSCH, JOHANNES, a Professor of Theology in the University of Leipsic, died February 3, 1876. He was the eldest son of Prof. Franz Delitzsch, of the University of Leipsic, and was born at Rostock, in 1846. He attended the gymnasium at Erlangen, and after-

ward laid the foundation of his theological studies at the university in the same place. He continued his studies at Tubingen, and finished them at Leipsic. His attention was directed quite early to the special study of the histories of symbol and dogma. He acknowledged his obligations for sympathy in this line of investigation to Drs. Thomasius and Landerer, to whom he submitted his first writings. A close and lasting attachment grew up between him and Dr. Brückner, of the University of Leipsic, based upon their common zeal in a common pursuit. He gained the degree of Doctor of Philosophy at Leipsic, in 1869, for which he had prepared an essay on the theology of Thomas of Aquinas. He passed the theological examinations at Leipsic and Dresden, and in the spring of 1872 was made a Licentiate in Theology, having submitted for this purpose a dissertation, "De inspiratione Scripturæ Sacræ quid statuerint patres apostolici et apologetæ secundi sæculi." In the summer term of the same year he began his lectures, and received strong encouragement from the students. His studies became concentrated upon a systematic and historical examination of the doctrines of the Roman Catholic Church, of which he sought to make a clear and thorough presentation. In 1874 he published in the *Studien und Kritiken* an historico-critical study on "The Apostle Peter in Tradition and History." In the summer of 1875 he was able to publish the first volume of a comprehensive work he had undertaken upon "The Doctrinal System of the Roman Catholic Church" (vol. i., "The Fundamental Dogma of Romanism; or, The Teachings of the Church"). In the spring of 1875 Delitzsch was nominated Professor-extraordinary in the Theological Faculty at Leipsic. While he was still occupied with his great work his strength began to fail. Nevertheless, he continued to labor steadily until his constitution was destroyed. His last work was that of editing the posthumous lectures of Oehler on "The Symbolical." His illness increased greatly after the completion of this task, and he was compelled to seek rest. He discontinued his academic instructions at the middle of the term, and went to a southern climate for restoration, where, after a few weeks, he died.

DENMARK,* a kingdom in Northern Europe. Reigning sovereign, Christian IX., fourth son of the late Duke William of Schleswig-Holstein-Sonderburg-Glücksburg, and of Princess Louise of Hesse-Cassel; appointed to the succession of the Danish crown by the Treaty of London, of May 8, 1852, and by the Danish law of succession of July 31, 1853; succeeded to the throne on the death of King Frederick VII., November 15, 1868; married, May 26, 1842, to Louise, daughter of Landgrave William of Hesse-Cassel. Heir-apparent, Prince Frederick, born June 3, 1843; married, July

* For latest statistics of commerce and commercial navy, see ANNUAL CYCLOPEDIA for 1876.

28, 1869, to Princess Louisa, only daughter of the late King Charles XV. of Sweden. Offspring of the union are three sons, born in 1870, 1872, and 1876, and a daughter born in 1875. The King has a civil list of 500,000 rigsdalers, and the heir-apparent 60,000 rigsdalers. The ministry, at the close of the year 1876, was composed as follows: President of the Council and Minister of Finance, J. B. S. Estrup; Minister of Foreign Affairs, Baron Rosenörn-Lehn; Minister of War and of the Navy, General W. Haffner; Minister of the Interior, E. V. R. Skeel; Minister of Public Education and Ecclesiastical Affairs, J. C. A. Fischer; Minister of Justice and for Iceland, Prof. J. M. V. Nellesmann. The area of Denmark proper, inclusive of lakes, is 14,753 square miles; of European dependencies (Faroe Islands and Iceland), 40,268 square miles; of American possessions (Greenland, St. John, St. Thomas, and St. Croix), 759,900 square miles. The population, according to the latest dates, was as follows:

TERRITORIAL DIVISIONS.	Census of 1870.	Official Calculation, 1874.
DENMARK.		
City of Copenhagen and Fredericksborg.....	197,576	283,000
Islands.....	799,046	824,000
Jutland.....	788,119	846,000
	1,784,741	1,963,000
COLONIES.		
Faroe Islands.....	9,999	10,600
Iceland.....	69,768	71,800
Greenland.....	9,825	9,900
St. Croix, } St. Thomas, } St. John, } -in the West Indies..	87,881	87,600
Total.....	137,401	129,900
Total population of Denmark and colonies.....	1,912,142	2,092,900

Nearly the entire population of Denmark proper (99.15 per cent.) is connected with the Lutheran Church. Of the remainder there were, in 1870, 1,433 Reformed, 1,857 Catho-

lics, 3,223 Baptists, 1,211 Free Congregations, 2,128 Mormons, 4,290 Jews, 260 Methodists, 349 Irvingites, 74 Anglicans, 28 Friends, 12 Greek Catholics, 88 of various other sects, and 205 without definite creed. The number of emigrants from Denmark was, in 1875, 2,088; in 1874, 3,322; in 1873, 7,200; in 1872, 6,893; in 1871, 3,906; in 1870, 3,525; in 1869, 4,360. Nearly all the emigrants went to the United States. The actual revenue and expenditure of the state, for the two years 1873 to 1875, were as follows (in rigsdalers, 1 rigsdaler = \$0.5463):

	Revenue.	Expenditure.
1873-'74.....	48,408,570	46,704,408
1874-'75.....	64,656,730	65,037,338

In the budget for the year 1876-'77, the revenue was estimated at 48,085,953 crowns (1 crown = \$0.268); the expenditures at 46,695,071 crowns: the surplus being 1,390,883 crowns. The public debt on March 31, 1875, amounted to 187,145,823 crowns, of which 160,355,623 were home debt, and 26,790,200 foreign debt. The state assets being 86,339,884, the actual indebtedness of the state amounted to 100,805,939 crowns. The debt has been in a state of reduction since 1866. In 1872 it still amounted to 232,000,000; in 1873, to 220,000,000; and in 1874, to 211,000,000 crowns.

Military service begins with the twenty-second year of age, and lasts eight years for the line and first call; the second call is liable to military service to the age of thirty-eight years. In time of peace, the line and reserve (first call) number 1,106 officers and 34,551 men; the second call, 286 officers and 12,993 men. In time of war, the army numbers 48,982 men. The navy, in 1876, comprised 34 steamers, 7 of which were iron-clad, 2 sailing-vessels, and 28 rowing-boats. It was manned by 800 men, and officered by 1 admiral, 15 commanders, 34 captains, 47 lieutenants, and 20 sub-lieutenants.

The movement of shipping during the year 1874 was as follows:

VESSELS.	SAILING-VESSELS.		STEAMERS.		TOTAL.	
	Number.	Tons.	Number.	Tons.	Vessels.	Tons.
<i>Entered.</i> { Coasting-vessels.....	13,260	205,664	6,547	166,356	24,816	372,020
{ Ocean-vessels.....	16,116	749,350	5,857	808,234	31,978	1,057,634
<i>Cleared.</i> { Coasting-vessels.....	13,856	185,734	6,361	142,590	25,217	328,364
{ Ocean-vessels.....	15,814	188,632	5,966	207,578	31,350	391,260

The aggregate length of railroads in operation, on January 1, 1876, was 1,260 kilometres (1 kilometre = 0.62 English mile), of which 819 kilometres were state railroads, and 441 kilometres private roads. The length of telegraph-lines was 2,545.9 kilometres; of wires, 7,049 kilometres; the number of telegraph-offices, 174. The Post-Office forwarded, in the year 1873-'74, 16,487,000 letters and 15,134,000 newspapers.

In the Danish Legislature the year has been spent in constant contentions between the

Government and the Opposition. The Landthing, or Upper House, contains a large majority in favor of the Government, while the Opposition has a much stronger majority in the Folkething, or Lower House. The two Houses have not been able during the year to agree upon any measure of importance. At the meeting of the Folkething after the Christmas holidays, the ministry announced that no propositions would be made in regard to relaxing the tithes, because in order to do this it would be necessary to wait until the question in ref-

erence to the support of the preachers, which had been in debate for a year, had been decided. The Folkething rejected a bill which had been passed by the Landsting to extend the interest-guarantee of a private banking company which had undertaken the construction of a railroad-bridge between the islands of Laaland and Falster. In the latter part of January, a bill relating to the responsibility of the ministry was introduced into the Folkething. It imposed conditions which would bear very hardly against a ministry obnoxious to an Opposition majority, and render their speedy retirement from office certain, while to a ministry acceptable to them it would operate to give a prolonged lease of power. It provided substantially for the continuance of a ministry for so long a period as the majority of the Chamber should make no complaint against it. This bill was passed in February, by a vote of 54 to 32, but was summarily laid aside by the Landsting. The session of the Legislature, having reached its constitutional limit at the beginning of February, could not be continued longer, except by the express permission of the King. This had been given regularly whenever occasion required till 1858. After that time the session had been prolonged only once, in 1860; since then, for fifteen years, it had adjourned promptly at the end of its allotted time, whether its business was completed or not. None of the necessary bills having been passed, the King now authorized the prolongation of the session for two months, to give time for the consideration of the financial, ecclesiastical, and military bills. On the 17th of February the Folkething passed the bill for a system of land defense, but with a reduction of the sum asked for by the Government, and with the addition of a supplementary clause, directing that the money be raised by a tax on property and incomes. On the 11th of March the Folkething adopted, by a vote of 63 to 7, the bill for the organization of the army, with certain amendments which had been proposed by the Army Committee, providing for a reduction of the standing army, and the conversion of a part of the force into Landwehr, or militia. In the finance bill the Government had had inserted an appropriation of 390,000 crowns for completing the iron-clad ship Heligoland. This was stricken out by the Folkething, whereupon the Government asked for 280,000 crowns for the ship. The sum of 264,000 crowns was granted. The bill as passed also provided for a tax of 300,000 crowns for the pay of the teachers in the public schools. The sum was less than had been asked for by the Government, and was declared by the Minister of Instruction to be insufficient, but the House refused to increase it. March 29th the Folkething adopted the amendments to the army bill which had been proposed by the Left, by a vote of 56 to 39, and then rejected the bill by a vote of 47 to 47. While the Lower House adhered to the modi-

fications it had adopted in the bill for the fortification of the country, the Upper House as strongly insisted upon the adoption of the plans of the Government. With these important bills in this shape, and without reaching any agreement on the financial bill, the Legislature came to an end March 29th. On the same day the Folkething was dissolved by a royal decree, for the reason, as assigned, that while measures for the defense of the country were of pressing necessity, this House had refused all the measures asked by the Government, and an understanding could not be hoped for with the Folkething as then constituted.

The elections for a new Folkething were held on the 25th of April. They resulted in large gains for the Left, or Opposition. While this party had had 60 members in the old Folkething, they now returned 74 members, and only 27 supporters of the Government were elected.

The new Folkething met on the 15th of May. The next day the Minister of War laid before it three drafts of laws, which the Government desired adopted: 1. Of a law providing a system of defense for the country, in the form in which it had been adopted by the Landsting at the former session, but in which the Folkething had refused to concur; 2. Of a law for the provision of the army with horses and wagons in case of war; 3. Of a bill for procuring and making field-guns. The bill for the provision of the army with horses and wagons was adopted on the 23d. The reintroduction of the fortification bill, in the same form as the one which the previous Folkething had refused to accept, was very unacceptable to the Opposition. Boisen, one of the leaders of that party, offered resolutions declining to consider the propositions of the Government in their present shape, and directing that a committee be chosen to consider whether a different basis could not be arranged upon which this matter could be settled with the Government. To these motions the Minister of Finance, President of the Council, Estrup, replied that if the Government could not receive the help of the Chamber in advancing its plans, it would give up the whole scheme. Boisen remarked that he thought the ministry ought not to attempt to remain in power after such a declaration, whereupon Estrup replied that no one would be more ready than himself and his colleagues to surrender their positions if men could be found who would be better able than they to carry out what they considered necessary for the defense of the country. The committee chosen in accordance with the motion of Boisen consisted of 15 members, of whom 11 were of the Opposition and 4 of the Right, or of the supporters of the Government. On the 23d of May the committee asked the ministry whether they were ready to consider with the Rigsdag the propositions adopted by the Folkething at the

former session, both with respect to the amount of the sum to be granted for purposes of defense, and to the manner in which it should be raised. The ministry replied, declining to entertain any further consideration of the subject upon the basis of the method of defense approved by the Folkething; stating that they regarded the imposition of new taxes as un-

in the taxes and of other reforms important to the country which affected the Treasury would have to be postponed. With regard to the amount to be expended in the works, the committee were of the opinion that 30,000,000 crowns was the maximum sum which the country would be willing to allow to be applied to this purpose. The statements of the minis-

try gave no guarantee that their expenditures would stop with the 33,000,000 crowns which they now asked. It was apprehended that this would be only a part of much larger sums which would be demanded in the future to complete works once undertaken. The committee then addressed several questions to the ministers: Did they consider the sum of 33,000,000 crowns sufficient for the completion of the extraordinary works of defense which they thought desirable? Had the ministry definitely given up the completion of the works formerly proposed, which

THE THORVALDSEN MUSEUM AT COPENHAGEN.

necessary; that they judged that the usual surplus of revenues would afford sufficient means not only for the purposes of defense, but also for other objects, as for the improvement of the means of communication; and remarking that the difference between the appropriation asked by the Government and that voted by the House only amounted to the

were not included in the drafted bills, which were to provide for the security of Copenhagen by means of fixed forts on the side of the land as well as of the sea? If this were the case, would the ministers lay before the committee the grounds on which they could assure them that the application of the designated sum of 33,000,000 crowns would be made most judiciously in the manner prescribed in the bill, if these works were no longer regarded as parts of a greater whole, but as complete in themselves, and requiring no further additions? The committee asked also to have communicated to them the reports which the military experts had made upon the plans of the Government. To these questions the ministry replied that the appropriations designated by the Chamber, if applied upon the plan of defense favored by it, would, no less than the sum demanded by the Government, and applied upon its plan, demand supplementary appropriations; on the other hand, the plan of the Government could be quite as well regarded as a completed whole as that adopted by the Folkething, that it would be found entirely useful even if no further defenses were added to it, and that the ministry were constrained to adhere to their plans in any event. The reply was regarded as evasive, but the committee construed it as an answer in the negative to their questions. The committee reported their correspondence to the Folkething, with a review of some of the details of fortifications, which they regarded as needful, and

EXCHANGE, COPENHAGEN.

inconsiderable sum of 3,000,000 crowns. In answer to this the committee remarked that its views on both points of difference were unchanged. With regard to the subject of the method of raising the money, it was true that the sums needed could be provided out of funds in the Treasury; but, if provision was made in this manner, the questions of reform

closed with the statement that they could not advise the Chamber to continue a discussion which under present circumstances offered no prospect of a practical result. The minority of the committee considered that a basis of adjustment could still be had, and advised that a positive proposition be made, with a view to securing an agreement. For this end they proposed a measure combining some of the features of both the measures which had already been considered. This was not acceptable to either side. After hearing the reports, the Folkething, June 12th, by a vote of 63 to 26, reiterated its adherence to its previous positions, and passed to the order of the day. It afterward adopted a vote of want of confidence in the policy of the ministry, in which 71 members agreed.

The regular session of the Rigsdag was opened on the 2d of October, without a speech from the throne. With 60 members present, the Folkething elected its former president and vice-presidents, Krabbe, Hagsbro, and Hansen, giving to each 57 votes. The budget was submitted. It estimated the revenues of the country at 47,000,000 crowns, the expenses at 45,000,000, and the increase of revenues at 8,000,000 crowns. A bill for the alteration of the tariff by the reduction of duties in some items, and increase in others, and a bill offered by the Minister of Instruction for the building of a Polytechnic School, were rejected by the Folkething. No progress having been made in the consideration of the budget, the King, at the beginning of December, authorized a prolongation of the session for two months, or till February 2d. The discussion on the second reading of the budget was opened on the 15th of December, on the presentation of the reports of the majority of the committee proposing amendments, and of the minority supporting the measures submitted by the Government. The first division took place on the 18th, on the statement of the finance minister. All of the amendments proposed by the Opposition were adopted, by votes of 60 against 15 or 18. The propositions offered by the Opposition in amendment of the statements of the Ministers of the Interior and of Justice were also accepted, while an appropriation asked by the Government for the building of a mail-steamer was denied. The discussion became very heated over the estimate of the Minister of Instruction. Berg, a leader of the Opposition, said that the Government would commit a breach of its oath if it framed a provisional finance law, as it was proposed to do if the two Houses failed to agree upon a measure. An appropriation was granted for finishing the Royal Theatre. Before adjourning for the holidays, the Folkething had approved the amendments proposed by its committee to the marine budget, and denied the appropriations asked by the Government. The Landsting, having nothing to act upon, had taken a recess from the 19th of December to the 9th of January.

The chief point of difference in the dispute between the Government and the Folkething concerns the plan upon which the defenses of the country shall be constructed. Both parties agree that defenses are necessary, and should be provided, but cannot agree upon any measure as to details. This disagreement has operated as a check upon the most important legislation for several years. During the former half of the present century the naval force was held in high regard as the most important and efficient instrumentality for defense, while the army was given a subordinate position. A different view has prevailed since the War of 1848. The fleet played an inferior part in the campaigns of that period, and suffered severe losses, while the army showed itself strong and effective; consequently, since that time the army has received particular attention, while no more than was necessary has been done for the fleet. In 1867 the army had been given a thorough organization, but no specific plans were thought necessary for the care and increase of the navy, and no new ships were built. In 1872 the Government began to entertain the apprehension that the country might become involved in a war with a great power, as Germany, and to give attention to the preparation, against such an event, of stronger defenses. It formed plans for the improvement of the army, for such an increase of the fleet as would place it in a condition to endure a conflict on the open sea, and for building fortifications at different points. It especially contemplated works to defend the capital against a capture from the side nearest the mainland. For these works it sought at first an appropriation of 40,000,000 marks. Its plans were disapproved by the Legislature. Nevertheless it presented them again the next year, in the same form as before. The Folkething answered them with other plans, in which a considerable sum was allowed for the improvement of the fleet, but nothing for the fortification of the capital from the land-side. In 1874 the Government succeeded in obtaining an appropriation to begin the building of an iron-clad vessel. In 1875 the Government again submitted its plans to the Chambers, in a form differing from the original plans, and calling for larger expenditures. The Landsting made some slight modifications in the plans, and approved them as modified. The Folkething again rejected them, and adhered to the plans which it had previously approved. The plans were again submitted to the Chambers in 1876, in the form in which they had been approved by the Landsting, and formed the subject of debate during the whole year, without the two Houses being able to come to any agreement upon them. The original plans of defense submitted by the Government contemplated the building of fortresses, to be so arranged as to afford a degree of protection to all parts of the country. They were open to the objection that such a disposition of forts

would compel a scattering of the military forces. In the later plans the defense of the whole country was given up, and attention was directed to making secure only Seeland, or rather the capital. The plans included, indeed, shore-batteries to be built along the shores of the Little Belt as well as of the Great Belt, but these were intended especially to secure communication with the mainland. To defend the capital against bombardment from the side of the sea, the old sea-forts were to be strengthened and new ones built. Works to prevent the irruption of small hostile forces from the side of the land could be built after the other works were finished. Great stress was laid upon the strengthening of the fleet, which it was desired to put in such a condition as to be capable of preventing the landing of an enemy's force, of destroying his transports, and even of engaging in battle on the open sea. A fortified naval station on the west side of Seeland was proposed, to furnish a place of retreat and a point of support for the fleet.

The Governor of the Danish West India Islands visited Copenhagen early in February, in order to attend to the legislation to be had respecting those islands, and especially to secure an advance from the Treasury of a sum of money to help the sugar-planters in building refineries. The Folkething voted a loan of 2,000,000 crowns for this purpose.

In July the King opened the exhibition of the industries of Jutland at Aarhus, and subsequently visited the military exercise camp at Hald.

A statue of the astronomer Tycho Brahe was unveiled at Copenhagen on the 8th of August.

DESPOIS, EUGÈNE ANDRÉ, a French writer and scholar, born December 25, 1818; died September 23, 1876. He studied at the Collège Saint-Louis, entered the normal school in 1838, taught rhetoric during one year at Bourges, and was called to Paris, where he became Professor of Rhetoric at the Collège Louis-le-Grand. After the *coup-d'état* of 1851 he devoted himself entirely to literary labors. He furnished to the "Bibliothèque Latine-Française" of Panckoucke, the translation of "Rutilius Nuvatianus," of "Rufus Festus Avienus," and of "Aratus"—the two latter together with Saviot (1844). He contributed to the publication in Latin of the works of Abélard by Cousin (1849), and published several annotated editions of the classics. He became well known by his contributions to the *Liberté de penser*, the *Revue des Deux Mondes*, the *Revue de Paris*, the *Revue Nationale*, etc. He also published a number of historical works, the best known of which are: "La Révolution d'Angleterre, 1603-1668" (1861), "Les Lettres et la Liberté" (1865), and "Le Vandalisme révolutionnaire" (1869).

DIAZ DE LA PENA, NARCISSE VIRGILE, a French painter, born in August, 1809; died November 18, 1876. He made his first ap-

pearance in 1831, with several landscape sketches, and afterward brought out "The Surroundings of Saragossa" (1834), "The Battle of Medina Cœli" (1835), and "The Old Ben - Emek." "The Nymphs of Calypso" (1840), and "The Dream" (1841), showed a change in his style; and in 1844 his "View of Bas-Bréan," "The Oriental," and "Bohemians going to a Festival," displayed those effects of light which formed his characteristic. In 1851 he finished his two paintings, "The Bathing-Woman" and "Love disarmed." He sent to the Universal Exhibition of 1855 several of his older works, among them "The Presents of Love," "The Rival," "The Close of a Fine Day," "Sleeping Nymph," "The Nymph tormented by Love," and "The Last Tears," of which the dull coloring called forth considerable criticism. About this time he undertook a journey to the East, and in 1859 exhibited "Galathea," "Venus and Adonis," and other paintings. Recently his older works were sold at very high prices, while his later works were not valued so highly. His son, Eugène Diaz, has gained considerable renown as a musical composer.

DIDOT, AMBROSE FERMIN, the head of the celebrated French publishing-house of Firmin Didot Frères, Fils et Cie., born December 20, 1790; died February 22, 1876. He studied particularly the ancient languages, traveled through the East, was attached for a time to the legation in Constantinople, and then entered his father's business, of which he took charge with his brother Hyacinthe Firmin in 1827. He published numerous works of Champollion, Jacquemont, and others; a new edition of the "Dictionnaire de l'Académie Française," and a new revised edition of the "Thesaurus Lingue Græcæ" of Henricus Stephanus. He wrote himself "Notes d'un Voyage dans le Levant en 1816 et 1817," and gained considerable fame by translations of Anacreon and Thucydides, and by excellent works on bibliography and other subjects, of which the best known are: "Essai typographique et bibliographique sur l'Histoire de la Gravure sur Bois" (1863), "Études sur la Vie et les Travaux de Jean Sire de Joinville" (1871), "Études sur Jean Cousin" (1872), and "Aldé Manuce et l'Hellénisme à Venise" (1875). He also wrote several works on French orthography. In 1873 he was elected a member of the French Academy. Among the more recent works published by Didot are: "Collections des Classiques Français," "Bibliothèque des Auteurs Grecs," "Glossarium Mediæ et Infimæ Latinitatis" of Dufresne, and the "Nouvelle Biographie générale" (1851, *et seq.*). The house is one of the oldest in Europe, having been established in 1718 by François Didot. Under his successors it rapidly grew, occupying at the present time a foremost rank among the publishing-houses of Europe.

DIEZ, FRIEDRICH CHRISTIAN, the founder of the philology of the Romance languages, died

May 29, 1876. He was born at Giessen, March 15, 1794. He attended the gymnasium at that place, and entered the university at Giessen in 1811. Here he devoted himself especially, under the care of F. G. Welcker, to the study of classical philology. In 1813 he joined as a volunteer the Hessian corps in the campaign against Napoleon, and acquitted himself with credit as a soldier. After the peace, he discontinued the study of philology, and devoted himself to that of the law. He soon found that he had made a mistake in choosing this branch, which was not adapted to his taste, and turned his attention to modern languages and literature, which he studied at Göttingen with great zeal and energy. He was confirmed in giving this new direction to his studies by his intercourse with Goethe, with whom he became acquainted at Jena in the spring of 1818. Goethe induced him to devote himself especially to the Provençal languages and literature, and Diez followed the advice, the more willingly as his own inclination accorded with it. He became deeply engaged in his newly-chosen studies, and did not even lose sight of them when circumstances compelled him, in 1819, to accept a position as tutor in Utrecht. The next year he lived privately for a short time at Giessen, in order to qualify himself to become a private tutor in Bonn. In 1823 he was made a professor-extraordinary, in 1830 a regular professor, in the university at Bonn. Here he continued to work and enjoy the fruit of his labors. Till the end of his life Diez displayed a stirring activity. His earliest works—"Old Spanish Romances" (Berlin, 1821), and "Contributions to the Knowledge of the Poetry of the Romance Languages" (Berlin, 1825; republished in French under the title of "Essai sur les Cours d'Amour," Paris, 1842)—displayed a remarkable talent for the interpretation of foreign poetry. His "Poetry of the Troubadours" (Zwickau, 1826; republished in French at Paris, 1845), and his "Life and Works of the Troubadours" (Zwickau, 1829), were very important contributions to the study of the modern languages, and soon made their author famous. The chief works of his life were the "Grammatik der romanischen Sprachen" (Grammar of the Romanic Languages, 8 vols., Bonn, 1836-'42), and the "Etymologisches Wörterbuch der romanischen Sprachen" (Etymological Dictionary of the Romanic Languages, Bonn, 1853). The "Grammar of the Romanic Languages" has also been published in a French translation (Paris, 1863), and in an English translation (London, 1863). Among his other works are: "Altromanische Sprachdenkmale" (Bonn, 1846); "Two Old Romance Poems" (Bonn, 1852); and a work on the early Portuguese poetry, "Ueber die erste portugiesische Kunst- und Hofpoesie" (Bonn, 1863). Diez contributed many and important articles to the literary journals, especially to the *Jahrbücher für wissenschaftliche Kritik*,

of Berlin, and to Haupt's *Zeitschrift für Deutsches Altherthum*, and to other learned works.

DIPLOMATIC CORRESPONDENCE AND FOREIGN RELATIONS. The relations of the United States with other nations have been of a most peaceful and ordinary character during the year. Only two or three points appear to be of sufficient importance to deserve a notice here.

The immigration to California from China has recently awakened so much interest as to attract the attention of Congress. It seems that the Chinese immigrants of that State are natives of the province of Kwangtung to such an extent that it is safe to refer more than nine-tenths of the whole to it. The entire area of this province is reckoned at about 80,000 square miles; but the largest portion of the emigrants go from its most populous prefecture of Kwangchow, in which the city of Canton and colony of Macao lie. This prefecture, which contains fourteen districts, may be roughly estimated at one-tenth or more of the whole province, and for population, resources, and energy of its inhabitants, is the leading division. They speak generally the same dialect, and as they have peculiar facilities for intercourse through the great number of creeks and canals which intersect it and connect with the Pearl River and the sea-coast, in their admirable boats, they are very well acquainted with each other's movements, wants, and industries. It is from this region, one also more or less connected with foreign trade for the last three centuries, that emigration has flowed to California and Australia more than from other parts; and to this familiarity with that trade, by having shared in its benefits, may partly be ascribed the readiness with which its inhabitants have gone abroad. The area of country from which the emigration proceeds hardly exceeds 15,000 square miles, and this includes portions of the adjoining prefectures.

The population of this province of Kwangtung, according to the best information, is about 20,000,000, and the proportion of this particular region which furnishes the emigrants not less than 5,000,000. Foreigners have not that ready access to the official returns of local censuses which will enable them to compare them with the population personally observed, even on a small area, and thus ascertain what degree of accuracy can be fairly ascribed to them; but, as this region is exceedingly fertile and accessible, this estimate of 5,000,000 is no doubt within the truth. The city of Canton contains 1,000,000, and there are other large cities.

The American secretary of legation, Mr. George F. Seward, under date of March 22, 1876, writes to Secretary Fish as follows:

It is certain that a great immigration of Chinese into our Pacific States would give rise to grave political difficulties. But, to my mind, it is quite as certain that no such immigration will take place. The

opportunities open to the Chinaman in other directions are, perhaps, nowhere else so lucrative, but they are more inviting to him for the reasons I have given. It is to be said further that, while he may earn a higher wage in America than at home, his expenses, too, are higher. He pays here less than a cent of our money for his sandals; his boots cost him in California perhaps five dollars. A mere comparison of the rates paid for labor here and there, leaving out of view other considerations, would lead to very wrong conclusions. And, again, his country is not so overpopulated as is believed. Under an improved system of administration, which would embrace the working of mines and minerals, the construction and operation of railroads, etc., there would be a demand at home for all the labor that would be available. As things are, there are perhaps as few persons pinched by want to be seen in the streets of most Chinese cities as in those of the cities of Christendom. If, then, the people of the Pacific States need Chinese labor, they may safely encourage immigration; when they cease to need it, the Chinese will cease to come to their shores. I mean by this that when the call for labor ceases to be an urgent one, the Chinaman will stop his migration in that direction. Even with a great call for labor in all our Western and Southern country, he cannot be induced to go to either.

But the most important feature of the correspondence of the year related to the treaty for the extradition of criminals between the United States and Great Britain. In February, 1876, Ezra D. Winslow, of Boston, Mass., charged with the commission of the crime of forgery in that State, escaped to London, where he was arrested and held awaiting extradition. On February 21st, Secretary Fish writes to General Schenck, the American minister at London, as follows:

SIR: A conversation occurred on the 17th instant, between Sir Edward Thornton (British minister at Washington) and myself, in reference to the course which might be adopted by the British Government on a demand being preferred for the extradition of Winslow on the charge of forgery.

Sir Edward suggested that if his surrender were requested it might be refused, unless a stipulation was entered into that the fugitive should not be tried upon any offense other than that for which he was extradited.

Whether this course, if adopted, grows out of the proceedings in the Lawrence case, or from a desire to make the extradition treaty between the United States and Great Britain subject to the provisions of the British extradition act of August 9, 1870, I cannot say.

You will remember that this act in section 3, under the head of "Restrictions on Surrenders of Criminals," provides that no criminal shall be surrendered unless provision is made by the law of the foreign state, or by arrangement, that the fugitive shall not be tried for any offense "other than the extradition crime proved by the facts on which the surrender is grounded."

If the course adverted to be caused by the Lawrence case, it may be well to say that it is believed that Lawrence has not, up to this time, been arraigned for any other than the extradition offense, and that no representation has been made to this Government on the question.

If such a course is taken for any other reason, it may be said that Great Britain has on more than one occasion tried surrendered criminals on offenses other than those for which they were extradited, and such trials afford a practical construction of the scope of the treaty and of the power and rights of either Government as understood and applied by Great Britain for a period of nearly thirty years after the ratification

thereof; and I cannot imagine that it will be claimed by Great Britain that either party to a treaty may at will, and by its own municipal legislation, limit or change the rights which have been conceded to the other by treaty, and have been practically admitted for such length of time.

I would also call your attention to the twenty-seventh section of the act of 1870 (chapters 52, 33, 34, Vict.), repealing former acts under which extradition had, theretofore, been made; this section expressly excepts everything contained in the act inconsistent with the treaties referred to in the repealed acts, among which is the treaty with the United States. It seems to have been clearly the intent of Parliament not to apply to that treaty any of the provisions of the act inconsistent with the treaty, as it had existed and been enforced for nearly thirty years.

In answer to the demand for the surrender of Winslow, Lord Derby writes to General Schenck, under date of February 29th, as follows:

SIR: I have the honor to state to you that I have been informed by her Majesty's Secretary of State for the Home Department that the chief magistrate of the Bow Street police-court issued, on the 18th instant, upon the information of Colonel Chesebrough, of the United States legation, warrants for the apprehension, under the eighth section, clause second, of the extradition act, 1870, of Ezra D. Winslow, who is accused of the crime of forgery within the jurisdiction of the United States of America.

Her Majesty's Secretary of State for the Home Department, in communicating this to me, has drawn my attention to the third clause, subsection 2, of the act, which is as follows:

"A fugitive criminal shall not be surrendered to a foreign state unless provision is made by the law of that state, or by arrangement, that the fugitive criminal shall not, until he has been restored or had an opportunity of returning to her Majesty's dominions, be detained or tried in that foreign state for any offense committed prior to his surrender, other than the extradition crime proved by the facts on which the surrender is grounded."

And has inquired whether any provision has been made by the law of the United States or by arrangement that Winslow, if surrendered, shall not, until he has been restored or had an opportunity of returning to her Majesty's dominions, be detained or tried in the United States for any offense committed prior to his surrender other than the extradition crime proved by the facts on which the surrender is grounded.

The Secretary of State for the Home Department fears that the claim advanced by your Government to try Lawrence in the recent case of extradition, with which you are familiar, for crimes other than the extradition crime for which he was surrendered, amounts to a denial that any such law exists in the United States; while the disclaimer by your Government of any implied understanding existing with her Majesty's Government in this respect, and the interpretation put upon the act of Congress of August 12, 1842, chapter 147, section 3, preclude any longer the belief in the existence of an effective arrangement, which her Majesty's Government had previously supposed to be practically in force.

The Secretary of State for the Home Department is, accordingly, compelled to state that, if he is correct in considering that no such law exists, he would have no power, in the absence of an arrangement, to order the extradition of Winslow, even though the extradition crime for which he has been arrested were proved against him, and the usual committal by the magistrate ensued thereupon.

I have thought it right to lose as little time as possible in calling your attention to the intimation which I have thus received from her Majesty's Secretary of State for the Home Department; and I have the honor to request that you will bring the circum-

stances to the knowledge of your Government, in order that means may be found for the solution of the present difficulty.

To this note Secretary Fish replied by telegram to General Schenck, on March 8d, as follows:

The treaty of extradition between the United States and Great Britain admits no right in either party to exact conditions beyond those expressed in the treaty. The promise now asked in regard to Winslow is not in accordance with the treaty, and cannot be given. You will request the surrender of the fugitive on the terms of the treaty.

A note from Lord Derby to Mr. Hoffman, secretary of legation, in the absence of General Schenck, under date of March 8th, concluded as follows:

But, in view of the difficulty created in consequence of what has recently occurred in the case of Lawrence, as well as the positive enactment of section 3, subsection 2, of the extradition act of 1870, quoted in the second paragraph of my note to General Schenck, of the 29th ultimo, her Majesty's Government do not feel themselves justified in authorizing the surrender of Winslow until they shall have received the assurance of your Government that this person shall not, until he has been restored or had an opportunity of returning to her Majesty's dominions, be detained or tried in the United States for any offense committed prior to his surrender other than the extradition crimes proved by the facts on which the surrender would be grounded; and I have the honor to request that you will communicate this decision to your Government, in order that some arrangement may be come to in the matter.

On March 31st Secretary Fish addressed to Mr. Hoffman as instructions a lengthy reply to the points advanced by Lord Derby above. The following are extracts from this reply:

It seems, therefore, that the Home Office of Great Britain undertakes to decide what is the law of the United States, as well as of Great Britain, and assumes that the law of the United States, as well as general law of extradition and the extradition act of Great Britain, prevents the trial of a criminal surrendered under the treaty of 1842 for any offense other than the particular offense for which he was extradited; and the position which it takes involves the assumption that, in demanding an extradition under the treaty, the United States is bound by the provisions of the act of 1870, whether in conflict with the treaty or not, and it claims to have "supposed" that an "effective arrangement was in force" that no criminal so surrendered should be tried for any other than the particular extradition offense; on the faith of which arrangement it is claimed that surrenders have heretofore been made, and without which it is now said that a surrender would not be possible under an English act; but, as already said, nothing is adduced in support of the belief of the existence of such supposed arrangement.

These positions are so different from the understanding of this Government, and so opposed to the views which it was supposed were entertained by Great Britain, and which have been recorded in parliamentary papers, which have been asserted in diplomatic correspondence, and been recognized in judicial decisions in that as in this country, and set forth by writers on extradition law, that I learn from Lord Derby's note, with surprise equal to my regret, that they appear to be supported by the Foreign Office.

The act of August 12, 1848, reproduced in the Revised Statutes (sections 5270 to 5276), referred to in the correspondence, does not affect or limit the rights of the two Governments on the question.

This act is simply a general act for carrying into effect treaties of extradition. It provides the machinery, and prescribes the general mode of procedure, but does not assume to determine the rights of the United States, or of any other state, which are governed wholly by the particular provisions of the several treaties, nor to limit or construe any particular treaty.

In some few treaties between the United States and foreign countries provisions exist that the criminal shall not be tried for offenses committed prior to extradition, other than the extradition crime, and in others no such provision is included.

Again, under some treaties, the citizens or subjects of the contracting powers are reciprocally exempt from being surrendered, while others contain no such exception. The United States act of 1848 is equally applicable to all these differing treaties. If the surrendered fugitive is to find immunity from trial for other than the offense named in the warrant of extradition, he must find such immunity guaranteed to him by the terms of the treaty, not in the act of Congress. The treaties which contain the immunity from trial for other offenses have been celebrated since the date of the act of 1848.

At that date the United States had treaties of extradition only with Great Britain and with France, neither of which contained the limitation referred to.

The terms of the respective treaties alone define or can limit the rights of the contracting parties.

The construction of the treaty between the United States and Great Britain, by the two Governments, and their practice in its enforcement for many years, were in entire harmony. In each country surrendered fugitives have been tried for other offenses than those for which they had been delivered; the rule having been that, where the criminal was reclaimed in good faith, and the proceeding was not an excuse or pretense to bring him within the jurisdiction of the court, it was no violation of the treaty, or of good faith, to proceed against him on other charges than the particular one on which he had been surrendered. . . .

Now, for the first time since the signing of the treaty of 1842, Great Britain raises the question of her right to demand from the United States, as a condition of the execution by Great Britain of her engagement to surrender a fugitive criminal charged with a series of stupendous forgeries, a stipulation or agreement not provided for in the treaty, but asked on the ground that an act of Parliament, passed some twenty-eight years after the treaty had been in force, prescribes it as one of the rules or conditions which should apply to arrangements for extradition, when made with a foreign state.

This involves the question whether one of the parties to a treaty can change and alter its terms or construction or attach new conditions to its execution without the assent of the other—whether an act of the Parliament of Great Britain, passed in the year 1870, can change the spirit or terms of a treaty with the United States of nearly thirty years' anterior date, or can attach a new condition, to be demanded of the United States before compliance by her Majesty's Government with the terms of the treaty, as they have been shown to have been uniformly understood and executed by both Governments for the third of a century.

As this Government does not recognize any efficacy in a British statute to alter or modify or to attach new conditions to the executory parts of a previously-existing treaty between the United States and Great Britain, I do not feel called upon to examine particularly the provision of the law of 1870. But inasmuch as Great Britain seeks to impose the provisions of that act upon the United States in the execution of a treaty of many years' anterior date, I do not fail to observe that, while by the act Great Britain assumes to require that no surrendered fugitive shall be tried in the country which demands his extradition for "any offense other than the extradition crime" (in the singular), proved by the facts on which the surrender is grounded, she reserves to herself the right to try the fugitive surrendered to her for such crimes (in the plural) as

may be proved by the facts on which the surrender is grounded.

This does not seem to be wholly reciprocal, and if the United States were disposed to enter into a treaty under this act, it might expect some greater equality of right than a cursory examination of this provision in the act seems to provide . . .

The President regrets that a condition which, in his judgment, is without any justification under the treaty, should have been asked. He regards the question thus presented as of a grave and serious character, on the final solution of which must probably depend the continuance of the extradition article of the treaty of 1842. He cannot recognize the right of any other power to change at its pleasure, and without the assent of the United States, the terms and conditions of an executory agreement in a treaty solemnly ratified between the United States and that power. He thinks that the twenty-seventh section of the British act of 1870 was specially intended to exempt the treaty with the United States from the application of any of the new conditions or provisions embodied in that act, and to leave that treaty to be construed, and the surrender of fugitives thereunder to be made, as had been previously done.

On May 4th Lord Derby made a reply to the above, which had been delivered to him with the request that it be substituted for a note addressed to him by Mr. Hoffman communicating it. The following is an extract from this reply :

Her Majesty's Government cannot assent to the proposition that the English extradition act of 1870 imposed a new condition upon the treaty of 1842. They maintain that if that act had never been passed, it would have been the duty of her Majesty's Government, under the act of 6 and 7 Victoria, cap. 76, upon which the treaty then rested, and the general law of extradition, to have protested against any extradition prisoner being tried in the United States for crimes other than those of which he was accused in this country, and, had that protest been disregarded by the Government of the United States, the British Government would have been equally bound to require an assurance in any subsequent case that a prisoner would only be tried for the crime or crimes for which he was surrendered.

And while dealing with this part of the case, I would ask how the United States Government is prepared to reconcile the views expressed in your note in favor of the assertion of the right of asylum for political offenses with the principle you have been instructed to advocate.

There is no principle of international law more clearly admitted than that advanced by you, that each state is judge of its own administration of justice ; and, with regard to the right of asylum for political offenses, it is clear that the nation surrendering is to be the judge of what is or is not a political offense, the more so because opinions differ in different countries on this question.

But if the principle contended for in your note be correct, what is to prevent the United States Government from claiming a prisoner from this Government for an extradition crime and trying him afterward for an offense which in this country would be deemed a political offense, but which in the United States might be viewed under a different aspect ?

Her Majesty's Government believe that the only test and the only safeguard for the liberty of the individual and the maintenance of the right of asylum are to be found in the principle for which they contend, that the crime or crimes of which a man is accused in the country surrendering, which are proved against him there, and for which he is surrendered, are the only crimes for which he ought to be tried in the country claiming, and that without this safeguard the liberties of the subjects and citizens of the two nations might

be jeopardized and put into the power of political parties or of the vindictiveness of the receiving government, who, *ex concessis*, is not the proper judge of whether a particular offense is a political one or not. And here I must observe, with reference to your comment on the words "deliver up to justice," that if those words can be construed as having the extended meaning for which you contend, namely, "deliver up to justice generally," there would be no object in having a list of extradition crimes for which alone an accused person can be claimed, and the construction would be in direct opposition to the act of Congress of August, 1848, chap. 147, sec. 3, and 6 and 7 Vict., chap. 76, sec. 3, "to be tried for the crime for which he is so accused," the word being identical in both acts.

I now proceed to consider the effect of the extradition act of 1870, and I will state at once that her Majesty's Government do not contend that any of the provisions of that act have any force or effect in any foreign state.

They look upon that act only as declaratory of the law that is to govern the British Government in the matters to which it refers, and they consider that none of its provisions are inconsistent with the treaty of 1842, section 27.

It is to be regarded as intended to prevent for the future the evils that were pointed out by Mr. Hammond and others as having occurred, and being liable to occur, in private prosecutions to which the attention of Government had not been called.

Her Majesty's Government consider the provisions of the act as having been devised, not in the particular interests or for the particular ends of Great Britain, but as the embodiment of what was the general opinion of all countries on the subject of extradition, and as being beneficial to all and injurious to none.

That the general opinion of European nations has justified this view, is proved by the acceptance, by most of the leading nations of Europe, of extradition treaties based upon its provisions.

The attention of the United States Government was drawn to the provisions of the act immediately after it became law, as is shown by Sir E. Thornton's communication to Mr. Fish of the 22d of September, 1870; and it is evident that Mr. Fish's notice was called to the effect of the restrictions of clause 3, subsection 2, from the question which he shortly afterward put to Sir E. Thornton, whether it would be possible that a stipulation could be inserted in any new convention, that if, during the trial of a person whose extradition had been asked for on a minor crime, such as larceny, evidence previously unknown should appear that a prisoner had been guilty of a higher crime, such as murder, it should be legal to try him for the latter crime. To this question Sir E. Thornton, by instruction from her Majesty's Government, returned the following answer in writing :

That any provision in the treaty, by which a fugitive surrendered for one offense mentioned in the schedule may be tried for any offense committed prior to his surrender, other than the extradition crime for which he was surrendered, would be inadmissible. Indeed, the treaty, if it is to be carried out, must contain a provision exactly to the opposite effect.

The draught of a new convention between the two countries was afterward prepared, and Article VI. of that draught, as it originally stood, was as follows :

When any person shall have been surrendered by either of the high contracting parties to the other, such person shall not, until he has been restored or had an opportunity of returning to the country whence he was surrendered, be triable or tried for any offense committed in the other country prior to the surrender, other than the particular offense on account of which he was surrendered.

Although much discussion took place on different provisions of this draught-convention, and considerable alterations and modifications of the original draught were proposed by the United States Government and adopted by the British Government, not one word of objection was ever raised by the United

States Government to Article VI. The only proposal made by them with reference to the article was the addition, at the end of it, of the words "No person shall be deemed to have had an opportunity of returning to the country whence he was surrendered until two months at least shall have elapsed after he shall have been set at liberty and free to return;" which was assented to by the British Government. The terms of that convention were, in fact, with one exception, virtually agreed upon by both Governments; that exception was a difference which arose upon Article VII., relating to political offenses.

The original article was to the effect that "no accused or convicted person should be surrendered if the offense in respect of which his surrender is demanded shall be deemed by the party upon whom the demand is made to be of a political character, or if he prove to the satisfaction [of the police magistrate, or of the police judge, or commissioners named in Article III. of this treaty, or of the court before whom he is brought on *habeas corpus*, or] of the Secretary of State that the requisition for his surrender has, in fact, been made with a view to try or to punish him for an offense of a political character."

The United States Government proposed to leave out the words between brackets, and thus restrict the power of deciding as to what was a political offense to the Secretary of State alone.

To this the British Government could not agree, as the effect would have been to deprive an accused of his right to *habeas corpus*; to take away from him the power of proving at once his right to be set at liberty and of taking the objection in the first instance before the tribunal before whom he was brought immediately on his arrest.

This would be contrary to the spirit of English law, entirely apart from the extradition act of 1870; would have been a direct blow to the liberties of persons claiming asylum in this country; would put it in the power of a Secretary of State to keep an accused person in prison who ought to have been set at liberty at once, and who ought to have the opportunity given him of claiming his right to be set at liberty at the very first moment that he was charged before any tribunal.

It was for these reasons that the British Government declined to accede to the proposal; and, if the rights of an accused, which were well known and established in this country long before the extradition act was passed, are secured to him, there is not, as far as her Majesty's Government are aware, any other matter of difference between the two Governments which would prevent that convention from being signed at the present moment.

It does not, therefore, appear how, in any respect, the act of 1870 erected an insurmountable barrier in the way of a convention, as alleged in your note.

It appears, therefore, that the provisions of the extradition act of 1870 and the powers of the British Government under it having thus been clearly brought to the notice of the United States Government, both countries continued, without any question, mutually to surrender persons accused of crimes within the treaty of 1842.

No case arose in either country, to the knowledge of the British Government, in which any departure was made from the usual practice, and no prisoner was ever, to the knowledge of the British Government, tried for any offense other than that of which he had been accused in the country surrendering.

Her Majesty's Government, therefore, contend that they and their predecessors were justified in considering that, by the tacit and implied consent of each country, this practice would be continued, and that it was not necessary to ask for any positive arrangement to secure that object.

Further correspondence ensued, without effecting any change in the position of the two Governments, and on June 20th the President

sent a message to Congress stating the facts, and concluding as follows:

It is for the wisdom of Congress to determine whether the article of the treaty relating to extradition is to be any longer regarded as obligatory on the Government of the United States or as forming part of the supreme law of the land. Should the attitude of the British Government remain unchanged, I shall not, without an expression of the wish of Congress that I should do so, take any action either in making or granting requisitions for the surrender of fugitive criminals under the treaty of 1842.

No action was taken by Congress on the subject, and affairs continued without change until the 27th of October, when Sir Edward Thornton, the British minister at Washington, addressed the following note to Secretary Fish:

SIR: I have the honor to inform you that I have received instructions from the Earl of Derby to state to you that her Majesty's Government, having regard to the very serious inconvenience and the great encouragement of crime which would arise from the continued suspension of the extradition of criminals between the British dominion and the United States, will be prepared, as a temporary measure until a new extradition treaty can be concluded, to put in force all the powers vested in it for the surrender of accused persons to the Government of the United States, under the treaty of 1842, without asking for any engagement as to such persons not being tried in the United States for other than the offenses for which extradition has been demanded. It is, however, to be borne in mind that each Government has the right laid down in the eleventh article of the treaty of 1842, which provides that the eleventh article shall continue in force until one or the other of the parties shall signify its wish to terminate it, and no longer.

I have, etc., EDWARD THORNTON.

This was satisfactory to the United States Government, and President Grant again regarded the treaty as operative, hoping before long to conclude a more comprehensive one with the British Government.

DISCIPLES OF CHRIST. The *General Missionary Convention* of the Disciples of Christ met at Richmond, Va., October 17th. About two hundred delegates were in attendance, representing thirteen States and the District of Columbia. The Rev. W. K. Pendleton presided. The report of the General Board on Home Missions showed that the total amount (proximately) of \$45,500 had been disbursed by the General and State Boards in this work, and that through its means about 3,250 members had been added and 21 churches organized. The board had secured, toward the formation of a permanent interest-bearing fund, the sum of \$1,893.57; it had also in prospective the proceeds of notes to be paid in installments, amounting to \$5,707.50; of bequests already made in wills, \$21,007.86; of bequests which had been promised to the corresponding secretary during the year, \$40,000. A beginning of permanent funds of State conventions had been made in Ohio, Indiana, and Illinois. It was estimated that 200 weak congregations had been aided during the year. A satisfactory condition as to statistical information had been attained in Pennsylvania, New York, Ohio, and Nebraska, and the board

hoped, through arrangements already projected, to be able in a few years to give the statistics of the entire Church. The Bible-school at Louisville, Ky., had been kept up during the year, with a class of fifteen students. Some ten or twelve of the young men of the school were already in the field, doing good service, in Kentucky, Texas, Alabama, and other parts of the South. The school, however, had encountered difficulties, in consequence of which it had been necessary to delay the time of opening for the next year. The efforts to raise \$10,000 for this school had not been successful. The board advised that they be continued, or that attention be given to a plan for building up local Bible-schools for colored ministers in as many Southern States as possible. A project had been formed to establish an institution in Mississippi to prepare colored men for the ministry, to be called the "Southern Christian Institute." A charter had been obtained for it, requiring \$10,000 as a minimum and \$250,000 as a maximum of capital stock. The sum of \$15,000 had been promised by one gentleman as soon as \$10,000 were obtained from other persons. An increasing interest was reported in the cause of foreign missions, and was manifested in the convention. This work was not yet fully organized, but its importance was being urged upon the attention of the churches.

The Sunday-school secretary reported that it had been impossible to obtain very general trustworthy statistics of the condition of the Sunday-schools. There had been steady, healthy progress in several States. More than one hundred institutes, conventions, and normal classes, had been held. State organizations had been perfected in Ohio (1867), Indiana (1867), Illinois (1868), Kentucky (1874), Iowa (1874), California (1875), and Missouri (1875). In New York, Pennsylvania, West Virginia, Texas, and Nebraska, Sunday-school work was considered in connection with State conventions. Steps toward organizing this work had also been taken in Mississippi, Virginia, and South Carolina. A list was given of ten papers published by Disciples in the interest of Sunday-schools, having an aggregate circulation of upward of 65,600 copies. Most of the weekly papers of the denomination had Sunday-school departments.

It was stated in the convention that \$110,000 had been given to benevolent objects during the year, in addition to the amount which was officially reported by the General Board. During the seven years since the general and State organizations of the convention for missionary work had been formed, 38,500 members had been added to the churches, and about 260 new congregations had been organized.

The annual convention of the *Christian Woman's Board of Missions* was held at Indianapolis, Ind., October 11th. Mrs. Maria Jamieson presided. Reports were made by the

State secretaries from the States of Indiana, Iowa, Kansas, Illinois, and Missouri, and contributions were received from the States of Ohio, Kentucky, Michigan, Pennsylvania, Tennessee, and Mississippi, not represented in the convention. The treasurer reported: Funds received, \$2,921.85; cash disbursed, \$1,120.70; leaving a balance in the treasury of \$1,801.15. A resolution was adopted favoring the introduction of missionary interests into the Sunday-schools and among the children at home. The subject of the introduction of life-memberships, as a means of securing an endowment fund, was considered. The society has made a beginning of missionary work in Jamaica.

DOMINION OF CANADA. A military college has been established by the Dominion at Kingston, Ontario. The course is four years, and is designed to impart a complete education in all branches of military tactics, fortification, engineering, and general scientific knowledge in subjects connected with, and necessary to, a thorough knowledge of the military profession, and to qualify officers for command and for staff appointments. Cadets are admitted upon competitive examination. Parliament appropriated the sum of \$19,486,616.02 for the expenses of the Dominion for the year ending June 30, 1877, including \$689,021.50 for civil government, \$306,175.69 for penitentiaries, \$304,158 for legislation, \$290,130 for immigration and quarantine, \$952,551.50 for militia, \$1,176,850 for public works and buildings, \$301,281.67 for ocean and river service, \$386,042.50 for lighthouse and coast service, \$301,596 for Indians, \$697,591 for customs service, \$235,800 for excise service, \$2,330,291.66 for maintenance and repairs of public works,

SEAL OF DOMINION OF CANADA.

and \$1,732,500 for post-office service. Among the acts of Parliament passed during the year are two relating to corrupt practices at elections of members of the House of Commons, one making provision for the collection and registration of the criminal statistics of Canada, one amending and consolidating the laws respect-

ing Indians (known as the "Indian act," 1876), one amending the Dominion land acts, one making further provision in regard to the Supreme Court and the Exchequer Court of Canada, and one amending the insolvent act of 1875. An important act sets apart the eastern

ity of Hudson's Bay; thence southerly, following upon the westerly shore of the said Hudson's Bay to the point where it would be intersected by a line drawn due north from the place of beginning, and thence due south on the said last-mentioned line to the said place

KINGSTON, CANADA.

portion of the Northwest Territories "as a separate district of the said Northwest Territories by the name of the District of Keewatin." The Lieutenant-Governor of Manitoba is *ex officio* Lieutenant-Governor of Keewatin. The district is bounded as follows: "Beginning at the westerly boundary of the Province of Ontario on the international boundary-line dividing Canada from the United States of America; then westerly, following upon the said international boundary-line to the easterly boundary of the Province of Manitoba; thence due north along the said easterly boundary of Manitoba to the northeast angle of the said province; thence due west on the north boundary of the said province to the intersection by the said boundary of the westerly shore of Lake Manitoba; thence northerly, following the said westerly shore of the said lake to the easterly terminus thereon of the portage connecting the southerly end of Lake Winnipegosis with the said Lake Manitoba, known as the Meadow Portage; thence westerly, following upon the trail of the said portage to the westerly terminus of the same, being on the easterly shore of the said Lake Winnipegosis; thence northerly, following the line of the said easterly shore of the said lake to the southerly end of the portage, leading from the head of the said lake into Cedar Lake, known as the Cedar or 'Morry Portage;' thence northerly, following the trail of the said portage to the north end of the same on the shore of Cedar Lake; thence due north to the northerly limits of Canada; thence easterly, following upon the said northerly limits of Canada to the northerly extrem-

of beginning." The estimated expenditures of the Province of Ontario, for the financial year ending December 31, 1877, are as follows: For civil government, \$157,374; legislation, \$126,750; administration of justice, \$276,222.50; education, \$557,465; public institutions, maintenance, \$437,843; immigration, \$53,137.42; agriculture, arts, literary and scientific institutions, \$101,850; hospitals and charities, \$59,610.90; miscellaneous expenditure, \$85,700; unforeseen and unprovided, \$50,000; public buildings, \$354,427.14; public works, \$38,-

400; colonization roads, \$77,090; charges on crown-lands, \$91,600; refund account, \$104,819.27; services in 1875 (balance), \$19,228.87; total, \$2,540,228.10, viz.: for current expenditure for 1877, \$1,988,752.82; on capital account, \$432,927.14; for other purposes, \$128,543.14.

DURBIN, JOHN PRICE, D. D., the well-known pulpit orator and Corresponding Secretary of the Methodist Episcopal Missionary Society, was born in Bourbon County, Kentucky, in 1800; died in New York, October 17, 1876. At the age of fourteen he was apprenticed to a cabinet-maker, and a few years later entered the itinerant ministry of the Methodist Church. He studied at Miami University while preaching at Hamilton, Ohio, graduated at Cincinnati College, and soon after was appointed Professor of Languages in Augusta College, Kentucky. In 1831 he was elected chaplain of the United States Senate, and in 1832 became editor of the *Christian Advocate and Journal*. In 1834 he was elected President of Dickinson College, at Carlisle, Pa., and during his incumbency made an extensive tour of observation in Europe and the East. As member of the General Conference of 1844 he was a prominent actor in the great contest on slavery which divided the Church. Retiring from his office in 1845, he was pastor of churches in Philadelphia, and was also presiding elder of the Philadelphia District. He was Secretary of the Missionary Society from 1850 to 1872, when he retired in consequence of physical infirmity. To his labors was largely due the establishment of missions in India, Bulgaria,

Western and Northern Europe, and many parts of the United States, and the reinvigoration of those in China and elsewhere; while through his plans the annual contributions were increased from \$100,000 to \$600,000. In 1867 he visited Europe in the interest of missions. Besides numerous contributions to periodical literature, Dr. Durbin published "Observations in Europe, principally in France and Great Britain" (2 vols. 12mo, New York, 1844), and "Observations in Egypt, Palestine, Syria, and Asia Minor" (2 vols. 12mo, 1845).

DÜRINGSFELD, IDA VON, a distinguished poetess and writer of romances, born November 12, 1815, at Militsch, in Lower Silesia; died October 22, 1876, at Canstatt, Württemberg. Her father was a military officer in the Prussian service, but afterward settled on an estate. She enjoyed only limited opportunities for education in her youth. She began to write verses in her fifth year. In her fourteenth year she spent a short time at Breslau, where she studied the Italian and English languages. She afterward became distinguished for her talents in mastering the idioms of foreign languages, and using them almost with the facility of a native. Her first poems were published in the *Abendzeitung*, at Dresden, and soon attracted the attention of other journals. In 1835, during a residence in Dresden, she became acquainted with Tiedge and other distinguished literary men, and secured recognition in literary society. She published in Dresden a collection of poems, under the signature of Thekla. This was followed by "Der Stern von Andalusien" (The Star of Andalusia), a collection of romantic poems in 1838, and "Schloss Goczyn" (Castle Goczyn) in 1841. In 1845 she was married to the Baron Otto von Reinsberg, a gentleman of high literary culture, with whom she resided by turns in Italy, Switzerland, Germany, France, and Belgium. In these countries she made the acquaintance of the people, studied the language, literature, history, and customs, and thereby acquired a diversity of gifts, the evidence of which is shown in her numerous works. The catalogue of her writings em-

braces: "Skizzen aus der vornehmen Welt" (Sketches from the World of Quality, 1842-'45), "Count Chala" (1845), "Esther" (1854), "Clotilde" (1855), and "Die Literaten" (The Literati, 1863)—romances of society; "Margaret of Valois and her Times" (1847), and "Antonio Foscarini" (1850)—historical romances; a volume of poems entitled "Für Dich" (For Thee, 1855); "Aminone, a Fairy Tale in Verse" (1852); "Böhmische Rosen" (Bohemian Roses, 1851)—translations from the Czech language; "Lieder aus Toscana" (Songs from Tuscany, 1855)—translations from the Italian; "Aus Dalmatien" (Out of Dalmatia, 1855-'57), and "Von der Schelde bis zur Maas" (From the Scheldt to the Meuse, 1861)—sketches of travel. She and her husband together prepared a work, entitled "Das Sprichwort als Kosmopolit" (The Proverb as a Cosmopolite), which was published in 1863. Her husband committed suicide by poison the day after her death.

DUSSARD, HIPPOLYTE, a French writer on political economy, born September 4, 1798; died January 26, 1876. In 1839 he was one of the editors of the *Répertoire de l'Industrie Étrangère*, which contained a description of all the most important machines invented in foreign countries. Afterward he wrote on economic subjects in the *Revue Encyclopédique*, the *Bulletin de Ferrusac*, and the *Temps*. In 1842 he published a work on "The Financial Condition of England, and the Measures proposed by the Whigs and the Tories." The following year he became the editor-in-chief of the *Journal des Économistes*, which position he held for three years. He worked with M. Eugène Daire in the revision and annotation of the works of Turgot, in the "Collection of the Principal Economists." In 1848 he was named prefect of the department of the Seine-Inférieure, and was elected a member of the Council of State by the Constituent Assembly. Retiring from that body, he was intrusted with a mission to England by M. Dufaure, and, while there, made a particular study of the charitable institutions of that country.

E

EARTH, THE. *Comparative Statistics*.—In the ANNUAL CYCLOPEDIA of 1875 for the first time there are presented some comparative statistics relating to the area and population of the world. A reference is made to that volume for an account of many statements to which, this year, no later information can be added, especially to an account of former estimates of the total population of the globe, beginning with Isaac Vossius, who, in 1685, estimated it at 500,000,000, and embracing, among others, the estimates of Malte-Brun, Balbi, Von

Roon, Berghaus, Dieterici, and the estimates by Behm and Wagner in the former volumes of the *Geographisches Jahrbuch* and the *Bevölkerung der Erde*. In the present article we confine ourselves to presenting some comparative statistics relating to the earth as a whole which are either later than those published last year, or belong to subjects which had not been referred to in the ANNUAL CYCLOPEDIA of 1875.

I. *Present Area and Population of the Earth*.—Behm and Wagner, in volume iv. of their

periodical, *Die Bevölkerung der Erde* (The Population of the Earth, Gotha, 1876), give the following estimates of the area and population of the large divisions of the world:

DIVISIONS.	Square Miles.	TOTAL POPULATION.	
		1875.	1876.
America.....	15,882,600	84,892,000	85,519,900
Europe.....	8,923,370	802,978,000	809,178,300
Asia.....	17,291,890	798,907,000	824,548,500
Africa.....	11,557,600	206,007,000	199,921,900
Australia and Polynesia.....	8,423,900	4,568,000	4,748,000
Total.....	51,978,160	1,894,842,000	1,428,917,000

The estimate of the total population in 1876 is an increase of over 27,000,000 on the estimate of 1875. In Europe the augmentation is chiefly due to the excess of births over deaths, both of which are now officially registered in most of the European countries. In the other large divisions of the world the changed figures are the result of more accurate information on regions hitherto but little known.

II. *Statistics of Sex.*—The numeric relations of the sexes in the different countries of the earth were as follows:

COUNTRIES.	No. of Females to 1,000 Males.	COUNTRIES.	No. of Females to 1,000 Males.
Canary Islands.....	1,208	Brazil.....	988
Sweden.....	1,064	St. Pierre and Miquelon.....	806
Finland.....	1,066	America.....	908
Switzerland.....	1,045	Lagos.....	1,161
Great Britain and Ireland.....	1,048	St. Helena.....	1,061
Portugal.....	1,088	Egypt.....	1,025
Germany.....	1,087	Cape Colony.....	950
Norway.....	1,086	Gambia.....	942
Denmark.....	1,026	Mayotte and Nosai Bé.....	778
Austro-Hungary.....	1,024	Mauritius.....	647
Russia.....	1,022	Réunion.....	547
Netherlands.....	1,022	Africa.....	975
Spain.....	1,016	Samoa.....	984
France.....	1,007	Japan.....	971
Italy.....	989	British India.....	948
Luxemburg.....	989	Siberia.....	922
Belgium.....	985	French colonies in India.....	918
Roumania.....	959	Russian Central Asia.....	909
Serbia.....	946	Caucasus.....	898
Greece.....	938	Ceylon.....	813
Europe.....	1,021	Labuan.....	618
Paraguay.....	2,079	Straits Settlements.....	587
Dutch West Indies.....	1,208	Hong-Kong.....	365
Brazil.....	1,189	Asia.....	948
Crendon.....	1,181	Australia, New Zealand, and Tasmania.....	817
Greenland.....	1,181		
Martinique.....	1,091		
Columbia.....	1,061		
Guadaloupe.....	1,049		
Chili.....	1,007		
United States.....	978		
Canada.....	976		
Furnam.....	966		
Argentine Republic.....	949		

III. *The Largest Cities.*—The population of the principal cities of the earth was as follows, according to the latest accounts:

CITIES.	Population.
1. London (1876).....	3,489,428
2. Paris (1872).....	1,851,792
3. New York (1875).....	1,028,629
4. Berlin { (1875).....	1,045,000
{ (without suburbs) (1875).....	966,858

CITIES.	Population.
5. Vienna (without the military) (1875).....	1,001,999
6. Canton.....	1,000,000
7. Siangtan (Hunan).....	1,000,000
8. Siangfoo (Shensi).....	1,000,000
9. Tchanchowfoo (Fokien).....	1,000,000
10. Tientsin (Chihli).....	980,000
11. Philadelphia (1876).....	817,448
12. Tchingtoofoo (Szechuen).....	800,000
13. Calcutta (India) (1871).....	794,645
14. Tokio (Japan) (1872).....	674,447
15. St. Petersburg (1868).....	667,968
16. Bombay (India) (1871).....	644,405
17. Moscow.....	601,969
18. Constantinople.....	600,000
19. Fokien.....	600,000
20. Hang-chowfoo (Chihkiang).....	600,000
21. Hankow (Hupei).....	600,000
22. Shooching (Chihkiang).....	600,000
23. Glasgow (1876).....	545,144
24. Liverpool (1876).....	521,544
25. Brooklyn (1875).....	507,000
26. Bangkok (Siam).....	500,000
27. Peking.....	500,000
28. Soochow (Kwangsi).....	500,000
29. Wanchow (Chihkiang).....	500,000
30. { Manchester (1876).....	188,917
{ Salford (1876).....	188,425
31. Nanking (Kwangsi).....	450,000
32. St. Louis (1875).....	450,000
33. Naples (1871).....	415,549
34. Chicago (1875).....	410,000
35. Tachan (Kwangtung).....	400,000
36. Madras (India) (1871).....	397,555
37. Kioto (Japan) (1872).....	374,496
38. Osaka (Japan) (1872).....	378,000
39. Birmingham (England) (1876).....	371,689
40. Yangchoo (Kiangsu).....	360,000
41. Brussels { (1875).....	358,700
{ (without suburbs) (1874).....	182,785
42. Cairo (Egypt) (1872).....	349,858
43. Hamburg { (1875).....	348,447
{ (without suburbs) (1875).....	264,675
44. Boston (Mass.) (1875).....	341,919

84. Tsinanfoo (Shangtung).....	200,000
85. Wochang (Hupei).....	200,000

IV. *The Railroads of the World.*—The length of the railroads in 1875 was as follows (in kilometres, 1 kilometre = 0.62 English mile):

The development of the railroads of the world will be found in the following table. The statements for the years 1830-'70 are according to Dr. G. Stürmer, "Geschichte der Eisenbahnen" (1872):

COUNTRIES.	Kilo-metres.	COUNTRIES.	Kilo-metres.
Belgium.....	8,499	Chili.....	991
Luxemburg.....	278	Uruguay (1876).....	876
Great Britain.....	26,818	Argentine Republic.....	2,120
Switzerland (1876).....	2,307	Peru.....	1,582
Germany.....	27,980	Costa Rica.....	59
Netherlands.....	1,602	Canada.....	6,719
France.....	21,761	Honduras.....	90
Denmark.....	1,260	Paraguay.....	72
Austro-Hungary.....	16,812	British Guiana.....	96

ECUADOR (REPÚBLICA DEL ECUADOR), an independent state of South America, lying between latitude 1° 5' north and 5° 30' south, and longitude 69° 52' and 80° 35' west. It is

bounded on the north by the United States of Colombia and Brazil, on the east by the empire just named, on the south by Peru, and on the west by the Pacific Ocean.

The territory of the republic is divided into thirteen provinces, including the Galápagos Islands, the capital of which is Albemarle.*

The following table shows the population of eleven of the provinces, according to an official return published in 1875 :

PROVINCES.	Population.	Capitals.
Azua	149,108	Cuenca.
Chimborazo	110,860	Elobamba.
Esmeraldas	8,000	Esmeraldas.
Guayas	87,437	Guayaquil.
Imbabura	77,879	Ibarra.
León	76,140	Latacunga.
Loja	60,734	Loja.
Los Ríos	61,923	Bababoyo.
Manabí	59,098	Portoviejo.
Pichincha	102,281	Quito.
Tungurahua	78,148	Ambato.
Total	866,187	

In the return above referred to no mention was made of the provinces of Oriente (capital Archidona) and Galápagos.

Of the 866,187 inhabitants given in the foregoing table, 461,254 were females; and to the total should be added some 200,000 uncivilized Indians.

The population of Quito, the capital, was set down at 76,000 for the year already alluded to.

The President of Ecuador is Dr. Antonio Borrero, inaugurated on December 8, 1875.

The cabinet is composed of the following ministers: Interior and Foreign Affairs, —; Treasury, Señor Francisco P. Icaza; and War and the Navy, General Julio Saenz.

The commandants-general of Quito and of Guayaquil are Señor José Martínez de Aparicio and Colonel Teodoro Gomez de la Torre, respectively, both of whom received their appointments simultaneously with the members of the cabinet.

The armed force comprises some 1,200 men, and the navy is composed of three small steamers.

Public instruction is still under the exclusive control of the clergy, and the Christian Brothers, whose zealous efforts have already been productive of excellent results. The number of schools goes on steadily increasing in the various continental provinces; large numbers of text-books have been procured, mainly from New York; and neither pains nor money will, it is promised, be spared in order to the completest possible organization and development of the school system now introduced.

Of the national revenue, which in 1875 amounted to 3,650,510 Ecuadorian pesos (= \$2,591,862), nearly one-half was derived from the custom-house receipts.

The national expenditure in the same year amounted to 3,985,560 pesos (= \$2,829,747), constituting a deficit of 335,050 pesos (= \$237,885).

In January, 1875, the national debt was re-

ported to stand as follows: * Foreign debt (£1,824,000, British loan of 1855), \$12,845,000; home debt, \$7,250,000; total \$20,095,000 pesos.

In the first quarter of 1876 an arrangement for the reduction of the debt, by the conversion of the one per cent. stock into new six per cent. bonds, was authorized by the Legislature.

No official statistics of the commerce of Ecuador were published in 1876; and the latest concerning the imports are still those of 1871.

With such a spirit of jealousy between two important sections of a country as that reigning between the inhabitants of the coast-region and those of the elevated plateaus of Ecuador,

CHIMBORAZO, ECUADOR.

the most insignificant elements of discord are, not infrequently, magnified into pretexts for open violence. The administration of Garcia Moreno gave rise to murmurings which, while they were easily stifled in the Alpine valleys on a level with that in which stands the capital, found fresh vent at Guayaquil, and on many occasions swelled into turbulent protests.

His successor, Dr. Borrero, does not seem to have as yet succeeded in conciliating the sympathies of the people of the littoral regions; so far from it, indeed, that a serious attempt has already been made to overthrow his government.

* Interesting particulars concerning the debt will be found in the ANNUAL CYCLOPEDIA for 1876.

* For the area, see the ANNUAL CYCLOPEDIA for 1873.

The speech delivered by Dr. Borrero on the occasion of his inauguration, on December 8, 1876, presents his views of public policy. The following is a translation :

The oath which I have taken to-day is not, sir, as you have well said, a mere formula, but a solemn compromise made to my God and my country. As a sincere Catholic, I will protect the religion of our fathers—a religion which has civilized the whole world, and which I think has not an enemy in all Ecuador. To attack the Catholic religion would be treason to the country, because, if Ecuador is now a civilized and cultivated nation, she owes it entirely to the light received from the Evangelical Church. The Ecuadorian Church will be therefore really independent, and the Government will protect that independence, respecting it, and making it respected by all. A church which is not free is not the church established by Jesus Christ, nor is it the most powerful element of social civilization and progress, but on the contrary an instrument of oppression and tyranny.

The duties which I have contracted with my country are set forth in the Constitution; but as that Constitution is vicious, it is natural that we should reform it; and the reform has already been begun by the honorable Senators and Deputies. Upon this point I think it well to indicate to you what are my ideas. The political world, if we may say so, is divided into two principal schools of government. According to one, the permanent subjection of a nation to tutelage, under a strong and repressive government, is the best and most convenient system for the political, social, and material progress of a nation. According to the other, the government ought to hold, for the rule of its conduct, the *laissez faire* (*dejad hacer*), so much recommended by that class of politicians. I think, sir, that a tutor-government is unacceptable equally for governor and governed: for the first, because, if the tutorship of a minor is a heavy duty, that of a nation must be an insupportable task; and for the second, because the dignity of man, without which he becomes a mere machine, is incompatible with a government which does all and directs all for him. Popular suffrage, the free press, public opinion, and moral sanction, etc., are not required, when the government believes itself omnipotent and omniscient, and consequently infallible. I do not hold, therefore, with a tutor-government, for that government means only a permanent dictatorship, and the degradation of the nation.

As little do I hold with a government of the *laissez faire* principles of certain visionary politicians, because such a government is incapable of fulfilling the duties imposed by God on those who direct public affairs. If liberty is sacred, authority is not less so; if the first has its rights, so also has the latter; but if liberty wishes to overstep its bounds, and become license, if force and violence wish to overcome justice and right, then authority is called, on its part, to restrain this license, and to withhold the advances of that anarchy which is far more dangerous and to be dreaded than is authority.

The two principal public liberties which are the essence of the republican system, and which contribute more than any others to the culture and the progress of a nation, are the liberty of election and the freedom of the press. The first is the exercise of the most important of political rights; the second is the expression of the sentiments, the necessities, and the opinions, of the governed. Without liberty of election, the republic would have no solid, legitimate base on which to erect the political and social edifice; because a government which does not derive its origin from this pure fount is contrary to the law of God and of humanity, and, for the same reason, destitute of all authority. Without a free press, there are no means of restraining the ex-

cesses of power, nor any means of exploring the public sentiments; there is nothing to guide the government in grave and difficult questions, nor, finally, anything to lead public opinion in the direction of true scientific, literary, and political progress. Under my administration, then, there will be in Ecuador full liberty of election, a legally free press; and, moreover, all legitimate freedom will be real and effective.

Raised without title or merit to supreme power, by the popular vote, and not by any party or faction, I do not see, in my fellow-countrymen, to whom I owe so much, and from whom I have received the most splendid mark of distinction and confidence, one party of oppressors, and another of oppressed people; but I see a nation of brothers, strongly interested in working together for the honor and advancement of the country. A government which has its origin in revolution and violence, and not in the popular will, needs to sustain itself by tyrannical and oppressive measures; but a government raised up by the force of justice, which is the only legitimate and respectable force; a government whose origin is not vitiated or corrupted, because it is born of the genuine will of the people; a government, in fact, which has been placed at the head of the destinies of the nation which it is called upon to rule, by assuredly providential circumstances, has nothing to fear, and needs nothing but the cooperation of good citizens, the aid of our loyal and disciplined army, and of its worthy and honorable generals like yourself. I assure you therefore, sir, that the authority with which I am now, against my own will, invested, and to which I never for one moment aspired, will not be used for an evil end, to plot against public liberties, nor to en throne despotism, but to guarantee the reign of justice, of order, and of liberty, and to render practical and effective the popular, elective, alternative, and responsible republic—a republic which, until to-day, has only existed in writing, in the eight constitutions which we have had in Ecuador. To bring to a good end the programme which I have indicated, I do not count upon my weak powers, I count only upon the protection of the All-Powerful, which never fails for him who, like myself, is animated by the purest patriotism, and the most upright and just intentions.

The revolution already alluded to broke out in September, headed by General Veintemilla, military commandant of Guayaquil, and who had been appointed to that post for the purpose of maintaining order and peace in the disaffected district. All the available forces disposable from the capital were placed at his disposal, as the Government placed implicit confidence in his loyalty. By the end of the month the insurrection was gaining adherents in the neighboring provinces; yet Borrero, spite of the imminence of the peril, had not retired from the presidency. He declared his intention to stay in Quito and oppose the insurgents.

EGGERT, FRANZ XAVER, a German painter on glass, born in 1802; died in October, 1876. He studied decorative painting in Augsburg, attended the Art Academy in Munich in 1824, and was afterward employed in the Royal Glass-painting Establishment. He was engaged on the windows in the church at Aue, and in the cathedral in Cologne, where he executed the greater part of the ornamentation. In 1837 he published several folios of Gothic ornaments, which he had engraved on stone

himself, and from 1841 to 1849 the glass-paintings of the church at Aue, for which he received from King Frederick William IV. first the small and then the large gold medal for art. In 1852 he published fifteen illustrations of the Salvator church in Kilindown, England. After the Royal Glass-painting Establishment was broken up, he established his own, and furnished numerous beautiful works, among them the windows of the cathedral at Basel, the cathedral at Constance, the Protestant churches at Baden-Baden, at Burgdorf in Switzerland, and others.

EGYPT,* a country of Northeastern Africa, nominally a pashalik of the Turkish Empire, but virtually an independent state since 1811. The ruler of Egypt, who has the name of Khedive, is Ismail Pasha, born at Cairo, December 31, 1830, second son of Ibrahim, the son of Mehemet Ali; succeeded to the Government at the death of his uncle, Saïd Pasha, January 18, 1863. The eldest son of the Khedive, Mohammed Tefwick, born in 1852, is President of the Privy Council; his eldest son, Prince Abbas Bey, was born July 14, 1874. The second son of the Khedive, Prince Hussein Kamil, born in 1858, is member of the Privy Council, and Minister of War and Colonies. The third son, Hassan, also born in 1858, is lieutenant *à la suite* in the Prussian army.

By the annexation of Darfour and other territories, Egypt has largely increased in both area and population. At the beginning of 1875, the area and population of the large divisions of which Egypt is now composed were as follows:

embrace the land of the Baria, of which Colonel Baker took possession on May 26, 1871; of Darfour, annexed in 1874; of Shegga and the neighboring districts, which, in 1874, were transferred by their ruler to the Khedive; the Basen or Kunama country; the Danakil coast as far as Bab-el-Mandeb, with Berbera (occupied in 1873), and other points on the coast near Berbera. The area and population of these territories, according to the latest estimates,* were as follows:

TERRITORIES.	Square Miles.	Population.
Land of the Bari.....	6,378.20	120,000
Darfour.....	104,808.85	5,000,000
Shegga and neighboring districts..	55,042.63	400,000
Land of the Basen.....	6,208.11	150,000
Danakil coast, with Berbera.....	6,378.20
New acquisitions.....	210,810.54	5,670,000
Former possessions.....	112,681.55	5,000,000
Total.....	323,492.09	10,670,000

The revenue of Egypt for the financial year ending September 10, 1875—year 1591 of the Ooptic calendar—was calculated in the official budget estimates at 2,108,493 purses (1 purse = \$24.75), and the expenditure at 2,105,295 purses, leaving a surplus of 3,198 purses.

The public debt of Egypt is divided into two classes, the funded debt of the state and the personal debt of the Khedive. There is, besides, a floating debt. In October the funded debt was estimated at £49,000,000, the floating debt at £7,000,000; total state debt, £56,000,000. The personal debt of the Khedive was estimated at £18,000,000. The real amount of his debt is, however, not yet fully known. On August 1, 1875, an English authority estimated the floating debt at £15,900,000, or, including the floating debt of the Khedive, secured on his personal property, the *daira*, at £22,000,000.

Egypt is bound to pay an annual tribute of £700,000 to Turkey. She has also to furnish a contingent of 15,000 men to the Turkish army. She cannot make treaties other than those of a commercial character, name ambassadors at foreign courts, or build iron-clads; but she raises and expends her own revenue, appoints her own officials, from ministers down to policemen, and, in fact, in all that relates to her home Government, she is entirely free.

In 1875 the aggregate length of railways which were in operation was 1,528 kilometres (1 kilometre = 0.62 mile). The telegraph-lines had, in 1873, a length of 6,486 kilometres, and the telegraph-wires of 13,750 kilometres.

The aggregate number of letters and newspapers received and dispatched by the Egyptian, Austrian, Italian, and Grecian mails, was as follows:

TERRITORIES.	Square Miles.	Population.
1. Egypt proper.....	212,006.7	5,252,000
2. Nubia.....	883,792.59	1,000,000
3. Egyptian Soodan.....	822,992.10	10,670,000
Total.....	860,891.52	16,922,000

The population of that part of Soodan which belonged to the Khedive previous to the recent annexation was estimated, in 1874, by Munzinger Bey, the Governor of the coasts of the Red Sea, at 5,000,000, divided as follows:

Khartoum....	750,000	mostly Arabs.
Farshoda....	250,000	mostly negroes.
Senaar.....	500,000	Arabs and negroes.
Fasael.....	500,000	Arabs and negroes.
Korfofan.....	1,000,000	one-half Arabs and one-half negroes.
Berbera.....	250,000	Arabs.
Dangola.....	250,000	Arabs and Barabra.
Taka.....	1,000,000	three-fourths Hadendos, one-fourth Tigré.
Faskin.....	250,000	Hadendos.
Massowah....	250,000	mostly Tigré; a few Dankali.
Total.....	5,000,000	

The new acquisitions of Egypt in Soodan

* For latest statistics of foreigners, of population of large cities, of exports, of commerce of Alexandria, of movement of shipping in the principal ports, etc., see ANNUAL CYCLOPEDIA for 1874.

* See Behm and Wagner's *Bevölkerung der Erde*, III, p. 112.

MAIL.	Letters.	Newspapers.
Egyptian.....	1,696,357	378,957
Austrian.....	278,163
Italian.....	824,500	186,100
Grecian.....	53,272	27,372

The movement of shipping, from 1870 to 1875, was as follows :

YEAR.	Vessels.	Tonnage.
1870.....	486	485,911
1871.....	765	761,467
1872.....	1,063	1,489,169
1873.....	1,178	2,065,073
1874.....	1,264	2,422,672
1875.....	1,494	2,940,708

The total expenditures for the construction of the Suez Canal and the first arrangements amounted, up to the close of the year 1873, to 471,769,930 francs. The value of the buildings and the inventory belonging to the company was estimated, in 1874, at 21,795,545 francs. The income of the company was, in 1871, 13,276,000 francs; in 1872, 18,825,000; in 1873, 24,831,127; in 1874, 26,726,145; in 1875, 30,844,636. The expenditures were, in 1871, 15,918,000 francs; in 1872, 16,253,000; in 1873, 17,346,199; in 1874, 18,667,668; in 1875, 17,946,547. Surplus in 1872 (the first year which showed a surplus), 2,071,279 francs; in 1873, 7,495,077; in 1874, 8,059,577.

Mr. Cave, who was sent to Egypt by the British Government at the close of 1875 (*see ANNUAL CYCLOPEDIA for 1875*) to examine the financial condition of the country, finished his examination and made his report in March. The report began with a criticism of the past administration of Egyptian finances, and an inquiry into the causes which had brought about the state of things then existing. The country had suffered much from the dishonesty and wastefulness of its officials. The Khedive's Government, with the intention of raising enough capital to pay off the floating debt, had made a law enabling land-owners to commute the land-taxes on terms which entailed the sacrifice of half the revenues from this source for all time, for the sake of obtaining eleven times the annual amount for the period of twelve years. The result was disastrous, in that the sum at present only sufficed to pay the interest on the floating debt, while, after 1886, the Egyptian revenue, which now produced \$53,445,350, would by the operation of the above law lose an annual sum of \$12,250,000. The normal expenditure of the Government was about \$45,403,405, more than half of which was devoted to the service of the debt. Every available portion of the revenue was pledged as security for the loans. The present pressure arose from the Khedive's inability to meet the bonds of the floating debt, which were continually falling due, and were estimated to amount to at least \$91,215,880. The second part of the report re-

ferred to the possibility of combining and consolidating the whole debt, in the event of British credit taking the place of Egyptian credit, in which case a diminution of the rates of interest, resulting from the guarantee by England, would allow of the entire repurchase of the Suez Canal without imposing fresh burdens on the country. This combination was, however, rendered impossible through the opposition of other governments. In the third part of his report, Mr. Cave suggested the conversion of the whole Egyptian debt into a stock bearing seven per cent. interest, and the appointment of a person who should inspire confidence at the head of a Board of Control to supervise the collection of taxes. Mr. Cave thought that if the present debt were replaced by one bearing a moderate rate of interest, there was no reason why the country should not quickly recover, as its revenues were deemed sufficient, if properly managed, to meet its liabilities. In the course of the debates in the British Parliament, March 31st, on Egyptian finances, a statement by Mr. Disraeli, that the Khedive was opposed to the publication of the report, excited some question; but the explanation was made that the report contained statements concerning the transactions between the father of the Khedive and the great powers which were not suitable for publication, but that the practical results of the report, as well as the statement of the present condition of Egyptian finances, would be made public at an early day. The report was actually laid before the Parliament on the 7th of April.

At the beginning of the year the Italian Government sent Signor Scialoja to Egypt to effect a financial management with the Khedive in the interest of the Italian creditors. In May he was appointed by the Khedive president of a newly-constituted Chief Council of Finance, and shortly afterward made a report substantially agreeing with that of Mr. Cave, and advised the Khedive to adopt a plan of settlement very similar to that recommended by the English agent. Negotiations were opened in April with French parties proposing to relieve the most pressing necessities of the Khedive, and undertake the settlement of affairs, to the defeat of the English plan, but they were very soon broken off. On the 25th of May the Khedive issued his decree for the unification of the public debt. It provided for the issue of seven per cent. bonds, with interest from the 15th of July, 1876, to be redeemable at par within sixty-five years, with half-yearly drawings; to be issued to bearer, in amounts of 500, 2,500, 12,500, and 25,000 francs each; coupons not to be subject to any tax by the Egyptian Government, and both coupons and bonds to be paid in gold, without deduction, at Cairo, Paris, or London. Messrs. Von Kremer, De Balignières, and Caravalli, foreign commissioners, were appointed directors of the commission for liquidating the public

debt, to begin their work on the 10th of June. This arrangement was not satisfactory to all the holders of Egyptian obligations. Private holders of securities, in England and France, held that their interests had been sacrificed to those of a few head establishments, and refused to accept the sixty-five-year bonds as a fair payment for the securities they held. Accordingly, another commission, consisting of Mr. Goschen, M. P., as a representative of the English, and M. Jonbert, as a representative of the French bondholders, visited Egypt in September, upon the invitation of the Khedive, to agree upon further and more definite measures for securing their loans. In November they effected an arrangement which was deemed as satisfactory as could be expected under the circumstances. It was

agreed that the *daira*, or private debt of the Khedive, be separated from the unified public debt, and that the income occurring from the *moukahalah* be applied to the loans effected on short time in such proportion that the payment should amount to eighty per cent. of the nominal sum; that the rate of interest on the treasury bills should be reduced to ten per cent., and that a loan of £15,000,000 at five per cent. should be issued, to be secured by the receipts of the railways and the port dues at Alexandria, the proceeds of which should be applied to the payment of the loans of 1862, 1868, and 1878. After the cancellation of these loans, the consolidated debt would be reduced from £91,000,000 to £59,000,000. This amount should for the future till 1885 bear six per cent. interest, and be yearly liqui-

MEHMET ALI SQUARE, ALEXANDRIA, EGYPT.

dated in the amount of one per cent. The appointment of a controller-general of revenue, and a controller-general of the public debt and audit, was provided for, who should be an Englishman and a Frenchman, and to whom should be given the nomination of the general tax-collectors of the whole land, in entire independence of the Egyptian Finance Minister. The Finance Minister, Ismail Sadyk Pasha, opposed this plan, and endeavored to awaken the religious prejudices of the people against it. He accused the Khedive of selling the land to foreigners, in disregard of the religious feelings of the native population. For this offense he was arrested, deprived of his office, and banished to Dongola. He died suddenly while on the way to that place. Prince Hussein, son of the Khedive, was appointed to succeed him.

The International Court of Appeal was constituted in Alexandria, January 30th, under

the supervision of President Zulsicar Pasha. Dr. Lapennu, the Austrian representative in the court, was unanimously chosen first vice-president for the transaction of business. Provision was then made for the establishment of three inferior courts, to sit at Alexandria, Cairo, and Ismailia. The Belgian representative, Janssen, was chosen vice-president of the court at Alexandria; the Dutch representative, Stopelaer van Middleberg, of the court at Cairo; and the Dutch representative, Van Bemmalen, of that at Ismailia. The courts began their functions on the 1st of February, with a large amount of business. More than 1,400 suits were transferred to them from the so-called mixed tribunals of commerce, which had hitherto existed in Alexandria and Cairo. Besides these were carried up numerous cases from the consular tribunals, and suits which had been for a year awaiting the opening of

the new court. About 400 claims and complaints of Europeans against Egyptians, or against the administration of the Khedive's estates and the members of his family, which hitherto had been prosecuted diplomatically, were awaiting final decision by commissioners to be appointed by the European members of the court, May 23d. While the court at Alexandria was engaged in hearing complaints against the *daira*, or private estate of the Khedive, its proceedings were interrupted by the appearance of persons claiming to be counsel of the vicerealty. They protested that, while the Khedive recognized the authority of the court, he had not surrendered the function of making the laws, and asserted that the court was pledged to recognize every decree of his as of legal force. In the category

defendant (the Khedive). The Khedive, however, refused to permit the judgment to be executed against him, whereupon Mr. Hackman, president of the Court of Summary Justice at Alexandria, refused to hear any more cases, closed the court, and resigned his office. Mr. Antoniadis was appointed to succeed him. In November the judges of the Court of Appeal, by a majority of three-fourths, dismissed Mr. Hackman. The vice-president of the court, Mr. Lapennu, and Mr. Scott, the English judge, however, declined to take part in this proceeding.

On the 4th of January, Rhazeb Pasha was appointed Minister of Commerce. The appointment was in effect the creation of a new office, as this bureau had previously been joined with that of Foreign Affairs.

At the same time Nubar Pasha resigned, or was dismissed from, the office of Minister of Foreign Affairs. The causes of the retirement were not known. A number of reasons were assigned for it, some of which were contradictory to each other, and all of them speculative. Nubar Pasha had proved himself to be one of the most far-sighted men in the country, and a valuable servant and adviser to the Khedive. He was progressive in his views. He had been largely instrumental in the production of the plans for the reform of justice by the institution of regular courts, which went into actual operation almost simultaneously with his retirement from office. Sherif Pasha was appointed to succeed him as Minister of Foreign Affairs.

The ports of Zanzibar seized by the Egyptians in November, 1875 (*see ANNUAL CYCLOPÆDIA* for 1875), were collectively known as Bemader, or "the ports." They would be of great service if they were in the hands of some strong power, but the hold of the Sultan of Zanzibar upon them was very weak. The object of the Egyptian operations against the district was to connect the country in which Colonel Gordon was operating with the sea, by means of the river Juba, the only navigable river on the east coast of Africa between Capes Guardafui and Delgado. On the 18th of January the Egyptians had evacuated Kisimayo and the Juba River country, and eventually withdrew their entire force. Mention was made in the *ANNUAL CYCLOPÆDIA* for 1875 of the occupation of Harrar by the Egyptians. Subsequently to this act the Sultan of that country formed a conspiracy with the Gallas to surprise the Egyptian garrison at the capital, put them to death, and free the city from foreign occupation. The Sultan had a brother whom he had kept in prison for fifteen years, on account of some former opposition against him, but had released him and sought reconciliation with him, and had informed him of this plan to deliver the city. The brother, in revenge for the Sultan's former treatment of him, informed the commander of the Egyptian garrison of the plot,

A STREET IN CAIRO.

of such decrees were the new financial convention and the arrangements made in connection with it for the consolidation of the floating debt, both of the state and of the *daira*. They therefore protested against the court taking proceedings or entering judgment against the *daira* which should not be in accordance with his decrees in reference to these matters. The Court of Appeal, May 24th, asserted its jurisdiction in the case of the *daira*, and ordered judgment to be issued against the

whereupon the Sultan was seized and beheaded in the presence of his brother, and the chiefs, his fellow-conspirators, about 100 in number, were also put to death.

Up to the 15th of December, 1875, Colonel Gordon, of the Egyptian expedition to the country of the Upper Nile, had formed military stations at Lardo, Ragerta, Bedden,

The grant asked by the British Government for the payment for the purchase of the shares of the Khedive in the Suez Canal was voted by the Parliament early in the year, with but little opposition, and without a division.

The general meeting of the shareholders of the Suez Canal was held in Paris, May 28th. M. de Lesseps presented a report showing that the total receipts of the company for 1875 had been 30,827,194 francs, and its expenditures, including all the charges of the undertaking, and the payment of the interest on the capital stock, had been 29,727,047 francs, leaving the sum of 1,100,147 francs to be distributed as dividends. Fourteen hundred and ninety-four ships, of an aggregate of 2,940,708 tons real measurement, had passed through the canal. The work of improving the canal had been carried on to a certain extent during the year. The British Government had been given a representation on the board of the company of three directors. M. de Lesseps stated, in a communication made to the French Academy of Sciences in May, that the work of the dredging-machines on the canal had been attended with good and permanent effects. The *Serapis*, a vessel of 4,582 tons, which had brought the Prince of Wales back from India, and her consort, the *Raleigh*, drawing twenty-six feet of water, had passed through the canal without any difficulty. A merchant of Marseilles, M. Amelin, in a pamphlet advocating the neutralization of the canal, publishes the following estimate of the relative proportion in which each country is represented in the Suez mari-

RUINED MOSQUE OF TULUN, CAIRO.

Moogi, and several other places. He had met with much hostility from the Moogi sub-tribe of the Baris, and had had several conflicts with them, in one of which his companion Linant had been killed. He finally subdued the Moogi tribe. The rapids of the river offering impassable obstructions to his boats, he had a steamer and two boats taken overland and set afloat again. While this work was going on, he undertook a journey overland from Fatiel to Anfino, on the left bank of the Victoria Nile, and thence to M'ruli, the capital of the chief Kaber Reger. Colonel Gordon affirmed in his reports that during his whole expedition he had striven to avoid hostility, and to exercise the kindest demeanor toward all the natives with whom he came in contact. July 22d Ishmael Pasha Ajub, Governor-General of Soodan, arrived in Cairo in the unprecedentedly short time of twenty days from Khartoom, bringing dispatches from Colonel Gordon's headquarters at Lado, on the Upper White Nile, dated only six weeks previously. On the 2d of August Colonel Gordon reported that, at the request of King M'Tera, he had left a garrison of 150 men in his capital. He had also established military stations at Urodogani and Kasitza, and had reached Maynugo, July 19th, in seven days from Duffi. He found the river navigable, the shores well peopled, and the soil tillable. Colonel Gordon returned to Cairo early in December, after an absence of three years in equatorial Africa. He was cordially received by the Khedive, and was decorated with the grand cross of the order of the Medijie.

MOSQUE OF MEHEMET ALI, CAIRO.

time traffic: Germany, 1.64 per cent; England, 74.16; France, 9.21; Italy, 2.63; Holland, 4.35; Austria, 3.47; Spain, 2.9; Russia, 0.50; Sweden, 0.27; Norway, 0.56; Turkey, 0.56; Greece, Egypt, Belgium, Denmark, Portugal, and Japan, only furnish together a total traffic of 0.66 per cent.

The viceregal library of the Darb-el-Gemamiz was founded in 1870, in pursuance of a decree addressed by the Khedive to Ali Pasha

Mubarak, Minister of Worship at that time. This decree directed that a building be erected in the ministerial premises, of a capacity for the proper accommodation of 30,000 volumes, in which should be collected and preserved the books, maps, scientific instruments, and papers, belonging to the public benevolent institutions and public offices of the country, in such a shape as to be convenient for the use of the public. The library will include the "Old Library," founded by Mehemet Ali in 1838, consisting principally of works printed at the public printing-office. Of the libraries of the public benevolent and religious institutions to be incorporated in it, a writer in the *Allgemeine Zeitung* names as known to him those of thirty-one mosques, three *Talijne*, or dervis cloisters, one school, and three private residences, containing in all 16,562 volumes, exclusive of the collection in the mosque of Al Azhar. The library will be made as complete as possible in the special departments of "Egyptology," of which all works published, in all languages, will be procured, and of Oriental literature. The collection of Arabic works will be carefully looked to, and it is anticipated that this department of the library of many valuable writings, now practically out of the reach of European scholars, will be made accessible and useful. It is intended also, in the scientific departments, to provide the works necessary for the pursuit of the professional studies of engineers, architects, and others, to professional men, without their having to go out of the country. The library is open to every one for consultation, on the single condition of his presenting a certificate signed by his consul or some prominent man of the city; but books cannot be taken out. The collection has already become very valuable. During 1876 it was enriched by the addition of a large portion of the works, chiefly Oriental manuscripts, of the late Mustafa Fazyl Pasha, of Constantinople.

The Assembly of the Delegates of Egypt was opened on the 23d of November. The Khedive recommended the establishment of an Egyptian national bank.

The war with Abyssinia, commenced in 1875, continued through the greater part of 1876, being in its results rather disastrous to the Egyptians. (*See* ABYSSINIA.)

EHRENBERG, CHRISTIAN GOTTFRIED, a German naturalist, born April 19, 1795; died June 27, 1876. He entered the University of Leipsic in 1815, studying at first theology, and then devoting himself to the study of the natural sciences and of medicine. In 1816 he went to Berlin, where he graduated as doctor of medicine in 1818. In the following year the Academy of Sciences furnished him and his friend Friedrich Wilhelm Hemprich with the means for a long scientific journey. They went to Egypt and its neighboring countries, from which Ehrenberg returned alone in 1826, Hemprich having died at Massowah. Upon

his return to Berlin he was appointed extraordinary professor in the university, and in the following year he was created a member of the Academy. In 1829 he took part in Alexander von Humboldt's journey to Asia. Having become Secretary of the Academy in 1842, he was appointed ordinary professor at the university in 1847. A sketch of his first journey is contained in "Naturgeschichtliche Reisen durch Nordafrika und Westasien den Jahren 1820-'25, von Hemprich und Ehrenberg." The scientific results of this journey are contained in "Symbolæ physicæ seu Icones et Descriptiones Mammalium" (1828-'33), "Symbolæ physicæ Avium" (1828), "Symbolæ physicæ Insectorum" (1829-'34), and "Symbolæ physicæ Animalium Evertectorum sepositis Insectis" (1829-'31). His great scientific fame is based chiefly on the knowledge of microscopic organisms, which was considerably promoted by him. Although his observations have been superseded by more recent ones, he must be regarded as the founder of this school. Among his works pertaining to this subject the most important are: "Organisation, Systematik und geographisches Verhältniss der Infusionsthierchen" (1830), "Zur Kenntniss der Organisation in der Richtung des kleinsten Raums" (1832-'34), "Zusätze zur Erkenntniss grosser Organisation im kleinsten Raum" (1836), and his principal work, "Die Infusionsthierchen als vollkommene Organismen, ein Blick in das tiefere Leben der organischen Natur" (1838), with 64 copperplates engraved from his own drawings. He was led by the discovery that many firestones, chalk, and other mineral substances consisted of layers of microscopic organisms, to the observation of the smallest fossil creatures. On these researches he reported in "Die Bildung der europäischen, libyschen und uralischen Kreidelfelsen und des Kreidemergels aus mikroskopischen Organismen" (1839), "Die fossilen Infusorien und die lebendige Dammerde" (1837), and his principal work on this subject, "Mikrogeologie" (1854). Among his later works are: "Uebersicht der seit 1847 fortgesetzten Untersuchungen über das von der Atmosphäre unsichtbar getragene reiche organische Leben" (1871), "Nachtrag zur Uebersicht der organischen Atmosphärien" (1872), and "Mikrogeologische Studien über das kleinste Leben der Meerestiefgründe aller Zonen" (1873).

ELECTRICITY. *Electricity and the Theory of Comets.*—Reitlinger and Urbanitsky have addressed to the Paris Academy of Sciences a memoir on a new electrical repulsion and its application to the theory of comets. It is known that the luminous column produced in a Geissler tube gives rise to a phenomenon of attraction, when the finger or any conductor whatever is brought near the tube. The authors experimented with two tubes that had contained, the one bromine and the other perchloride of tin. The light

obtained was greenish and of peculiar aspect, in which the spectroscope showed neither the rays of bromine nor those of tin perchloride, but only the three well-known bands usually attributed to the spectrum of carbon. These bands are the same which Vogel and other observers have designated as forming the spectrum of comets. Besides, the luminous column thus produced gave rise, not to a phenomenon of attraction, but to a very well-defined repulsion. The authors, after repeated experiments, are firmly convinced that these curious phenomena are due to the extreme rarefaction of the gases employed; and, since the gas forming the tails of comets is undoubtedly in a state of high rarefaction, they conclude that this is the cause of the repulsion of the sun on the comet's tail, the sun being then considered simply as a good conductor.

Electrical Phenomena in Plants.—The leaf of the plant *Dionaea muscipula*, one of the carnivorous plants, has been found by Dr. Burdon-Sanderson to possess an electro-motive action. The same author has shown that when contraction takes place in the leaf there is a negative variation of the current; he has also observed in the leaf something corresponding to the latent stimulation of muscles and the electrotonus of nerves. This subject has lately been investigated by Hermann Munk, whose results have been published in *Der Naturforscher*. Briefly they may be stated as follows:

Applying the unpolarizable electrodes to the under surface of a leaf, a current appears in (say) an upward direction, i. e., flowing in the leaf from the end of the petiole or leaf-stalk (call it the *fore-end* of the leaf) to the free end or point of the leaf (which may be called the *hind-end*). Points situated similarly on the two halves of the leaf are homogeneous, hence on the two sides of the midrib all is symmetrical. Conceive the midrib divided into two unequal parts, a shorter hinder part and a longer fore part; then in each of these parts every point nearer the inner end is positive to every more distant point. The most positive point of the midrib lies about the fore-end of its hindermost third, and with increasing distance from this point the positivity decreases toward both ends.

Suppose lines drawn on the surface of a half-leaf at right angles to the midrib; and call these *cross-lines* of the leaf. Every point of such a cross-line proves negative to the corresponding point of the midrib; and regularly the negativity of these points increases first to a maximum, and then, on to the outer leaf-border, decreases. The most negative point of the cross-line never coincides with the middle of the line, but is always nearer the leaf-border than the midrib.

By connecting the most negative points of all the sections, we have a principal line of length nearly parallel to that of the midrib. All points in this line are homogeneous. So also are related points of other lines of length running parallel to the midrib, and lying inward from the principal length-line. Of the middle parts of two cross-lines, which are both in the fore or both in the hinder halves of the leaf-halves, the middle nearer to the fore or to the hinder leaf-border respectively is always positive to the more distant middle, and the force, downward in the former case, upward in the latter, in-

creases with the width of span of the arch. The principal length-line, then, is the sum of the most negative points of each leaf-half, while in opposition is the most positive point of the leaf at the fore-end of the hindermost third of the midrib. And, as in the whole leaf all is symmetrical on the two sides of the midrib, so in each leaf-half all is symmetrical on the two sides of the middle cross-line. The complete symmetry of the leaf seems to be disturbed only in that the most positive point in the midrib is displaced back from the middle.

The examination of the upper surface of the leaf offers great difficulties, owing to its sensitiveness. These having been overcome, it is found that the same distribution of tensions prevails as on the under surface.

The source of the electro-motive action he supposes to reside in the interior of the leaf, nor can it, according to him, arise from heterogeneity of surface. The primary organs of the electric forces are neither the disk-glands, the hairs, the fibro-vascular cords, nor the epidermis, but the cylindrical cells of the parenchyma in the halves of the leaf and in the midrib. These cells are endowed with forces of such a kind that the positive electricity is driven from the middle of the cell to each of the two poles, which are positive poles to the middle.

The mechanical movements of the plant are of two kinds: stimulation movements, and resorption movements. In the former, the leaf closes very quickly after stimulation, within a minute or so, all parts moving simultaneously. In a few hours it begins to open again, and is quite open after twenty-four to thirty-six hours. It is then susceptible of further stimulation. The resorption movement, on the other hand, is more rare, and occurs when a small piece of flesh, albumen, or the like, is carefully laid on the leaf-surface, avoiding the sensitive hairs. The closure which follows is very slow, not beginning for some hours, and being completed only in one to two days. The movements of the two halves are irregular and unsimultaneous, and depend on the place of contact, from which they spread outward. The reopening begins after several days, and takes several days to be completed; and during this time the leaf is not, or is very little, susceptible of either stimulation or resorption movements. The leaf may die after one such resorption movement, and two or three always prove fatal to it; it opens no more.

We now come to the electrical phenomena in stimulation, of which Dr. Sanderson said that they presented a negative variation similar to that of the muscle-current. The electrodes were placed on the under surface of the midrib, as being the only part of the leaf which, during movement of the latter, does not alter in position. On stimulation through movement of the sensitive hair, there occurs, not a simple negative variation, but, as the author expresses it, a positive variation with negative primary impulse, which he calls double variation. This electrical phenomenon occurs even when, notwithstanding stimulation, there is no movement of the leaf. The latter circumstance renders possible an examination also of the leaf parenchyma; and the same double variation is here observed.

As to the explanation of this double variation, the supposition that all the cells pass first through a negative, then through a positive variation, is to be rejected; the process is rather (the author thinks) that through stimulation the cells of the upper halves of the half-leaf parenchyma and of the upper midrib parenchyma experience a negative variation, those of the under halves of the half-leaf parenchyma and of the under midrib parenchyma a positive; that is, the negativity of the middle of the cells to

their poles increases in the former cells, on stimulation, and decreases in the latter.

Variation in the Electrical Condition of the Heart.—It is known that during every revolution of the heart its muscular tissue undergoes singular variations of temperature and excitability, a diminution of excitability, and a rise of temperature, coinciding with the systole, while during diastole the opposite phenomena are manifested. Supposing it to be probable that corresponding variations of the electrical condition of the cardiac muscle could be detected, Marey has made a series of experiments to determine this question. The galvanometer, owing to the inertia of its needle, is unsuitable for the observation of sudden changes in the intensity of currents. Hence, in Marey's experiments, Lippmann's electrometer was employed. The heart of a frog was placed on two non-polarizable electrodes, one of which supported the apex of the ventricle, while the auricles rested on the other. Two successive negative variations of the current were indicated by the electrometer during each cardiac systole: one of these was sudden, and corresponded with the abrupt contraction of the auricles; the other was more gradual, and coincided with the slower movement of the ventricle. The phases of electrical variation are thus seen to be similar to those of the work done by the muscle.

Influence of Light on the Electrical Behavior of Metals.—In order to determine the action of light upon the electrical behavior of metals in water—a subject which many years ago engaged the attention of E. Bequerel—Hankel, a member of the Leipsic Gesellschaft der Wissenschaften, employed two carefully-cleaned and newly-scoured strips of copper, one of which he fixed in a porous clay cell by means of a cork stopper. This cell was filled with water, and placed in a larger vessel of glass containing some water, in which the other copper strip was so immersed as to have one of its surfaces turned toward the source of light. The two strips having been connected with the wire of a galvanometer, the glass, with its contents, was placed in a black case having a slide for the admission of direct sunlight or colored light to the outer strip of copper. The results were as follows:

On access of free sunlight, the strip exposed to the light was negative to the one in darkness, though only moderately so; with red glass interposed, the action was inconsiderable; with yellow glass, a little stronger; with green and dark-blue successively, still stronger; with very dark-violet glass it was less again.

The copper strips were now oxidized by moderate heating, and the following results were obtained: In free sunlight the illuminated strip was strongly negative; on darkening again, the deflection gradually disappeared; behind red glass the action was less; behind light-yellow glass the plate was first positive, then negative; on darkening it became still more negative, and then the action disappeared; behind dark-green glass the behavior was similar, but the first positive deflection was less; behind

bright-blue, dark-blue, and violet glass, the plate was equally negative.

Strongly-oxidized copper strips were next tested. In free sunlight the illuminated strip was first strongly positive, then weakly negative, then the action ceased. Behind red glass the plate was pretty strongly positive, but the deflection of the needle soon fell off considerably; behind bright-yellow glass the strip was very strongly positive, but very soon the action diminished; on darkening, a strong negative deflection occurred. Behind dark-green glass the plate was first weakly positive, and then negative; behind dark-blue glass it was also negative, and this change was more considerable than with free sunlight; behind violet glass the action was similar.

The author describes also the behavior of copper in sulphate-of-copper solution, and the behavior of silver, tin, brass, zinc, and platinum, which metals were examined in the same way.

Effects of Lightning on Different Species of Trees.—The effects of lightning on different species of trees have been made a subject of investigation by Daniel Colladon, who has communicated to the Geneva Society of Natural History the results of his observations. He states that when a poplar is struck all the upper part of the tree remains perfectly sound and green. The height above the ground at which the injuries appear does not, in large poplars, exceed one-third of the tree's height. These injuries commence immediately below the junction of the strong branches with the trunk. In general, they do not reach quite to the ground. It is always the tallest poplar of a group that is struck. In some cases the storm will pass over trees of other species and will burst on poplars, though they be of less height. The author has never met with any traces of carbonization. The cases in which several poplars are injured by a single discharge of lightning are rare. One such case is recorded by M. Colladon, where three poplars were damaged by the same stroke. These trees stood in a straight line, and about twelve feet distant from each other.

Magnetic Properties of Nickel and Cobalt.—The researches of Hankel into the magnetic properties of nickel and cobalt are worthy of being recorded here. The bars of these metals used in his investigations were large and pure, the nickel-bar being 168 millimetres long, 41.1 millimetres broad, and 13.1 millimetres thick; the cobalt-bar was of nearly the same dimensions. A bar of iron, of like dimensions, was examined at the same time. Comparing the iron with the nickel, it was found that, within the limits of current-strength used, the magnetism in the former increased proportionally to this strength; the nickel at first, i. e., with weak currents, showed nearly the same magnetic force as the iron; very soon, however, its magnetism increased in less degree than in the iron, so that with the greatest strengths of current it was little over a half of that in the iron. The cobalt behaved like the nickel in that, even with moderate currents, the magnetism increased in less degree than the intensity of current; but it differed in showing a much less strength of magnetism within the

strengths of current employed. Since, however, the increase of magnetism from the second last to the last observation, in cobalt, was much greater than in nickel, it is not impossible that, with very strong electric currents, the magnetism of cobalt may be greater than that of nickel. Unlike the nickel, the cobalt piece was not without coercive force.

New Electro-Motor.—In a new electro-motor recently exhibited in London by its inventor, Chutaux, the primary force is supplied by a battery of eight or more cells, being a modification of the Bunsen battery. The elements used are graphite and unamalgamated zinc, and the exciting fluids are sulphuric acid and bichromate of potash in the inner (or graphite) cell, and a solution of acid sulphate or bisulphate of potash in the outer (zinc) cell. No material action is exerted on the zinc while the battery is at rest, hence the reason for dispensing with the process of amalgamation. Two or more horseshoe electro-magnets, with their poles upward, are worked by the current, a wheel rotating on an horizontal axis immediately above and almost touching them. This wheel is practically formed of two parallel wheels joined at their circumference by a series of soft-iron bars. As soon as the current is set up the wheel begins to revolve, owing to the attraction between the electro-magnets and the iron, the motion being kept up, and rapidly increased, by means of a simple automatic "current-reverser." The principal feature to which the inventor draws attention is the construction of the transverse soft-iron bars, each of which is composed of seven thin plates, much being thus gained in intensity of magnetization, and consequently in mechanical power. By a series of ingenious devices the machine is applied to the working of pumps, sewing-machines, lathes, etc., as a substitute for manual or foot labor. It is not of course in any way intended to supersede steam, its object being the simple and easy performance of labor of a light description. The battery is free from smell, and, being very "constant," will last for a long time without renewal, the trouble involved in starting and stopping the machine being practically *nil*.

Influence of the Electric Current on the Dimensions of Iron.—The change in length of a conductor, through which an electric current is passing, has been measured by Exner, whose method is free from the error caused by the expansion due to the heat produced by the current. In making this measurement, two pieces of the same wire of nearly equal lengths were hung one over the other, and so connected with a battery that the current might be passed through either. The lower wire was passed through a glass which might be filled with water if desired. The elongation was measured by resting the end of the wire on a lever carrying a mirror whose deflection was read by a microscope and scale. The current being passed successively through the two

wires, a different deflection was obtained in each case, but these were rendered equal by inserting an additional resistance in circuit with that wire whose elongation was greater. The tube was now filled with water so as to carry off the heat generated in the lower wire as rapidly as possible. It was found that the galvanic expansion was only 1.2 to 2.2 per cent. of the heat-expansion; and no connection was recognizable with the nature of the metal employed. If it be considered that these values, of course, can only be an upper limit, it will follow, from the smallness of the effect obtained, that there is no sufficient ground for the hypothesis of a special expansion power of the galvanic current. There can hardly be any doubt that the slight expansion which the water-inclosed wire still shows is simply and alone due to the heat remaining in it.

Magnetic Equivalent of Heat.—In Lamin and Roger's decisive experiment establishing the production of heat through disappearance of magnetism, the soft iron of an electro-magnet was placed in the reservoir of a large thermometer of oil of turpentine; on sending an interrupted current through the spiral, it was observed that the liquid expanded. The conclusion hence drawn was, that during each magnetization a part of the electricity goes into the iron, producing magnetism, and that at the moment of demagnetization this magnetism is transformed into heat. In further investigating this subject, Cazin employed three different methods of experimentation. In the first, the iron core was inclosed in an hermetically-closed vessel filled with petroleum, and surrounded by the magnetizing spiral. From the vessel proceeded a capillary tube, also containing petroleum, and the changes of level in it were observed when the core was magnetized by an interrupted current. But inasmuch as change of level might arise, not from heat-action, but from the expansion of the iron by magnetism, the following experiment was arranged:

Into the vessel containing the liquid and the iron core were introduced some closed glass tubes, which displaced a third of the liquid; the vessel was then closed, and the experiment repeated. If the expansion of the iron were the cause of the change of level, this must now be the same as in the experiment without the glass tubes; if, on the other hand, the change of the level were due to the heat produced, it must now be different, for, instead of three volumes of liquid, two volumes of liquid and one volume of glass were heated by the same quantity of heat. The experiment then revealed a difference, which corresponded to the difference of the specific heats and confinements of expansion of petroleum-oil and glass.

It was thus proved that the discontinuous magnetization of an iron core produces heat.

In another method for demonstrating and measuring this heat-effect, the core was an iron tube, closed at both ends with corks, and inclosing the bulb of a common thermometer. Here, again, there was heat-action when the spiral was traversed by an interrupted cur-

rent. In the third method a differential thermometer was used, consisting of two hollow iron cores, communicating by a capillary tube in which was a liquid index: every heat-action in the one core was followed by an expansion of the contained air, and displacement of the index.

In order to determine the cause of the development of heat, M. Cazin proceeded as follows:

Round the iron core in the petroleum thermometer two coils of 480 turns were passed, one of them being in the interrupted magnetizing circuit, while the other formed a special circuit, which at each turn of the interrupting apparatus was closed. The first coil could now induce a current in the second, if the closures of the two circuits took place at the proper times, as might be arranged at will. These experiments gave the greatest development of heat when the circuit of the second spiral remained continually open. The heat was not altered when the circuit was closed at closing of the magnetizing current. There is thus no thermal action during the variable period of closure. Lastly, the heat was smaller when the circuit of the second spiral, during the opening of the inducing circuit, was closed; it went down as much as the half. "It thus proved that the production of the magnetic heat takes place during the opening of the voltaic circuit; consequently, that it accompanies the disappearance of magnetism in the core."

The decrease of heat in this last case is explained on the principle of thermo-dynamics. The disappearance of the magnetism is the cause of the appearance of a certain quantity of heat. When no circuit is near, in which an induced current can arise, then the whole of this heat appears in the core; but, when induction occurs, a part of the heat appears in the induced circuit, and the rest remains in the core. The cessation of the magnetization is an operation in which the magnetic energy decreases and is transformed into heat-energy, either in the core or in the neighboring masses which are in a position to be the seat of induction phenomena.

Improved Electric Railway-Signal.—A simple and effective application of electricity to railroad signaling is in use on the Boston, Lowell & Nashua Railroad. The apparatus is described and illustrated with a woodcut in the *Scientific American*. Its principle will be readily understood from what follows: A single-cell Callaud battery is connected to the two rails at one end of a given section of the line (say two miles in length), each section being insulated from adjoining sections. At the other end of the section the signal has an electro-magnet similarly connected to the two rails. When the circuit is closed, as is normally the case, the magnet is excited and the signal controlled thereby, so as to show that the line is clear. But when a train enters on the section, then a shorter circuit is made by the wheels and axles, and the current returns to the battery by this course instead of passing through the signals. The magnet ceases now to attract, and the signal, by mechanical means, is at once turned to indicate danger. It is ob-

vious that this must occur as long as a single car remains on the track, or when the circuit is broken by a displaced or broken rail, or any other cause. Hence the device may be applied over an entire line, and will indicate the condition of every section to a train about to enter on the same. It is not affected by changes of weather.

ELIO, JOAQUIN, a Spanish general, died in January, 1876, very much advanced in years. He was educated for service in the royalist army in Spain, in which he obtained his first commission. During the progress of a stormy public career, he served under many governments. In 1860 he commanded a part of the Carlist insurgents, and during the last Carlist War he also acted with Don Carlos, by whom he had been threatened with the loss of his command, and with court-martial, on several occasions. In 1860 he was captured by Queen Isabella's forces, and was only saved from death by the clemency of the Queen. On that occasion, he wrote a letter to the Queen, in which he promised never again to take part in any movements against her; but, nevertheless, he fought in the Carlist War against her son, Don Alfonso. Don Carlos appointed him in 1873 captain-general of the Carlist forces, and Minister of War. He conducted the operations of the Carlist forces against Bilbao, and the defense of the line of Sommorastra, in 1874, and, when the Carlists were repulsed there, he resigned his position, but remained with the army.

ENGINEERING. The art of engineering has made great strides in late times, and, with the growth of commerce, has been put more and more into requisition to devise and construct shorter and easier avenues of communication. In all progressive countries gigantic works are constantly in progress, requiring millions of outlay and years of labor, while still greater undertakings are being seriously proposed, such as would formerly have been considered fond and idle dreams. Among them may be mentioned the connection of the Black Sea with the Caspian by a ship-canal; the construction of an artificial channel between the great rivers of Central Africa, so as to make a navigable water-way across the continent; the cutting of a passage between the sea and the low bed of the great African Desert, by which a great portion of the sandy waste would be submerged, and wide districts rendered fertile; the building of a great ship-canal through Southern France from the bay of Biscay to the Mediterranean; the widening and deepening of the Seine, so as to make Paris a seaport.

It is worthy of note that the chief engineering projects of the most recent times look toward the extension and improvement of water-communication. The construction of a ship-canal through the American Isthmus, which has long been a cherished project of the American people, may be said to be on the

way to be realized. The commission appointed by the United States Government to consider its feasibility, and select the best route, have presented a final report; and treaties are in progress with other countries concerning it. The Dutch have achieved a great engineering success in the completion of the North Sea Canal, which makes a seaport of the city of Amsterdam, floating the largest vessels, and allowing direct steamboat communication with foreign ports. The St. Gothard Tunnel is approaching completion; but its undertakers have been greatly dismayed by the discovery of an enormous miscalculation in the estimates of cost. Extensive and costly experiments upon the proposed railway-tunnel through the chalk-beds underlying the straits of Dover are undertaken, and will amount to a commencement of the work, if it shall be found feasible. In Italy we see the completion of an enterprise which has been pursued for many years, by which a large tract of land, submerged for ages, has been recovered to agriculture. Other similar works are proposed for the reclamation of the wide ranges of land which lie waste in that country, covered with disease-generating marshes; while in Holland a plan is seriously entertained by the Government for the draining and fertilization of the bed of the Zuyder Zee, which would increase the territory of that country about one-sixth, and afford a permanent revenue of millions of francs to the Government. The long-expected Russian railway across Central Asia has not yet been practically commenced, though the project is gaining favor. In our own country, the great works of river and harbor improvement, which have been carried on by the Government, are still under vigorous prosecution; the chief results of this year's labors have been the clearing away of Hallett's Reef, one of the most serious obstructions in the East River channel (*see* article HELL-GATE), and the deepening of the chief outlet of the Mississippi (*see* below).

The survey which has been conducted by the commission of the American Government for five years past upon the isthmuses of Panama and Nicaragua, with reference to a ship-canal, has been completed within the year, and final reports have been presented to the President. The route which was found most promising and practicable was one across the Nicaraguan Isthmus, by way of Lake Nicaragua. Four other proposed routes have been carefully examined. The one across the isthmus of Panama, formerly much thought of, was found to present the greatest difficulties. J. C. Trautwine, chief-engineer of the Panama Railroad, lately expressed an opinion that a canal over that route would cost not less than \$300,000,000! The survey across the isthmus of Tehuantepec, under Commodore Shufeldt and Engineer Fuertes, showed that the line proposed by those engineers by way of the river Coatzacoaleos would require the construction of as many as 140 locks, which, in connection with

the deficient water-supply, was enough to condemn the plan. The route between the gulf of San Blas and the river Chepo or Bayanos has been supposed to be a specially desirable one, because the tides from both oceans are nearer together at this point than elsewhere; but the survey revealed insurmountable difficulties, even after an eight-mile tunnel should have been cut. A survey from Caledonia Bay out discovered no pass at a less elevation than 1,000 feet. Several other routes which were surveyed showed difficulties still more formidable. The Government has expended about \$60,000 in this investigation.

The treaties with foreign powers are to be made on the basis of the Clayton-Bulwer Treaty of 1850, guaranteeing the neutrality of the canal. The estimate of the cost returned by the commission is \$65,722,157; but several practical engineers, who have examined the route, conjecture that obstacles will be encountered which will increase the cost to nearly \$100,000,000. The work cannot be completed in less than five years of hard labor; but if it is sustained by the leading governments, it is supposed that it will not be delayed or abandoned for want of funds. The distance to be excavated is 61½ miles, and the total length of the canal, including 53 miles of slack-water navigation, by way of the San Juan River, and 56 miles across Lake Nicaragua, will be 180½ miles from ocean to ocean. For a number of years there has been a considerable and increasing transportation traffic by the way of Lake Nicaragua and the San Juan River. Whether a ship-canal across the Nicaraguan Isthmus would draw any of Europe's trade with the East from the Suez Canal is doubtful; but the benefits it would afford to the American trade with the East and the Pacific coast, and the improved communication it would render between the western side of the North and South American Continents, and the whole commercial world, would be much more than commensurate with its cost.

An American engineer, Henry C. Spalding, has broached a scheme for letting the waters of the Black Sea into the Caspian through an artificial channel-way, thus greatly enlarging the area of the latter sea by the submersion of comparatively sterile tracks, but immensely improving the fertility of the surrounding regions, and giving Russia maritime communication with the commercial world, and a broad sea-coast. His project is to cut a canal, 150 metres wide, from a point in the basin of the Caspian Sea, which is 15 metres below the level of the Black Sea, in a westerly direction to such a point that it will have a depth of 10 metres; from there a narrower cutting is to be carried on to the Black Sea. This narrower channel, he calculates, should have a depth of three metres where it strikes the Black Sea, and a width of 50 metres; through this the water would flow with a velocity of 12 kilometres an hour, and, where it gives into the larger

channel, would have a fall of 10 metres, which would give it a tremendous excavating power. It would take about six years, he reckons, to complete the excavations, and then about forty years for the waters of the two seas to approach near enough to a level to allow of navigating the canal. This time can be shortened to twenty-five years, he further proposes, by connecting the rivers Don and Volga through another cutting.

The scheme of letting the waters of the Atlantic into the desert of Sahara is gaining favor. M. de Lesseps has expressed his opinion that it can easily be realized, and advocates also the connection of the Congo and Zambesi rivers by a canal at the point where they approach each other within eighteen miles, both being navigable at that point. He considers that the climate of Europe would be improved, if anything, after the submersion of the desert, and suggests that the fertile oases are all above the ocean-level.

Reports on the improvement of the mouth of the Mississippi show that the work is progressing, and that satisfactory results have already been attained. Grand Bayou has been closed, and the water which passed through it now makes its way through the pass, increasing the current and its scouring force greatly. The width, depth, and straightness of the channel are improved, and a recent statement of Captain Eads shows an average depth of 20 feet through nearly the whole length, the exceptions being a spot near the upper end of the pass, and one within 1,000 feet of the lower end of the jetties, about 75 feet together, where the depth is 19 feet in the shallowest places. Captain Eads declares that the alluvium carried out of the pass on the jetty system is not deposited so as to form a new obstruction outside; but that, on the contrary, a large lump at the mouth of the South Pass has been cut through by the increased strength of the current, and is being gradually worn away. A series of dikes and wing-dams is in process of construction in the pass above the jetties, which is intended to reduce the width of the channel gradually from 5,000 to 800 feet, and accelerate the scouring out of the pass.

The Dutch opened the new North Sea Canal, in the summer of 1876, amid festal rejoicings. This canal, although but fourteen miles long, is of immense utility to the commerce of the country, and of the highest importance to the prosperity of Amsterdam; and its construction was attended with such difficulties as to place it among the highest order of engineering achievements. A great part of its course is over tracts which were submerged by an arm of the Zuyder Zee, and had first to be pumped dry to allow the bed of the canal to be dug out. To prevent the sand-hills near the sea from choking the canal, huge locks had to be constructed. One of the locks is 815 feet long and 59 wide, and another ship-lock is 239 feet

by 46; and both are built upon no fewer than 8,896 piles. The tremendous driving force of the storms on the North Sea, and the shifting sands of the coast, gave rise to difficulties which taxed all the resources of engineering skill. The plans of this great work were devised by the English engineers Sir John Hawkshaw and Darnton Hutton. The canal receives vessels of any tonnage. At intervals it is enlarged into basins like the Suez Canal.

The plan for draining the Zuyder Zee was pronounced practicable and advisable by a Government commission in 1873. During the last couple of years it has been much discussed in the Legislature, in the chambers of commerce, and by the press; and there seems every likelihood that its practical execution will soon be commenced. The most difficult part of the work will be the construction of a great dike across the lake, from the town of Enkhuisen to the island of Urk; and then, with two angles, to Kampen, on the east side. The length of the dike is to be 40 kilometres, some 25 miles, with a height of 8 metres, or 26 feet, above high-water level, and a breadth of 50 metres, or 164 feet. Double sluices at Enkhuisen, Urk, and Kampen, will communicate with the sea. Alongside of the dike a canal will be made on the inside, and on the interior *berm* will be the tow-path and a railroad. The plan for draining the lake is to divide it into squares, which are to be successively pumped out by immense steam-engines into canals of discharge, which will convey the water into the large permanent canals of maritime communication, leading into great reservoirs, from which the accumulated water will flow out at low tide. Large commercial canals will be constructed between the harbors now situate upon the lake, of dimensions approaching those of the new North Sea Canal from Amsterdam. The largest of the canals will be one from Enkhuisen to Amsterdam, and one starting near Harderwyk, and going along the southern shore to Huizen, then turning toward the Pampas, and joining the other line. Of the smaller order of canals, there will be four principal lines, two parallel, running southwest and northeast across the bed of the lake, and two intersecting ones. For the completion of the drainage, thousands of small trenches and ditches must be cut over the entire bottom in every direction. The construction of bridges and sluices will present greater difficulties than the work of canalization. Three several kinds of sluices will have to be made—the great double sluices at Urk, Enkhuisen, and Kampen; and a score of others of the same construction at all the crossings of canals, the simple sluices for the outflow of water, of which there will be three by the side of the three great double sluices, and the small sluices for irrigation, of which there will be great numbers distributed over the entire surface of the reclaimed lands. The mean depth of water to be drawn off is es-

timated at $3\frac{1}{2}$ metres. If 9,400-horse power is applied it is calculated that the lake will be drained in about two years, at the rate of 4,500 cubic metres per minute. The only efficient power here applicable is supposed to be the steam-engine. After the steam-pumps have done their business, dredges will have to be employed to dig out the bottoms of the canals, and clear away the mud, where large structures have to be built. For the foundation of many of the heavy structures it will be necessary to sink piles and bundles of fascines, as has been done in the making of the great Amsterdam Canal. The entire work, it is estimated, can be completed in from twelve to sixteen years. The surface drained will be 196,670 hectares, or about 795 square miles, of which area about one-tenth will be taken up by roads and canals. It is supposed that, with all allowances, there will be about 150,000 hectares of fine, tillable land. The expense of the undertaking is estimated at 240,000,000 francs, a large estimate, exclusive of interest. If the Government should carry out the undertaking, as seems most likely, it is calculated that it would bring in, after completion, an annual revenue of 1,880,000 francs.

Two enterprises for the reclamation of large submerged tracts are successfully in progress in Italy. The Ferrara Marshes, in Northern Italy, are being drained by means of steam-pumps, constructed by John and Henry Gwynne, of Hammersmith, England. The area to be reclaimed is 200 square miles. The engines lift 2,000 tons of water per minute through an average distance of seven feet three inches. The maximum lift is twelve feet. The water is discharged into the river Volano, at Cordigoro. Another large enterprise is the drainage of Lake Fucino, which lies about 55 miles east of Rome, and has an area of sixty-one square miles, by means of a siphon 1,500 yards long, from canals which have been dredged out at the bottom. The works have been going on many years, at the expense of the late Prince Torlonia, and the enterprise will soon become remunerative. This area was drained by the Emperor Claudius, and the ancient works were suffered to go to decay in the middle ages. The project was at first designed to restore the Roman works, and a company was formed in 1855 for that purpose, and the work was intrusted to M. de Montricher, a well-known French engineer. This was found impracticable, and, the Prince Torlonia assuming the entire responsibility, the present works were constructed. About 50,000,000 francs have been expended upon them thus far.

There are suggestions of extensive improvements in the harbor of Genoa, and various plans have been proposed for the work. It has long been the dream of the Genoese to make their harbor the best in the Mediterranean, and regain their ancient commerce and prestige on the sea. A nobleman of Genoese birth, it is said, has presented the city with the sum of

20,000,000 francs, to be devoted to harbor improvements.

The tunnel under the English Channel, for the commencement of which companies have been formed in London and Paris, it is proposed to construct on the route proposed by Sir John Hawkshaw, from St. Margaret's Bay to a point near Sangatte on the French coast. In this course it is expected that it will pass through chalk-beds the entire way, while in the route proposed by M. Thomé de Gamond it is known that several different strata would be encountered. The distance across the Channel in the proposed course is 22 miles, which, with the long approaches necessary, would make 31 miles altogether. Shafts are to be sunk on either shore to the depth of 450 feet below high-water mark. At that depth driftways are to be driven, which will serve for the drainage of the works when in progress, and of the tunnel permanently. The tunnel will commence 200 feet above the driftway, with an inclination of one foot in eighty down to the junction with the driftway, and then of one foot in 2,640 to the centre of the Channel, where it will meet that driven from the other side. The dimensions of the tunnel will be those of an ordinary railroad-tunnel for two tracks. A driftway, nine feet in diameter, it is proposed first to carry entirely through, which can afterward be enlarged to the size of the tunnel. A machine for tunneling in chalk has been invented by Dickenson Brunton, an English engineer, which has been successfully tried upon the bed of gray chalk through which the tunnel is to be made. It works similarly to an ordinary board-auger, cutting off the chalk in slices, which fall upon an endless band, and are loaded upon wagons. The machine, it is found, can cut a driftway of seven feet diameter at the rate of something over a yard an hour. At that rate it would take two years to complete a driftway under the Channel with a machine starting from each side. The expense of completing such a driftway is estimated at £800,000, including interest upon the outlay. Engineers and contractors of experience have calculated that, after the driftway should be completed, it would take four years' time and £4,000,000 only to enlarge it to the dimensions of a railroad-tunnel, and to construct the junctions with the railways on either side. It seems certain now that the commencement of this work will soon be made and its practicability tested. The companies which have been formed for this purpose are to unite with the French and English railways interested, and with the Rothschilds of London and Paris, in making up the sum of £160,000, to be expended upon sinking a shaft on either side to the depth of 450 feet, and driving a headway a short distance under the sea.

The project of a tunnel under the North River from New York to Jersey City, for railway transportation, for which a company was formed some time ago, gave rise to a long

contention in the courts with the Delaware & Lackawanna Railroad Company. The tunnel company has come out victorious in the litigations, and nothing now lies in the way of the enterprise. The works were begun a long time ago, and now will probably be pushed forward to a speedy completion. The capital stock of the company is to be \$15,000,000, of which, it is said, \$10,000,000 has already been subscribed; Senator Jones, of Nevada, is said to be an active promoter of the enterprise. The project was first advanced by D. C. Has-kin, of New York, who is the president of the corporation. The beginning of the work was the sinking of a vertical shaft lined with brick masonry of three or four feet thickness, having a diameter of 30 feet, in Jersey City, at the junction of Jersey Avenue and Fifteenth Street. When the shaft shall have been sunk to the depth of 65 feet, the horizontal cutting will be commenced. The direction of the tunnel will be northeast and southwest. It will have a length of about two miles; the terminus on the New York side will be near Washington Square. It will descend from both ends toward the centre in a gradient of two feet in 100. The diameter of the tunnel is to be 26 feet. Its roof will be nowhere less than 35 feet below the bottom of the river, so that there will be no danger from the anchorage of vessels. Little blasting will be required, and the two or three veins of rock which will have to be penetrated are of soft substance; the first vein of rock to be encountered crops up about 1,100 feet from the New York side. After a few feet of the lateral tunnel shall have been excavated, an iron cylinder will be introduced, in which the workmen will be protected when driving forward the tunnel. The cylinder will have hinged doors, and be provided with an apparatus and tubes for introducing compressed air from the surface.

There is a proposal to carry a telegraphic wire across the African Continent, from Khar-toom, where there is telegraphic communication with Alexandria, at a distance of 1,100 miles, to Delagoa Bay, the terminus of the Cape lines. The distance between these points is 2,300 miles; but extensions are in progress which will shorten it to 1,500 miles. It is suggested that the trees might be utilized as telegraph-poles, and that depredations of the natives, who might covet the valuable iron of the wires, might be prevented.

The Dutch Government have issued proposals for the improvement of the harbor at Batavia, the capital of the island of Java and of their East Indian possessions. The only communication between the town and the present harbor, which has an excellent roadstead, has been by a canal 8 or 10 feet deep at low tide. The present accommodations are entirely insufficient for the large steamers which are employed in the Oriental trade, since the opening of the Suez Canal. It is therefore proposed to construct a new harbor

at Tandjong-Priok, to be formed by two breakwaters, 1,968 and 1,743 metres in length respectively, and rising 2½ and 1½ metres above low-water mark, with two inner harbors, of which only one is to be constructed for the present, each having a length of 1,100 metres, and a basin 7½ metres deep and 175 metres in width. The entrance to the outer harbor will be 250 metres wide and 8 metres deep at low water. There will be 1,500 metres of quay, and a channel 50 metres wide leading to a coaling station. Between the harbor and Batavia a canal, five miles long, and a railroad, are to be built. The cost of the entire works will be \$15,000,000; but for the portion to be constructed forthwith the estimate is something more than half that amount.

The first wire carried across between the towers of the Brooklyn Bridge was fastened on the 22d of September. This great work, after seven years of labor and the expenditure of \$6,750,000, is still a long way from completion. The entire estimated cost of the completed structure is now set at about \$11,250,000, or more than double the original estimate.

The contract for the construction of the proposed railroad-bridge at Poughkeepsie, over the Hudson River, has been taken by the American Bridge Company, of Chicago. The main part over the water will consist of five spans of 525 feet each between the centres of the piers, whose breadth will be 25 feet. The bridge will be of the description called the under-grade or deck bridge, and will have two tracks and sidewalks, and an under and upper deck, the latter carrying the two railroad-tracks, and the other a carriage-way of 16 feet clear width. Each span is to have two trusses, 25 feet between centres, of the rectangular description, with double intersections; the material will be iron and steel combined. The trusses are to be 58 feet high, and the top of the piers 135 feet above high-water mark, so that the elevation of the track above the river at high tide will be 193 feet. The approach on the west side of the river will have one span of 160 feet, formed by two trusses, 30 feet in height. The long approach on the other side, extending across the town, will be composed, as far as Water Street, of iron trestling, formed by three post-bents strongly braced, and four lines of stringers of iron lattice, making spans of 20 to 60 feet. Across the Hudson River Railroad grounds, Water Street and Dutchess Avenue, will be two spans of 25 feet depth. Beyond, as far as the opposite side of Tallmadge Street, where the approach ends, will be iron trestling, except at the crossings of Tallmadge and Delafield Streets, over which will be made two 90-foot spans. The entire length of the bridge and approaches will be 4,500 feet. The plan of the bridge proper is a suspended girder, with parallel and cradled cables, and two decks. The girder, 1,680 feet in length, will be of wrought-iron. The supporting towers will also be of wrought-

iron. The cables are to be of steel links and pins, which are required to possess a final breaking strength of at least 80,000 pounds to the square inch, and which will be subjected to a tension in the bridge of 20,000 pounds per square inch. The pins are to have the form of a perfect cylinder between head and nut. The links near the middle of the span will be 25

feet long between the centres of the eyes, and as they approach the towers are to be longer in such proportion that the horizontal distance between the eyes shall remain 25 feet. The largest links in their middle will not have a greater sectional area than eight inches. The towers below the track of the railroad will be formed of cells of wrought-iron, and above the

SUSPENSION-BRIDGE OVER THE EAST RIVER, BROOKLYN, N. Y.

track will have eight columns 80 feet high and 11 feet in diameter. Each chamber in the lower tower will have twelve saddles and two pairs of compensating levers. These and their attachments will be carried by a frame that extends in both directions across the saddle-chambers and over the heads of all the columns of the tower. All the parts of the saddles and the lever attachments for the stay system will be worked in together upon this frame; and so that the parts will move together sufficiently to compensate the expansion and contraction of the main back-stays beyond what the tower itself sustains. The saddles will move by steel rollers upon steel faces under the carrying-frame. The anchorage of the cables will be in the solid rock at both ends. It is expected that this bridge will pave the way for a new railroad to the West, with a route between New York and Chicago only 921 miles long, a saving of 50 miles over any existing line.

A new bridge is to be constructed at Montreal, about four miles from the Victoria Bridge, which is to be called the Royal Albert Bridge, and will be the longest structure of the kind in the world. Its whole length, including the portion built over the land, will be 15,500 feet, almost exactly three miles. It will start from the level of Sherbrooke Street in Montreal, and pass through the town at the height of about 90 feet, with distances of 150

to 200 feet between the piers. Between the city and St. Helen's Island, whose centre is of the same elevation as the roadway of the bridge, there will be six spans of lattice, one of 550 feet and the rest of 300 feet. The roadway will have but a single track; but on the island side-tracks and a crossing-station will be made. From the centre of this island to the water's edge four spans of 240 feet will be required. On the other side of the island there will be twenty-one spans of 200 feet to the other channel, and over that five spans of 200 feet, the roadway on this side having a falling gradient of 1:100. On the lower side of the river embankments will be made, and connections established with the Montreal, Portland & Boston, and the Grand Trunk Railroads. At the other end there will be a junction with the Quebec, Montreal, Ottawa & Occidental Railway; the distance between the two junctions is five and a half miles. In the navigable channel the piers, which will be like those of the Victoria Bridge, with heavy ice-breakers, will have to be put down with caissons, in a channel 40 feet deep, where the current is seven miles an hour. The superstructure will be of iron lattice-work, each pier being crossed by four girders, placed 18 and 14 feet apart; between the inner girders will be two street-car tracks; between them and the outer girders will be the roadways for teams, and on pro-

jecting cantilevers outside will be suspended two walks for pedestrians. Upon an upper boom, 15 feet above the street-car track, will be the railway track, and on each side of it a roadway for carriages. The height of the upper floor will be 200 feet above the water. The estimated cost is \$5,000,000. The maximum load which the bridge is calculated to bear is 12,500 pounds per lineal foot.

The Gilbert Elevated Railroad Company, after long contentions in the courts, is now in a position to complete its line of elevated steam-railway for rapid transit in New York City. The route is from the Battery, through College Place, West Broadway, South Fifth Avenue, Amity Street, and up Sixth Avenue. Upon some portions of the line the supports have been erected for some time. The structure consists of two rows of iron columns standing in the street, supporting parallel girders, which are connected at intervals by cross-girders, and having longitudinal floor-beams. The outer girders rise above the track so as to be a protection in case of accidents; the upper surface of their top-beams being on about the same level as the car and landing platforms. The Sixth Avenue columns will be 37 feet apart lengthwise, and 28 feet distant across, from centre to centre. The parts of the columns will be two channel-bars, 9 by 2½ by ¼ inches; two plates, 12 by ¼ inches; a plate fastened to the foot; and four pieces of angle-iron bars. The girders are pinned trusses, 6 feet deep, and 5 feet 6 inches distance between the centres of the pins; the upper and lower chords are composed of two channel-bars, united by iron plates. Each span of the longitudinal girder has four panels. The cross-girders are made up of plates, 24 inches deep by ¼ of an inch in thickness. At the junction of Amity Street and Sixth Avenue there will be a curve of 90 feet radius, and at South Fifth Avenue and Amity Street another like curve. Fifty-two feet in a mile will be the steepest grade. In Amity Street, College Place, and West Broadway the posts are to be placed on the sidewalk, and in Sixth and South Fifth Avenues in the roadway. The cross-ties will be 19 feet 6 inches long, and will be placed 18 inches apart. Outside each line of rails longitudinal timbers will be bolted, letting down upon the cross-ties on the outside. The total load which the structure is calculated to support is 15,000 pounds per foot on each track. The stations will be situated at the intersections of streets to the number of two per mile. The station-platforms will be level with the car-floors, and 160 feet at least in length. The station-buildings will have iron frames, and will be roofed and sided with galvanized sheets of corrugated iron. The tracks are of steel, weighing 56 pounds per yard.

ESQUIROS, HENRI ALPHONSE, a French writer and politician, born in 1814; died May 14, 1876. In 1834 he made his *début* as a writer with a volume of poems, entitled "Les

Hirondelles," which attracted but little attention. This was followed by two novels, "Le Magicien" (1837), and "Charlotte Corday" (1840). At the same time he published, under the title of "Évangile du Peuple" (1840), a philosophical and radical commentary on the life of Jesus, for which he was sentenced to eight months' imprisonment and a fine of 500 francs. During his imprisonment he wrote another volume of poems, "Les Chants d'un Prisonnier," and 1841-'42 published three small socialistic works. After the Revolution of 1848 he was elected to the Legislative Assembly from the department of Saône-et-Loire. Having made himself prominent by radical views, he was among those deputies who were expelled after December 2, 1851, when he went to England. In 1869, having returned to France, he was elected to the Corps Législatif from the department Bouches-du-Rhône, where he sat on the extreme Left. After September 4, 1870, he administered for a time the department of Bouches-du-Rhône, but, having disagreed with the Government at Tours, he was removed from office. In 1871 he was elected to the National Assembly, and in 1876 a Senator from Bouches-du-Rhône, taking his place on both occasions with the extreme Left. Besides the works mentioned above, he wrote "L'Histoire des Montagnards" (1847), "L'Enlue du XIX^e Siècle," "La Vie future au Point de Vue socialiste" (1857), "La Vie des Animaux," etc.

EUROPE. The area of Europe, according to the latest dates (*see* Behm and Wagner, *Bevölkerung der Erde*, iv., Gotha, 1876), was estimated at 8,823,378 square miles (against 8,824,456 in 1875), and the aggregate population at 309,178,000, against 302,972,000 in 1875. The transfer of 6.59 square miles from Switzerland to Italy has changed the area of these two countries, and new calculations have been made for several other countries. Gains of population are found chiefly in Germany, and in Austro-Hungary, the Netherlands, Luxemburg, Finland, Sweden, Norway, Denmark, Belgium, Great Britain, Portugal, Italy, Roumania, and Servia, where new estimates were substituted. The figures of 1875 and 1876 compare as follows:

COUNTRIES.	Pop'n in 1875.	Pop'n in 1876.
Germany.....	41,000,846	42,738,242
Austro-Hungary.....	35,904,485	37,700,000
Netherlands.....	3,716,009	3,809,527
Luxemburg.....	197,538	206,158
Finland.....	1,832,188	1,892,622
Sweden.....	4,977,973	4,838,291
Norway.....	1,768,000	1,802,583
Denmark.....	1,861,000	1,908,000
Belgium.....	5,258,521	5,334,684
Great Britain.....	32,778,000	33,450,000
Portugal.....	8,990,670	4,395,861
Italy.....	26,801,154	27,482,174
Roumania.....	4,500,000	5,078,000
Servia.....	1,888,506	1,877,088
Total.....	165,299,971	171,427,479

The area and population of the divisions of Europe were, at the latest dates, as follows:

DIVISIONS AND SUBDIVISIONS.	Square Miles in Subdivisions.	Square Miles of Divisions.	Population of Subdivisions.	Population of Divisions.

The Eastern war-cloud which hung over Europe during 1875 continued during the year 1876, and at one time threatened to lead to a general European war. The insurrection in the Herzegovina spread over the whole of Bosnia in the early part of the year. All attempts at pacification failed, the insurgents steadily refusing all propositions of the foreign powers as well as of the Turkish Government. On July 1st, Servia, which had for a long time threatened to make the cause of the insurgents her own, declared war against Turkey, and was shortly afterward followed by Montenegro. But, although the Servians were aided by Russian volunteers, and contributions of arms and money, they were repeatedly defeated by the Turks, so that Servia was forced to invoke the aid of Russia to secure an armistice of two months. The Government of Turkey, in the mean while, had undergone considerable changes. On May 30th the Sultan, Abdul-Aziz, was dethroned by the Sheik-ul-Islam, and was succeeded by his nephew, Murad V., who in turn was removed by the Council of Ministers on August 31st, and was replaced by his brother Abdul-Hamid II. These proceedings had produced a deep impression in the other countries of Europe, particularly in England and Russia. In the former country the excesses committed by the Bashi-Bazouks, the irregular troops of Turkey, in Bosnia and Bulgaria, created a storm of indignation, and called forth a decidedly hostile feeling to the Turks among all classes of the population. Finally, in the latter part of the year, the English Government proposed to the other powers of Europe that a conference be held at Constantinople to settle all questions arising out of the war. Russia, after having in every possible manner aided the Servians, and after a threatening speech from the Czar, was obliged to accede to this proposition, and the conference met at Constantinople on December 12th. The Governments of both England and Russia, however, had previously ordered the mobilization of parts of their armies.

In accordance with the provisions of the new constitution, the elections in France for the Senate and the Chamber of Deputies took place in the beginning of the year, the Republicans gaining a decisive victory in both. The prime-minister, Buffet, resigned immediately after the election, as he had been defeated in four different districts, and he was replaced by M. Dufaure. The most important questions

discussed in the early part of the year were the amnesty questions and the university bill. The latter, which provided that the state universities should have the sole right of conferring degrees, was adopted by the Chamber of Deputies, but was rejected by the Senate. In the latter part of the year the interment question led to a ministerial crisis, in consequence of which Jules Simon replaced M. Dufaure as prime-minister. With regard to the Oriental question, the Duc Decazes, the Minister of Foreign Affairs, declared on November 3d that it was necessary for France to preserve peace, and it would not interfere in the Oriental question until its most vital interests demanded it.

In Austro-Hungary the Oriental question caused considerable trouble. On the one hand, the Slavic subjects of Austria showed their sympathy for their oppressed brethren in the Turkish provinces in many ways. On the other hand, the Hungarians, partly on account of their hostility to everything Slavic, and partly through race-affinities (being besides the Turks the chief representatives of the Mongolian race in Europe), were entirely in sympathy with the Turks. Several demonstrations to this effect occurred in Hungary, which were suppressed with considerable difficulty. The conflict between the Government and the Catholic Church continued during 1876. The marriage law which was passed by the Reichsrath was disliked by the bishops. The monastic association law, after being passed by both Houses, was not signed by the Emperor, but the ministry declared that the Government would bring in a new bill in a different form. The differences between the two parts of the empire were brought to a close in May by a treaty in which all points except the bank question were satisfactorily settled. The latter continued to be a source of trouble, and was the cause of a panic.

The Royal Title's Bill was, next to the Eastern question, the most important subject discussed in England in 1876. The object of this bill was to give to the Queen the additional title of Empress of India, and thus strengthen the English hold upon the natives of India. The difficulties with China were brought to a close this year, after having threatened at a time to lead to a war, the Chinese Government making some important concessions. An animated discussion of the extradition treaty between England and the United States threatened for a time to overthrow the Ashburton Treaty of 1842.

In Germany the war of the Government with the Roman Catholic bishops continued during the year. The Bishops of Münster and Paderborn, and the Archbishop of Cologne, were removed from their offices, and only saved themselves by flight from imprisonment. The Arnim affair, or rather the conflict between Prince Bismarck and his former ambassador in Paris, Count Harry von Arnim, came to an

end in 1876 by the total defeat of the latter. A plan of the Imperial Government to bring all the railroads in the empire under its control, while being supported by Prussia, met with a bitter opposition in South Germany.

In Italy the financial condition of the country seemed to be improving, as, according to the budget of 1876, there was to be a surplus of 2,000,000 lire. The plan of the ministry to buy up the railroads led to a ministerial crisis, which ended in the resignation of the Minghetti ministry in March, and the formation of a new body under Depretis, the leader of the Left. The elections for the Chamber of Deputies in November resulted in a decided victory for the Government. In order to secure to the Liberal party a majority in the Senate, the King created thirty-two new senators on November 17th.

In Spain the Carlist War was brought to a close in February, and the country enjoyed for the first time in many years internal peace. In the Cortes the new constitution was adopted in May. Although this document guaranteed full liberty of conscience, the restrictions of the Protestants continued to such a degree that England and Germany were forced to interfere.

In Denmark the old conflict between the Government and the Lower House continued during 1876, the House repeatedly refusing to vote for the budget. The socialists caused considerable excitement, being very active, although in a considerable minority.

EVANGELICAL ALLIANCE. The eighth annual meeting of the Evangelical Alliance for the United States of America was held in New York City, January 31st. Mr. William E. Dodge presided. A resolution was adopted commending to the Branch Alliance in Philadelphia "the consideration of the expediency and practicability of special religious services during the time of the International Exposition of 1876 in that city, illustrating the unity and power of our evangelical Christianity, and the relations of the religion we teach to the progress, perpetuity, and true glory of the American Republic, and the world's civilization and salvation." The Philadelphia branch was also "respectfully requested to embrace suitable opportunities for acquainting distinguished visitors to the International Exposition with our Christian and philanthropic institutions." A committee was appointed to cooperate with the Philadelphia branch in carrying out this measure. Reports were read from the Wisconsin, St. Louis, and Newbern branches. An account was given of the proceedings of the first Biennial Conference of the Alliance, which was held at Pittsburg, Pa., October 26 to 29, 1875. (See ANNUAL CYCLOPEDIA for 1875.)

In March, 1875, a committee of the Alliance had addressed a memorial to the Board of Education of the City of New York against a proposition from the trustees of the Roman Catholic parochial schools of the city to have a part of

the public money appropriated to the support of their schools.

A memorial addressed by the Alliance in 1874 to the Turkish ambassador at Washington, in behalf of persecuted Christians, and in favor of religious liberty in the Turkish Empire, had been brought to the attention of the Government at Constantinople. In behalf of his Government, the ambassador denied that the Christian subjects of the Turkish Empire had any cause of complaint in the matter referred to. (The grievances of the Turkish Christians are related in the ANNUAL CYCLOPEDIA for 1875.) But, during the year, these complaints had been continued. The Sultan had lately promised important reforms, and, among them, better security for religious liberty. In accordance with the direction of the executive committee, the secretary and treasurer of the Alliance had remitted, semi-annually, to Mesdames Pronier, Carrasco, and Cook (the widows of the three delegates to the General Conference of the Alliance of 1873, who lost their lives by the sinking of the steamer Ville du Havre), the interest of the funds raised by the American friends of their deceased husbands. The funds were invested in the following amounts: Cook fund, \$7,000; Carrasco fund, \$5,000; Pronier fund, \$5,000. The "Conference fund," or the surplus left from the sums contributed for the General Conference of 1873, amounted to \$6,000, and was safely deposited. In view of the continued financial pressure, it was proposed to conduct the Alliance for the ensuing year without expense for salary or office-rent.

The annual conference of the Evangelical Alliance (British branch) was held at Southport, beginning October 3d. The report of the secretary for the past year spoke of an increase in the number of members and the formation of new branches. Mention was made of the interest which had been taken in the Alliance by the Queen and the Empress of Germany. An address had been presented to the Prince of Wales on his departure for India. The Alliance had been very earnest in efforts in behalf of the Christians in Turkey, and the credit was claimed for its committee of having been the first body—more than a year previously—to call the attention of the Government to their condition. The Emperor of Germany had offered a cordial welcome to the members of the Alliance, if they should desire to hold a conference in Berlin, and it was suggested that the invitation might be accepted in 1878. During the sessions of the Alliance a number of papers were read, principally upon subjects bearing upon the condition of Christianity on the Continent of Europe. An important paper was also read by the Rev. James Stephenson, of Dublin, on "The Power of the Evangelical Alliance, and how here to use it for Local Purposes."

EVANGELICAL ASSOCIATION. The following is a summary of the statistics of

the Evangelical Association as they were published in September, 1876:

CONFERENCES.	Itinerant Preachers.	Local Preachers.	Members.	Churches.
East Pennsylvania.....	109	72	15,959	205
Central Pennsylvania....	85	69	11,157	154½

The total number of children baptized was 7,397; of adults baptized, 1,429; probable value of churches, \$3,619,468; number of parsonages, 379½; probable value of the same, \$465,985; amount of conference contributions, \$4,787.75; of contributions for missions, \$66,300.57; of contributions for the Sunday-school and Tract Union, \$2,189.17; number of Sunday-schools, 1,743; of officers and teachers in the same, 19,551; of Sunday-school scholars, 105,566. The *Missionary Society* of the Evangelical Association supported, according to the last annual report of the corresponding secretary, 289 missions, both home and foreign: 277 of these missions were supplied by the respective annual conferences with 301 missionaries. The *Sunday-school and Tract Union* of the Evangelical Association was organized in 1859. It has published a number of Sunday-school books and tracts, and aids Sunday-schools in procuring libraries.

The annual meeting of the *Missionary Society* of the Evangelical Association was held at Indianapolis, Ind., October 27th. The treasurer reported that the receipts for the year had been \$65,807.13; the total expenditures had been \$82,000. The amount of the heathen-mission fund now in the treasury, after allowing for \$1,299.95 spent during the year, was \$27,729.53. The standing fund amounted to \$52,907.73, having increased \$3,739.88 during the year. The corresponding secretary reported that the heathen mission had been established in Japan, and the first detachment of missionaries, three in number, had been sent out. The home-missionary work exhibited an encouraging degree of prosperity. The number of missions had been increased, and all had made some progress. The work on the Pacific coast was advancing steadily. The first camp-meeting ever held on that coast had been held in Oregon during the summer, and the Pacific Conference had been organized. The work in

Europe was in a flourishing condition, and the number of members in the missions there had increased. This work extended over Wurtemberg, Baden, Alsace, Saxony, Switzerland, and a part of Prussia. Seven churches had been built during the year in the European district, giving an increase in valuation of church property of more than \$38,000, in gold. A building-lot had been bought at Stuttgart, and help was asked in building a church there. This society was organized in 1839, and the first four regularly-appointed missionaries were sent out in that year. The first missionary was sent to Europe in 1850. Now, the society had a very large mission-work in the United States, employing more than 800 missionaries, and had in Europe one annual conference, a Sunday-school work, a branch publishing-house, and a seminary for young preachers. The increase in the European missions was 25 per cent. annually, the number of members having doubled during the last four years.

The annual meeting of the *Board of Publication* of the Evangelical Association was held at Cleveland, Ohio, October 31st. The book agent reported that the amount of cash and its equivalents in his hands on the 1st of September was \$35,004.12, or \$11,236.51 more than the amount on hand during the same period of the previous year. The total resources of the Board were \$336,971.45, against \$3,846.55 of liabilities, showing the net resources to be \$328,124.90. The net gains on the business of the year had been \$21,916.40. The report of the sixteen periodicals showed that they had an aggregate circulation of 183,775 copies, or 69,567 more than were circulated in the previous year.

EXHIBITION, CENTENNIAL. The International Exhibition of Arts, Manufactures, and Products of the Soil and Mine, to which the citizens of the United States had been looking forward with eager anticipations, was opened in Fairmount Park, Philadelphia, on the 10th of May, 1876. In the last volume of *THE ANNUAL CYCLOPEDIA* was given an account of the preparations for this, the sixth of the great World's Fairs, and the first one held in this country, which was also an anniversary exhibition of the country's progress in the hundredth year of its national existence.

The project of holding a World's Fair and Centennial National Exhibition was first publicly proposed by an association of citizens of Philadelphia in 1870. It was officially adopted by Congress in the act of March 3, 1871, creating the Centennial Commission, consisting of a delegate and alternate delegate from each of the States and Territories, intrusted with the selection of a place and making of plans and preparations for the Exhibition, and by the act of June 1, 1872, appointing the Centennial Board of Finance, empowered to raise a capital stock, which was fixed at \$10,000,000, one-quarter of which was readily taken up in subscription shares of \$50, mostly by the citizens

of Philadelphia. The President formally proclaimed the Exhibition on the 3d of July, 1873, and on the 5th of the same month the representatives of foreign governments were duly advertised. On June 5, 1874, an act was passed declaring that the Exhibition would be held under the auspices of the Government, and requesting the President to invite foreign governments "to be represented and take part in the International Exhibition." By a special provision permission was granted to convey articles to the exhibition-grounds without payment of import duties, to be held there in bond; duty was to be collected only on articles sold and delivered in this country, except upon articles imported for sale during the Exhibition; the other class, comprising the exhibits proper, must remain on exhibition until the day appointed for the close of the Exposition, which was the 10th of November.

The Centennial Commission was appointed by the President from nominations made by the Governors of the several States and Territories. The officers chosen were the following gentlemen: General Joseph R. Hawley, of Connecticut, for president; Orestes Cleveland, John D. Creigh, Robert Lowry, Thomas H. Coldwell, John McNeil, and William Gurney, vice-presidents; Alfred T. Goshorn, director-general; John L. Campbell, secretary; and John L. Shoemaker, counselor and solicitor. An executive committee of thirteen was appointed, with Myer Asch as its secretary, and several bureaus of administration were constituted under the following chiefs: foreign, A. T. Goshorn, Myer Ash; installation, Henry Pettit; transportation, Dolphus Torrey; machinery, John S. Albert; agriculture, Burnet Landreth; horticulture, Charles H. Miller; fine arts, John Sartain. The corporators of the Board of Finance consisted of two from each congressional district, and four from each State and Territory at large. This body was organized with John Welsh as president; William Sellers and John S. Barbour, as vice-presidents; Frederick Fraley, secretary and treasurer; William Bigler, financial agent; Henry Pettit, Joseph M. Wilson, and H. J. Schwarzmann, engineers and architects; and a Board of Directors of twenty-two members.

The city of Philadelphia was decided upon as the place of the Exhibition, a beautiful site in the spacious Fairmount Park being selected. Besides the private subscriptions, appropriations of \$500,000 in 1875 and \$1,500,000 in the following session were made by Congress as an advance loan, while the city of Philadelphia appropriated \$1,500,000, the State of Pennsylvania, \$1,000,000, and other States and Territories various lesser amounts. The States made active preparations, appointing local managers to aid and organize the efforts of their citizens. The foreign nations also, to which the invitation had been presented, accepted it promptly in most cases, and bespoke space for their exhibits. The chief com-

missioners appointed by the foreign governments were the following gentlemen: Argentine Confederation, Carlos Carranza; Austria, Rudolph Isbary; Belgium, Baron Gustave de Woelmont; Brazil, the Conde d'Eu; Chili, Rafael Lorrain; China, Edward B. Drew; Denmark, Jacob Holmblad; Ecuador, Edward Shippen; Egypt, Prince Mohammed Tawfic Pasha; France, M. M. Ozenne; German Empire, Dr. Jacobi; Great Britain and colonies, the Duke of Richmond; Canada, Senator Luc Letellier de St. Just; New South Wales, Sir James Martin Knight; Victoria, Sir Edmund Barry; South Australia, A. Musgrave; Honduras, Governor Don Francisco Bardales; Italy, Baron Blanc, minister to Washington; Japanese Empire, Okubo Toshimichi; Liberia, J. S. Payne; Mexico, Romero Rubio; Netherlands, Dr. E. H. von Baumhauer; Norway, Herman Baars; Orange Free State, Charles W. Riley; Peru, J. O. Tracy; Russia, Privy-Councilor Butovsky; Sandwich Islands, S. G. Wilder; Siam, J. H. Chandler; Spain, Colonel Lopez Fabra; Sweden, P. A. Bergstrom; Switzerland, Colonel H. Rieter; Tunis, Sidi Houssein; Turkey, G. d'Aristarchi, minister to Washington; Venezuela, Leon de la Cova.

An area of 286 acres was inclosed for exhibition purposes. By the beginning of the year 1876 the Exhibition Buildings were erected and ready for the reception of exhibits. The cost of the five main structures was about \$4,500,000. At the opening of the Exposition 190 buildings had been erected within the inclosure, and before its close there were more than 200. The city of Philadelphia went to a great expense in improving the avenues leading to the grounds, and in building a handsome iron truss-bridge over the Schuylkill, costing over \$1,000,000. The chief railroad-lines of the country entered into special agreements to convey visitors to the Centennial at special reduced rates of fare.

The applications for space exceeded the expectations of the commissioners. It was found necessary to erect a large annex to the Art Building, as the wall-space in Memorial Hall was found far from sufficient to accommodate the applicants. France began early to bestir herself in preparing for the Exposition. Russia was backward in responding to the invitation, questioning the official character of the Exhibition, but at a late hour decided to send a large representative display of her arts and products, selected and managed under governmental auspices, which formed when opened, somewhat more tardily than the other national exhibits, one of the most interesting sections of the fair. Spain also was dilatory in dispatching her exhibits, and also sent a fine representation of her productions, under patronage of the government. The British exhibitors seemed to comprehend best the spirit and requirements of the Exhibition, and took a pride in sending samples of the best art-work of their country, as well as of her

finest industrial products; yet her latter exhibition, owing to the questionable commercial advantage of competing with American protected manufactures, was not so large and

fine as at Vienna. The German and Austrian exhibitors, and the French in their art exhibit, evidently labored under a false appreciation of the taste of the American public, which was a

THE CENTENNIAL EXHIBITION GROUNDS AND BUILDING.

little indignant at being credited with so little artistic understanding as was inferred by many of the art and ornamental exhibits. Several

foreign exhibitors frankly declared, after seeing the American displays, that, if they had known what they had to compete with, they

would have made a difference in the character of the articles exhibited. In the American department the exhibition was unexpectedly full and rich, although many novel manufacturing processes remained unexhibited, owing to the jealousy of the proprietors lest their methods might be copied. The European colonies and distant nations were, in the main, better represented than in any of the former expositions; and it is one of the best results of international fairs that countries far removed from the usual tracks of commerce have greeted them as a means of opening up intercourse with the commercial world. The British colonies and the South American nations, with the pardonable vanity and ambition which are common to new countries, sent most extensive and interesting collections of their products. In judging of the different displays it should be borne in

mind that the exhibitors were actuated mainly by commercial motives, and that it was an American market which they sought to gain in exposing their manufactures at the Philadelphia Exhibition. Those industries in which the Americans are weakest and those which are not practised in this country would naturally be the best represented in the foreign exhibitions, while those in which American manufacturers, under the protection of import duties, have driven foreign producers out of the home market, could not be exhibited with any advantage by foreigners.

The Main Building, designed for the exhibition of the manufactured products, and products of the mines and metallurgy, as well as the condition of science and education, in all nations, covered an area of twenty acres, with a length of 1,880 feet, east and west, and a

MAIN EXHIBITION BUILDING.

breadth of 464 feet, and having projecting wings in the centres of the sides, 416 feet in length, and in the centres of the ends, 216 feet in length. The exhibition-space was on one floor. The roof of the main part was 70 feet high. In the centre of the main portion was an elevated square, with 184 feet sides, having towers 120 feet high and 48 feet square at the corners. At the four corners of the building were towers 75 feet high; and the projecting wings, through which led the main entrances, were fronted with façades 90 feet in height. The building was constructed with wrought-iron roof-trusses supported by wrought-iron columns, 672 in number, and sided mainly with glazed sash, with a substructure of brick 7 feet high, upon a foundation of massive masonry. There was a tier of restaurants and withdrawing-rooms at the sides of the building, and above them, in an upper story, a gallery of chambers occupied by the Centennial authorities, and by the educational exhibits of several of the States. The space was apportioned for the collective displays of the different nations as follows, in square feet: Argentine Republic, 2,861; Austro-Hungary, 24,727; Belgium, 15,598; Brazil, 6,899; Canada, 24,118; Chili, 8,424; China, 6,628; Denmark, 2,562; Egypt, 5,026; France, 45,460; Germany, 29,625; Great Britain and Ireland, 54,155; India and British colonies, 24,198;

Hawaiian Islands, 1,575; Italy, 8,948; Japan, 17,881; Luxemburg, 247; Mexico, 6,567; Netherlands, 15,948; Norway, 6,959; Orange Free State, 1,058; Peru, 1,462; Portugal, 5,988; Russia, 11,141; Spain and colonies, 11,258; Sweden, 17,799; Switzerland, 6,693; Tunis, 2,015; Turkey, 3,347. The space reserved for the United States' exhibits was 186,684 square feet. The total exhibition-space of the building was 368,102 square feet. The space was distributed in parallelograms between the main longitudinal aisle, 120 feet broad and 1,882 feet long, and two side-aisles 100 feet broad, and the numerous cross-aisles. Connecting the two side-entrances was a transept of the same width as the central nave.

Two remarkably large organs, one built by Roosevelt, of New York, with two other organs which were played by electric connections with the large one, and the other set up by Hook & Hastings, of Boston, occupied portions of the galleries, and were playing almost constantly. The Maine cotton-mills made a collective exhibit. Nearly all the large New England cotton and cloth factories participated in an extensive exhibit of American textiles. The collection of American carpets was very large. The new floor-cloth called linoleum was also exhibited. The cutlers and hardware manufacturers also made a fine exhibit. A new kind of veneering for interiors was sent from Boston.

The display of porcelain and pottery was extensive. The iron-masters of the country made a good representative display. The watch-companies exhibited their watches, and all the principal gun, scale, safe, scientific instrument, clock, telegraphic instrument, railroad-car, glassware, furniture, piano-forte, organ, paint, chemical, paper, book, and stationary manufacturing houses, and all the largest industrialists in every branch did credit to themselves and to their country. The gas-fixtures were specially admired; and the displays of silver-ware and jewelry and precious stones by the leading New York and Philadelphia jewelers were the largest and in some respects the finest collections of the kind in the fair.

The British exhibition was the strongest in textile fabrics, embracing a great variety of dress-goods, of woollens, the broadcloths, chevots, kerseymeres, and all the well-known materials for men's apparel; of poplins and linens, lawns and laces, from Ireland; of curtain brocades, from Morris & Co., of London, and made-up ladies' garments from Hitchcock & Co., which were behind the French display in the same line in taste, rather than in richness of material. There was a very extensive display of Axminster carpets, imported Indian carpets, oil-cloths, etc., which contrasted favorably with the still larger but cheap and badly-designed collection of American floor-coverings. The display of chemical products represented eighty-five houses, and contained crystallized masses of caffeine, aloin, codetac sulphas, chlorate and bichromate of potassium, the essence of egg, a novelty, a new indelible ink, soda, soaps, paints, inks, etc. The metallurgists and iron and steel workers of England made a very slender exhibit of her principal industry; there were only nineteen exhibits, the chief of which were models of Dr. Siemens's regenerating furnaces for iron and glass, wire ropes, and a single exhibit of ores, pigs, rails, and steel. The gunsmiths' exhibit was fine, seventeen exhibitors taking part; and there was a good display of the only two of the Sheffield outlers who thought it worth while to exhibit. In literary manufacture, Bradbury, Agnew & Co. had a good exhibit; Dickman & Higham showed a hexaglot Bible; and the *Illustrated London News* and *London Graphic* made showy displays, the latter paper having a pavilion hung around with the original drawings of hundreds of its best engravings, and a private office for the use of its artists and correspondents. There was a fine show of scientific and philosophical instruments by the best English makers. The first London and Liverpool watchmakers combined, to the number of fourteen, in a fine display; M. F. Dent exhibited different systems of compensating balances. Other articles exhibited were Aberdeen and Beesbrook granita, roof-tiles, Portland cement-blocks, fire-brick retorts, chalk, whiting, emery, etc. British jewelers made a very scanty show. The largest London

houses were not represented. Not a single precious stone or piece of jewelry of value was sent. Artchison, of Edinburgh, made a large display of Cairngorm stones, Scotch pebbles, among them the largest one ever found, and fancy articles. A new description of cutlery, in which the silver plating is made to penetrate the substance of the steel, was exhibited, with a considerable variety of jewelry, by John Neal. The most interesting portion of the British section was the very fully represented class of artistic manufactures, pottery, furniture, and domiciliary ornamentation, illustrating the extraordinary revival of art-feeling and good taste which has been going on in England for many years. The English exhibition of ceramics, ornamental metal-work, and furniture, probably engrossed the attention of the visitors more than any other separate collections in the Exposition. Doulton, of Lambeth, sent a vast variety of his famous earthenware and terracotta fabrics. The Lambeth faience presented all the rich soft hues of blue, green, brown, and buff, which are peculiar to it, and all the quaint and graceful forms, and the brilliant glaze, by which it is also distinguished. Many of the objects were covered with raised and painted devices, human and animal figures, flowers, fruits, leaves, and conventional ornaments, of artistic conception, and spiritedly treated. In terra-cotta, there were a pulpit and font, mantels, etc.; of the use of encaustic tiles in fireplace decoration, there was a striking exhibit; two tiled hearths had fenders of the same material, and were covered with clocks, vases, plaques, etc., one of Doulton ware, the other of Lambeth faience. One set of chimney-tiles represented scenes from Shakespeare. A series of plaques, painted by George Tinworth, contained child-scenes of the Bible. The two Mintons and Maw & Co. had not less profuse displays of painted tiling; conspicuous among the designs, which often covered a number of blocks combined, were a water-view with cranes and lily-buds, a large domestic scene, allegorical and grotesque figures, falcons, and a series of genuine canine portraits. Many of the figures were colored, some in outline, on grounds of all colors, but oftenest white, drab, or buff; there were hand-painted, printed, enameled, and majolica, glazed and unglazed tiles, and ceramic tesserae for coarse mosaic, in which work there was a copy of an ancient fresco, and other examples. Daniel & Son exhibited a good collection of finer porcelain, including a splendid Prometheus vase, and imitations of antique vases decorated in *pâte sur pâte*, by L. Solon; also copies of Henry II. ware, and of Limoges enamel, panels representing Shakespeare's seven ages, by H. S. Marks, and a gorgeous display of table-ware richly decorated with Oriental and floral patterns, etc. The exhibition of the cabinet-makers was varied and fine; specimens of fully-furnished apartments were shown in many exhibits; the East-lake style was prominent. Other styles ex-

hibited were the Queen Anne, Jacobean, and Anglo-Indian. The materials were mahogany, oak, satin-wood, ebonized wood, etc., heavily carved, or lightly constructed, of uniform or combined woods, inlaid or trimmed with wood, porcelain, or metal. It was the most solid and tasteful exhibition of furniture in the Fair. A great centre of attraction in the British section was the regal display of silversmith's work, and electroplating, made by the famous house of the Elkingtons. The Milton shield and magnificent vase exhibited at Vienna, a row of elaborate dessert-sets, and a hundred other pieces, showed what wonderful work they can turn out in *repoussé*, metallic inlaying, and enamel, and exhibited an immense wealth of artistic ideas.

The Australian colonies made a large and ambitious display, revealing a vigorous and solid development, fine public buildings, and great works of engineering, a fine system of education, and the establishment of all the chief manufacturing industries on a firm basis. The immense production of the precious metals was exhibited, and the excellent grain and fine wool produced in most of the colonies. The industrial exhibit showed that the colonists can supply themselves with nearly all the comforts of English life. The woollens exhibited were of admirable material and texture. Cocoons and skein-silk showed that the silk-worm has been naturalized here. Excellent manufactures of leather were exhibited. Wine exhibits of over a hundred kinds showed that all the best varieties of the European grape will grow in that friendly climate. Of interest were the collections of stuffed birds, minerals, ornaments made from the great eggs of the emu, weapons and tools of the natives, and the photographs of towns and scenery.

The Indian exhibit included the grains, cotton, and natural productions of the great British dependency; its dyes, and silk, in the cocoon, threads, and in the finished textures, some of which were of rich patterns, and some splendidly embroidered; also, a few fine Indian carpets, a curious collection of jewelry from Bombay, some furniture elaborately carved, elegant fans inlaid with jewels and ivory, gold and silver cloth, native pottery and metal-work, and a collection of antiquities.

Canada made a very large and comprehensive exhibit. Among the prominent classes of products shown were cotton and woolen cloths, hosiery, leather goods, chemicals, sewing-machines, hardware, earthenware, marbles, and made-up garments. The models of ships, and specimens of ores, petroleum, plumbago, and building-stones, were also exhibited. The display of furs was prominent and fine.

Each of the other colonies of the British Empire sent a contribution of its products and peculiar native industries, all of them curious, attractive groups of good industrial promise.

The prominent feature of the French exhibition was the very extensive display of textile

materials for ladies' wear, and of dress-ornaments and finished garments. The richest point-lace shawls and trimmings, beautiful embroideries, satin dresses richly trimmed, dresses with Oriental patterns combined in beautiful color-effects, daintily-embroidered satin shoes, fans, ribbons, artificial flowers, silk stockings with lace insertions, rich brocades and heavy velvets, and all the sumptuous products of the Lyonnaise silk-industry, were grouped and combined, with such a masterly understanding of effects of color and symmetry, that their beauties were enhanced by the arrangement. Forty Lyons silk-manufacturers made a joint display, filling a large court with their exhibits. One house exhibited fifty varieties of silk-cocoons. The French bronze-founders made the finest show of bronzes in the Exhibition, though few new works were shown in the Main Hall, and several of the most celebrated dealers were not represented. Among the finest pieces were Grégoire's "Rape of Hersilia," exhibited by Susse, and Pradier's "Atalanta" and "Sappho," Jules Moignier's "Pointer and Pheasant," and the Comte de Nieuwerkerke's "Duke of Clarence in Combat with a French Knight" in brass and nickel, exhibited by the same house, which also had fine salvers and clock-cases of beaten brass, and handsome objects ornamented with Mexican onyx. Still finer was the Marchand exhibit, embracing Bourgeoise's "Snake-Charmer," and his "Kabylean Washerwoman," Schönewerk's "Boy and Tortoise," and two figures of Egyptian dancers, besides a large mantel of black marble, elaborately ornamented with verd-antique and figures in gilt bronze, and a circular settee, with a bronze candelabrum in the centre, surmounting a fountain in red antique marble, and having a silver-gilt frame and green satin upholstery. Kaffel, of Paris, had a large variety of fancy bronzes. A great variety of fancy articles of all kinds, materials, and uses, came from France. The largest Paris jewelers contributed no more than the great jewelers of Regent Street; yet there were exquisite specimens of enamel and other curious ornamental work sent by makers who are alone in their specialties. Of French furniture there was a slender collection, though three or four gorgeous articles were sent. Of porcelain there was a much weaker exhibit than in the English and German sections. The Sèvres factory was not represented, except by a couple of splendid vases and one or two other articles in the Art Hall, and a few plaques in the collection of the *bronzneur* Kaffel. A large variety of Palissy ware was brought by Barbizet, the grandson of the Barbizet who rediscovered the process of Palissy about fifty years ago. Montagnon, of Nevers, exhibited fine copies of the Nevers faience of the seventeenth century. Faience de Gien, table-sets, etc., consisted of imitations of ancient French and majolica faience. The Limoges makers exhibited porcelain, decorated

with Oriental designs, and other fine specimens.

The Netherlands exhibition was well selected and representative, having been organized by the Government. The educational, agricultural, and industrial methods of the kingdom were well illustrated. There were a great number of charts and drawings, illustrating the system of public works in Holland, and the plans for draining the Zuyder Zee. There were plans also of Dutch dwellings and public buildings, model working-men's homes, school-houses, etc. The book and music publishers made a good exhibit. In the small exhibition of manufactures, woollens for male ware, fine blankets, excellent imitations of Turkish carpets, handsome oil-cloths, clay-pipes, belting, and handsome tiles, after the old Delft manner, were noticeable; and also some fine lacquered work, particularly a screen, with illustrations from Goethe and Schiller. The colonial display was fine, including the cereals, spices, and woods of the Dutch East Indies, and the weapons, embroideries, filigree, and rich webs made by the natives.

The Belgians made a good exhibition of their excellent manufactures. Of special note were the laces of Mechlin and Brussels, the cloths of Verviers, the tapestries of Malines, the linens, paper materials, fine glass, and wood-carvings, notably an elaborate wooden pulpit, various fancy articles, and a large display of fire-arms.

The German exhibition was strong in cheap and substantial textiles and articles of general utility, besides containing the best book exhibit and the best display of fine porcelain in the Fair. The Saxon and other cloth-makers filled large booths with their cloths for male wear, more durable than fine, their calicoes and mixed goods, velveteens; and scattered among these were some rich velvets and beautifully-figured textures. Several piano-makers exhibited excellent instruments. The peasant clock-makers of the Black Forest, and their rivals in Freiburg, the toy-makers of Nuremberg and Magdeburg, the looking-glass manufacturers, the pencil-makers (Faber and his principal competitor), the manufacturers of cheap jewelry, the cutlers, and the dealers in common bronzes, all set up displays more or less extensive. Of the fine bronzes of Berlin none were sent. Of chemical products there was a considerable variety, including dyes, gelatine, medicinal barks, essential oils, bronze powders, soap, cologne-water, etc. One case contained all the varieties of amber found in the Baltic. A collection of surgical instruments and appliances included models of hospital wards and a hospital train, and photographic illustrations of operations, and all kinds of instruments. The cheap gold and the imitation jewelry were very fine of their kind, and for the most part tastefully designed. Conspicuous in the magnificent display of the Royal Porcelain Manufactory of Berlin were the Borussia vase, a vase containing a copy of Guido's

Aurora, one representing Otho in the tomb of Charlemagne, after Kaulbach, a table-top, with a copy of Raphael's Poetry, and a vase with a finely-rendered design of Klöber's, among a great number of other finely-painted and richly-decorated pieces, in which the grounds and flat colors were wonderfully even and brilliant. A collection of gray and blue stone-ware wine-jugs and beer-mugs in the old German style was interesting.

In the Austro-Hungarian exhibition the most noticeable group was the brilliant collection of Bohemian glass. The finest specimens were in pure white glass, with flowers, leaves, arabesques, etc., ground into their surface with the emery-wheel. There were also fine examples of ruby and emerald ware, with gilded ornaments, and cheaper samples of dark-green glass in the ancient Vienna style. The Bohemian porcelain also is of very fine texture, and the exhibited samples were tastefully decorated; and in the Hungarian exhibit of china-ware there were some fine imitations of Chinese and early European styles from the town of Herend. From Innsbruck were sent some fine stained-glass windows. The display of meerschaum carving from Vienna was very large and fine. Other exhibits were Russia leather from Vienna, the garnet jewelry of Prague, Hungarian fire-opals, Viennese silks and shawls, delicate laces from the Erzgebirge, bent-wood and hollow-iron furniture from Vienna, woollens and cottons, ready-made clothing, buttons, chemicals, perfumes, musical instruments, mirrors, with paintings on their faces, and a fine collection of photographs.

In the Swiss section all the principal exports of the republic were shown. Forty-five watch-makers exhibited every imaginable variety of watches and chronometers, some of them so minute as to be inserted in a finger-ring or the top of a pencil-holder. There were good exhibits of scientific instruments, electrical clocks, and music-boxes. Prominent exhibits also were the handsome laces and embroideries of Appenzell and St. Gallen, the carved-wood trinkets from the Bernese Oberland, and the public exhibits of education and engineering, including some masterpieces of cartography. Other Swiss specialties were the silk bolting-cloths, braids for ladies' hats, red-cotton cloth for the Eastern trade, condensed milk, chocolate, dyes, and liquors.

The Swedish exhibition was one of the largest in the Fair, and was to most people an unexpected revelation of the state of arts and manufactures in that country. The iron exhibit, embracing samples of pig-metal, rails, railroad axes, nails, spikes, bars, and pipes, and ingots of iron and steel, and maps of the mining-regions, and drawings of furnaces and machinery, was the largest one in the Fair. The exhibit of furs was fine. There was also a very attractive display of porcelain, showing rare and beautiful colors and rich ornamentation: the Parian ware, with delicately-moulded

vines and flowers, table-sets with black ground and vines and arabesques in white, large vases with paintings of flowers, a pair of vases with a ground of red and a dull metallic color, and pictures from an ancient Saga, some reproductions of Palissy ware, and a massive stove, and a pair of candelabra, with a beautiful blue ground of delicate shade, richly ornamented with white, gold, and dark blue, were prominent in this rare and fine collection. The exhibit of common industrial products, woolen cloths of the very finest, plain silks and cotton goods, cutlery, kitchen-utensils of polished brass, hardware, and carpentry, all showed an advanced stage of industrial art, and solid, conscientious workmanship. The peasant-figures modeled by Prof. Lödermann, and costumed in the genuine dress of the people, grouped to represent familiar scenes of popular life, illustrated vividly the intimate habits of the Swedish folk. The military exhibit was large, and showed an advanced condition of the military art.

In the Norwegian court the most attractive exhibit was the beautiful silver filigree-work from Christiania. Other interesting groups were the textiles, metals, and various special manufactures. There was a series of costumed figures of the inhabitants, and a collection of Gothic antiquities, arms, and utensils, of great interest.

The Danes exhibited the furs, skins, woolen-manufactures, etc., of their country, some Equimaux curiosities, and two exceedingly attractive groups, terra-cottas, in Etruscan style, and artistic silver-work from Copenhagen, including a silver vase, which was one of the gems of the Exposition.

The Russian section was organized and supported by the Government, and, as a national display, was the most striking one in the whole Exhibition. The fruits of the new national school of arts, which cultivates the early Muscovite styles, were the most prominent feature of this exhibition. The Strozonoff School of Technical Design in Moscow exhibited an interesting collection of casts and drawings which are given its scholars to study. Two Moscow silversmiths exhibited some of the finest specimens of *repoussé* work and enamel, both ancient Russian arts, in the whole Fair. Their display embraced silver beakers, with historical and national designs, artistic bronze casts of Russian peasants and soldiers, a silver plaque, with a copy of the Last Supper of Leonardo, and several pieces of table-furniture of gilded silver, with the Russian napkin in white silver draped over them with wonderfully deceptive effect. There was a large exhibit of malachite, jasper, lapis-lazuli, rhodonite, nephrite, etc., from the Ural Mountains, made, combined with metals, into ornamental pieces of furniture, and also worked up into smaller ornaments. A unique style of jewelry was in the form of flowers, with petals of gold of different shades, colored by different

degrees of heat. There were some samples of gold and silver cloth, mixed with silks, or richly embroidered in colors, of dazzling splendor. A collection of garments and table-coverings from Circassia, embroidered in silk, silver, and gold, was curious and pleasing. The Russian display of furs, cured skins, and made-up garments, was the finest of the Exhibition. The exhibit of gutta-percha goods revealed a flourishing condition of that new industry. The collection of minerals and fossils sent by the Pedagogic Museum of St. Petersburg was highly interesting. The exhibits of pianos, scientific apparatus, amber, velvet cloaks, with linings of the white fur of the Thibet goat, or trimmings of sable-fur, chemicals, fans, umbrellas, and various other articles, spoke well for the industrial condition of Russia.

The Italian section, though not very large, contained a tolerably good representation of the ornamental industries and manners of art treatment for which she is distinguished. The ancient Italian art of wood-carving was represented by a great number of elaborate specimens from half a dozen different cities, in which the ornaments ranged from bold realistic figures to delicate floral designs in low-relief and conventional Renaissance patterns. Articles exhibited were immense mantels and bedsteads, and tables, cabinets, and chests of all sizes. Inlaying with wood, the art for which Siena is distinguished, in floral and arabesque patterns, was exhibited; and also wood inlaid with malachite, lapis-lazuli, onyx, etc. The display of Venetian glass was not brilliant, nor was that of miniature mosaic, called Roman mosaic; of Florentine mosaic there was a fair exhibit in jewelry and table-tops, and some fine pieces were placed in the art exhibition. There were some admirable reproductions of majolica pottery, and numerous copies of antique bronzes, armor, hammered metal-work, etc. Of Genoese filigree there was a fair representation. There was a good exhibit of the coral ornaments of Naples. The jewelers of Turin and Rome made a brilliant display of gold and precious stones, one of the richest and most artistic in the whole Exhibition. The finest part of this exhibit was the show of tiaras and necklaces of Signor Castellani, of Rome, brother of the archæologist whose splendid collection of antiques was exhibited in the Art Building; the manner of the Etruscan jewelry was admirably reproduced, and even improved. Of the silks of Turin and the velvets of Genoa the display was almost nothing. In the more utilitarian industries Italy made a very small, but in some branches not discreditable, exhibition.

The Portuguese exhibition was a full one, and of considerable interest. There were some beautiful filigree-work, and examples of most delicate wood-carving; also specimens of fine silver-work, and tasteful porcelain. And in the whole range of useful manufactures there was a creditable display. A kind of coarse

pottery of strange forms and ornaments, and some little terra-cotta figures of country-folk, were curious features. There was a good exhibit of printing materials from the Royal Typographic Establishment, and a large collection of minerals.

The Spanish exhibition was one of engrossing interest, as revealing styles of ornamentation and workmanship strikingly different from those of the countries whose work is better known to us. The tapestries, brocades, laces, velvets, shawls, scarfs, cotton and woolen dress-goods, the glassware, pottery, and porcelain tiles, all showed forms, colors, and devices, in a fine but unfamiliar taste. The metal-work, silver and gold and iron inlaid with gold, the copies of ancient armor and utensils, ornamented in the Moorish manner, were beautiful beyond compare. The exhibit represented all the industrial activity and productivity of the country.

The Turkish exhibition was varied and fine, including, notably, gorgeous embroidery, fine linen and woolen fabrics, curious pottery and pipes, attar of roses, Oriental floor-cloths, and interesting ancient armor.

In the Egyptian court the chief groups were the magnificent embroideries, the goldsmiths' work and brazen salvers, engraved with beautiful arabesques, fine inlaid cabinet-work, and the displays of silk and cotton, and some fine examples of ancient Saracenic art. There were magnificent caparisons, with velvet hangings, embroidered with gold-thread and mounted with gold. The furniture was, much of it, of ebony, inlaid with ivory and mother-of-pearl. Many articles of daily use were ornamented with precious stones and metals. The silken and embroidered stuffs were gorgeous beyond description. Table-ware of solid gold, with beautiful engraved or open-work arabesques, and a good display of porcelain, were also noticeable. The rugs and carpets were also fine. The varieties of silk-cocoons and of cottons were prominent exhibits, and the other products of the soil were well represented.

The Bey of Tunis displayed a collection of arms, beautifully engraved, inlaid, and jeweled, jewelry and silversmiths' work, and rich gold-thread embroideries, and decorated trappings.

The Orange Free State in South Africa, with enterprising spirit, sent a selection of its products, comprising wool, fine wheat and corn, the singular grain called Kaffre corn, coal, dried fruit, hides of the springbok and jackal-skins, whips of rhinoceros-hide, the curious cream-of-tartar plant, ivory, diamonds, and stuffed birds.

The Hawaiian kingdom was represented by sugar, coffee, corals, and shells, handsomely marked woods, strange textile fibres, stuffed birds, and the contribution of the Queen, fans, feather-work, and curious articles of native use.

Probably no national exhibit was so much visited and wondered at as the Japanese; cer-

tainly none represented more manual labor and skill and artistic invention. The prominent specialties in this exhibition were the bronzes, the porcelain, the lacquered-ware, and the pictorial screens; yet every other industry exhibited is peculiarly Japanese, either in its mechanical method or in the artistic treatment which this æsthetic people bestow upon every product of their skill. The rare and costly ancient bronzes and porcelain vases were fewer than at the Vienna Exposition; yet the collection of vases was a large one of entrancing richness and variety, and the infinity of decorative devices would furnish study for a longer time than the whole period of the Exhibition. Some of the Japanese bronzes are cast entire in the moulds; and in others the ornaments are worked out with chisels and polishing-instruments. A large number of them were inlaid with metals, which is done in two manners: by incising the design and filling up the hollow with the metallic inlay, or by filing, and then beating the gold or silver into the roughened surface. A peculiar style of work called *mokn-me* is produced by soldering plates of several different metals together, chiefly gold, silver, copper, and a dark-blue amalgam, and then hammering, rolling, and working over the mass, and finally beating it out into a sheet, thus producing a beautiful variegated surface of damascened appearance. The grotesque plays the chief part in Japanese decoration. On a great number of the vases was seen the Japanese dragon, and among the ornaments were grotesque figures of birds, beasts, and human beings, and also many wondrously naturalistic representations of animal life. Some of the artists reveled in ludicrous caricatures of popular and official manners. On many of them gold or silver bronze was combined, sometimes in raised figures worked out in high-relief, and sometimes inlaid in delicate traceries, with the darker metal, which in the finest examples was of a deep steel color. On the Japanese porcelain was lavished a wealth of ornamentation not less prodigal. Noteworthy were the examples of Kaga ware, with scarlet or green ground and gold ornamentation of exceeding brilliancy; the white Yokohama ware, delicately ornamented in gold and colors; the Banko ware, with colors running through the material; the large pair of vases with raised dragons in gold and finely-painted landscapes on a blue-and-white ground, and a collection of grotesque figures satirizing Japanese manners sent from Tokio. In lacquer-work a wide range of articles was exhibited. The ancient pieces are the best in color and workmanship, of which class a wonderful cabinet, three hundred and fifty years old, was the finest specimen. The art of lacquering is generally practised throughout the empire, but in the greatest perfection in Tokio and Kiyoto. The slightly-raised figures in lacquer-ware are either carved in the founda-

tion, or are built up by the application of successive layers of the varnish, which is the viscid sap of the tree *Rhus verniciifera*. The collection of screens was large and highly interesting, containing paintings on silk, sometimes combined with embroidery, in the best style of Japanese art, affording an opportunity of studying their peculiar manner of art-treatment, and, in the subjects, giving glimpses of the inner social life of that remarkable people. The display of carved wood, inlaid, and upholstered furniture was remarkable, embracing some articles in the European style, which, for taste and fine workmanship, were not surpassed. Of the special products of Japanese industry the ivory carvings, the buckskins printed with colored patterns, the stamped bronzed leather, the peculiar sorts of paper, and the elegant silk patterns, were worthy of attention. There was also a fine government exhibit of ores, minerals, grains, medicinal plants, stuffed animals, etc.; and a group of plaster images showing the costumes worn by the different classes.

The Chinese exhibition was handsomely increased in a showy structure carpentered by their own workmen. Though not so large as the Japanese exhibit, it was well selected, and more representative, including the more ordinary products and manufactures of the Celestials. The porcelain was worthy of their high reputation in the art. In lacquer-work they must yield the palm to the Japanese. The silks and embroideries were beautiful in colors and design. Handsomely-embroidered screens were framed with wood elaborately carved. The ivory carvings were wonderfully delicate and finished. The carved and inlaid furniture, particularly the former, was marvelous in its elaborateness and detail of ornament. Among the fine collection of bronzes were some of great age and rarity. The model of a joss-house was a conspicuous object. Among the products exhibited were cotton and hempen fabrics, calico prints, shoes, hats, and clothing, fancy-leather articles, paper, musical instruments, woods, wine, grain, wax, cotton, wool, and hair. To judge from their different displays one would say that, although the Chinese may be behind the Japanese somewhat in artistic invention and the appreciation of form, they are fully their equals in the understanding of colors and in technical skill.

The Brazilian people and their Emperor took great pains to set off the products and resources of that vast tropical empire to the best advantage, and the presence of the latter at the Exhibition gave additional *éclat* to the display. The most noticeable of the contents of their showy Moresque colonnade, besides the educational exhibit and the large collections of minerals, entomology, and natural products, were the Paraguayan tea or *maté*, an herb which yields a decoction similar to tea, but less injurious, which was described in a special pamphlet; the artificial flowers made from

bright-colored plumage, the jewelry set with green and blue beetles, the excellent work in leather, including some saddles of embossed leather, the light furniture from native woods, an ingenious combination bed, table, washstand, and chairs, for travelers' use, and the crockery-ware.

From the Argentine Republic was sent a mineral collection of great variety. The textile fabrics embraced cotton, woolen, silk, and some unusual materials. There was a fine display of skins and manufactured leather. The weapons and clothing of the natives were an attractive feature.

Chili also sent silks, leather, etc., with stuffed animals and specimens of antiquities and native handiwork.

Antiquities and the weapons and dress of the natives formed part of the Peruvian exhibit also, which included manufactures of leather, soap, and sugar, valuable metals and minerals, and a considerable range of tropical products.

The Mexican Republic made a large exhibit of minerals and native woods, besides some creditable manufactures—leather, silks, clothing, etc.—a collection of medicinal plants and of textile fibres, some richly-embroidered deer-skin garments, and a considerable collection of Aztec antiquities. The Mexican exhibit, though interesting, was not nearly so full as was expected.

In the carriage annex were exhibited a large variety of carriages, parts of carriages, children's carriages, etc., and a Pullman-car in the American department; a luxurious railway-coach from Brazil; drags, coupés, barouches, broughams, etc., from England, of substantial make and elegant finish; and some handsome sleighs from Canada. The French exhibit of carriages in the Machinery Building was also fine.

The educational exhibits of several different countries were very complete and instructive, and illustrated fairly the present stage of education, particularly of primary education, in those lands where the most attention is paid to it, and also gave a comparative view of different systems. The American system of popular education was adequately exhibited by several of the States. The Belgian schools have been a bone of contention between the liberal and clerical parties in that country, and this rivalry has given an impetus to education. The model of a juvenile school-house exhibited was exceedingly complete and commodious in its appointments, containing a lavatory, gymnasium, and a school-room with graduated desks and seats, well lighted, and warmed by the fresh-air system, by which the air is entirely renewed every half-hour: the desks when opened in one way present a writing-table; another turn discloses a slate affixed to the stand; and when turned another way a lace cushion is exposed; when opened wide they form a lunch-table. The teachers pro-

vide a luncheon for the poorer children. The educational apparatus comprises the abacus, the higher apparatus of the Froebel system, and pictures and specimens of every description which can convey instruction through the sight, stuffed animals, mechanical models, specimens of raw materials and manufactured products, exhibiting the methods of the silk, cotton, woolen, metal industries, etc. Holland exhibited the work of the scholars of her technical and industrial schools. The Swedish model school-house was exhibited with much pride, and was a pattern public school. All their school-houses are constructed and furnished after the same model. It was of pine-wood, solidly made and finely finished; the seats have comfortable backs; the lighting and ventilation are excellent. In the upper story is the lodging of the teacher. The school-room contains maps and pictures, representing the national industries and productions, globes, books of reference, zoological specimens, herbaria, and a musical instrument. In Sweden education is obligatory. In the afternoon the scholars are taught some trade or domestic occupation. Every parish contains its regular school, except the less populous parishes, which are supplied with circuit teachers. The books and implements of study are provided by the Government at a minimum price. When a scholar shows a special fitness for any particular occupation, he is enabled to pursue his further studies at the expense of the state. The Swiss with their genius for juvenile instruction have devised a vast variety of appliances and processes of teaching, which were amply exhibited at the Exposition. Norway, Jamaica, and Cape Colony, exhibited their systems of primary instruction. The colony of Ontario presented its compulsory system, in which the Catholic and Protestant schools are both sustained at public expense, and answerable to the Bureau of Education. The Hawaiian schools, the Art-School of Cairo, and technical and primary schools in other parts of the world, sent specimens of their pupils' work. The Japanese Commission exhibited with great complacency the status and method of education introduced into Japan of late years after European models. They have universities, intermediate and common schools; in Tokio is a special advanced school for women, and also schools for the exclusive teaching of foreign languages, in one of which French, English, German, Russian, and Chinese, are taught, and in another the English language alone. In their exhibited model school were a gymnasium, a school library, the apparatus of Froebel adapted to their special requisitions, maps, anatomical, zoological, and botanical specimens, etc. Their text-books are copied after those of the best European schools; they follow English methods in science and German methods in languages. They learn to use the abacus universally in calculations, and acquire great skill in its employment. Education is oblig-

atory in certain districts of Japan. Of the States, Pennsylvania and Massachusetts made the fullest educational exhibits, while most of the other States exhibited the workings of their systems of public instruction. The Kindergarten system was illustrated by two model school-houses, in which instruction was imparted to classes of little children by two experienced lady teachers.

WOMEN'S PAVILION.

The Women's Pavilion, 208 feet square, covering about an acre of ground, was designed to receive the products of female industry and ingenuity of every class. The American exhibitors occupied three-fourths of the floor-space. The other nations represented were Great Britain, Ireland, Canada, and the colonies, France, Netherlands, Denmark, Sweden, Norway, Italy, Germany, Spain and her colonies, Brazil, Mexico, Tunis, Japan, and Egypt. This was the first collective display of women's work ever attempted, and much of its incompleteness was due to its novelty: nor was it a complete collection of all feminine products exhibited, as many of the best productions of female art and invention were included in the other collections. In the centre of the building, grouped about a flower-bordered fountain, was an abundant display of ornamental needle-work. The Royal School of Needle-work, patronized by the Queen of England, set up here, as well as in the Main Hall, a representation of their skill, which contrasted strongly in the mediæval manner of the designs with the productions of American ladies in the same field. Two embroidered flags worked by the ladies of New York hung down from the rafters. Designs for woven fabrics, made by ladies trained in the Massachusetts School of Technology, showed study and invention. Wood-work carved or inlaid by ladies in the West bore graceful but simple patterns. The Women's Medical College of Philadelphia presented a *materia medica*, very complete and accurate. A combination desk, invented by Mrs. Stiles, has found great favor, and is a very ingenious and practical contrivance for the economy of room, presenting, when closed, the appearance of a cabinet, 6

feet wide and 18 inches deep, and, when opened, taking up an horizontal space, 6 by 7 feet, and affording accommodations for half a dozen persons. Mrs. Mountain's life preserving mattress has been adopted for general use as a supplementary life-saving appliance by the United States Supervising Inspectors of Steamboats. Mrs. Coston's telegraphic night-signals, an invention which originated with that lady's husband, but which was practically perfected by her after the death of Mr. Coston, have been introduced into the United States Navy, and have found great popular approval. The Women's Pavilion was enlivened by the spectacle of ladies engaged in weaving, candy-making, and other manufacturing processes. The power was supplied by an engine managed by a lady engineer, Miss Allison.

The Art Building, which was called Memorial Hall, was intended as a permanent monument and gallery of art. It occupies a commanding

cellent representation of modern English art. The American exhibition bore an equally historical character, containing good examples of all of our early painters.

There were in the American section portraits and historical paintings by Gilbert Stuart, Copley, Washington Allston, Rembrandt Peale, Waldo, Thomas Hicks, Wilson Peale the elder, Colonel John Trumbull, Prof. Morse, Smibert, and Stewart Newton; and, in the modern portion, paintings by Boughton, Colman, Gray, Suydam, Irving, Hubbard, Wood, Loop, La Farge, Hamilton, Edward and Thomas Moran, Eastman Johnson, De Haas, Cropsey, Whittredge, Gifford, Kensett, Charles N. Miller, Healey, Huntington, Rosenthal, Thomas Hill, Prof. Weir, Smilie, Bierstadt, Sonntag, Bridgeman, Charles Elliot, Harry Fenn, Winslow Homer, Inman, Kendrick, Page, T. B. Thorpe, Tiffany, Jerome Thompson, and others of the best-known artists. A large and striking painting

by Rothermel was only introduced after some opposition, on account of the subject, which was the battle of Gettysburg. Among the American statuary were pieces by Story, Margaret Foley, P. F. Connelly, Preston Powers, Palmer, Rogers, and Haseltine.

In the English collections the most noteworthy works were Gainsborough's portrait of the Duchess of Richmond, a small scene of country-life by Constable, Sir Joshua Reynolds's portrait by himself, two Wilkies, examples of Turner, Calderon, Maclise, C. R. Leslie,

Mulready, Stanfield, Calcott, Creswick, Benjamin West, a painting by Fuseli, Sir James Barry's "Temptation in Paradise," portraits by Sir Thomas Lawrence and Opie, five small Landseers, and Frith's two most famous productions; and among the more recent artists were represented Leighton, Alma Tadema, Millais, Prinsep, Faed, Orchardson, George Leslie, Holman Hunt, Saut, Fildes, Cope, John Gilbert, Louis Haghe, Knowles, Armitage, Croft, Northcote, and Arthur Hughes. The only statues of note in the English department were Gibson's "Venus" and Chantrey's portrait of Benjamin West.

The French department contained hardly a single painting of value, and not a name of the first eminence. "Rizpah protecting her Sons from the Vultures," by George Becker, was the most striking picture; other paintings which showed some imagination and technical handling were Prion's "School for

MEMORIAL HALL.

site on the Lansdowne Plateau, 116 feet above the river. It was built after a noble design in the modern Renaissance style, with a central tower rising 150 feet above the ground, surmounted by a great bell, on which stands a colossal statue of America, and at the four corners of whose base are four colossal figures of smaller proportions representing the four quarters of the globe. The building is 365 feet in length by 210 in width, and 59 in height. Its floor is 12 feet above the ground, with broad stone stairways leading to it. The material is granite, with glass and iron. Connected with the central portion by arcades at each end are two pavilions parallel with it, with abutting, tower-like extremities.

The art exhibition consisted for the greater part of works of inferior merit. This was notably the case with the French, German, and Belgian exhibits. The English section, on the contrary, was a carefully-selected and ex-

Young Satyrs," a figure-piece by Sain, Clement's "Death of Cæsar," and several paintings from the nude. Some fine Gobelin tapestry and Sèvres porcelain were exhibited here.

The German exhibit was still more barren and insignificant than the French. The best pictures were an historical piece by Schrader and one by Folingsby of Munich, portraits by Richter and Begas, a sea-piece by Achenbach, *genre* paintings by Boser and Meyer von Bremen, and a landscape by Wilberg.

Austria, however, sent specimens of her best art-productions, including one of the masterpieces of Makart, her most famous painter, "Catarina Cornaro receiving the Homage of Venice," a work of surpassing power and beauty; some good landscapes by Russ, Thoren, Lichtenfels, and Schaeffer; a piece of flesh-painting by Felix, and other paintings strong in color and conscientiously executed.

Spain sent one or two old masters and a good number of fairly-done modern paintings, showing the characteristics of the Spanish school in color and treatment.

Sweden also exhibited some fair work, strongly tintured with the German manner.

Norway sent some coast-scenes of moderate merit.

The Netherlands made a considerable display of paintings, many of them carefully executed, but none of them marked with any decided qualities.

Belgium, besides a very unsatisfactory display of mediocre paintings, exhibited some good art-work on brass and faience, and some fine statuary.

Italy exhibited a number of insignificant paintings, and a large collection of marbles by her best artists, mostly *genre* subjects, handled with spirit and great technical knowledge in many cases, and in a manner unfamiliar in this country, which is more accustomed to the earlier classical school.

The Italian section contained also the noteworthy collection of antiquities made by Alessandro Castellani, of Rome. This important collection consists of marble statuary of Greek and Roman workmanship, artistic bronze utensils of Etruscan production, a large collection of ancient jewelry, many wonderfully fine engraved gems, a collection of rings dating from the earliest Tuscan period to the end of the sixteenth century, and one of the finest collections of early majolica ever got together. The statues were seventeen portraits and busts from the imperial epoch, a colossal Dionysius or Indian Bacchus, being a repetition of the piece in the Vatican called the "Sardanapalus," a comic mask of Hercules, a mask of Bacchus, and an exceedingly realistic treatment of the subject of the boy with a thorn, the position being the same as that of the Spinario in Florence. The collection of bronzes included twelve of the caskets found in the ruins of Præneste, one of them containing all its fittings of mirrors and mirror-cases, oil-flasks

and ointment-boxes, combs, scrapers, etc., all elaborately ornamented, like the caskets. The Etruscan jewelry included ornaments in cupulated and uncupulated gold, bronze, silver, amber, glass, and precious stones. Some of them belong to the earliest and rudest period of Tyrrhenian art, while many of them are incomparably fine in their artistic taste and delicacy of finish. The engraved gems comprised 270 specimens illustrating the entire history of ancient glyptic art, and including some of the most famous examples extant. The rings numbered 350 articles, many of them of rare types, while the collection in its completeness possesses great historical worth.

The art-collection embraced interesting products of the engraver's art, decorative work in all kinds of material, good collections of water-colors, particularly in the English and American departments, architects' designs, and ornamental devices for all purposes, and every variety of art-workmanship.

In a photographic annex many of the best photographers combined to make up a large and fine exhibition. Several new processes and styles of finish were shown.

Next in size to the Main Building was the Machinery Hall, 1,402 feet long by 360 wide, covering with its annex, 208 by 210 feet, an area of 12.32 acres, with about 14 acres of exhibition-space. It was constructed of wood with iron ties and struts in the roof trusses, upon piers of solid masonry. The architectural effect was plain, but it was an excellent structure for the purpose intended. Steam and water power and shafting were provided by the Commission. Next the building was an annex intended for hydraulic machinery, containing a water-tank with 10 feet of water, 60 feet broad and 160 long. The double-acting duplex vertical engine which furnished the power for driving the machinery in Machinery Hall was erected and exhibited by George H. Corliss, of Providence. The cylinders were 44 inches in diameter and 10 feet stroke, and it was rated at 1,400-horse power. The gear-wheel, 30 feet in diameter, 24 inches face, and weighing 56 tons, making 36 revolutions per minute, had 216 teeth cut by special machinery also exhibited by Mr. Corliss. The crank-shaft was made of hammered iron. The cranks weighed over 5 tons each. The beams were 9 feet wide in the centre, 27 feet long, and weighed each 11 tons. The connecting-rods were made of worn-out horseshoes, the best material. The piston-rods were of steel. The weight of the entire machine was about 700 tons.

In Machinery Hall a conspicuous exhibit was the sewing-machines, all the American houses taking part, together with French, English, Canadian, German, Russian, and Belgian makers. The chief novelties were: a universal feed-apparatus for embroidering, from France, by which the cloth can be turned in any direction without touching it; an automatic em-

broiderer, of American device, for about a dozen special patterns; a machine with two needles, capable of sewing or embroidering with different colored threads at the same time; and the machines which sew from spools directly, without requiring the thread to be reeled off. Ingenious knitting-machines were also exhibited. There was likewise a curious machine for engraving patterns for lace and

six-roller stop-cylinder, roller-drum, and perfecting presses exhibited by Cottrell & Babcock, of New York, with C. E. Johnson's automatic paper-feeder; and the various kinds of amateur hand-presses. A curiosity in this display, which was much larger than that at Vienna, was the original press used by Benjamin Franklin. M. Alisoff, a Russian inventor, exhibited an admirable type-writer, which excels all other contrivances of its kind, in the variety of characters that can be used and in the neatness of the impression, and the mechanical adjustment, but does not admit of the rapidity of the American machines exhibited. The same inventor exhibited a rapid and ready process for photo-lithographing music. The process of setting up music-types was shown in the American department. A variety of American machines for paper-cutting, book-binding, copperplate printing, lithographic printing, electrotyping and stereotyping, and type-founding, was

MACHINERY HALL.

embroidery. In the Singer exhibit, which was contained in a separate building, the wax-thread lock-stitch, button-hole, and book-binders' machines, and one capable of making 80,000 different kinds of stitches, were among the novelties shown. Among the interesting manufacturing processes was that of paper-making, the operation by the mechanical method being shown in all its successive stages. The process of making rubber shoes was also exhibited. Most interesting too was the exhibition of watch-making by the Waltham Company. Numerous weaving processes were exhibited; several power-loom were kept at work weaving carpets, ingrain and Brussels; the operations of cloth, cotton, and silk mills were also illustrated by several different exhibitors; and a Jacquard loom, a corset-weaving loom, a jute loom, a Murkland carpet-loom, a suspender-weaving loom, and the Lyall positive-motion loom, were seen in operation. Other mechanisms used in textile industries were: the powerful and huge direct-acting steam and hydraulic cotton-press from the Taylor works of Charleston, which works without pumps, and has but a single valve; apparatus for making and winding spool-cotton, exhibited by the Willimantic and Hopedale Companies; the machines for winding machine twist and spool-silk and labeling spools; a variety of wool-carding machines; the Garnett machine, which works over the waste of woolen-mills; machines for drying dyed goods; the silk-thread spinning-machines from Paterson, N. J., and other interesting processes. A New Haven company showed a machine for putting pins into the papers. The exhibition of printing-machinery was an important and interesting group, embracing the great Bullock presses which printed off the *New York Herald* and *Sea* in the building at the rate of 20,000 impressions per hour; the improved Hoe press, which was working on illustrated work; the

shown. Howell & Brothers, of Philadelphia, exhibited a large machine for stamping paper-hangings. Other manufacturing processes illustrated were those of cracker and candy making by machinery; of envelope-making by an automatic machine, which cuts, folds, and counts the envelopes at the rate of 120 per minute; of envelope-printing, of glass cutting and engraving, of making paper collars and of drying the stock by machinery, of brick-making by a machine which turns out ready for baking 40,000 per diem, of paper-box making by machinery, of cork-cutting, of cutting tacks with the Weaver machines, which make 400 tacks per minute, and can produce 2,500 different sorts; of nail-cutting by an entirely automatic machine, etc. A gang of Virginian negroes showed the old-fashioned process of working up tobacco for the market. There were butchers', bakers', and millers' machines; coffee and spice grinding machines; French burr-mill-stones and meat-cleaning machines; washing, wringing, and mangling machines for hand and steam power; a ditching and draining machine for horse or steam power, exhibited by Randolph Brothers, of New Jersey, by which a pair of horses can be made to do the work of forty men; machines for charging soda-fountains; a planing machine exhibited by W. Sellers & Co., of Philadelphia, of 81 tons' weight; a novel saw for cutting stone, with teeth formed of pieces of coal, sent from Pittsburg; an arrangement for separating particles of iron-ore occurring in gravel-banks; two kinds of machines for cutting through several folds of cloth for clothing-manufactories; a great variety of machinists' tools, of saws, grindstones, files, nuts, bolts, screws, metal presses, and dies; piano-making machinery exhibited by the Steinways; a varied display of scales and balances; machine for bending heavy beams for ships' keels, sent by J. W. Griffiths, of New York; flax-seed chashing-mills; coal-breaking machines; and a col-

lection of gas-meters, another of steam-drills, etc. The wood-working machinery formed an exceedingly noteworthy class, including a remarkable set of machinery for making casks from Buffalo; an automatic shingle-maker which finishes 25,000 in a day; an intricate and ingenious dovetailing, carving, moulding, and paneling machine; a novel apparatus for drying lumber, scroll-saw machinery, which was kept busy cutting out delicate patterns; saws and moulding machines in the greatest variety; lathes of every description, and other mechanisms equally remarkable. A huge vacuum-pan, 35 feet in height and 10 in diameter, with the air-pump, sugar-moulds, and all the concomitant apparatus for clarifying sugar, was exhibited by the Colwell Iron-Works of New York; while the Laffertys, of Gloucester, N. J., showed a large centrifugal sugar-draining and drying machine in operation. In Machinery Hall was also a varied display of iron materials and manufactures: twisted and cold-chilled bars, and forged steel axles and shafts, rollers of chilled iron for rolling brass, from Pittsburg; valves and steam fittings of every kind, lap-welded wrought-iron pipes, exhibited by the National Tube Company. The Port Richmond Iron-Works set up a huge blast-furnace. The different systems for extinguishing fires were all exhibited. The locomotive exhibit was one of the most prominent groups. A narrow-gauge road for mining purposes was shown in its workings, and parts of railroads and cars were seen in great variety; the workings of the Wharton patent switch, of the Westinghouse air-brake, and of Henderson's hydraulic brake, were fully exhibited. The marine exhibit was very complete, including models of all the kinds of shipping, steering-gear, life-saving apparatus, diving-bells and armor, etc., made or employed in Massachusetts, exhibited by the commissioners of that State, contrasting the shapes now used with those of a hundred years ago; models of the steamers of the American Line; a model of a merchant-vessel rigged with the wire-rope manufactured by the Roebling Company, of Trenton; models of the iron ships built by Roach & Sons, of New York; models of the American double life-boat, of the Monitor raft, which made the voyage of the Atlantic, of an improved steam-yacht made by Baird & Huston, of Philadelphia, and a variety of other sea-craft, boats, shells, an ice-yacht, etc. One of the finest exhibits was the wire cables and bridge materials and plans made by the Roeblings. George B. Grant of Boston's wonderfully ingenious difference-machine was exhibited by the University of Pennsylvania; it constructs intricate logarithmic tables, and solves all the problems of the differential calculus, preparing also a waxen mould from which electrotype plates can be taken. A calculating-machine of the same inventor, of convenient size and moderate cost, was also on exhibition. A curiosity was the infinitesimal steam-engine

which stood on a gold quarter-dollar, brought by Levi Taylor, of Indianola. The collection of steam-motors was extensive and exceedingly interesting, embracing: capital automatic cut-off and throttling engines, from Salem, Ohio; a huge high-speed blowing-engine, from Lebanon, Pa.; five vertical engines from New Haven and elsewhere; a hoisting-engine and other mining machinery; a Cornish steam-pump, from Scranton, Pa.; various meters for registering the consumption of water, and a registering apparatus showing the speed of an engine; a boiler which prevents incrustations of lime; the well-known Baxter engine; steamship and yacht engines, etc. The first engine ever used in the United States was a curious relic. Cornell University sent a magneto-electrical machine, a steam-engine, and a measuring-machine, the work of her pupils. The Backus water-motor seems excellently adapted to the sewing-machine. A novel hydraulic ram exhibited by the Dexter Spring Company is a complete automatic pump. Albert Brisbane exhibited a pneumatic tube, in which the articles to be dispatched are packed in a ball which rolls swiftly through the tube while the air is exhausted in front; it is his ambition to see the invention applied to large tubes for the transportation of freight. The State of Nevada set up a quartz-mill in a special building, containing all the appliances for mining, and showing the entire operation of crushing, amalgamating, etc.

Great Britain occupied about one-third of the space covered by the foreign exhibits in Machinery Hall, and about one-ninth as much room as the United States. The exhibit was highly interesting, comprising: Aveling & Porter's well-known traction-engine; Siebe & Gorman's diving apparatus; steam-hammers, stamps, and saws for iron and steel, with samples of their strongest armor-plating, exhibited by the Masseys, of Manchester; fine cotton-machinery, and a carding-machine; immense steam-cranes, sent by the Applebys, of London; cotton-looms, spool-winding machines from the Coates, and a calico-printing machine which uses several colors at once; a model of a floating dry-dock; the Walter press, which was running on the *New York Times*; a sugar-mill and air-pump for a vacuum-pan, from Glasgow; a model of an Inman steamer; and very interesting exhibits showing the operation of the English system of switching and block-signaling.

The British North American Colonies sent turbine-wheels, horizontal and radial boring machines, steam-engines of all types, seamless lead-trap machines, quartz-crushers from Halifax, boats, sewing-machines, wood-working machines, and many other classes of machinery.

France exhibited a Lyons silk-loom, a soap-machine, and bonbon and chocolate machines in operation, lithographic printing-machines, including one with a movable bed, an apparatus for making sugar from beet-roots, a fine

machine for making gas, an ice-making machine, a special arrangement for mountain-railways, a machine for making stearine-candles, wood-working machinery, and machines for sewing straw hats, embroidering, and other processes.

The German exhibit was defective. From the Krupp Works were sent two of the breech-loading 1,200-pounder siege-guns, and smaller rifled steel cannon, and an exhibit of iron-ore and smelted metal. An admirable brick-making machine from Berlin was seen at work. There were also a railroad exhibit, one of copper and sulphur ores from Prussia, one of gas-meters, one of the needles of Aix, and a collection of steam-gauges, from Hamburg and Magdeburg, besides printing-presses from Leipzig, steam-engines from Bremerhaven, and other machinery of various kinds.

The Belgian section was not large, but was extremely interesting. A huge and intricate well-boring machine was sent from Brussels; wool carding, cleaning, and spinning machines from Verviers; embroidering and sewing machines, and a fat-extracting apparatus, also from Brussels; railway-stock from Louvain and Mariemont; Corliss engines built in Ghent; besides models of a trip-hammer and steam-shears, and filters, rotary pumps, punching and bolt-making machines, etc.

Sweden sent a locomotive of novel device, in which the weight of the engine is distributed over a number of coupled wheels, and the axle-box is so constructed that the axle is kept parallel to the radius of any curve passed over, to prevent wrenching; the engine is a very powerful one for a narrow-gauge railroad. There was a considerable variety of machinery exhibited both in the Swedish and Norwegian sections. The machines for working in wood and metals were as perfect as any in the exhibition.

Russia displayed some capital machinery and ordnance.

Brazil made a large exhibit. A peculiar stationary engine was constructed for both high and low pressure; there were also several models of marine engines. There was a model of the machine-shop of the arsenal at Bahia, with all its appointments and machinery, and models of three vessels-of-war; the ordnance and equipments of the Brazilian army and navy were also exhibited by models. A variety of steam-power engines and gearing, brass pumps, etc., showed some unusual forms but excellent workmanship. A hand pin-making machine and the stamping apparatus of the Imperial Mint were interesting. In three separate buildings were exhibited boilers and quartz-crushing machines.

In the Hydraulic Annex a great variety of pumps and hydraulic machines discharged steady streams of water. A cascade, for propelling the turbines and other water-power apparatus, flowed from the upper tank which was refilled by two splendid rotary steam-pumps.

Other rotary pumps, all kinds of steam and hand pumps, pumps for miners, sugar-refiners, etc., blowing-machines, ventilating apparatus, steam fire-engines, etc., were kept in constant operation. Great Britain and other foreign nations participated in the exhibition.

UNITED STATES BUILDING.

The United States Building was erected by the Government for the purpose of exhibiting the functions and activity of the Government in internal development, and the workings of the different departments. The Departments of the Interior, of War, of the Treasury, the Navy, the Post-Office, of Agriculture, and the Smithsonian Institution, all took part in the display. The building was 504 by 806 feet, and covered 102,840 square feet of ground. The workings of the postal-service were practically illustrated by the Centennial Post-Office, whose appointments and organization were completely representative. All the equipments of the mail service, of the local and general offices, and the stamps and stationery, were shown, together with a special system of lock-boxes, and an envelope cutting, folding, stamping, gumming, and counting machine. The Agricultural Department was very complete and extensive, including the statistics of agriculture and large maps showing the agricultural condition of the country; the chemical constitution of the soils of all parts of the country, with the vegetable, animal, and mineral fertilizers, and an exhibit of the manufacture of agricultural products; and also a complete exhibit of the botanical products and woods of America. There were also exhibits of microscopical plants, and fibres and cells, and models of all the vegetable and horticultural products, stuffed specimens of poultry, samples of tobacco, grain, textile products, etc., and illustrations of the different processes of cultivation. The Department of the Interior showed as its principal exhibit the system of the Patent-Office, and exhibited 60,000 drawings and 5,000 models of patents; a national museum consisted of relics of Washington and other Continental antiquities. Besides these, the Pension-Office and General Land-Office presented their reports and documents. The In-

dian-Office made an interesting exhibit of Indian curiosities, and of the Indian policy of the Government. There were also exhibits of the Education-Office, the Census-Office, and the Geological and Geographical Survey of the Territories. The Smithsonian Institution exhibited a very extensive and complete collection to illustrate the animal resources of the United States. Besides a comprehensive display of the land and water fauna, there was also a full collection of hunting and fishing implements, including those used by the Indians, and a very interesting chronological exhibit of fire-arms. The modes of utilizing animals for food and other purposes were also exhibited. Supplementary to this exhibit was the collection to illustrate the fishery resources of the United States, comprising casts of all the inhabitants of American waters, angling tackle of every description, fishing-boats, whaling-implements, etc. There were other collections to illustrate the ethnology and the mineral resources of the United States. The Treasury Department exhibited the workings of the revenue system, the processes of engraving and printing paper currency, etc. The Coast Survey had an exhibit. The Lighthouse Board exhibited specimens of the different lights and methods of tending them, including a wonderfully brilliant rotary lantern, stationary parabolic reflectors, floating lamps, etc. The Navy Department made an extensive exhibit, embracing the ordnance used in the service, with the means of handling, inspecting, and repairing the different kinds of torpedoes, the publications of this branch of the service, and an historical display of the uniforms of the navy; besides two marine engines, one of 800-horse power, a compound screw-engine, and a back-acting condensing engine of 500-horse power. The Navigation Branch exhibited specimens of flags and bunting, different kinds of logs, and sounding and signaling apparatus, mathematical instruments, etc. The Naval Observatory made an exhibit of its operations and the instruments employed, and of a collection of relics of the different arctic expeditions. The Hydrographic and Nautical Almanac Offices exhibited charts and documents. The Yard and Dock Branch exhibited plans of all the navy-yards, machinery, buildings, etc. The Equipment and Recruiting, Construction and Repair, Medical and Surgical, and Pay, Provision, and Clothing Branches also exhibited their methods and equipments. The exhibit of the War Department was also extensive, illustrating every branch of the service. The Signal Service exhibited all its appliances in operation, a weather-station fully equipped, with a full corps of observers, and recording, telegraphic, and printing apparatus. The self-acting electric barometer or barograph, Hough's thermograph, the marine barometer, Eccard's evapograph, Gibbon's electrical rain and snow gauge, Eccard's rain-gauge, and Gibbon's anemograph, and the military signal apparatus, formed a collection

which reflected great credit upon American ingenuity. The Engineer Corps displayed all the methods and apparatus used in harbor improvements, and the engineering operations connected with the military service, with all the mechanical apparatus employed. There was also a full display of military ordnance, with an historical collection of weapons, and plans of forts and arsenals, models illustrating the manufacture of arms, and all the belongings of the service. Separate buildings connected with the Government display were the ordnance laboratory, showing the manufacture of cartridges and dangerous explosive ammunition; a post hospital with all its furniture and surgical instruments and medical supplies; the building containing a siren or fog signal-horn; and a model of a lighthouse with lamps and fog-bell complete.

HORTICULTURAL HALL.

The Horticultural Hall, built of iron and glass, in the Moorish style of the twelfth century, was erected at the cost of the city, and designed to remain permanently. It is 383 feet long by 193 feet wide, with an altitude in its central part of 73 feet. It overlooks the Schuylkill River, and is approached by ornamental terraces and broad stairways. The central lantern is 170 feet long. Side-portions, with curved glazed roofs, were used as forcing-houses. The central portion was filled with splendid specimens of tropical vegetation, with sago, date, and cocoa palms, orange and lemon trees, the fan-palm, the guava, camphor and India-rubber trees, the eucalyptus of antiseptic properties, the mahogany-tree, bananas, and all varieties of the cactus. In the side-portions were an immense collection of tree-ferns, rare flowering plants from England, azalias from Belgium, pitcher-plants of the South Sea Islands, the flamingo-plant, etc. Around the Horticultural Building about 25 acres were laid out in beds and terraces, and planted with all kinds of hardy flowering plants, indigenous and foreign. The Pacific Guano Company, of Boston, exhibited the extraordinary properties of their fertilizer in a luxuriant plantation. One of the finest features of the horticultural display was the collection of rhododendrons from the Knapp Hill Nurseries, in England. All kinds of gardeners' tools, and the different methods of culture and styles of landscape-gardening, were included in the horticultural exhibition.

The Agricultural Building was less solidly built of wood and glass, containing a nave and three transepts, roofed with Gothic arches, the nave being 820 feet long and 75 feet high, and the side-transepts 70 feet high, while the central one had the same height as the nave. The ground covered was rectangular in form, 10 acres in area, having a breadth of 540 and a length of 820 feet. The display of agricultural implements and products was the largest ever made, and it was specially by this department that the Exhibition was distinguished from the other World's Fairs. The Americans, standing far in advance of all the rest of the world in the application of mechanics to agriculture, exhibited proudly the finest products of their skill. Ploughs of the latest approved patterns, drills, seed-planters, horse-rakes, hay loading and baling machines, mowers and har-

AGRICULTURAL HALL.

vesters of a hundred styles, thrashing machinery for horse and steam power, winnowing and wheat-cleaning machinery, portable steam-engines, corn-shellers, various devices for binding sheaves, lawn-clippers, steam road-rollers, mechanical churns, cider-mills, iron-work for farms and stables, a machine for making horse-shoes, a self-loading excavator, windmills, and machinery for butchers and meat-packers, were prominent among the multifarious contrivances which the immense discrepancy between the extent of tillable ground and the available labor in this country has prompted the quick brains of our ingenious men to invent. The display of the land-products and food-manufactures of the United States was very large, and, to most people, exceedingly interesting. Several of the States made collective exhibits. Illinois, Indiana, Michigan, and Wisconsin, exhibited splendid specimens of grain; Oregon exhibited grain, commercial woods, and dried fruits, among them the curious dried cider and solidified apple-sauce; New Hampshire sent fine samples of wool, and specimens of her native woods; Massachusetts exhibited the products of her fisheries, and the methods of capture and packing; California exhibited her woods, birds, and agricultural products, and a case of live silkworms; the Cotton Exchange of New Orleans exhibited bales and samples of cotton; New Jersey and Delaware, Ohio, Nebraska, and Washington Territory, made collective exhibits of agricultural products; Connecticut and Massachusetts made like displays, the lat-

ter State exhibiting, also, a collection of beneficial birds; Iowa had a large display of farm-productions, together with a collection of fruits, and specimens of her soils; Nevada exhibited her minerals. The wine-growers of California, Ohio, Missouri, and New York, made a promising show of native wines. The starch, flour, spice, gelatine, baking-powder, mustard, chocolate, macaroni, and farina manufacturers had competitive exhibits of their productions. An exhibit of Southern moss, for upholstering purposes, came from New Orleans. An apparatus for hatching chickens attracted attention. Distillers and perfumers, hop-growers and maltsters, manufacturers of condensed milk and meat extracts, and canners of fruits, fish, meats, fowls, soups, shell-fish, vegetables, etc., were represented by varied displays. The exhibit of tobaccos, in the leaf and manufactured, was very large, all the principal manufacturers taking part.

The British exhibit in Agricultural Hall was imperfect, though containing some interesting classes, eminently the pickles, preserves, sauces, and extracts, including caffeine and theine; apary furniture, a comprehensive exhibit of wools from all countries, ales, Irish whiskey and oatmeal, patent condensed tea and coffee, with milk; and, among the implements, portable engines and road locomotives, and a curious apparatus for suckling calves, lambs, and pigs.

Canada made an extensive display of agricultural products, her grains, roots, beans, peas, flour, and an exhibit of wool of remarkable length and fineness. There were also considerable displays of prepared foods, stuffed animals, and ingenious agricultural machinery, including a turnip-drill, snow-ploughs, and other novelties.

The most prominent and interesting group in the French section was that of the wines. Other attractive displays were the seeds and photographed flowers and vegetables, Strasburg pies, and other fine preparations of food, chocolate, cheese, etc., tanned leather, silk-cocoons, artificial manures, cements, hydraulic lime, and artificial stone.

The Germans exhibited their wines and liquors, essences and extracts, beers, tobacco, and some fine wool from Silesia. The general agricultural productions of the country were not exhibited in any way.

The Austro-Hungarian display included raisins and dried fruits, beer, and mustards, from Bohemia; excellent wine, wool, flax, and hemp, from Hungary; with fruits, nuts, and grains, from different parts of the empire; candied fruits put up in Vienna, leather from Austria and Bohemia, etc.

Italy exhibited hemp, leather, Piedmontese rice, oil, wine, sardines, fine soap, honey, grains, beans, nuts, and cordials; sausages and cured meats from Bologna, Parmesan and Gorgonzola cheese from Milan, macaroni and dried fruits from Naples and Sicily, and oranges,

lemons, olives, figs, essential oils, and licorice from Sicily, confections from Turin, etc.

Spain made a fine and systematic exhibition of her products, native and colonial. The collection of wines, fine wools, oil, skins, and Cordovan leather, and all the agricultural productions of the peninsula, varied with the products of Spanish America and the Philippine Islands, great logs of mahogany and rosewood, festoons of tobacco and cases of cigars, chocolates, Manila hemp and cordage, and gums and resins, formed a well-arranged and pleasing exhibit.

The Portuguese exhibit was scarcely less extensive and attractive, including her generous wines, olives, oils, silk-cocoons, fruits, spices, and many other products.

Belgium had a small exhibit of chicory, chocolate, cordials, fine leathers, flax, wool, and millstones.

The Netherlands exhibited seeds, grains, plants, dye-woods, photographs of cattle, Edam cheese, flax, tobacco, liquors, beet-sugar, a flour which does not spoil, chocolate, fishing-implements, etc.

Norway exhibited leather, spirits, tobacco, essences, canned meats and fish, fishing-implements, and various sorts of preserved fish, stuffed birds, etc.

Sweden made a similar exhibit of her fisheries, and interesting displays of leather, woods, and grain, and one of dairy-utensils.

Denmark had a small exhibit, embracing punch, spirits, grain, pickles, fish, etc.

Russia sent fine specimens of grain and hemp, liquors, and food-preparations.

Japan made an interesting and curious exhibit of fishing and agricultural implements, silk-cocoons, skins, tea, tobacco, sauces, and all her native agricultural products and woods.

Brazil had an extensive exhibit, in which the principal classes were cotton, coffee, woods of over one thousand varieties, sugar, tobacco, rubber, beans, vegetable fibres, silk-cocoons, gums and resins, cocoa, rice, and starch.

Venezuela exhibited her coffees, oils, balsams, rum and Angostura bitters, cochineal, and other tropical products.

The Argentine Confederation also made a large and interesting exhibit of woods, grains, tobacco, skins, leather, silk, gums, barks, sugar, coffee, chocolate, honey, etc.

Liberia took part in the agricultural exhibition, sending coffee of good quality, a newly-introduced product in that country, with palm-soap and palm-oil, arrow-root, indigo, ivory, sugar, etc.

A wagon annex to the Agricultural Building contained a collection of farm wagons and carts, milk-carts, ice and bakers' wagons, etc., of American make.

Great Britain erected three buildings for the use and entertainment of the commissioners; and Germany, Portugal, and Brazil, each had a commissioners' pavilion. The British buildings were beautiful examples of the later Tudor architecture. The Swedish Government

exhibited a national school-house, with all the educational appliances and furniture complete. France had a Government building containing charts, drawings, and models of public works. Canada displayed her wood and lumber productions in a log and timber house, constructed from the products of her forests. Spain also erected a Government exhibition building, a soldiers' barracks, and a Cuban acclimation garden. Turkey illustrated her sponge-fisheries in a special building. Japan exhibited a model dwelling. Morocco had a Moorish villa for the display and sale of her productions. A frame building erected by Chili contained models of amalgamating machines. England had a boiler-house, and Sweden exhibited also a meteorograph. Three private French exhibitors erected special buildings.

In a Turkish *café*, of true Oriental type, an attractive Moresque pavilion, were dispensed mocha, mastic, Samian wine, and Syrian tobacco. A Tunisian bazaar and Algerine pavilion were less genuine speculative enterprises. Japanese merchants had erected one of the most tasteful structures on the grounds, much remarked as an example of Japanese architecture and joinery, surrounded by a little garden planted with curious specimens of their native vegetation, amid which were scattered quaint bronze figures of cranes and pigs: in this building a vast quantity of Japanese products and manufactures were sold by the brisk native salesmen among the crowds which thronged the shop during the whole time of the Exhibition. A New England farmer's home and kitchen, designed to present in contrast the furniture, domestic appliances, and mode of living in a Yankee dwelling a hundred years ago and those of the present day, was fitted out with many interesting relics in the ancient part of the double structure, and was eagerly and curiously visited.

Twenty-six buildings were erected by the States as State headquarters, two or three of them containing large exhibitions of State products. The Ohio headquarters, constructed of all the varieties of building-stone quarried in the State, was solidly built after a neat design. New Jersey's building exhibited her brick and tiling products. The Mississippi headquarters was in the rustic style of her early settlers' cabins. The Connecticut building was neatly designed in the English style of architecture used in colonial days. Pennsylvania erected a building for her educational exhibit, besides the State headquarters: it was perhaps the most complete educational exhibit made by any State. The other State buildings were those of New York, Rhode Island, Vermont, New Hampshire, Massachusetts, Virginia, West Virginia (whose building contained an exhibit of the vegetable and mineral products of the State, her woods, ores, coal, tobacco, marls, mineral manufactures, etc.), Maryland, Delaware, Michigan, Illinois, Indiana, Iowa, Missouri, Tennessee, Wisconsin, and Arkansas (whose

headquarters likewise contained a collection of State products, including fine specimens of cotton). Kansas and Colorado united in a very full exhibition of their extraordinary agricultural and mineral products, in a large frame structure: there were wheat-stalks from five to six and a half feet high, with heads three to six inches long; corn thirteen and a half feet high; broom-corn over eighteen feet high; rye and oats as luxuriant as the wheat; clover four and five feet high; blue-grass of over three feet growth; and fourteen different varieties of wild-grass, including the blue-stem prairie-grass, over ten feet high: there was also a fine display of the native woods of Kansas, one of the animals of both States, and a large exhibit of the gold-quartz, silver-ore, and other mineral resources of Colorado. California and Nevada also had a joint pavilion, containing an exhibit of their agricultural, forest, and mineral products.

Thirty or more buildings were erected by private American exhibitors, some of them illustrating processes and manufactures of great interest. The Telegraphic Building showed the practice of telegraphy and the appliances employed. The Empire Transportation Company showed the methods used in oil transportation and grain transportation by the fast-freight system. The Bankers' Building exhibited the forms and uses of coin and currency. The American Kindergarten and Froebel Kindergarten illustrated that system of infantile instruction, and exhibited the models and apparatus employed. The Bible Society had a pavilion for the exhibition and sale of Bibles. An other building exhibited the processes of manufacturing glass-ware. Others contained exhibits of stoves, glass, fusee-matches, chemical paints, printing-presses, organs, water-proof roofing, hollow-brick ventilated house-construction, pressed fuel, sheet-metal, Singer's sewing-machines, burial-caskets, perforated metallic window-shutters, and rubber roofing; and others exhibited the processes of baling hay, of making tea and coffee extracts, and of raising water by wind-power. An apiary contained many varieties of bees and hiving apparatus. The newspaper-advertisement bureaus exhibited the current journals of the country and files of old papers. Henry R. Worthington, of Brooklyn, exhibited two

duplex pumping-engines, which raised about 2,000,000 gallons of water per day of twenty-four hours to an average height of 200 feet, furnishing the water supply for the Exhibition. The Shoe and Leather Building, erected by the shoe and leather trade, was a large and busy hall, in which all the processes connected with the leather-manufacture in all its branches were carried on in their fullest details, and all the latest and most perfect mechanisms invented for the manufacture of shoes and other leather goods were seen in operation. The Brewers' Industrial Exhibition Building illustrated quite as completely all the processes of malting and brewing. A butter and cheese factory showed the processes and mechanical appliances used in that industry. In the Campbell Printing-Press Building all the printing for the Exhibition was done, and numerous specialties in presses were exhibited. The famous Cook, of London, set up a pavilion in which excursion-tickets to all parts of the world were procurable. The process of driving piles by gunpowder, and the automatic railroad for unloading vessels, invented by Charles W. Hunt, of New York, were exhibited in special buildings. The Starr Iron-Works, of Camden, had a large exhibit, comprising several novelties in gas-machines and steam-engines.

The Exhibition was open to visitors every day, except Sundays, from May 10th to November 10th, six months. The total number of admissions was 9,910,966; of which number 7,250,620 paid the regular fee of 50 cents, and 753,654 the special rate of 25 cents; 1,906,692 admissions were free, representing the number of exhibitors', officers', and employés' tickets and complimentary passes to members of the press and others, used during the Fair. The total admissions for the different months were as follows: May, 502,995; June, 952,177; July, 906,447; August, 1,175,314; September, 2,439,689; October, 2,663,911; November, 1,037,840.

These numbers include the admissions to the stock exhibition, which was contained in a separate inclosure. It consisted of about 20 acres, in which, for some weeks toward the close of the Exhibition, a large collection of farm-stock—sheep, goats, swine, and horned cattle, horses and dogs, for the most part from the United States and Canada—was exhibited.

F

FENYES, ALEXIUS, an Hungarian geographer and statistician, was born July 7, 1807, at Csokalj; died at New Pesth, July 23, 1876. After studying at Debreczin, Grosswardein, and Presburg, he became a lawyer in 1829, and in the following year was sent as a deputy to the Hungarian Diet. He subsequently spent several years in traveling, and in 1836 took up his permanent abode in Pesth. Here he occu-

ped a very prominent and respected position, becoming Director of the Society of Protection and Industry, President of the Radical Club, President of the Society of Agriculture, and editor of the *Ismereto*, a journal of agriculture, and of an industrial journal. His first great work, "The Present Condition of Hungary and its Dependencies in a Geographical and Statistical Point of View" (Pesth,

1836-'39, 6 vols.), was crowned with a prize by the Hungarian Academy. The same distinction he received for his "Statistics of Hungary" (Pesth, 1842-'49, 3 vols.), which simultaneously appeared in a German edition, and for his "General Hand and School Atlas" (1845), all of which works were published in the Magyar language. Subsequently he published, under the title "Description of Hungary" (Pesth, 1847, 2 vols.), an abridgment of his larger statistical works. In 1837 Fenyes became a member of the Hungarian Academy, in 1848 chief of the statistical section in the Hungarian Ministry of the Interior, and 1839 President of the Military Court of Pesth. In consequence of his moderate attitude during the Hungarian Revolution, after its suppression he was not persecuted by the Austrian Government. After that time he lived partly in Pesth, and partly in his villa in Godollo, devoting his whole time to the compilation of a geographical dictionary.

FERRARI, GIUSEPPE, an Italian philosophical writer, born in 1812 at Milan; died there, on July 2, 1876. He studied in Pavia, and then as the heir of a large fortune devoted himself entirely to his studies. He began his career as an author with an essay on his teacher Romagnosi in the "Biblioteca Italiana," and with an edition of the complete works of Vico, which he accompanied with an explanatory volume. Owing to the reactionary state of Italy, he went to France, and after that published most of his works in French. Among his works of this period are "Vico et l'Italie" (1839), "De l'Erreur" (1840), and "De Religiosis Campanellæ Opinionibus" (1840). In 1840 he was appointed Professor of Philosophy in the University of Strasburg, but was removed after a fortnight, as his opponents had succeeded in representing his teachings as communistic. The lectures that gave rise to these charges he published under the title of "Idées sur la Politique de Platon et d'Aristote" (1842). He also received appointments in other universities of France, but everywhere for a short time only, as his liberal ideas made him obnoxious. One of his most important works appeared at this time, "Essai sur le Principe et les Limites de la Philosophie de l'Histoire" (1843). In 1848 he returned to Milan, but he was soon forced to leave again for France. There he wrote "Machiavel, Juge des Révolutions de notre Temps," and "Les Philosophes salariés" (1849), and his most important work as characterizing his own political views, "Filosofia della Rivoluzione" (1851; second edition, 1873). His political views he laid down in "La Federazione repubblicana" (1859). After the War of 1859 he again returned to Italy, and was elected by his native town a deputy to the Italian Parliament. From this time on he remained in Italy, with the exception of a short period in 1860, when he went to Paris to have his work "Histoire de la Raison d'État" printed. He was reelected to

Parliament every year, where he was known as a brilliant orator. In politics he was a decided federalist, opposing the policy of annexation of Count Oavour. Besides the works mentioned above, he wrote "La Chine et l'Europe, et leur Histoire et leurs Traditions comparées" (1867), "Storia della Rivoluzione d'Italia" (3 vols., 1871-'73), and "Teoria dei Periodi politici" (1874).

FINANCES OF THE UNITED STATES.
The financial affairs of the country continued through the year 1876 without change. There was not only a lack of any improvement, but the effects of the general stagnation began to manifest themselves in quarters least anticipated. Wherever there was a large indebtedness requiring the payment of heavy installments of interest which were to be derived from income earned, embarrassment or insolvency generally ensued.

In the annual report of the Secretary of the Treasury, made December, 1875, there were presented a statement of the receipts and expenditures of the Government for the first quarter of the fiscal year ending June 30, 1876, and an estimate of the same for the remaining three-quarters of the fiscal year.

The receipts of the first quarter above mentioned, ending on September 30, 1875, which is the first quarter of the fiscal year ending June 30, 1876, were as follows:

Customs.....	\$44,228,626 25
Internal revenue.....	28,199,729 50
Sales of public lands.....	308,641 73
Tax on circulation, etc., of national banks..	2,622,068 88
Repayment of interest by Pacific Railways..	262,209 87
Customs' fines, etc.....	23,521 75
Consular, patent, and other fees.....	510,427 19
Proceeds of sales of Government property..	104,378 65
Miscellaneous sources.....	1,723,408 90
Net ordinary receipts.....	\$78,985,869 67
Premiums on sales of coin.....	2,160,375 47
Total net ordinary receipts.....	\$81,156,245 14
Balance in Treasury, June 30, 1875.....	144,702,416 41
Total available.....	\$225,858,661 55

The expenditures during the same period were as follows:

Civil and miscellaneous expenses, including public buildings, lighthouses, and collecting the revenues.....	\$18,673,072 69
Indians.....	2,660,474 38
Pensions.....	8,342,927 64
Military establishment, including fortifications, river and harbor improvements, and arsenals.....	11,891,476 26
Naval establishment, including vessels and machinery, and improvements at navy-yards.....	7,969,067 29
Interest on the public debt, including Pacific Railway bonds.....	34,517,554 81
Total ordinary expenditures.....	\$84,047,548 76
Redemption of the public debt.....	6,883,999 66
Balance in Treasury, September 30, 1875....	134,972,018 13
Total.....	\$225,858,561 55

For the remaining three-quarters of the same fiscal year, ending June 30, 1876, it was estimated that the receipts would be as follows:

Customs.....	\$112,000,000
Internal revenue.....	92,000,000
Sales of public lands.....	1,000,000
Tax on national banks.....	3,650,000
Reimbursement by Pacific Railways.....	850,000
Customs' fines, penalties, and forfeitures.....	100,000
Consular, patent, and other fees.....	1,800,000
Proceeds of sales of public property.....	600,000
Miscellaneous sources, including premium on coin.....	5,900,000
Total net receipts.....	\$216,800,000

It was estimated that the expenditures for the same period would be as follows:

Civil, miscellaneous, including public buildings..	\$49,500,000
Indians.....	4,400,000
Pensions.....	91,000,000
Military establishment.....	80,000,000
Naval establishment.....	12,000,000
Interest on the public debt.....	67,500,000
Total ordinary expenditures.....	\$184,400,000

Thus, for the fiscal year ending June 30, 1876, from the foregoing statement of actual receipts and expenditures for the first quarter and the estimates of the same for the remaining three-quarters, based upon appropriations already made, and also on the assumption that Congress would not increase the expenditure by deficiency or other appropriations, it was expected in the judgment of the Department that the revenues would reach the sum of \$297,456,145.14, and that the ordinary expenditures would amount to \$268,447,543.76. This exhibit gives a surplus revenue of \$29,008,601.38.

But the moneys received and covered into the Treasury by warrants during the fiscal year ending June 30, 1876, were as follows:

From customs.....	\$148,071,994 61
From internal revenue.....	114,700,733 08
From sales of public lands.....	1,129,466 95
From tax on circulation and deposits of national banks.....	7,328,578 29
From repayment of interest by Pacific Railway companies.....	718,179 96
From customs' fines, penalties, etc.....	158,797 66
From labor, drayage, storage, etc.....	1,026,846 08
From sales of Indian-trust lands.....	190,160 29
From fees—consular, letters-patent and land.....	2,009,280 92
From proceeds of sales of Government property.....	1,859,714 94
From marine-hospital tax.....	845,679 92
From steamboat fees.....	265,588 65
From profits on coinage, etc.....	1,741,117 81
From tax on seal-skins.....	817,584 00
From miscellaneous sources.....	1,877,291 03
Total ordinary receipts.....	\$288,756,498 86
Premium on sales of coin.....	8,733,545 80
Total net receipts, exclusive of loans.....	\$297,482,089 16
Proceeds of bonds of 1831, Geneva award....	6,618,826 12
Total net receipts.....	\$294,095,865 28
Balance in Treasury June 30, 1875, including deposits of coin and United States notes represented by certificates outstanding....	144,702,416 41
Total available cash.....	\$438,798,281 69

The net expenditures by warrants during the same period were:

For civil expenses.....	\$17,292,248 88
For foreign intercourse.....	1,410,252 50
For Indians.....	5,966,558 17
For pensions.....	23,257,895 69
For military establishment, including fortifications, river and harbor improvements, and arsenals.....	88,070,888 64

Brought forward.....	\$90,937,343 83
For naval establishment, including vessels and machinery, and improvements at navy-yards.....	18,968,309 82
For miscellaneous civil, including public buildings, lighthouses, and collecting the revenues.....	48,815,873 45
For interest on the public debt, including interest on bonds issued to Pacific Railway companies.....	100,348,371 22
Total net expenditures.....	\$258,459,797 83
Redemption of the public debt.....	\$51,889,464 80
Judgments of Court of Alabama Claims.....	6,641,287 26
Total net disbursements.....	\$316,990,549 89
Balance in Treasury June 30, 1876.....	121,907,733 90
Total.....	\$438,798,281 69

This statement shows that the net revenues for the fiscal year were \$297,482,089 16 and that the net expenditures were \$258,459,797 83

Leaving a surplus revenue, exclusive of provision for the sinking-fund, of \$39,022,241 88

By the statement of actual receipts and expenditures for this fiscal year it will be seen that the revenues yielded \$287,482,089.16, or \$9,974,106.98 less than the estimate; and that the net expenses amounted to \$258,459,797.83, or \$9,987,746.43 less than was anticipated: exhibiting a surplus revenue of \$29,022,241.88, or \$13,640.45 in excess of the amount contemplated. It will thus be perceived that the estimates, when taken as a whole, were remarkably reliable, varying from the actual results realized by the Treasury only to the extent of \$13,640.45.

The receipts for the first quarter of the fiscal year ending June 30, 1877, were as follows:

From customs.....	\$87,554,738 58
From internal revenue.....	28,818,886 87
From sales of public lands.....	252,005 68
From tax on circulation, etc., of national banks.....	3,084,707 87
From repayment of interest by Pacific Railways.....	97,902 59
From customs' fines, etc.....	17,095 27
From consular, patent, and other fees.....	423,684 75
From proceeds of sales of Government property.....	171,575 86
From miscellaneous sources.....	2,128,069 16
Net ordinary receipts.....	\$72,991,005 58
Premium on sales of coin.....	119,518 96
Proceeds of bonds of 1831, Geneva award....	2,408,445 88
Total net ordinary receipts.....	\$75,518,970 09
Balance in Treasury June 30, 1876.....	121,507,732 80
Total available.....	\$197,026,702 89

The expenditures during the same period were as follows:

For civil and miscellaneous expenses, including public buildings, lighthouses, and collecting the revenues.....	\$15,987,208 41
For Indians.....	1,484,765 98
For pensions.....	8,852,257 98
For military establishment, including fortifications, river and harbor improvements, and arsenals.....	9,715,661 85
For naval establishment, including vessels and machinery, and improvements at navy-yards.....	6,174,353 96
For interest on the public debt, including Pacific Railway bonds.....	87,107,550 68
Total ordinary expenditures.....	\$78,751,998 26

Brought forward.....	\$78,751,806 26
Redemption of the public debt.. \$3,618,648 77	
Judgments of Court of Alabama	
Claims.....	2,858,684 21
	<u>5,972,282 98</u>
Total expenditures.....	\$84,724,176 24
Balance in Treasury September 30, 1876.....	112,597,526 08
Total.....	<u>\$197,821,709 89</u>

For the remaining three-quarters of the same fiscal year ending June 30, 1877, it was estimated that the receipts would be:

From customs.....	\$39,445,271 47
From internal revenue.....	91,511,658 64
From sale of public lands.....	800,000 00
From tax on national banks.....	8,600,000 00
From reimbursement by Pacific Railways...	800,000 00
From customs' fines, penalties, and forfeitures.....	75,000 00
From consular, patent, and other fees.....	1,200,000 00
From proceeds of sales of public property...	253,000 00
From miscellaneous sources, including premium on coin.....	4,000,000 00
Total net receipts.....	<u>\$191,181,925 10</u>

For the same period it was estimated that the expenditures would be:

For civil and miscellaneous, including public buildings.....	\$39,000,000 00
For Indians.....	4,000,000 00
For pensions.....	20,000,000 00
For military establishment.....	26,500,000 00
For naval establishment.....	7,500,000 00
For interest on the public debt.....	61,876,880 09
Total ordinary expenditures.....	<u>\$158,876,880 09</u>

From the statement of actual receipts and expenditures for the first quarter ending September 30th, and of the estimates of the same for the remaining three-quarters, based upon existing laws, it was expected that the revenues for the fiscal year would yield the sum of \$264,292,449.59, and that the expenditures would amount to \$237,628,753.35, which would leave a surplus revenue of \$26,663,696.24. The amount which should be applied to the sinking-fund was estimated at \$33,705,806.67. The surplus revenues would fall below this amount, by not less than \$7,042,110.43.

During the fiscal year ending June 30, 1876, the public debt was reduced \$29,249,381.33, as will appear by the following statement:

Principal of the debt July 1, 1875.....	\$2,282,334,581 95
Interest due and unpaid, and accrued interest to date.....	83,647,556 19
Total debt.....	<u>\$2,270,982,088 14</u>
Cash in the Treasury.....	142,243,361 82
Debt, less cash in the Treasury....	<u>\$2,128,698,726 32</u>
Principal of the debt July 1, 1876.....	\$2,180,395,067 15
Interest due and unpaid, and accrued interest to date.....	88,514,004 54
Total debt.....	<u>\$2,218,909,071 69</u>
Cash in the Treasury.....	119,469,736 70
Debt, less cash in the Treasury....	<u>\$2,099,439,344 99</u>
Showing a reduction, as above stated, of...	<u>\$29,249,381 33</u>

By the act of Congress of 1875 the redemption of greenback notes in coin is required in 1879. The views of the Secretary on the adequacy of the provisions of the measure for re-

sumption to accomplish its object are important. He says:

As a further provision deemed essential to the purpose of resumption, it is recommended that, in addition to the authority of the Secretary of the Treasury already conferred, to provide for redemption of legal-tender notes on and after the day provided for resumption, by the accumulation of an adequate amount of gold to meet the volume of \$300,000,000 of legal-tender notes, which will then be outstanding, by the sale of United States bonds, authority be given him from time to time, as he may deem expedient and the state of the finances admit, to fund these notes into a bond bearing a rate of interest not more than four and one-half per cent., with not less than thirty years to run, with such limitations as to the amount to be so funded in any given period as Congress, in its discretion, may determine.

A sudden accumulation of gold in amounts sufficient to meet so large a demand as that contemplated in January, 1879, is deemed impracticable; while to accumulate in advance of that time would be attended with necessary loss of interest, would be likely to disturb money exchange, and embarrass the funding of our national securities. The present time is regarded as opportune for the gradual withdrawal of these notes. It is believed they would not be greatly missed from the circulating medium, as their place will readily be supplied by the issue of national-bank notes under this act.

The act of January 14, 1875, entitled "An act to provide for the resumption of specie payments," as methods of its accomplishment, requires the redemption of the outstanding fractional currency in silver coin; the increase of the volume of gold coin by cheapening the coinage of gold bullion; the substitution, as the business demands of the country may require, of national-bank notes for the legal-tender notes of the United States in excess of \$300,000,000; and the ultimate redemption of the entire legal-tender notes on and after January 1, 1879, as they shall be presented.

In pursuance of these provisions the issue of subsidiary silver coin and the redemption of fractional currency are successfully progressing; \$23,000,000 of silver change has been issued, and \$13,000,000 of fractional currency redeemed. The capacity of the mints is believed to be equal to the coinage, in the present fiscal year, of the balance of the fractional currency outstanding, and they are now working at their full capacity.

The coinage of gold bullion for the past year has been 1,949,468 pieces, of the value of \$38,178,962.50—an increase of \$4,624,997.50 over the operations of the previous year; which is an increase compared with the previous year of the amount of gold operated on of \$14,327,686.

Legal-tender notes have been reduced by redemption and the issue of national-bank notes to the amount of \$14,464,284, leaving the amount of legal tenders \$367,535,716. As the demand for national-bank currency is limited, with slight probability of its immediate increase, the contemplated reduction of these notes in excess of \$300,000,000 prior to January, 1879, is not likely to be realized. It is believed that the larger portion of them will at that time remain outstanding. It will be observed that, in contemplation of the act, the Secretary is limited in the issue of silver coin by the sum of fractional currency to be redeemed by it and a reduction of the legal tenders to the amount in excess of \$300,000,000. Besides this he is required to make adequate preparation and provision for the redemption, in coin, of legal-tender notes outstanding at the prescribed period of resumption. It is apparent that the silver coin may be substituted for the fractional currency and the gold coin increased, while there is little probability of retiring the entire amount of legal tenders in excess of the \$300,000,000. It will be observed that it is incumbent on the Secretary to

prepare to provide for the redemption of all legal-tender notes which may be presented on and after that date, and that he means at his command, at this end, are the surplus revenues existing at that time not otherwise appropriated, and the proceeds of the issue, sale, and disposal of certain descriptions of United States bonds at par in coin to the extent necessary to carry this act into effect. This involves the necessity of the accumulation of coin to the amount of the actual demand for redemption of these notes on that day and any day thereafter. There will likely be at that time not less than \$300,000,000 outstanding, and probably no inconsiderable amount in excess of that sum.

Here, it will be seen, is an imperative requirement of the Secretary to redeem in coin, on a given day, the legal-tender notes amounting to \$300,000,000, and authority to prepare and provide for it. He may sell United States bonds to obtain the needful coin to the extent necessary to carry this act fully into effect. The act contemplates the accumulation of the needful amount of coin against the day of resumption; but, as the necessary amount on a given day is terminate only at the option of the holders of the notes to be redeemed, the amount to be provided for is necessarily uncertain, and, as it will depend upon events or a condition of things over which he has little or no control, impossible for him to determine. He is authorized, if in his judgment deemed necessary to carry the act into effect, to accumulate an amount of gold equal to the entire amount of the legal tenders outstanding on that day; but this, if it were not morally impossible, would be so inexpedient, as a financial measure, that it is not to be presumed to have been contemplated by Congress, and so not incumbent on the Secretary. Still he is expected and required to meet the demand of redemption by the accumulation of coin adequate in amount, at his discretion, with no certain data for his guidance in the exercise of it. What is essential for him to know in order to the performance of the duty is, what amount of notes will certainly be presented for redemption on the 1st of January, 1879. As this is clearly not attainable he is left to deal with what is probable, determinable, upon the condition of such general causes as will be likely to attend that event. It would not be difficult, in the present state of monetary affairs, to make a probable estimate of the amount required if the redemption were to take place in January next; and it is probable that accumulation of an amount of coin equal to a moiety of the sum total of these notes would be an ample preparation; but, while it is to be hoped that the credit of our bonds may not be less in 1879, it may not be known that in other respects the situation will favor such result. It is, however, deemed probable in any supposable condition of monetary affairs, that, if no inconsiderable reduction of the volume of these notes should be made in anticipation of the redemption of 1879, the preparation required by accumulation of coin for the demands of January, 1879, and immediately thereafter, must be at least an equal proportion of the sum total of the notes outstanding. As to the surplus revenues as a measure of redemption, such is the present and probable future of these revenues and the demands upon them, that it is not deemed at all probable that any considerable sum not otherwise appropriated could be devoted to this end. In this connection, however, it is proper to observe that now, for the first time in many years, owing to the large reduction of currency payments, the sales of gold, to obtain the equivalent currency therefor, are no longer necessary, and thus a considerable accumulation of gold may be anticipated from the surplus from the customs revenue.

By the act of January 14, 1875, the limitation upon the issue of national-bank notes was repealed, and the volume of currency left to be determined by the business demands of the country. The Secretary of the Treasury was required to retire, of legal-ten-

der notes, eighty per cent. of the sum of national-bank notes then issued in excess of \$300,000,000. The amount of additional currency issued since the passage of this act is \$18,080,855, and legal-tender notes to the amount of \$14,464,282 have been retired.

By the act of June 20, 1874, national banks might withdraw their circulation in whole or in part by depositing lawful money with the Treasurer, and withdraw a proportional amount of the bonds; and it was made the duty of the Secretary to retire legal-tender notes to the extent of eighty per cent. of the bank-notes thereafter issued. Under this act, \$52,853,560 of legal-tender notes have been deposited in the Treasury, and \$37,122,069 of bank-notes, accordingly, have been redeemed and destroyed.

The amount of legal-tender notes outstanding November 1, 1876, was \$367,535,716. The amount of said notes on deposit for the purpose of retiring circulation was \$20,910,946. The amount of national-bank notes in circulation on that day was \$29,143,464 less, and of legal tenders \$14,464,284 less, than on January 14, 1875—a total decrease in circulation, under the operation of the act, of \$43,607,749.

From these facts, as well as from the large accumulations of money at the money centres and the lack of demand for it, it is apparent that the volume of currency is largely in excess of the real demands of legitimate business, and that a portion of the legal tenders might be gradually withdrawn without embarrassment to the business of the country.

In the interest of permanent redemption, and as a means of maintaining the same, it is deemed important also, if not quite indispensable, that provision should be made requiring the national banks to gradually provide coin in such ratio as the Secretary of the Treasury may direct, and to hold the same as a part of their legal money reserve, so that said reserve, on the first day of January, 1879, shall be equal in amount to the entire reserve required by law. To the same end, as the fractional currency is withdrawn, it is deemed expedient that not only the vacuum caused thereby in the matter of change should be made good, but that, as additional change, the volume of silver should be increased to the amount of at least \$80,000,000, and silver made a legal tender to the amount of \$10 in all cases, except the obligations of the Government of the United States and the customs dues.

On the 24th of August, 1876, a contract was made for the negotiation of \$40,000,000 of the four and a half per cent. bonds authorized by the acts of July 14, 1870, and January 20, 1871, and giving to the contracting parties the right to subscribe for the whole or any part of the remaining \$260,000. The agreement provides that the Secretary is to allow the parties named one-half of one per cent. commission upon the amount they may take, they to assume and defray all expenses which may be incurred in preparing, printing, transporting, and issuing said four and one-half per cent. bonds, and for transmitting to the Treasury Department at Washington, coin, United States five-twenty bonds, matured United States coin coupons received in payment for the four and one-half per cent. bonds issued, or which may be issued, to the contractors; and the Secretary agreed to issue notices for the redemption of an equal amount of six per cent. five-twenty bonds of the United States, upon the dates of subscription by the contracting parties for four and one-half per cent. bonds, as provided by the act of July 14, 1870. Issues to the extent of \$35,674,550 of four and one-half per cent. bonds have been made.

STATEMENT OF THE OUTSTANDING PRINCIPAL OF THE PUBLIC DEBT OF THE UNITED STATES, JUNE 30, 1876.

							\$2,180,395,067 15

The report of the Controller of the Currency for 1876 contains full statistics of the reserves, taxation, dividends, earnings, and losses of the national banks, with a summary of their resources and liabilities for each year since the system began. It states that the total number of national banks organized since the establishment of the national banking system is 2,343. Of these 49 have failed, and 207 have gone into voluntary liquidation, leaving 2,087 in existence on November 4, 1876. During the year,

86 banks were organized, with an authorized capital of \$3,189,800; 9 banks have failed, with an aggregate capital of \$985,000; and 33, with a total capital of \$3,030,000, have voluntarily closed business by vote of shareholders owning two-thirds of their capital stock.

The following table exhibits, by months, the issue and retirement of national-bank circulation, and the deposit and retirement of legal-tender notes, for the year 1876, under the acts of June 20, 1874, and January 14, 1875:

MONTHS.	NATIONAL-BANK CIRCULATION.		LEGAL-TENDER NOTES.	
	Issued.	Retired.	Deposited.	Retired.
January.....	702,870	1,986,738	2,629,900	564,080
February.....	829,385	1,949,878	3,556,287	829,748
March.....	822,380	1,859,549	5,804,029	188,144
April.....	225,515	1,622,117	8,001,600	227,879
May.....	476,560	2,087,421	2,085,692	404,206
June.....	485,670	4,744,747	2,612,645	351,894
July.....	144,889	2,631,816	1,232,881	158,056
August.....	860,100	4,082,908	1,187,630	284,624
September.....	1,045,510	2,330,188	1,776,085	889,864
October.....	1,193,780	2,201,606	1,251,609	956,024
November.....	780,893	1,900,892	432,600	624,716
December.....	1,069,895	1,410,235	870,975	855,916
National-bank notes surrendered.....		3,088,809		
Totals.....	7,142,249	32,082,929	24,191,881	5,772,186

It will be seen that the net decrease of national-bank circulation during the year was \$24,893,680, and of legal-tender notes \$5,772,186. The net decrease of national-bank circulation from January 14, 1875, to January 1, 1876, was \$7,469,554, and the net decrease of legal-tender notes \$10,172,780. If to these sums be added the amount of legal-tender notes on deposit with the Treasurer on Janua-

ry 1, 1877, which was \$18,908,374, the aggregate decrease of circulation since the passage of the act of January 14, 1875, will be \$67,211,524.

The following table exhibits the circulation and deposits, together with the specie, United States notes, and other kinds of reserve held by the national banks at three different periods in each of the years 1873, 1875, and 1876:

DATES.	Number of Banks.	LIABILITIES.			Reserve required.	RESERVE HELD.		CLASSIFICATION OF RESERVE.		
		Circulation.	Net Deposits.	Total.		Amount.	Ratio to Liabilities.	Specie.	Other Lawful Money.	Due from Agents.
April 25, 1873.....	1,963	888.1	650.3	988.4	194.9	925.4	92.9	16.9	119.7	88.8
June 18, 1873.....	1,968	888.8	691.9	1,080.7	904.9	254.1	24.7	28.0	139.0	97.1
September 12, 1873.....	1,976	889.1	673.3	1,012.4	199.5	229.1	22.6	19.9	118.1	96.1
May 1, 1875.....	2,046	822.8	720.6	1,048.9	907.3	230.5	22.1	10.6	139.8	80.6
June 30, 1875.....	2,076	818.1	758.4	1,078.5	914.8	259.8	24.9	19.0	151.1	89.7
October 1, 1875.....	2,087	818.4	781.9	1,050.3	908.9	265.1	23.8	8.1	141.4	85.6

June 30, 1876.....	2,091	894.4	718.5	1,007.9	200.2	246.7	24.5	25.8	188.5	87.9
October 3, 1876.....	2,089	891.8	705.5	997.3	193.4	236.8	23.7	21.4	128.0	87.4

The following table gives, by geographical divisions, the capital, surplus, dividends, and net earnings, and the ratios of dividends to capital, to capital and surplus, and of earnings to capital and surplus, semi-annually, for the year ending September 1, 1876; from which

it will be seen that the average annual dividends upon capital during the last year were less than 9½ per cent., while the ratio of dividends to capital and surplus in the same period was 7½ per cent., and the earnings to capital and surplus less than 7 per cent.:

GEOGRAPHICAL DIVISIONS.	Number of Banks.	Capital.	Surplus.	Dividends.	Net Earnings.	RATIOS.		
						Dividends to Capital.	Dividends to Capital and Surplus.	Earnings to Capital and Surplus.

The average rate of interest in New York City for the fiscal year ending June 30, 1876, on call loans, was 3.3 per cent., and on commercial paper, 5.3 per cent.

The amount of losses charged by 806 national banks to profit and loss or surplus accounts during the six months ending March 1, 1876, was \$6,501,169; and during the six

months ending September 1, 1876, \$13,217,856; making a total of \$19,719,025; of which amount \$6,878,759 was charged off by the New York City banks, and \$1,598,722 by the Boston banks.

The following table gives, by geographical divisions, the amount of national and State taxes paid by the national banks, and their ratios to capital, for the year 1875:

GEOGRAPHICAL DIVISIONS.	Capital.*	AMOUNT OF TAXES.			RATIOS TO CAPITAL.		
		United States.	State.	Total.	U. S.	State.	Total.
					Per cent.	Per cent.	Per cent.
New England States.....	\$164,916,988	\$1,987,016	\$3,016,587	\$4,953,559	1.2	1.8	3.0
Middle States.....	193,555,507	3,300,498	4,062,459	7,362,957	1.7	2.1	3.8
Southern States.....	34,483,488	448,048	476,286	924,334	1.3	1.4	2.7
Western States and Territories...	111,300,598	1,634,969	2,502,590	4,137,559	1.5	2.4	3.9
United States.....	\$508,687,911	\$7,817,581	\$10,068,122	\$17,875,658	1.5	2.0	3.5

The national banks paid the following percentage of taxation: In New York city—United States 2 per cent., State 3.1 per cent., total 5.1 per cent.; Boston, 1.4, 1.9, total 3.3; Philadelphia, 2, 0.8, total 2.08; Baltimore, 1.3, 2, total 3.3; Chicago, 2.3, 2.5, total 4.8; St. Louis, 1.2, 2.8, total 4. The national banks of the State of New York paid the highest percentage of taxation, the total being 4.7 per cent. In Ohio and Indiana the rate was 3.8; Illinois, 4.2; Wisconsin, 3.8; Kansas, 4.6; Nebraska and South Carolina, each 4.5. The amount of United States taxes paid by the na-

tional banks during the year ending July 1, 1876, was—on circulation, \$3,091,796; on deposits, \$3,505,129; on capital, \$632,296: making an aggregate for the year of \$7,229,221.

The following table exhibits the resources and liabilities of the national banks on October 2, 1876, and of the State banks, savings-banks, and trust companies, of the country, far as they could be obtained from official sources; also the resources and liabilities of the national banks and of the State banks separately, in New York City, and in the State exclusive of the city, on December 22, 1876:

RESOURCES AND LIABILITIES.	NEW YORK CITY.		NEW YORK STATE.		UNITED STATES.

* The capital of the banks which reported State taxes in 1875 was \$498,733,403.

The exchanges at the clearing-house of New York for the year ending October 1, 1876, were \$21,597,274,247; the average daily exchanges were \$70,849,428; and the average daily balances paid in money were \$4,218,878, or only 6 per cent. of the amount of the settlements.

The United States laws require returns of capital, circulation, and deposits, to be made by State banks, savings-banks, and private bankers, to the Treasury Department, for the purposes of taxation. From these returns, and from the reports made to the Controller of the

Currency, the following statement has been compiled, giving, by States, the amount of circulation of the national banks on January 1, 1877; the number, amount of capital, and deposits of the national banks on May 12, 1876; and the number, average capital, and deposits of the State and savings-banks, trust companies, and private bankers, for the six months ending May 31, 1876: from which it will be seen that the total number of banks and private bankers making returns was 6,609, with a total banking capital of \$720,012,806, and total deposits, \$2,054,980,107:

STATES AND TERRITORIES.	NATIONAL BANKS.				SAVINGS-BANKS, STATE BANKS, AND PRIVATE BANKERS.

The table on page 290 exhibits the growth of savings-banks in the States named, as shown by their deposits, from 1830 to 1875.

Some remarks are made by the Secretary, and arguments advanced, to show that the coin payment, to which the faith of the nation was pledged in 1869, was that of gold and not silver. This point has become one of national importance, under the decline in the value of silver during the last few years, and a differ-

ence of opinion exists. The Secretary asserts that "any other view, whatever technical construction the language may be susceptible of, would be regarded as of doubtful good faith, and its probable effect prejudicial to the public credit."

The amount of silver coin issued to October 30, 1876, was \$22,096,712.16, of which there was issued for fractional currency redeemed and destroyed, \$12,953,259.43.

The coinage at the different mints during the fiscal year was as follows:

DESCRIPTION.	Pieces.	Value.
MINT AT PHILADELPHIA.		
Gold coinage.....	422,265	\$3,260,987 50
Silver coinage (trade-dollars)...	290,050	280,050 00
Silver coinage (subsidiary coin)...	29,022,950	6,320,453 50
Minor coinage.....	14,915,000	260,350 00
Total.....	44,640,265	\$15,121,790 50
MINT AT SAN FRANCISCO.		
Gold coinage.....	1,375,600	\$37,036,500 00
Silver coinage (trade-dollars)...	4,523,000	4,523,000 00
Silver coinage (subsidiary coin)...	92,504,000	4,440,000 00
Total.....	98,402,600	\$35,999,500 00
MINT AT CARSON.		
Gold coinage.....	151,608	\$2,881,525 00
Silver coinage (trade-dollars)...	1,329,000	1,329,000 00
Silver coinage (subsidiary coin)...	12,578,000	3,244,000 00
Total.....	14,058,608	\$6,454,525 00
Total coinage.....	87,101,468	\$57,565,315 00

It is stated by the Director of the Mint that, from the most authentic sources of information which could be procured, it has been ascertained that the domestic production of gold and silver, for the last fiscal year ending June 30, 1876, was about \$85,250,000; of which amount \$46,750,000 was gold, and \$38,500,000 silver.

The estimates of the same Director of the Mint made for the previous fiscal year fixed the stock of gold and silver coin in the United States at about \$142,000,000, of which some \$12,000,000 was probably silver. Taking this estimate as a basis, we have: amount of gold coin June 30, 1875, \$130,000,000; adding to this the product of the mines for 1876, \$46,750,000, and importations, \$7,992,000, furnishes \$184,742,000; deducting the exports, \$31,177,000, and about \$2,000,000 consumed in

the arts and manufactures, leaves a net balance of about \$151,565,000 gold in the country at the close of the fiscal year, June 30, 1876. The estimated amount of silver coin, June 30, 1875, was about \$12,000,000; importations during 1876, \$7,942,000; product of the mines, \$38,500,000; giving a gross amount of \$58,442,000, from which deduct exportations, \$25,829,000, and amount employed in manufactures, \$3,000,000, leaving \$30,113,000 as the stock of silver coin and bullion: June 30, 1876, a total amount of both gold and silver coin and bullion of \$181,678,000. This is an increase during the year of about \$39,000,000 in the national coin.

The following facts, stated by the Director of the Mint on the change in the relative value of gold and silver, are important:

The average relative value of gold and silver from the establishment of the money system of the United States in 1792 down to the year 1870 was about as 1 to 154, from which ratio there were no important variations, except that in 1859 silver appreciated nearly five per cent., as compared with its relative value to gold in 1848. In 1760 the relative value of gold and silver was as 1 to 14.29; in 1781, 1 to 18.33; and in 1809, 1 to 16.25; or a change of 21½ per cent. Taking 1781 as the year of the highest relative value of silver since 1760, and the average of the first seven months of 1876 as the lowest within a period of ninety-five years, shows a change of 84 per cent. in the relative value of the two metals. In 1849 the ratio was as 1 to 15.78, and in 1859, 1 to 15.19, representing a change of 3½ per cent. This covered the period of an extraordinary addition to the world's supply of gold from the mines of California and Australia. That the change in relative value was not greater than this appears to be conclusive that either there existed a vacuum for the absorption of gold, or that it is naturally more unvarying in value than silver. Evidences of an approaching important alteration became apparent in 1872, or immediately after a change from a silver to a gold standard by the German Empire had been definitely determined upon. This change progressed very gradually during the years 1872, 1873, and 1874, became marked in 1875, and during the first seven months of 1873 was so

great as to be without a parallel in modern times. At one time in July of this year, the commercial relation of the two metals was as 1 to 20.17.* Since the last-named date there has been a gradual recovery, the price at present (October 20, 1876) being 103½ cents per standard ounce, corresponding to a ratio of 1 to 17.96. The large purchases of silver by the United States no doubt had a very decided effect in arresting the decline, and also in promoting the recovery in price which has since taken place. If the substitution of silver coin for the fractional currency had not been undertaken in this country, the price of silver would no doubt have fallen lower than it did in July last, and its appreciation since then been less than it has been.

The change in the relative value of the precious metals is not, however, due altogether to the depreciation of silver, there evidently having been during the same period, 1871 to 1876, an appreciation of gold; but it is slight compared with the depreciation of silver. In making this statement in reference to gold, I am aware that nearly all the prominent authorities in Europe, including the highly intelligent British commission which recently examined and reported on this subject, treat the change in the relative valuation of gold and silver as being solely a depreciation of silver. The new gold coinage of Germany, which commenced in 1872, now amounts to more than \$387,000,000 in our money terms. While this coinage has been in progress, Austria and the Netherlands, countries of the silver standard, have each coined gold for the purpose of regulating and conducting foreign exchanges, and France has largely increased her stock of that metal. I cannot but think that the demand for gold by these countries and the Scandinavian states, in which there has been recently a change to the gold standard, exceeded the supply available for coinage from the mines of the world, and to a sufficient extent to produce a slight advance in its value.

The dividing line between the depreciation of silver and the appreciation of gold cannot be accurately determined; but it is very clear that the

change in the relative value of the two metals has been principally caused by depreciation of silver. The causes which effected this unexampled change may be summarized in the order of their importance in producing the decline, as follows: First, the change from the silver to the gold standard by the German Empire and the Scandinavian states; second, the use of a forced paper currency in Russia, Austria, and some other countries; third, diminished demand for export to the Indies and China; fourth, the limitation placed on the coinage of silver by countries of the double standard; fifth and last, increased production of that metal.

The alteration in the relative value of the two metals shows conclusively that their exchange or purchasing power is due in a greater degree to their use as money than has heretofore been generally conceded, and this point must not be lost sight of in considering their probable future relative value.

The principal sources of revenue to the Government are the receipts from customs and the collections of internal taxes.

The receipts from customs for the year ending June 30, 1875, were \$157,167,722.35, and at the corresponding date of 1876 they were \$148,071,984.61, a decline of \$9,095,737.74. The receipts for the first quarter of the current fiscal year, 1876-'77, were \$37,554,728.53, while for the corresponding period of last year they were \$44,233,626.25, showing a decrease of \$6,678,897.72.

For the months of October and November, 1876, the receipts were \$20,247,043.97, and for the same months of 1875 were \$23,936,950.23.

The following tabular statement shows the comparative receipts from the various sources of internal revenue for the fiscal years ending June 30, 1875 and 1876 respectively:

SOURCES.	1875.	1876.	Increase.	Decrease.
Spirits.....	\$52,061,991 19	\$56,426,865 18	\$4,364,874 01
Tobacco.....	37,303,461 98	39,795,839 91	2,491,378 08
Fermented liquors.....	9,144,004 41	9,571,230 66	427,226 25
Banks and bankers.....	4,097,248 13	4,006,696 08	\$90,550 09
Penalties, etc.....	281,107 61	409,284 48	128,176 87
Adhesive stamps.....	6,587,229 65	6,518,487 51	68,742 14
Bank taxes under repealed laws.....	1,080,111 44	509,631 09	570,480 35
Total.....	\$110,545,154 23	\$117,287,036 81	\$7,891,705 16	\$99,772 58

The amount of collections, as above reported, includes commissions on sales of stamps, paid in kind, and certain sums reported as collected, but not deposited, during the fiscal years in question, thus causing an apparent discrepancy between the above amounts of collections and the amounts of such collections shown by warrants covering the deposits into the Treasury.

The coin values of the exports and imports of the United States for the last fiscal year, as appears from official returns made to and compiled by the Bureau of Statistics, are as follows:

Exports of domestic merchandise.....	\$525,582,247
Exports of foreign merchandise.....	14,802,424
Total.....	\$540,384,671
Imports of goods.....	460,741,190
Excess of exports over imports.....	\$79,643,481

For the fiscal year 1875 there was an excess of imports over exports amounting to \$19,562,725, showing a difference of \$99,206,206.

Exports of specie and bullion.....	\$56,506,302
Imports of specie and bullion.....	15,936,681
Excess of exports over imports.....	\$40,569,621

Total excess of exports of merchandise, and the precious metals over imports..... \$130,218,102

The value of the exports to the provinces of Ontario and Quebec, during the last fiscal year, as the detailed statements furnished by the Commissioner of Customs of the Dominion of Canada show, amounted to \$10,507,563 in excess of that returned by the customs officers of the United States. With this addition, the value of the total exports of the year under consideration would amount to \$550,892,234.

* This temporary and exceptional ratio of 1 to 20.17 in July, 1876, compared with that of 1 to 13.33, the average during 1781, showed a change in relative value of 51½ per cent. in a period of ninety-six years, during which there were various fluctuations.

The total exportation of specie and bullion was less than that for the preceding year by \$35,625,840, while the exports of domestic goods have increased in value \$26,298,147.

Importations of merchandise decreased to the amount of \$72,264,246 as compared with those of the preceding fiscal year, and of \$106,665,152 as compared with the fiscal year ended June 30, 1874.

There was an increase in the value of the importations of a few articles, chiefly raw products and necessities admitted free, as follows: Barka, medicinal, and cork-wood, \$611,540; coffee, \$6,197,509; dye-woods in sticks, \$611,377; jute, raw, \$371,490; silk, raw, \$920,202.

There was a decrease in the value of the importations of chemicals, drugs, and dyes, of \$2,081,817; gums, \$444,061; hides and skins, \$5,501,195; India-rubber and gutta-percha, crude, \$611,831; paper-materials, \$916,699; tea, \$3,149,587; tin, in bars, blocks, and pigs, \$510,923; wood, unmanufactured, \$488,904; malt-liquors, \$580,653; cotton-manufactures, \$5,012,803; fancy goods, \$1,046,852; flax, and manufactures of, \$2,157,196; fruits, \$624,180; glass and glass-ware, \$998,167; hair, \$507,844; hemp, raw, \$862,768; iron, and manufactures of, \$5,865,877; gunny-cloth, \$1,048,497; lead, \$336,672; leather of all kinds, \$1,944,357; opium, \$231,887; precious stones, \$919,379; flax-seed, \$2,367,516; silk-manufactures, \$634,956; soda, and salts of, \$1,181,082; sugar and molasses, \$18,735,958; tin, and manufactures of, \$2,950,848; tobacco, and manufactures of, \$688,447; watches, etc., \$826,116; wines, spirits, and cordials, \$1,174,986; wood, and manufactures of, \$1,015,006; wool, unmanufactured, \$2,823,642; wool, manufactures of, \$11,400,896.

There was an increase in the exports of the following articles, the values being stated in currency:

Indian-corn, \$8,898,843; wheat, \$8,775,036; wheat-flour, \$721,039; copper, in pigs, bars, and sheets, \$2,055,859; cotton, raw, \$2,020,637; cotton-manufactures, \$3,651,096; leather, and manufactures of, \$2,744,919; oil-cake, \$636,285; mineral oil, crude, \$814,250; refined, \$1,725,277; sperm, \$519,232; shot and shell, \$507,452; bacon and hams, \$11,051,843; refined sugar, \$2,967,205; tallow, \$1,042,175; timber, sawed and hewed, \$1,105,510.

The exports of domestic gold and silver in excess of the imports were \$34,102,010, as against \$62,956,412 for the previous year.

There was a decrease in the value of the exportations of the following articles:

Agricultural implements, \$368,923; brass, and manufactures of, \$743,655; clocks, and parts of, \$255,323; copper-ore, \$645,107; fruits, \$818,216; manufactures of hemp, \$1,823,804; pig-iron, \$307,699; steam-engines, locomotive, \$435,080; machinery, \$1,264,467; muskets, pistols, rifles, and sporting-guns, \$1,835,270; manufactures of lead, \$326,583;

rosin and turpentine, \$585,796; beef, \$1,011,652; butter, \$397,500; cheese, \$1,389,520; lard, \$471,037; spirits of turpentine, \$252,476; leaf-tobacco, \$2,504,166; shooks, staves, and headings, \$1,288,223.

There was little change in the proportion of the foreign carrying-trade transacted in foreign vessels, about seventy-two per cent. of imports and exports, during the last fiscal year, having been carried in foreign vessels as against seventy-four per cent. for the preceding year, and seventy-two per cent. for the fiscal year 1874.

The Register of the Treasury reports the total tonnage of vessels of the United States to be 4,279,458 tons, a decrease of 574,274 tons from that of the fiscal year ended June 30, 1875. This decrease is principally caused by the dropping of canal-boat tonnage exempt under the act of Congress approved April 18, 1874.

The actual decrease is believed to be about 583,611 tons, this amount being the excess of the losses over the gains during the last fiscal year; but this decrease is reduced to 574,274 tons by corrections of the balances outstanding.

The legislation of Congress, relative to the currency, embraced two measures of importance. The first was the passage of the following act, approved April 17, 1876:

Be it enacted, etc., That there be and hereby is appropriated out of any money in the Treasury, not otherwise appropriated, the sum of \$163,000, to provide for engraving and printing, and other expenses, of making and issuing United States notes, and the further sum of \$18,000, to provide for engraving and printing national-bank notes, to be disbursed under the Secretary of the Treasury.

SECTION 2. That the Secretary of the Treasury is hereby directed to issue silver coins of the United States of the denomination of 10, 20, 25, and 50 cents of standard value, in redemption of an equal amount of fractional currency, whether the same be now in the Treasury awaiting redemption, or wherever it may be presented for redemption; and the Secretary of the Treasury may, under regulations of the Treasury Department, provide for such redemption and issue by substitution at the regular sub-treasuries and public depositories of the United States, until the whole amount of fractional currency outstanding shall be redeemed, and the fractional currency redeemed under the act shall be held to be part of the sinking-fund provided for by the existing law, the interest to be computed thereon as in the case of bonds redeemed under the acts relating to the sinking-fund.

The other measure was the passage of a joint resolution which provided:

That a commission is hereby authorized and constituted, consisting of three Senators, to be appointed by the Senate, three members of the House of Representatives, to be appointed by the Speaker, and experts not exceeding three in number, to be selected by and associated with them, with authority to determine the time and place of meeting, and take evidence, and whose duty it shall be—1. To inquire into the change which has taken place in the relative value of gold and silver, the causes thereof, and the effect thereof upon trade, commerce, finance, and the productive interests of the country, and upon the standard value in this and foreign countries; 2. Into the policy of the restoration of the double standard in this country, and, if restored, what the relation between gold and silver coin

should be; 3. Into the policy of continuing legal-tender notes concurrently with the metallic standards, and the effects thereof upon the labor, industries, and wealth of the country; and, 4. Into the best means for providing for facilitating the resumption of specie payments. And said commission is authorized to employ a stenographer, and shall report on or before the 15th day of January, 1877, with the evidence taken by them, and such recommendations for legislation as they may deem proper.

The congressional members of the commission were Senators Boutwell, Bogy, and Jones, with Representatives Ball, Bland, and Gibson.

The range of prices in New York for Government securities for the year 1876, and the amount of each class of bonds outstanding January 1, 1877, were as follows:

BONDS.	1876.		AMOUNT, JANUARY 1.	
	Lowest.	Highest.	Registered.	Coupon.
6s. 1881..... registered	112½ December 12.	123½ February 23.	\$198,672,850

The highest price of gold was 115 on March 14th, and thence it gradually fell off, and on December 30th sold down to 106¼, which was the lowest point since 1862, excepting the temporary decline in the panic of 1873.

From the circular of Messrs. Dunn, Barlow & Co. it appears that the aggregate liabilities of the insolvent firms are reported for last year

at \$191,000,000, against \$201,000,000 for 1875, \$155,000,000 for 1874, \$228,000,000 for 1873, \$121,000,000 in 1872, \$207,000,000 in 1861, and \$291,000,000 in 1857. During the four years just expired, the liabilities involved in the mercantile failures of this country have amounted to \$777,000,000, which is rather more than the average annual increase in the material wealth.

The statistics of 1876 as compared with those for 1875 are as follows:

FLORIDA. According to the latest official reports, the bonded debt of Florida is \$1,381,600, including \$132,000 bonds of 1857, held by the Indian Trust Fund, to offset which the State has claims against the Federal Government for expenditures incurred in suppressing Indian hostilities. Without these, the debt at the beginning of the year was \$1,249,600. Adding accrued interest and deducting bonds in the sinking-fund and cash applicable for the reduction of indebtedness, the net debt stood at \$1,195,320.48. There were also warrants and certificates outstanding to the amount of \$134,437.20, making the total indebtedness \$1,329,757.68. The receipts of the Treasury for the year 1875 were \$384,735.24, and the expenses \$290,561.43. Controller Cowgill, in making an investigation of the warrants issued from time to time, found that there were \$17,479.91 unaccounted for, and suggested that proceedings be instituted to recover the losses sustained by the State during the administration of Treasurer S. B. Conover. The cost of the government in 1876 was \$190,000. The regular tax-levy of the State is seven mills to the dollar, yielding about \$180,000, and there is a license-tax which yields about \$40,000 yearly.

The question of the proprietorship of the Jacksonville, Pensacola & Mobile Railroad was passed upon both by the Supreme Court of the State and the Supreme Court of the United States early in the year. By a decision of the Federal Court in December 1875 it was settled that the lien of the State on account of unpaid purchase-money, due from the sale by the trustees of the Internal Improvement Fund in 1869, was superior to all other claims, and D. P. Holland, a subsequent purchaser under execution, and other defendants, holders of guaranteed bonds of one of the old roads by the consolidation of which the Jacksonville, Pensacola & Mobile was formed, were enjoined from interfering with or disturbing the State of Florida or its agents in the possession and control of the property. The State court decided in January that the bonds issued by the State to aid in the construction of that portion of the road from Quincy to Mobile were unconstitutional, and that the State was not bound for them, but that its lien as a trustee in behalf of the holders of the bonds still held good. The decision of the lower court was affirmed, and the defendant (Holland) was perpetually enjoined from interfering with the possession of the road by the State. On the 1st of May an order was made by Justice Bradley, of the United States Supreme Court, directing that Robert Walker, the receiver appointed by that court to take possession of the property, deliver it over to Dennis Eagan, Commissioner of Lands and Immigration of Florida.

The Executive Committee of the Republican party of the State, consisting of eleven members chosen by the State Central Committee appointed by the Convention of 1872, issued a

call on the 17th of March for a State Convention to be held on the 31st of May. Some question was raised as to the authority of this committee, the opposition coming from supporters of Simon B. Conover for Governor, and several contesting delegations to the convention were chosen. The State Central Committee held a meeting on the 7th of April, and recognized the validity of the call of the Executive Committee. It also adopted the following resolution:

Resolved, That this committee do now adjourn, to meet in Madison at 9 A. M. on the 31st day of May next, then and there by a majority vote of the members of the State Central Committee, originally elected in 1872, actually present, to decide equitably who shall be entitled to participate in the temporary organization of the State Convention; but in said State Convention no proxies shall be allowed, nor shall any person be permitted to act as a delegate or alternate unless he is a registered voter of the county which he claims to represent, but the delegates or alternates present may cast the whole vote of their county.

STATE SEAL OF FLORIDA.

The convention met at Madison on the 31st of May, and consumed four days in accomplishing its work. The first day and a half were occupied by the Central Committee in determining the right of delegates to take part in the temporary organization. It decided against the contesting delegations from seven counties, and its action was ultimately ratified by the convention, thus excluding most of the supporters of Conover. The organization was not completely effected until the morning of the fourth day. On that day Marcellus L. Stearns was renominated for Governor; David Montgomery was nominated for Lieutenant-Governor; W. H. Holden, C. H. Pearce, T. W. Long, and F. C. Humphries, were nominated for presidential electors; eight delegates were chosen to the National Republican Convention, and a State Executive Committee of the party was appointed, consisting of seventeen members. The following platform was adopted:

Resolved, That we, the Republicans of Florida, in State Convention assembled, reaffirm our confidence in, and inalienable attachment to, the principles of

the national Republican party, believing them to be in accordance with the just and enlightened sentiments of mankind, and largely answerable for material, intellectual, and moral progress throughout the world.

Resolved, That the wide-spread demand for economy, integrity, and paternal devotion to the interest, protection, and progress of all the people on the part of the national and State Administrations, meets our hearty indorsement as being in full accord with the principles and genius of republicanism, and fundamental to progress under peaceful conditions; and we respond to the sentiment with emphatic unanimity, desiring nothing more than the enforcement of just laws, the preservation of rights, and efficient protection in their enjoyment secured by the omnipresence of the law's majesty.

Resolved, That we indorse and approve the administration of our State government as being wise, just, economical, and progressive. It has given unprecedented encouragement to immigration by its judicious devotion to all material interest; has brought the credit of the State to a ground of confidence equal to that of any other State in the Union; and has, by its loyalty to principle and to the best interests of all the people, contributed largely to the utter obliteration of causes of dissension, distrust, and prejudice, between different races, and the healing of those unwise divisions which are fatal to genuine progress.

Resolved, That in the maintenance of our free-school system, untrammelled by sectarian influences, we secure that method which will make the near and remote future of our country blessed and sublime, and we pledge to it our constant and undeviating support.

Resolved, That we unqualifiedly favor a speedy return to specie payments, and hail with satisfaction the unanimity of the national Republican party on this important subject.

Resolved, That in sending delegates to the National Convention at Cincinnati we trammel them with no instructions, confiding in their loyalty to their country and the great party whose standard-bearer they will help to choose.

The Democratic State Convention was held at Quincy on the 7th and 8th of June. George F. Drew was nominated by acclamation as the candidate for Governor, N. A. Hull for Lieutenant-Governor, and Robert Bullock, Wilkinson Call, Robert B. Hilton, and James E. Yonge, were named for presidential electors. Sixteen delegates to the National Democratic Convention were chosen, and a State Executive Committee of five members was appointed. The following was the platform adopted:

The Conservative Democratic party of the State of Florida, in convention assembled, arraign the radical party, which has had uninterrupted control of the General Government for the last ten years, for having brought the Government as well as the individual citizen to the verge of bankruptcy, destroyed our commerce, fettered the industries of the people, squandered the public money and the public lands, multiplied public offices for party ends, demoralized and debauched the Government service to an unprecedented extent, culminating in the present Administration, the most disgraceful known to American history.

We arraign the State government for its corruption, oppression, and extravagance; for its reckless disregard of the rights of the people; for administering the government as if created for the benefit of the rulers and not of the people.

For these and other considerations we pledge ourselves to work unceasingly and earnestly for the

overthrow of this party in power; and we cordially invite the cooperation of honest men of all shades of political opinion to unite with us equally in sustaining and enforcing the following principles:

1. Fidelity to the Constitution and all its amendments.
2. Retrenchment and economy in Federal and State administration.
3. Lessening the burdens of labor by a reduction of taxes and offices.
4. Free schools exempt from all sectarian control.
5. Opposition to centralization as well as Federal interference with local government.
6. Exposure and punishment of corruption in officials.
7. Equal rights and equal justice to all, irrespective of race or sectional residence, and a hearty and cordial welcome to immigrants from all sections.

ALLIGATOR.

S. B. Onover persisted for some time in running as an opposition Republican candidate for Governor, but finally withdrew on the 5th of September.

On the 23d of October the Republican Campaign Committee issued an address, in which the following statements were made:

The coming election is the crisis of free government in Florida!

Our Democratic opponents realize already that their defeat is inevitable unless they can stifle the voice of the people by fraud and violence, and deter the masses of our party from casting their ballots on the day of election.

Information, *absolutely reliable*, has been received at these headquarters, that evil-designing men in the southern counties of Georgia are preparing to invade our State in armed bands on the 7th day of November next, for the purpose of intimidating Republicans from casting their ballots, and to stir up riots and bloodshed. Georgia, now Democratic by eighty thousand majority, proposes to assist the Democrats of Florida in wresting from our people the rights guaranteed us by the Constitution and laws of our common country. Your committee deem it advisable that the plans of the invaders be made known to every Republican in the State of Florida, and that immediate action be taken in every county bordering on the State of Georgia to defeat this nefarious scheme. Let it be made known that, while we cherish no ill will or bitterness toward any person, while we desire to live in peace and quietness, while we are ready to bear and forbear, and make any sacrifice consistent with honor and manliness, to protect the good name of our State, we will not tolerate interference by the desperadoes or bullies of another State. Let it be known that if they come here on the day of election with the purpose of interference in our matters, they do it at their peril, and that the consequences of their evil deeds and intentions must rest upon their own heads—it may

be before they have penetrated far enough into the State to put their schemes into effect.

Let all Republicans remember that upon their own vigorous and determined action during the next twenty days depends, in a great measure, the preservation of Republican government in Florida.

The Republican party want peace and harmony, and that not one dishonest vote be cast at the coming election. Every man who is legally entitled to vote must be permitted to do so, as his conscience dictates.

On the 31st of October Governor Stearns issued the following proclamation:

EXECUTIVE OFFICE,
TALLAHASSEE, FLA., October 31, 1876.

In view of the excited condition of the public mind, and the, in some degree well-founded, apprehensions of coming trouble, growing out of the bitter political canvass now in progress in this State, and in order to secure a fair, full, and legal expression of the popular will through the ballot-box, to preserve the reputation that Florida has already achieved as a peaceable and law-abiding State, and to prevent the possibility of any occurrence that would bring disgrace upon her people and tend to mar her bright and promising future—a future in which every citizen has an equal and vital interest—I, Marcellus L. Stearns, Governor of Florida, hereby issue this proclamation to all the people of the State.

I earnestly call upon all citizens to temper zeal with discretion; to deprecate fraud, violence, or disorder, and to exert their individual and collective influence to allay excitement, and to secure peace and order; and I advise that no citizen shall carry arms, either openly or concealed, to political meetings, or to the polls on election-day, but that all should trust to the law and its officers alone, assuring them that the whole power of the government will be exercised to protect the people in the full enjoyment of every right which the law gives to them. I call upon the judicial officers of every circuit, and upon the sheriffs of every county, to make such preparations as may be necessary, to the full extent of their authority, to prevent or to punish fraud or violence, if any should be attempted or committed; and I command every inspector of election, and every other officer or person charged with the conduct of the election, or the preservation of peace and order, to discharge their duties firmly and in strict conformity to the law.

I recommend that the municipal authorities of all towns and cities throughout the State require the closing of all places where intoxicating liquors are sold, and prohibit the sale of intoxicating liquors within their respective jurisdictions from midnight of Saturday, the 4th day of November, until midnight of Tuesday, the 7th day of November, and that the sheriffs of each county shall see that no intoxicating liquor is sold at any place within his county, outside of any incorporated town or city, within the same period.

Should bands of armed men, citizens of this or of any other State, appear at any voting precinct for the purpose of unlawfully influencing the election at such precinct, or of interfering in any manner, with the free exercise of the elective franchise by citizens of this State, the sheriff and his deputies will proceed at once to disperse, or to arrest, such persons, and, if necessary, to call the power of the county to their assistance; and in case of the escape of any person guilty of any such unlawful act, or of aiding, abetting, or countenancing the same, they shall ascertain and report the name and residence of such person, whether a citizen of this or any other State, to the proper prosecuting officer, in order that such person may be indicted, pursued, and brought to justice.

While the State is able and prepared to enforce

the laws, and to punish all who may violate the same, whether such violation is the result of a pre-determined policy or of temporary excitement or passion, nevertheless the people themselves must feel and accept their responsibility as men and as citizens, and must aid in protecting their own interests and the fair fame of the State, by an honest determination to see justice and good order prevail, and by a hearty cooperation with the officers of the State in preserving the public peace, and in securing a fair, free, and honest election.

In testimony whereof, I have hereunto set my hand and caused the Great Seal of the State [L. S.] to be affixed, at Tallahassee, this 31st day of October, A. D. 1876.

M. L. STEARNS, Governor of Florida.

By the Governor: Attest,

SAMUEL B. McLEIN, Secretary of State.

FLORIDA ARROWROOT (COONTIE) AND FRUIT.

The election of the 7th of November passed off without any disorder or disturbance of the peace. The election law, enacted August 6, 1868, provides for a complete registration of voters by the county commissioners, and for the conduct of the election by three inspectors at each polling-place, appointed by the commissioners. The inspectors are authorized to "maintain good order at the polls and to enforce obedience to their lawful commands during the election and during the canvass and estimates of the votes, and if any person shall refuse to obey any lawful orders of the inspectors, or by disorderly conduct in their presence or hearing shall interrupt or disturb their proceedings, they may command any sheriff, or constable, or other person, to take such disorderly person into custody and confine him during the election and canvass." After the close of the polls the inspectors are required to proceed at once to canvass the votes publicly, and must complete the work without adjournment. Certificates of the result, signed by the inspectors and clerk, must be securely sealed and delivered without delay, one copy to the clerk of the Circuit Court and one copy to the county judge. On the sixth day after the election, or sooner if the returns shall have been received, the county judge, clerk of the Circuit Court, and a justice of the peace of the county, are required publicly to canvass the votes for their respective counties. The result is to be made out in duplicate certificates, one to be recorded in a book by the clerk, one to be sent by mail to the Secretary of State, and a third to the

Governor. Twenty days are allowed for the canvassers in Monroe, Orange, Dade, Brevard, and Manatee Counties. The act declares that "the person who shall receive the highest number of votes cast for any office shall be elected to such office." The provisions regarding the State canvass in the original act are as follows:

SECTION 28. On the first Tuesday next after the fourth Monday in November next after any general election, or sooner, if the returns shall have been received from the several counties, the Secretary of State, Attorney-General, and Controller, or any two of them, shall meet at the office of the Secretary of State, pursuant to notice to be given by the Secretary of State (or, in his absence or inability to attend, by the Governor), and proceed to canvass the returns of such election, and determine who shall have been elected, by the highest number of votes, to any office, as shown by said returns. They shall make and sign a certificate containing, in words and figures written at full length, the whole number of votes given at such election for each office, the number of votes given for each person for each office, and designating who shall have been elected to each office, which certificate shall be recorded in the office of the Secretary of State in a book to be kept for that purpose, and the Secretary of State shall cause a certified copy of such certificate to be published in one or more newspapers printed at the seat of government.

SEC. 29. The Secretary of State shall make and transmit to each person chosen to any State office, immediately after the canvass, a certificate showing the number of votes cast for each person for such office at such election, which certificate shall be *prima facie* evidence of his election to such office.

SEC. 30. When any person shall be elected to the office of elector of President and Vice-President, or Representative in Congress, the Governor shall make out, sign, and cause to be sealed with the seal of the State, and transmit to such person, a certificate of his election.

An amendment to this act, approved February 27, 1872, contains the following provisions:

SECTION 4. On the thirty-fifth day after the holding of any general or special election for any State officer, member of the Legislature, or Representative in Congress, or sooner if the returns shall have been received from the several counties wherein elections shall have been held, the Secretary of State, Attorney-General, and the Controller of Public Accounts, or any two of them, together with any other member of the cabinet who may be designated by them, shall meet at the office of the Secretary of State pursuant to notice to be given by the Secretary of State, and form a Board of State Canvassers, and proceed to canvass the returns of said election, and determine and declare who shall have been elected to any such office, or as such member, as shown by such returns. If any such returns shall be shown or shall appear to be so irregular, false, or fraudulent, that the board shall be unable to determine the true vote for any such officer or member, they shall so certify, and shall not include such return in their determination and declaration, and the Secretary of State shall preserve and file in his office all such returns, together with such other documents and papers as may have been received by him or by said Board of Canvassers. The said board shall make and sign a certificate, containing in words written at full length the whole number of votes given for each office, the number of votes given for each person for each office, and for member of the Legislature, and therein declare the result, which certificate shall be recorded in the office of the

Secretary of State in a book to be kept for that purpose, and the Secretary of State shall cause a certified copy of such certificate to be published once in one or more newspapers printed at the seat of government.

The Board of State Canvassers consisted of Samuel B. McLin, Secretary of State; Clayton A. Cowgill, Controller; and William Archer Cocks, Attorney-General. Mr. McLin is a native of Tennessee, forty-three years of age, a lawyer, and the editor of the Tallahassee *Sentinel*, and has lived in Florida since 1855. He was formerly a Whig. For a time during the war he was in the Confederate service, and after its close acted with the Democrats. In 1872 he supported the Republican candidates, and the next year was appointed Secretary of State by Governor Hart. Dr. Cowgill was born in Dover, Del., in 1826, and was trained to the practice of medicine. During the war he was a surgeon in the army, and settled in Florida in 1867. He soon took an active part in politics as a Republican, and was appointed Controller in 1873. Judge Cocks is a native of Virginia, and was practising law in Richmond when the war broke out. He went to Florida in 1863, and practised his profession at Monticello. He was appointed Judge of the Second Circuit in 1868, and Attorney-General in 1873. He is the author of a "Constitutional History of the United States" and other works. Although a member of the Republican administration of the State, he is a Democrat, and supported the nominees of that party during the campaign of this year.

It being understood that Governor Stearns claimed the right under an old law to canvass the votes for presidential electors, the chairman of the Democratic State Executive Committee addressed the following request to the Board of Canvassers on the 17th of November:

*To the Honorable Samuel B. McLin, Secretary of State,
C. A. Cowgill, Controller of Public Accounts, Wil-
liam Archer Cocks, Attorney-General.*

GENTLEMEN: We request you, as the Board of State Canvassers, to proceed to canvass the returns of the several counties wherein an election took place for electors of President and Vice-President, on November 7, 1876, so far as the same may have been received. We desire to be informed of the time and place, so that the fraud may be shown which exists in some of them. As this proof may require some time for its accurate determination, it is, in our judgment, of the first importance that you assign an early day, that the Executive, in accordance with section 136 of the Revised Statutes of the United States, may be enabled on December 6th to deliver to each elector chosen the certificate which enables him to act as an elector of this State on Wednesday, December 7, 1876, as required by section 135 of the Revised Statute.

Yours, very truly,

S. PASCO,

Chairman of State Executive Committee of Con-
servative-Democratic party of Florida.

W. D. BLOXHAM.

On the 20th of November, R. B. Hilton, Robert Bullock, James E. Yonge, and Wilkinson Call, the Democratic candidates for elec-

tors, petitioned Judge P. W. White, of the Circuit Court of the Second Judicial Circuit, in and for the county of Leon, for an injunction restraining Governor Stearns, and a mandamus requiring the canvassers to proceed with their duty. In their bill of complaint the petitioners made the following allegations:

1. The first allegation is, that an election was held in the State of Florida on the 7th day of November, A. D. 1876, for presidential electors, and that your orators did receive votes for said office and are themselves qualified to hold the office, and interested in having true and lawful returns made of said election.

2. That in the act of the Legislature, approved February 27, 1873 [title given], the returns for presidential electors are required to be canvassed only and alone by the Board of State Canvassers, and they have the exclusive duty, functions, and jurisdiction to determine who shall have been elected presidential electors.

3. That the Governor (Stearns) is vested with no jurisdiction to canvass said returns, but only to give a certificate of election to said electors on or before the first Wednesday of December.

4. That no certificate can be made out except upon a prior determination of the Board of State Canvassers.

5. That Governor Stearns pretends that he can, and proposes to, issue said certificate, independently of the Board of State Canvassers, which pretension is wholly without warrant of law.

6. That the Secretary of State has not issued any notice to those forming the Board of Canvassers, that the duty of canvassing may be commenced, notwithstanding that the returns of "most of the counties" have been received, and your orators charge that said inaction will postpone said canvass to a time when it shall be impossible to have a deliberate investigation of said returns, and a true declaration.

7. That said action by the Executive will, if consummated, be wholly illegal, and will injuriously impair the right of your orators as candidates for the office of presidential electors.

The bill closes with the usual prayer for answer, and for the writ of injunction upon Governor Stearns enjoining him from making out, signing, sealing, and delivering any certificates to presidential electors except in pursuance of the action of the Board of State Canvassers under the act of February 27, 1872.

An alternative writ of mandamus was issued on the 21st of November. This recited the claim of the petitioners that certain returns already received were forged and fraudulent, and differed from the returns made at the county canvass, and that the Secretary of State refused to convene the Board of Canvassers after being requested so to do, and proceeded as follows:

And the said petitioners further showed that on Wednesday, December 7, A. D. 1876, in accordance with section 135 of the Revised Statutes of the United States, the electors of this State are required to meet and give their votes; and said petitioners believe, as each return of each county must be canvassed by said Board of Canvassers before they can make and sign a certificate of the whole number of votes given, that said duty cannot be performed fully and completely in time to enable the electors chosen to have their certificates of election in accordance with law, unless said Board of State Canvassers shall be con-

vened, and shall proceed with the canvass of said returns so far as received.

And said petitioners further showed that they had no specific remedy at law to redress the grievance of which they complained.

Said petitioners therefore prayed that the said Samuel B. McLin, as Secretary of State, be commanded to notify the Attorney-General and the Controller of Public Accounts to meet him at his office and form with them a Board of State Canvassers, and that the said C. A. Cowgill, as Controller of Public Accounts, and William Archer Cooke, as Attorney-General, be commanded, upon said notice by them received, to meet with the said Samuel B. McLin, as Secretary of State, to form said board, and that they, the said Samuel B. McLin, C. A. Cowgill, and William Archer Cooke, as members of said board, be commanded to proceed forthwith to canvass the several returns of the several counties already received, and such as shall from day to day be received, until said canvass shall be completely ended, as required by the act passed February 27, A. D. 1872, entitled "An act to amend an act to provide for the registration of electors and the holding of elections," approved August 5, 1868, or the cause why not to show unto us.

Now, therefore, we, being willing that full and speedy justice should be done in the premises, do command you, Samuel B. McLin, Secretary of State, to notify the said C. A. Cowgill, Controller of Public Accounts, and William Archer Cooke, Attorney-General, to meet you, the said Samuel B. McLin, at your office forthwith, and form a Board of State Canvassers, and do command you, the said C. A. Cowgill, Controller of Public Accounts, and you, the said William Archer Cooke, Attorney-General, upon receipt of said notice, to meet forthwith with the said Samuel B. McLin, as Secretary of State, to form said board; and do command you, the said Samuel B. McLin, C. A. Cowgill, and William Archer Cooke, as members of said board, to proceed forthwith to canvass the several returns of the several counties already received, and such as shall from day to day be received, until said canvass shall be completely ended, as required by the act passed February 27, A. D. 1872, entitled "An act to amend the act to provide for the registration of electors and the holding of elections," approved August 5, 1868, or that you appear before our said court at Tallahassee, on Thursday, the 23d instant, at eleven o'clock A. M. of said day, to show cause why you refuse to do so.

Witness my hand and seal of office at Tallahassee, in said county, this the twenty-first day of November, A. D. eighteen hundred and seventy-six.

[SEAL.]

C. H. EDWARDS,

Clerk Circuit Court, Leon County.

Edw. M. West, Deputy Clerk.

With reference to the allegation that the Governor claimed the right to canvass the votes for electors, he made answer on the 23d of November, in which he said, while protesting and averring that the court had no jurisdiction:

And this defendant further says that he has never, at any time, proposed to issue such certificate to such electors independently and without the declaration and determination of the said Board of State Canvassers, as charged in said paragraph five, and that he has never stated to any person whomsoever that he intended, or designed, or had determined to issue such certificates independently and without the declaration and determination of the said Board of State Canvassers, and that, in truth and in fact, he has not determined nor decided to issue such certificates independently and without the declaration and determination of the Board of State Canvassers aforesaid.

The Board of Canvassers met at the office of the Secretary of State on the 27th of November. A protest was received from Charles H. Pearce, for himself and the other Republican candidates for electors, against Attorney-General Cooke serving on the board, on the ground that he had in a published telegram prejudged the case, and exhibited a strong bias toward the Democratic side. No action was taken upon this, and the board was organized with Mr. McLin as chairman. A resolution was adopted inviting Governor M. L. Stearns, Mr. George F. Drew, and General Brannan, commander of the United States forces in Florida, to be present at the sessions of the board; also a resolution providing for the issue of tickets of admission to the number of six (subsequently increased to ten) to the chairman of the Executive Committee of each political party, to be distributed by them among their friends respectively.

The following rules were then adopted to govern the proceedings of the board:

The Canvassing Board will commence its duties on the 28th day of November instant, at ten o'clock, and will meet daily thereafter, at the same hour, unless a different hour be fixed (except on Sundays and holidays), and will remain so long in session each day as the necessities of the case may require.

In order to facilitate the canvass within the brief period which remains for that purpose, the following rules of procedure are adopted, and are hereby promulgated:

1. The office of the Secretary of State, where, by law, the board is directed to meet, being small, a limited number of persons only, not exceeding twenty-two in number, equally representing each political party, will be admitted to witness the proceedings, except when the board may think it necessary or desirable to close the doors for deliberation.

2. The Secretary of State shall open the returns from each county, whereupon the board will proceed to examine the same, and determine from the face thereof, subject to final review, whether the legal formalities and requirements with respect thereto have been complied with; and, upon an affirmative determination of such preliminary matters, the chairman shall announce the vote of the county.

3. On the announcement of the vote of any county, any person may give notice that the said return, and the election or vote of said county, or any precinct thereof, will be contested, and the clerk shall forthwith note the objection generally.

4. The contestants, subsequent to the announcement as aforesaid, of the result as it appears on the face of the returns, must file with the board brief statements, in writing, giving specifically the objections proposed to be made, with particulars of time, place, and circumstances, together with a statement of the relief demanded.

5. In view of the fact that the board has no power to compel the attendance or examination of witnesses, it will receive in evidence proper affidavits, and also such official certificates as are made evidence by law, and may be otherwise admissible. If either party desires to produce *vis a vis* testimony, they must submit to the board a brief statement, in writing, of the names and residences of the witnesses, and the facts expected to be proved by them; and the board, in their discretion, will allow them to attend, and will themselves examine them—the extent to which this is done necessarily depending on the time at the disposal of the board.

6. The affidavits and documentary proofs on each side shall be filed with the board in the office of the

Secretary of State, and shall be accessible to the other side, under such regulations as the Secretary of State shall think proper for the safe keeping thereof.

7. All motions and arguments shall be in writing, and signed. No oral arguments will be allowed.

8. The concurrence of a majority of the board being necessary to determine its action, such concurrence, with respect to any proposition or matter, may be formally ascertained by vote, upon motion duly made and seconded, or informally by the assent of at least two members.

9. The board reserves to itself the right to make and announce such modifications of, or additions to, these rules, as the case may require. Parties, in preparing and presenting their proofs and arguments, should bear in mind that the canvass must be completed, and the result reached, in time for the electors to discharge their duties under the law.

On the second day the returns from all the counties but Dade—which had not been received—were opened, and the votes for electors counted. The returns showed on their face 24,825 votes for the Republican electors, and 24,282 for the Democratic electors. On the third day a call of the counties in alphabetical order was begun. Objections were made to the returns from various precincts in different counties for fraud, intimidation, or irregularity, and several days were occupied in taking testimony. The final action of the board was taken on the 5th of December.

The following twenty-four counties were canvassed according to the face of the returns: Brevard, Bradford, Calhoun, Dade, Escambia,

Franklin, Gadsden, Hillsborough, Holmes, Lafayette, Liberty, Madison, Marion, Putnam, Polk, Santa Rosa, Sumter, St. John's, Suwannee, Taylor, Volusia, Wakulla, Walton, and Washington. Baker County was then taken up and canvassed according to the precinct returns by a unanimous vote of the board. In Olay County twenty-nine votes were added to and four taken from the Democratic electoral and State vote, and eight added to and two deducted from the Republican vote. In Hernando County five Democratic votes were deducted; Nassau and Levy were canvassed according to the face of the returns; in Orange, seven Democratic votes were deducted; in Jefferson, sixty Republican votes were deducted; in Leon, two Republican votes were deducted; Manatee was thrown out entire, on account of the absence of all legal preparations for holding the election; the Duval County return did not have the signature of the judge, but was canvassed by comparison with the precinct returns; in Hamilton county eighty-three Democratic and fifty-eight Republican votes, which had been added to the face of the electoral vote, were thrown off again; and Jasper precinct, giving three hundred and twenty-one votes for Drew and one hundred and eighty-three for Stearns, and three hundred and twenty-three for the Democratic and one hundred and eighty-five for the Republican electoral ticket, was thrown out for violation of the election law by

KEY WEST, FLORIDA.

the inspectors, in not completing the canvass without adjournment, in allowing unauthorized persons to handle the ballots and assist in the count, in adjourning overnight and going to another place, and in signing returns next day which they had not themselves made or verified, and the contents of which they did not

know; in Monroe County, precinct No. 3, Key West, giving four hundred and one votes to the Democratic electoral and State tickets, and fifty-nine to the Republican, was thrown out of the canvass on account of violation of the election laws by the inspectors, in adjourning before the completion of the canvass, and com-

pling it the next day in a different place, and without public notice; in Alachua County thirteen Democratic and four Republican votes were deducted, but Archer precinct No. 2 was retained; in Jackson County, Campbellton precinct, giving seventy-seven Republican and two hundred and ninety-one Democratic votes, was thrown out on account of the violation of the election laws by the inspectors, in removing the ballot-box from the election-room at the adjournment for dinner into an adjoining store and leaving it there unsealed and concealed from the public during said adjournment, in not counting the ballots at the close of the polls and comparing them with the number of names on the poll-list, and because only seventy-six Republican ballots were counted out of the ballot-box, whereas one hundred and thirty-three persons swore that they voted the full Republican ticket at that poll; and Friendship Church precinct, in the same county, giving forty-four Republican and one hundred and forty-five Democratic votes, was thrown out on account of violation of the election laws by the inspectors, in placing the ballot-box in such a position as to be out of sight of the voter and of the public, in placing a supervisor at the window to receive the ballots instead of an inspector, in not making and completing the canvass at the polling-place without adjournment, and in view of the public, but in a bedroom two miles away, and in not counting the ballots and comparing them with the number of names on the poll-list.

The action of the board was taken unanimously, except in the cases of Jefferson, Manatee, Duval, Alachua, and Jackson Counties. In the first of these, the Attorney-General desired to throw out several precincts because the county canvassers acted as inspectors, and the voting place was changed; in the second he opposed the rejection of the returns; in the third he favored rejection; in the fourth he favored throwing out Archer precinct No. 2; and in the fifth he favored retaining the Campbellton and Friendship Church precinct returns. The vote as declared by the Board of Canvassers gave 23,849 for the Republican to 22,923 for the Democratic electors, making the majority of the former 926. On the State ticket it stood 23,666 for Stearns, and 23,208 for Drew, giving the former a majority of 458. It elected Montgomery Lieutenant-Governor by 308 majority; Purman, Republican, for Congress in the first district, by 294; and Bisbee, Republican, in the second, by 142. Attorney-General Cocke made the following protest:

ATTORNEY-GENERAL'S OFFICE, }
TALLAHASSEE, December 6, 1876. }

Hon. C. A. COWGILL, Controller of the State of Florida, and
S. B. McLIN, Secretary of State of the State of Florida,
and, as such, members of the State Canvassing Board of
the State of Florida.

GENTLEMEN: I regret that I am compelled from a strict sense of justice, not only involving the clear exercise of principles of law, but the maintenance of the rights of the citizen to vindicate the elective

franchise, to protest most solemnly and decisively against the return on the part of a majority of the State Canvassing Board of the State of Florida, in its decision that the electors for the State of Florida for President and Vice-President on the Republican ticket have been elected.

These are my reasons for making this my protest against the action of the Canvassing Board:

1. That the Board of State Canvassers erred most signally, in point of law, in receiving a statement of the votes of Duval County, when there was in no conceivable sense any legal return of the votes of said county on which the Board of State Canvassers could act. For this reason, that the statute of 1872 requires the Probate Judge and the clerk of the county to call in a justice of the peace to assist them in counting the county canvass, and that in violation of law the clerk of Duval Circuit Court called in a justice of the peace (Mr. Edwards), whose selection was not sanctioned but rejected by the Judge of the County Court, thereby showing to the board that there was no selection according to law by which a county canvass could be made, but that the canvass and return was such as to preclude all notice of it, in every legal sense, before the Board of State Canvassers.

2. That in the county of Jefferson it appeared from the records on file in the office of the Secretary of State that certain county officers officiated as officers of election at the following-named polls: (1.) M. J. Taylor, clerk of the Circuit Court of Jefferson, acted as inspector of elections at Monticello Station No. 1; thereby placing himself in the position of supervising under the statute his official acts as inspector. (2.) Mr. Wm. Beazely acted as justice of the peace at a precinct election held at Lickskilllet, there being no such precinct established according to law, and that at such precinct, as was unknown to law, acted as a clerk, thereby confounding his duties as clerk with his action as justice of the peace, and being the justice before whom the action of the clerk was cognizable, and required at law to be reviewed. That the return of the Canvassing Board from such precinct, even if it existed at law, was, in itself, absolutely illegal. (3.) That J. Bell, Judge of the County Court of Jefferson, acted as clerk at the precinct in Jefferson County known as the "Waukeenah precinct." The said J. Bell was disqualified from action as said clerk of election, for the reason that as Judge of the Probate Court of Jefferson it was made his duty by the act of 1868 (chapter 1,625, section 24) to canvass the votes given for the several officers and persons, as shown by the returns on file in his office, and by his said action as clerk of election making himself judge of his conduct as clerk, when subjected to his supervision as judge of the same, in his capacity as county judge entirely and absolutely illegal.

3. In rejecting the vote of Manatee on the alleged reason that there was no clerk of the county to receive the registration of the voters. The reason of there being no clerk of such county to perform such legal duty was that the Governor of the State, with whom resided the power of appointing such officer, failed in the discharge of his duty in relation thereto by not appointing a man to such office—the present Governor being a candidate for reelection. My reason for insisting on the vote of Manatee being that official dereliction of duty on the part of the Executive, with whom, as stated, was the power of appointing the proper officer to superintend the registration of voters, should not be a legal bar to the exclusion of the voters in the just and legal exercise of the elective franchise. The fact of there being no clerk could not apply to voters previously registered who had a right to vote, secured by the constitution of the State and the laws.

4. In relation to the votes at Campbellton and Friendship Church in the county of Jackson, a majority of the Board of State Canvassers disregarded

the law of the State and the evidence offered in rejecting the votes polled at said precincts.

5. In rejecting the votes polled at precinct No. three (3) in the county of Monroe, I claim the right, before the final action of the Board of State Canvassers, to reconsider my vote thereon for the purpose of sustaining the return from said precinct, for the reason that it complies substantially with the requirements of the law on the canvassing and returns in the State of Florida.

I protest also against the disfranchisement of the people of Hamilton County by throwing out the entire vote of Jasper precinct, without any charge or proof of fraud or illegal voting, on the alleged ground of irregularity in this, that two Republican inspectors, appointed in the interest of the Republican party, filed an affidavit before the board that they absented themselves from the polls several times during the day. I insist that this exclusion of one hundred and fifty votes, whereby the Democratic majority was reduced for the above alleged reason, is a wrong against the people, and a violation of both the letter and the spirit of the laws, both of the United States and of the State of Florida.

I include in this protest my objections urged to the vote at Archer precinct No. 2 in the county of Alachua, which I moved to reject on account of its falsity, that the return was evidently fraudulent from the clear proofs exhibited in relation thereto, and that the power to reject it on the part of the State Canvassing Board was evident from the meaning of the statute under which the board was appointed.

I also protest, for substantially the same reasons, against signing the certificate of election in the State vote as regards the gubernatorial and congressional elections—considering the statement of the other members of the Canvassing Board false and fraudulent.

Respectfully submitted:

WM. ARCHER COCKE,
Attorney-General State of Florida, and *ex-officio*
member of the State Canvassing Board of the
State of Florida.

This was promptly published, but the other members and the clerk of the Canvassing Board declared over their signatures that it was not presented before them, or filed with the proceedings.

While the Board of Canvassers was in session, an injunction had been granted by Judge White, of the Circuit Court, on application of Geo. F. Drew, the Democratic candidate for Governor, restraining them from canvassing the vote of State officers in any other manner than from the face of the regular returns filed in the office of the Secretary of State. Although the order of the court was served upon the board, it finished the work as it had begun, against the protest of the Attorney-General. Judge White then summoned the members of the board to show cause why they should not be adjudged guilty of contempt. Meantime the Supreme Court of the State, on petition and motion of Mr. Drew, granted an alternative writ of mandamus, directing the board to show cause why they did not canvass the vote from the face of the returns. The court ordered the issues to be made up by the 16th of December. The proceedings before Judge White were then dismissed. The answer of the respondents in the case before the Supreme Court was filed on the 16th, and a demurrer entered

on behalf of the relator Drew. The arguments of counsel were completed on the 20th, and the decision of the court rendered by Judge Westcott on the 22d, awarding a peremptory writ of mandamus directing the Board of Canvassers to recount the votes according to the face of the returns, on or before the 27th, and submit the result before the court on the 28th. Judge Westcott, in delivering the opinion of the court, held that the Board of Canvassers had no judicial power to determine the legality of a particular vote or election. He said:

All of the acts which this board can do under the statute must be based upon the returns; and while in some cases the officers composing the board may, like all ministerial officers of similar character, exclude what purports to be a return for irregularity, still everything they are authorized to do is limited to what is sanctioned by authentic and true returns before them. Their final act and determination must be such as appears from, and is shown by, the returns from the several counties to be correct. They have no general power to issue subpoenas, to summon parties, to compel the attendance of witnesses, to grant a trial by jury, or do any act but determine and declare who has been elected as shown by the returns. They are authorized to enter no judgment, and their power is limited by the express words of the statute, which gives them being, to the signing of a certificate containing the whole number of votes given for each person for each office, and therein declaring the result as shown by the returns. This certificate thus signed is not a judicial judgment, and the determination and declaration which they make is not a judicial declaration—that is, a determination of a right after notice, according to the general law of the land as to the rights of parties, but it is a declaration of a conclusion limited and restricted by the letter of the statute. Such limited declaration and determination by a Board of State Canvassers has been declared by a large majority of the courts to be a ministerial function, power, and duty, as distinct from a judicial power and jurisdiction. Indeed, with the exception of the courts in Louisiana, and perhaps another State, no judicial sanction can be found for the view that these officers are judicial in their character, or that they have any discretion, either executive, legislative, or judicial, which is not bound and fixed by the returns before them.

We must, therefore, decide that the general nature of the power given by the statute is ministerial, and that to the extent that any strictly and purely judicial power is granted, such power cannot exist.

This brings us to the consideration of the only remaining general question as to the powers of the board under the statute. While the general power of the board is thus limited to and by the returns, still as to these returns the statute provides that "if any such returns shall be shown or shall appear to be so irregular, false, or fraudulent that the board shall be unable to determine the true vote for any officer or member, they shall so certify, and shall not include such return in their determination and declaration, and the Secretary of State shall preserve and file in his office all such returns, together with such other documents and papers as may have been received by him or by said Board of Canvassers." The words *true vote* here indicate the vote *actually cast*, as distinct from the *legal vote*. This follows—1. From the clear general duty of the canvassers, which is to ascertain and certify the "*votes given*" for each person for each office; and, 2. Because to determine whether a vote cast is a legal vote is beyond the power of this board. As to the words "*irregular, false, or fraudulent*," in this connection, their definition is not required by the questions

raised by the pleadings in this case. These respondents have not alleged that they have before them any return "so irregular, false, or fraudulent," that they are unable to determine the actual vote cast in any county, as shown by the returns; and nothing can be clearer than that the counting of returns sufficiently regular to ascertain the whole number of votes given, and signing a certificate, are merely ministerial acts. Under these pleadings the genuineness and regularity of the particular returns in question here are admitted. We will say, however, that the clear effect of this clause in the statute is that a return of the character named shall not be included in the determination and declaration of the board; and that it has power to determine the *bono-fide* character of the returns *de hors* their face. It is not within the power of this board to refuse to count some of the votes embraced in a return and to count others embraced therein. They must count the whole of the return, or must reject it *in toto*. We will also say that the powers here conferred are ministerial powers. It is true that in some respects these powers are something more than simple counting or computing, but they are powers which necessarily appertain to the discharge of every ministerial duty of this character. Their existence is no obstacle to the control of such officers by mandamus from a court having jurisdiction of the subject-matter.

Under this act (of 1868) it became the duty of the State Board to determine ministerially the result, but necessarily, by the exercise of discretion and judgment, they must first determine that the papers before them were genuine, and that they were executed in form and matter substantially according to the requirements of the statute, and that they were, in fact and in law, the returns of the election. This, as was said by this court in a former case, was the exercise of a *quasi* judicial power. To the extent here indicated, a judgment in the nature of a judicial function is necessarily exercised, for, if it be otherwise, the whole law is inoperative in respect to the power of the board to do any act whatever. The constitutional provision that the officers of one department of the government are strictly forbidden to do any act, to exercise any function pertaining to any other department, unless expressly provided for in the constitution, must be taken in connection with the provision (section 6, Article XIV.) authorizing and requiring the Legislature to provide for ascertaining the result from "the returns of elections." This is clearly an express authority for providing that "returns of elections" must be received, considered, and passed upon by such officers or persons as might be designated by the Legislature. And the necessary conclusion is, that such officers may be authorized by the Legislature to inquire into the truth or falsity of the returns sent to them, and if, upon such inquiry, they be satisfied that the return does not show the vote actually cast at the election, but that it states a falsehood as to that fact, they may lay it aside and refuse to count the return as is provided in the act of 1872.

The action of the Board of Canvassers in relation to Jackson, Hamilton, Monroe, Manatee, Hernando, Orange, Leon, and Clay Counties, was considered by the court, and the law applied in each case. With reference to Jackson County it was said:

The answer sets up that five hundred and fifty-seven (557) votes were deducted from the votes cast in the county of Jackson, as appeared from the face of the return, upon the ground of irregularity and gross fraud in the conduct of the election.

Upon the face of this answer, and in view of the express allegations of the alternative writ as to the genuineness, intelligibility, and *bono-fide* character of the return of the votes cast in this county, and in view of the express admission by the pleadings

that such return was a genuine return of votes cast, the only question raised here is whether, under this statute, the canvassers can reject a return of votes cast or any of the votes cast for irregularity or fraud in the conduct of the election.

Whether irregularities or fraud in an election will authorize the rejection of a vote cast, counted, and returned in a genuine, *bono-fide* return, is a question of law not within the power of this board to determine. If the return was regular, genuine, and *bono-fide*, as it was admitted to be by the pleadings, it was the duty of the board to count it.

The same principles applied in the case of Hamilton County. A part of the allegation with reference to Monroe County was of fraud in the conduct of inspectors. This, the court declared, was not ground on which the canvassers could reject a return which was genuine and *bono-fide*.

What is fraud in such an inspector, it said, is a question of law, so also is the question whether such fraud by inspectors can vitiate an election a question of law. Both are judicial questions beyond the power of the board to determine.

With regard to the Manatee County case the court said:

A return of votes cast in a county at a general election, of which notice is given throughout the State by the proper executive authority, no notice of election by local officers (county) having been given, is not a return either irregular, false, or fraudulent, within the meaning of the statute regulating and defining the powers and duties of the State canvassers.

Like the question of the legality of a vote, this is a question of law to be determined by a court—a judicial question beyond the power and jurisdiction of a ministerial officer under the law, constitutional and statutory. A return of votes cast in a county at such *general election*, duly signed by acknowledged county officers, and regular in form, of which election no notice by county officers as to polling-places is given (the time of election being according to the general notice), is a return which the State canvassers must count, as it is neither irregular, false, nor fraudulent, within the meaning of the statute. Whether such vote is effective to vest the office is a question judicial in its character, which this court upon mandamus should no more determine than should the State canvassers. Such canvassers must count such returns, and so this court should order. Whether all these votes so returned are legal votes is another question, which neither the State canvassers can determine in their action, nor should this court determine it when it is sought to direct them to perform ministerial duties.

In regard to the addition of votes in Clay County which had been rejected by the county canvassers, and the deduction of others on the ground that they were cast by non-residents, the court said:

It follows from the view we have taken of the law applicable to the powers and duties of the State canvassers, that any statement of votes by precinct inspectors, which were not included in the canvass made by the County Canvassing Board, cannot be counted by the State Board, the powers of the latter being confined by law to counting only such votes as are duly returned by the County Board. Such votes cannot be legally included in the estimates of the State Canvassing Board.

The demurrer was sustained, and the peremptory writ awarded.

The Board of Canvassers met, in pursuance of

the order of the court, on the 27th of December, and adopted a resolution to canvass the returns from each county according to the face of said returns, unless said returns show their falsity on their face; and that the same principle be adopted as to the returns for members of Congress and the Legislature as was adopted in relation to the returns for Governor and Lieutenant-Governor. All the county returns were canvassed in alphabetical order without question or division, except those of Baker, Clay, and Duval Counties. From Baker County there were three papers purporting to be returns, two being duplicates and signed by the county clerk and justice of the peace, and the third being signed by the county judge, sheriff, and a justice of the peace. The return signed by the county judge was accepted by a majority vote, the Attorney-General favoring the other. The difference was, that two precincts were omitted in the judge's return, but the Secretary of State and Controller claimed that they must take the one which came the nearest to being correct in form. The return of Clay County was thrown out altogether by the vote of the Secretary of State and Controller, and against that of the Attorney-General, on the ground that it was false on its face, one precinct not having been counted by the county canvassers. The Attorney-General favored excluding the return of Duval County because it was not signed by the county judge, but the majority decided to canvass it. The vote stood after this canvass: For Governor, Drew, 24,179; Stearns, 23,984—Drew's majority, 195; for Lieutenant-Governor, Hull, 24,243, and Montgomery, 23,895; for Congressman in the first district, Davidson, Democrat, had 540 majority, and in the second district, Bisbee, Republican, had 319 majority. The vote for electors was 24,205 for the Republican ticket, and 23,999 for the Democratic, making the majority of the former 206. The report of this canvass was submitted to the Supreme Court with a protest signed by Samuel B. McLin and C. A. Cowgill. The material portion of the protest was in the following terms:

They respectfully, but as of right, enter their protest against doing and being required to do any and all the things of them ordered by the said writ of the said Supreme Court, and in connection therewith they deny that the court could rightfully take jurisdiction of the said proceeding, and assume to issue said writ against them, because they say the election, the returns of which they are directed now to recanvass, was a mixed election, being partly for the officers of the State of Florida, and partly for Representatives in Congress, of which election they say they were officers within the meaning of section 5,515 of the Revised Statutes of the United States, and being such officers they say they were bound to observe every duty by the law of Florida imposed upon them in regard to such election, subject to the pains and penalties by the said section prescribed for neglect or refusal to perform such duties. And as they were not at liberty, under the said election law of Florida, to separate the returns for Representatives in Congress from the returns for State officers for purposes of canvass and count, neither can

the court make order requiring them to canvass said returns separately and by different rules.

They further say in protest that, as such Board of Canvassers, they did heretofore, to wit, on the day of the 8th instant, assemble, and, as in their judgment they thought required by the law of Florida, section 4 of the act approved February 27, 1872, canvass the returns of the election held November 7, 1876, being the same returns they are now by the court ordered and required to recanvass; that in such former canvass some of the said returns were contested for alleged irregularity, falsity, and fraud, in which cases proof was heard by the board, to ascertain, if possible, the true vote cast for the several candidates in the counties or precincts of counties so contested, with result that, in some instances, the aggregate of votes, as it appeared on the face of some of the returns, was changed by the board to correspond with the aggregate of the true vote, as the same appeared by the evidence, while in other cases the returns were entirely rejected.

Then follows a statement of the results of the first and second canvasses.

On the 1st of January, 1877, the Supreme Court quashed the return of the Canvassing Board as no answer to its writ, and issued a new order requiring it to reassemble at once and count the votes for Governor as they appeared on the face of the returns, taking no account of the votes for other candidates. This was done on the same day, and Mr. Drew was declared elected Governor, and Mr. Hull Lieutenant-Governor; and on the day following, January 2d, Drew was inaugurated without opposition. The Legislature also met and was organized with a Democratic majority in both branches. In his inaugural address Mr. Drew said:

As the contest is over, let us hope that the animosities engendered thereby have died away, and that, as your chosen Executive, I may be able to rise to the true and broad statesmanship of occupying the position of the Governor of the State of Florida, and not the head of a political party. Our immense territorial dimensions demand a population commensurate with their capacity. Let us demonstrate by wise measures that our feelings and interests combine to generously invite an immigration that will promote this most desirable result.

Reflecting upon the past only as a guide for the future, let us endeavor to bring about an era of good feeling between all classes, and build up the prosperity of Florida by the combined efforts of her entire population. A large portion of that population, recently enfranchised, have been taught to feel solicitude of the continuance of their newly-acquired rights, if the party of which I have been the honored candidate came into possession of our State government. Their fears are groundless, and our colored fellow-citizens may finally rest assured that their rights, as guaranteed by the Constitution, will be fully sustained. It is both our wish and our interest to protect them in all their rights, and to bring about the kindest feelings between the races. As the Executive of this State, I shall exhaust every legal and constitutional remedy for the protection of the rights, the life, and the liberty of every citizen—feeling that such a course is my highest duty, and most conducive to the prosperity of the State.

A Northern man by birth and a Union man from principle, I recognize that the Democracy of Florida, in placing me in this position, demonstrate their desire for a true and fraternal union of all sections of our common country. That such a union may be firmly established, and ever remain peaceful, prosperous, and happy, is the hope of every patriot. At a

period in our country's history when the theory of republican government is undergoing a severe test, it is the duty of every law-abiding citizen to use his earnest efforts for the promotion of harmony and the security of those institutions. I hope and believe that the political contest now waging in the Federal arena will be peacefully settled, and that the chosen constitutional agents of the people will be quietly inaugurated with the full sanction of the honest masses of all parties.

The proceedings before the Supreme Court, of which an account has been given, pertained directly to the result of the election for State officers. The persons first declared by the Board of Canvassers to have been chosen for presidential electors received certificates from Governor Stearns, and met at Tallahassee on the 6th of December to cast their votes for President and Vice-President of the United States. While they were in session, notice was served upon them of the filing of information in the nature of a *quo warranto* by the Democratic candidates for electors. The information was filed in the Circuit Court, and was as follows:

To the Hon. P. W. White, Judge of the Circuit Court of the Second Judicial Circuit of Florida.

Robert Bullock, of Marion County; Robert B. Hilton, of Leon County; Wilkinson Call, of Duval County, and James E. Yonge, of Escambia County, who sue in their own behalf, as well as in behalf of the people of the State of Florida, come now before your Honor, the Honorable William Archer Cocke, the Attorney-General of the State of Florida, having refused to institute proper proceedings in the name of the State of Florida, for the purposes herein set forth, and give your Honor to understand, and inform your Honor, and charge and assert as follows:

1. That on the seventh day of November, A. D. one thousand eight hundred and seventy-six (1876), at an election legally and duly held in and for the State of Florida, pursuant to notice given and published by the Secretary of State, as provided by law, for four electors of President and Vice-President of the United States, they, the said Robert Bullock, Robert B. Hilton, Wilkinson Call, and James E. Yonge, received the highest number of legal votes cast at said election, for the offices of such electors of President and Vice-President, and were there and then duly and legally elected such electors of President and Vice-President.

2. That the said Robert Bullock, Robert B. Hilton, Wilkinson Call, and James E. Yonge, each, are, and were, at the time of such election, and have ever since been, legally qualified and duly registered electors of said State, under the constitution and laws of said State of Florida, and citizens thereof, and of the United States, and in all respects fully qualified to hold such offices of electors of President and Vice-President of the United States, and are rightfully entitled to such offices; that neither of them, at the time of such election, was, or has since been, or is now, a Senator or Representative in Congress, nor then held, nor has since held, nor now holds, any office of trust or profit under the United States.

3. That on the sixth day of December, A. D. eighteen hundred and seventy-six, Charles H. Pearce, of Leon County; Frederick C. Humphries, of Escambia County; William H. Holden, of Orange County; and Thomas W. Long, of Marion County, usurped the offices of electors of President and Vice-President aforesaid, and have ever since unlawfully exercised the duties and functions of the same, and withhold the same from the said Robert Bullock, Robert B. Hilton, James E. Yonge, and Wilkinson Call:

Wherefore, the said Robert Bullock, Robert B. Hil-

ton, James E. Yonge, and Wilkinson Call, pray the advice of your Honor in the premises, and due process of law against the said Charles H. Pearce, Frederick C. Humphries, William H. Holden, and Thomas W. Long, in their behalf to be made to answer by what warrant or authority they claim to use, exercise, enjoy, or perform the franchise, functions, and powers of such offices aforesaid; and further pray judgment that the said Charles H. Pearce, Frederick C. Humphries, W. H. Holden, and Thomas W. Long, are not entitled to such offices, but should be ousted therefrom; and that they, the said Robert Bullock, Robert B. Hilton, Wilkinson Call, and James E. Yonge, are entitled to said offices of electors of President and Vice-President, and to the powers, functions, and emoluments thereto belonging.

In response, Judge White issued the following order:

In Circuit Court, Second Judicial Circuit of Florida. The State of Florida, *ex relatione*, Wilkinson Call, Robert B. Hilton, James E. Yonge, and Robert Bullock, *vs.* Charles H. Pearce, Frederick C. Humphries, William H. Holden, and Thomas W. Long.

An information in the nature of a *quo warranto* having been filed in above cause, it is ordered that a writ of summons addressed to the defendants be issued in this cause by the Clerk of the Circuit Court of Leon County, Florida, returnable on the 18th day of December, A. D. 1876, upon which day the defendants above named are required to enter their appearance. It is further ordered that the defendants be allowed until the 28th day of December, A. D. 1876, to file their plea, demurrer, answer, or other pleading to the information filed in this cause, and that the issues herein be made up by the 1st day of January, A. D. 1877. It is further ordered that all pleadings and papers in this cause be filed in the office of the Clerk of the Circuit Court for Leon County aforesaid, and that a copy of this order be served with the writ of summons aforesaid.

Done and ordered at Chambers this December 6th, A. D. 1876, at Tallahassee, Fla.

P. W. WHITE,

Judge Circuit Court, Second Judicial Circuit, Florida.

The case was prosecuted to judgment in January, 1877, and the court decided that the Republican electors did not receive the highest number of votes cast; and it was therefore "considered and adjudged that the said respondents" (Hayes electors) "were not, nor was any one of them, elected, chosen, or appointed, or entitled to be declared elected, chosen, or appointed as such electors or elector, or to receive certificates of election or appointment as such electors or elector; and that the said respondents were not on the said 6th day of December, 1876, or at any other time, entitled to assume or exercise any of the powers and functions of such electors or elector, but that they were upon the said day and date mere usurpers, and that, all and singular, their acts and doings were and are illegal, null, and void." The court then went on to adjudge the Tilden electors duly elected and entitled "to be declared elected, chosen, and appointed, to have and receive certificates, and on the said day and date, and at all times since, to exercise and perform, all and singular, the powers and duties of such electors, and to have and enjoy the pay and emoluments thereof."

Meantime the Democratic candidates for

electors caused notice to be served on the Canvassing Board that they should apply on the 9th of January to the Supreme Court for a mandamus to compel them to make a canvass of the votes for electors and members of Congress, but with the change of administration the officials constituting the board went out of office. The Legislature passed an act, approved January 17th, directing the Secretary of State, Attorney-General, and Controller, or any two of them, together with any other "member of the cabinet" who might be designated by them, to canvass the returns of the election for electors of President and Vice-President. Thus the new Canvassing Board, which was composed of Democrats, received authority of law to canvass the result of the election in November. Mr. Raney, the Attorney-General, having been counsel for the Democratic candidates, declined to act, and the Commissioner of Lands and Immigration was designated in his place. The canvass made by this board, on the 19th of January, showed 24,434 votes for the Tilden electors and 24,340 for the Hayes electors, giving the former a majority of 94. Another act was then passed by the Legislature "to declare and establish the appointment by the State of Florida of electors for President and Vice-President." This was approved January 26th, and, after reciting the result of the election, declared the Democratic candidates by name to be the electors, and authorized the Governor to make and certify in due form under the great seal of the State three lists of their names, and to transmit the same, with an authenticated copy of the act, to the President of the Senate of the United States, and authenticating and validating the said lists and certificates, "as if they had been made and delivered on or before the 6th day of December, 1876, and had been transmitted immediately thereafter," and declaring "illegal and void" the certificates containing the names of Charles H. Pearce, Frederick C. Humphries, William H. Holden, and Thomas W. Long. Thus three sets of certificates of the electoral votes of the State were sent to Washington: first, that of the Republican electors, bearing the signature of Governor Stearns; second, that of the Democratic electors as first made out, and signed by Attorney-General Cocke, in December; and third, that of the Democratic electors made in pursuance of the act of the Legislature, and signed by Governor Drew.

During the greater part of the month of December and the first week of January, 1877, a committee from each branch of the Federal Congress was in the State making investigations into the election and its results. Their proceedings were for the most part private, and will be noticed elsewhere.

FORSTER, JOHN, a British writer, born in Newcastle, in 1812; died February 1, 1876. He was an extensive contributor to the *Examiner* for more than eighteen years, during ten

of which he was its editor. He also contributed largely to the *Edinburgh* and *Quarterly Reviews*, the *Foreign Quarterly Review*, of which he was for several years editor, and to other leading periodicals. On the retirement of Mr. Dickens from the editorship of the *Daily News*, Mr. Forster succeeded him, but resigned after holding it nearly a year. In 1855 he was appointed secretary to the Lunacy Commission, and in 1861 a Commissioner in Lunacy. He wrote "Statesmen of the Commonwealth of England" (1831-'34); "Life of Oliver Goldsmith" (1848); "Arrest of the Five Members by Charles the First" (1860); "Debates on the Grand Remonstrance" (1860); "Sir John Eliot, a Biography, 1590-1632" (1864); "Walter Savage Landor, a Biography, 1775-1864" (2 vols., 1868); and "The Life of Charles Dickens" (3 vols., 1871-'74).

FRANCE, a republic of Europe. President, Marshal Marie Edmond Patrice Maurice de MacMahon, Duke of Magenta, elected May 24, 1873. Chief of the cabinet, Colonel Robert; Secretary of the President, Viscount d'Harcourt; Vice-President of Council of Ministers, at the close of the year 1876, Jules Simon.

The legislative body consists of a Senate and a Chamber of Deputies. The Senate consists of 75 life-members, elected by the late National Assembly (see ANNUAL CYCLOPEDIA for 1875 for a complete list and the biographies of the life-senators), and 225 elected for three, six, and nine years respectively, by a direct vote of the people. The President of the Senate in 1876 was the Duke d'Audiffret-Pasquier. The Chamber of Deputies consists of 532 members. The President of the Chamber of Deputies in 1876 was François Paul Jules Grévy.

The area of France, according to the official report on the census of 1872 ("Statistique de la France"), was 204,092 square miles. The population, according to the census of 1872, was 36,102,921.

The table on page 807 exhibits the area and population of each department, and the movement of population during the year 1873.

The relation of sexes, in the total population, is as follows:

CLASSES.	Males to 100 Females.
Department of the Seine.....	102.4
Population of the towns.....	104.8
Rural population.....	105.6
Total.....	105.0

The movement of population from 1866 to 1873 was as follows:

YEARS.	Birhs.	Deaths.	Surplus of Birhs (B.), or Deaths (D.).	Percentage of Increase (I.), or Decrease (D.), of Population.
1866...	1,006,253	884,573	B. 121,680	I. 0.83
1867...	1,007,515	886,887	B. 120,628	I. 0.81
1868...	984,140	922,088	B. 62,102	I. 0.16
1869...	948,528	864,820	B. 84,906	I. 0.21
1870...	944,115	1,046,909	D. 102,894	D. 0.28
1871...	828,121	1,271,010	D. 444,815	D. 1.22
1872...	966,000	798,064	B. 172,986	I. 0.48
1873...	946,364	844,588	B. 101,776	I. 0.28

Yonne	2,363	372,569	363,603	7,506	6,243	2,374
Total	204,092	36,469,336	34,102,921	946,364	844,533	321,233

In the ANNUAL CYCLOPÆDIA for 1875, attention was called to the very favorable relation existing between the number of births and marriages and that of deaths. This proportion was mainly due to the natural reaction after the destructive war with Germany, and could hardly be expected to continue. The figures for the two years 1872 and 1873 are as follows :

MARRIAGES, ETC.	1872.	1873.
Marriages.....	852,754	821,288
Births.....	966,000	946,364
Deaths.....	793,064	844,588

A comparison of the two years shows that the marriages have diminished 31,516, or 3.83 per cent., the births 19,636, or 2.03 per cent., while the deaths have increased 51,524, or 6.58 per cent. These figures are divided among the three great classes of the population as follows :

CLASSES.	1872.	1873.	Increase (I.) or Decrease (D.).
MARRIAGES.			
Department of the Seine.	95,181	92,750	D. 2,431
Population of the towna.	86,498	79,695	D. 6,803
Rural population.....	941,195	818,793	D. 22,402
BIRTHS.			
Department of the Seine.	63,874	66,689	D. 1,785
Population of the towna.	255,552	252,690	D. 2,862
Rural population.....	643,074	627,063	D. 15,089
DEATHS.			
Department of the Seine.	49,305	52,114	I. 2,909
Population of the towna.	223,658	239,743	I. 16,090
Rural population.....	520,201	552,736	I. 31,475

The number of still-born children from 1869 to 1873 were—in 1869, 45,280; in 1870, 45,169; in 1871, 40,315; in 1872, 43,967; in 1873, 44,487.

The number of marriages, which had risen in 1872 to such an unusual height, fell again during the year 1873. The following table shows the proportion of marriages to the total population from 1825 to 1873 :

1825-1833.....	1 to 123 inhabitants.
1829-1833.....	1 to 126 "
1834-1838.....	1 to 123 "
1839-1844.....	1 to 125 "
1845-1868.....	varying from 142 (1847) to 118 (1858).
1869.....	1 to 121 inhabitants.
1870.....	1 to 166 "
1871.....	1 to 139 "
1872.....	1 to 109 "
1873.....	1 to 118 "

The number of illegitimate children has since 1825 been invariably from seven to eight per cent. of all the children born. From 1861 to 1866 it amounted, on an average, to 7.56 per cent.; in 1873 to 7.46 per cent. In the department of the Seine they constituted in 1872 24.61, and in 1873 25.21 per cent.; in the towns, by which name the French statisticians designate all the *communes* with more than 2,000 inhabitants, in 1872, 10.42, and in 1873, 10.69; in the rural communities, in 1872, 4.08, and in 1873, 4.27 per cent.

The following table exhibits the number of voters who in 1875 were entitled to take part in the general and municipal elections :

DEPARTMENTS.	General Election.	Municipal Election.

France.....	24.49	36.63	30.55	21.48	32.93	27.38

In 1874 the population of Paris was 1,851,792, but had fallen to 1,799,250 on January 1, 1876.

The budget for 1876, voted by the National Assembly, comprised the following sources of revenue and branches of expenditures:

REVENUE.	France.
Direct taxes.....	407,408,700
Stamps and enregistrement.....	619,489,815
Produce of forests.....	33,064,890
Duties.....	238,938,250
Indirect taxes.....	998,615,465
Produce of posts.....	110,176,000
Miscellaneous receipts.....	97,437,447
Extraordinary receipts.....	66,908,785
Total.....	2,575,028,592

EXPENDITURES.	France.
Ministry of Justice.....	38,771,640
Ministry of Foreign Affairs.....	11,250,500
Ministry of the Interior.....	85,406,064
Ministry of Finances.....	1,468,449,869
Ministry of Public Instruction.....	98,640,540
Ministry of Agriculture and Commerce	19,136,500
Ministry of Public Works.....	161,105,188
Ministry of War.....	500,098,115
Ministry of the Navy.....	165,898,496
Administration of colonies.....	26,908,681
General civil government of Algiers...	26,908,681
Total.....	2,570,505,518

The public debt, according to the budget of 1876, was as follows (in francs):

DEBT.	Interest.	Capital.
Consolidated debt.....	747,998,866	19,900,906,900
Capital that may be called in..	277,599,888	3,508,000,000
Dette viagère.....	124,776,346
Total.....	1,150,375,060	23,408,906,900

On January 1, 1873, the new army law of August 16, 1872, went into operation. Its first article enacts universal liability to military service. Every Frenchman capable of bearing arms must serve for twenty years, namely, four years in the standing army, five years in the reserve of the standing army, five years in the territorial army (Landwehr), and six years in the reserve of the territorial army (Landsturm).

The recruiting in 1874 showed that the number of the young men registered in the military lists as becoming twenty years old in 1873 ("class of 1873") was 296,504. In addition to these there were 21,023 properly belonging to the class of 1872. Of these numbers there were:

. MEN.	Class of	
	1873.	1872.
1. Declared fit for service.....	152,425	6,797
2. Exempted on account of family relations (eldest son of a widow, etc.).....	42,983	945
3. Exempted partly, or conditionally, on account of their calling (priests, teachers, etc.).....	26,705	58
4. Reserved for sanitary and other services.....	27,427	2,826
5. Put back for one year.....	21,255	8,789
6. Rejected on account of bodily infirmities.....	25,650	2,132
Totals.....	296,504	21,022

Of the men declared fit for service, 6,056 were assigned to the navy for a service of five years. The remaining 146,369 men of the class of 1873, and the 6,797 of the class of 1872, were divided into two sections:

	Class of		Total.
	1873.	1872.	
1. For five years' service in the standing army (class of 1872 only four years).....	69,080	3,943	92,973
2. Embracing all those who may be furnished after a service from six to twelve months.....	57,839	2,855	60,194

As a small number of young men are always exempted after having been declared fit for service, the number really entering the army may be estimated at about 165,000. The number of young men who, in accordance with the law of 1872, were allowed to enlist as volunteers for one year, either as graduates of educational institutions of a higher grade, or on

account of having passed the examination prescribed by law, was 13,314.

By a law of July 24, 1873, on the reorganization of the army, France is divided into eighteen districts, each of which is occupied by an army corps. One army corps, moreover, is organized in Algeria. Each of the eighteen army corps consists of two divisions of infantry, one brigade of cavalry, one brigade of artillery, one battalion of engineers, one squadron of the train, a general staff, and the subordinate staffs. The composition of the army, in time of peace, will be as follows:

Infantry (156 regiments, 505 battalions, 2,445 companies).....	251,601
Cavalry.....	66,617
Artillery.....	66,831
Engineers.....	10,960
Train.....	9,892
Staff.....	26,407
Gendarmes.....	27,014
Total.....	490,822

To this number may be added the second division of the yearly contingent, amounting to about 80,000 men, who serve from six to twelve months, and swell the number of the army to 501,007 men. In time of war, the army will be composed as follows:

Field army (divided into 19 army corps and 9 divisions of cavalry).....	880,000
Battalions, squadrons, batteries, etc., of the <i>armées actives</i> remaining in France and Algeria.....	50,000
Garrison troops, according to the estimates of the army commission (in companies of 500 men each).....	220,000
The territorial army.....	560,000
Garrison troops of the territorial army.....	20,000
Corps forestier and douaniers.....	20,000
Total.....	1,750,000

The army commission estimated the territorial army at only two battalions of together 474,840 men, exclusive of the staffs. In the total as above are included four regiments of marines. The degree of instruction received by the "class of 1878" was as follows:

INSTRUCTION.	Men.	Percentage.
Not able to read or write.....	51,620	17.41
Able to read only.....	6,122	2.08
Able to read and write.....	26,794	12.41
Able to read, write, and cipher.....	190,578	64.28
Number having received diplomas as bachelors of arts or sciences.....	1,964	0.66
Unknown.....	9,526	3.31

The navy was composed as follows, according to the budget of 1875:

VESSELS.	Iron-clads.	Others.	Total.	Salloes.
Fully-equipped vessels.....	7	85	92	28,431
Vessels for the post-service, and trial vessels.....	19	48	62	
Total.....	26	133	154	28,431
Reserve.....	81	47	78

The following table exhibits the movements of French commerce from 1859 to 1874:

YEARS.	GENERAL COMMERCE.		SPECIAL COMMERCE.		GOLD AND PRECIOUS METALS.	
	Imports.	Exports.	Imports.	Exports.	Imports.	Exports.
1874..	4,422,500,000	4,702,100,000	8,507,700,000	8,701,100,000	952,000,000	159,000,000
1873..	4,576,400,000	4,822,300,000	8,554,500,000	8,737,800,000	565,000,000	492,000,000
1872..	4,501,600,000	4,756,600,000	8,370,800,000	8,761,600,000	858,000,000	334,000,000
1869-1873..	4,107,000,000	4,061,300,000	8,242,500,000	8,259,700,000	462,000,000	371,000,000
1864-1868..	3,818,900,000	3,988,800,000	2,858,700,000	2,961,800,000	799,000,000	451,000,000
1859-1868..	2,946,600,000	3,038,200,000	2,121,100,000	2,271,000,000	607,000,000	513,000,000

The foreign countries chiefly interested in the trade of France in the years 1872, 1873, and 1874, were the following:

COUNTRIES.	IMPORTS.			EXPORTS.		
	1872.	1873.	1874.	1872.	1873.	1874.

St. Marie, Mayotte.....	2,100,000	2,300,000	2,800,000	300,000	700,000	400,000
Total.....	243,900,000	262,300,000	21,600,000	206,900,000	199,100,000	188,900,000

The total commerce of France with foreign countries, and with its colonies, accordingly was as follows :

YEARS.	Imports.	Exports.
1873.....	3,570,800,000	3,761,600,000
1873.....	3,554,600,000	3,737,800,000
1874.....	3,507,700,000	3,701,100,000

In 1875 the imports amounted to 3,672,800,000

francs, and the exports to 4,022,162,000 francs. —The coal and iron production in 1875 was as follows: Coal, 169,490,315 metrical hundred-weights; cast-iron, 14,157,283; iron bars, 7,554,422; railroad-tracks, 1,189,589; sheet-iron, 1,149,812; steel, 2,516,374; and cast-steel, 61,431 metrical hundred-weights.

The movement of shipping in 1873 was as follows (of coasting-vessels only statistics of 1872 have been published):

CLASSES OF VESSELS.	ENTERED.				CLEARED.

Surplus.....	37,419,238	42,532,840

All the railroads of France are private roads, which are assumed by the Government at the expiration of their charters. According to the *Statistique Centrale des Chemins de Fer*, the

number of kilometres in operation on January 1, 1874, 1875, and 1876, was as follows:

YEARS.	Kilometres.
1874.....	20,005
1875.....	20,771
1876.....	21,761

The statistics of telegraphs for 1875 were as follows:

Government stations.....	2,817
Length of lines (kilometres).....	51,700
Length of wires.....	143,234
Dispatches in 1873.....	6,500,623
Receipts (francs).....	15,758,995
Expenditures (francs).....	14,632,500

The donations to public institutions, while varying between 12,000,000 and 19,000,000 francs from 1861 to 1871, rose in 1872 to 23,000,000 francs, and in 1873 to 31,813,381 francs. In 1873 they were donated for the following purposes:

	Francs.
To religious orders.....	11,537,798
To hospitals and charitable institutions.....	13,769,164
To asylums and houses of refuge.....	137,556
To institutions of public instruction.....	433,604
To academies and learned bodies.....	37,000
To communities.....	4,609,779
To departments.....	768,550
Total.....	31,813,381

The French colonies and dependencies had, according to the latest official reports, the following area and population:

COLONIES AND DEPENDENCIES.	Area, sq. m.	Population.

The new year opened with a conflict in the ministry. The electoral rescripts of MM. Léon Say, Dufaure, and Wallon, to their officials, were of a very liberal character. Owing to a difference of opinion in the cabinet on this subject, MM. Say and Dufaure handed in their resignations, but a compromise was eventually brought about. The elections for the 225 senators to be chosen by the departments were held on January 30th, after the senatorial electors had been chosen on the 16th. Previous to the election, on January 18th, President MacMahon issued the following proclamation :

FRENCHMEN: For the first time in five years you are called upon to participate in a general election. Five years ago you desired order and peace, and at the price of the most cruel sacrifices, and after the greatest of trials, you obtained them.

You still desire order and peace. The senators and deputies you are about to elect must cooperate with the President of the Republic to maintain them. We must apply, with common accord and sincerity, the constitutional laws, the revision whereof I alone, until 1880, have the right to propose.

After so much agitation, discord, and misfortune, repose is necessary for the country, and I think her

institutions ought not to be revised before they are honestly tried. But to try them as the salvation of France requires, it is indispensable that the conservative and truly liberal policy, which I always intended to pursue, should prevail.

To uphold it I appeal for union among those who place the defense of social order, respect for law, and patriotic devotion, above their recollections, aspirations, or party engagements. I invite them to rally around my government. It is necessary that the sacred rights which survive all governmental changes, and the legitimate interests which every administration is bound to protect, should enjoy a full security under a strong and respected government.

It is necessary not only to disarm those who might disturb the security now, but to discourage those who threaten its future by the propagation of anti-social and revolutionary doctrines.

France knows that I neither sought nor desired the power I am invested with, but she may rely upon my exercising it without weakness.

In order to fulfill to the end the mission intrusted to me, I hope God will aid me, and that the support of the nation will not fail me.

M. MACMAHON,

President of the French Republic.

Countersigned,

BUFFET, Vice-President of the Council.

As the results of the elections for the electors were unknown, considerable interest was manifested when the latter met to vote for senators. The results of the election were as follows: 92 Republicans, 15 Constitutionals, 45 Bonapartists, 36 Legitimists, 26 Orleanists, and 11 Clericals. Adding these to the life-senators elected in 1875, the Senate stood as follows in the beginning of the year: 148 Republicans; 24 Constitutionals, of whom 12 were considered doubtful; 26 Orleanists; 24 Legitimists, friendly to the Government; 21 extreme Legitimists; 45 Bonapartists; and 11 Clericals—299 in all, one life-senator having died shortly after his election. The two most important features of the senatorial contest were the firm establishment of the republic, and the overthrow of the Bonapartists. Immediately after the senatorial elections the contest for the Chamber of Deputies began. In Ajaccio Prince Napoléon Jérôme accepted a nomination for deputy against Rouher, the ex-minister of the empire. The Prince Imperial addressed a letter to the Bonapartists of Ajaccio, directing them, as his father's heir, to vote for Rouher against Prince Napoléon, thus completing the split in the family. The elections took place on February 20th, resulting in a choice in 406 districts, only making 106 second ballots necessary. The second elections took place on March 5th. The total result of the two elections was as follows: Republicans of all shades 270, Radicals 60, Bonapartists 92, Liberal Conservatives 58, Legitimists 36—total 516. The Republicans carried rather more than half their candidates, the Conservatives four-elevenths, and the Bonapartists three-fifths. The aggregate votes given comprised 685,852 to Republicans, or 6,179 to each candidate; 302,523 to Bonapartists, or 6,577 to each candidate; 351,145 to Conservatives, or 5,630 to each candidate.

Adding together the first and second ballots, the Republicans had 4,687,117 votes, the Conservatives 2,147,094, and the Bonapartists 1,699,411. This gave the Republicans a majority of 1,024,467 over the other two parties put together. The aggregate total of the two ballots was 8,533,612, nearly the same as at the *plébiscite* of 1870, when 7,000,000 voted "Oui" and 1,500,000 "Non" only. By a singular coincidence, the empire had nearly the same numbers as its adversaries then had, and *vice versa*.

The election was generally considered a decided check to Bonapartism. In Ajaccio two ballots were necessary, resulting in the election of M. Rouher over Prince Napoléon Jérôme.

The most significant fact in connection with the election was the defeat of M. Buffet in four different districts. This was considered as a popular vote of censure of his policy, and led to his resignation on February 21st. On March 9th a new ministry was formed, under the presidency of M. Dufaure. Four members of the old cabinet retained their portfolios—MM. Dufaure, Decazes, Léon Say, and De Cissey. Five new men entered the cabinet, of whom four belong to the Left Centre. M. Ricard, who took the Interior, was the reporter on the electoral law voted by the last Assembly. He was defeated at the elections. M. Waddington, Minister of Education, is the son of an Englishman, but was born in France. He formed part of the last Casimir Périer cabinet, which fell with M. Thiers. M. Christophèle, Minister of Public Works, was formerly President of the Left Centre. M. Teisserenc de Bort took the portfolio of Commerce, which he held under M. Thiers. He presided over the Sugar Committee, and several of the able reports drawn up by him on that subject have been published. Lastly, Admiral Fourichon took the Marine Department. He belongs to the Right Centre, and performed the same functions under the Tours and Bordeaux Government. The preliminary meeting of both Chambers was held on March 7th. In both Assemblies the President of the Provincial Bureau was appointed by seniority, the youngest members being secretaries. The sitting lasted only a few minutes. On the following day the formal opening of the session took place. The Chamber of Deputies assembled at 1 P. M. M. Raspail, as senior deputy, provisionally occupied the presidential chair, and the six youngest members acted as secretaries. After the formation of the bureau the sitting was suspended, and the president, accompanied by the secretaries and a great number of deputies, left the hall to attend the ceremony of the transmissions of powers. This ceremony took place in the Hercules Saloon. The Duke d'Audiffret-Pasquier occupied the post of honor, and was surrounded by the bureau of the old Assembly and the ministers, MM. Dufaure, Léon Say, Walton, and Caillaux. Many old and new deputies were present. The Duke

d'Audiffret-Pasquier delivered a speech, which the Republicans concurred in considering firm and suitable to the occasion. He said: "I welcome the new representatives of the public powers, who have been freely elected. Universal suffrage has just sanctioned the republican constitution of the 25th of February, which is a work of conciliation and appeasement, and thus acquires a double authority. You will have to continue protecting the task of your predecessors and gather round the government of Marshal MacMahon, in order to insure the maintenance of order and peace, the repose necessary to the country, so that it may repair the disasters of the past and support the burdens of the future. I hope the country will be pacified when you hand over your powers to your successors." M. Gaultier de Rumilly, President of the Senate by seniority, said: "The Senate, the guardian of the constitution, will insure the preservation of peace and security for all interests, and will

THE OLD BASTILLE, PARIS.

lend its support to the marshal, the constitutional President of the Republic, on behalf of order and liberty at home and abroad." M. Dufaure announced that the cabinet was intrusted by Marshal MacMahon with the duty of declaring that, with the aid of God and the coöperation of the two Chambers, the marshal would govern conformably with the laws and with the view to the promotion of the honor and the interest of the country. The Duke d'Audiffret-Pasquier then declared the mission of the National Assembly to be at an end, and he delivered its powers to the new Chambers. At the close of the ceremony the Senate and the Chamber of Deputies commenced their first regular sitting. On the resumption of the sitting of the Chamber of Deputies, M. Raspail delivered a short address, in which he appealed to the members to dis-

play concord and devotedness to the country. The Chamber of Deputies elected M. Grévy its president by 462 out of 468 votes. The vice-presidents were MM. Lepère and Rameau, two thorough Republicans; M. Bethmond, an old Left Centre man, and Count Durfort de Civrac. In the Senate the Duke d'Audiffret-Pasquier was chosen president by 205 votes. There was no serious opposition. The vice-presidents chosen were MM. Martel and Duclerc, Republicans, who headed the poll; and, after them, the Conservatives General Ladmiraunt and M. Andreu de Kordrel. Jules Simon, who was a candidate, was badly beaten. The secretaries chosen were the Count de Saint-Vallier and M. Scheuerer Kestner, Republicans. The questors elected were MM. Baze, Toupet des Vignes, and General Aurelle de Paladines. The ministerial statement was read simultaneously in the Senate and Cham-

VILLA EUGÉNIE, BIARRITZ, FRANCE.

ber on March 15th, by M. Dufaure in the former, and by the Duke Decazes in the latter. Speaking in the name of the Council of Ministers, it says: "The Republican Government, already founded, has been completed by the election of two great Assemblies, which constitute with that government the entirety of the public powers. Universal suffrage has sanctioned the great constitutional results accomplished by the last Assembly. Power cannot have a higher origin in human society; never was a government more legitimately established." After referring to the terms of the presidential proclamation of the 18th of January, which maintained that the existing institutions ought not to be revised until they had been subjected to an honest trial, the ministerial statement says: "These wise words will be our constant rule. The greatness and the future of our country depend upon the loyal practice of the constitutional laws, and we shall be faithful to the liberal conservative spirit which has inspired them. In our relations with you, and in the preparation of future laws, we shall insist upon fidelity from our subordinates. The public function-

aries will second our views by making the republic understood and appreciated. We shall tell them that the republic, more than any other government, needs to repose upon the sacred laws of religion, morality, and family rights, upon respect for the inviolability of property, and upon labor encouraged and honored; lastly, that it will reject those warlike adventures in which governments have too frequently engaged." The statement proceeds to explain the condition of the finances. It states that the budget will be brought forward, balanced without any increase of taxation, and therefore without imposing upon the tax-payers any new sacrifice, yet at the same time insuring the reimbursement of the debt due to the Bank of France. It adds: "Our relations with foreign powers have in no way lost their amicable and pacific character. France has joined in the efforts made to put a stop

to the disturbances in the western provinces of Turkey. We still retain a hope that the agreement of the great powers jointly affirming their respect of treaties and their attachment to peace will bear fruit. No power has suffered more than we from the civil war which has desolated Spain, and none could see it brought to a conclusion with more lively and sincere satisfaction than ourselves. This pacification of the public mind at both extremities of Europe, and the ardent desire for peace by

which all peoples and all governments are animated, will be favorable to the prosecution of the pending commercial negotiations. The approaching expiration of the treaties of commerce compels us to lay down a new economical régime, to which our commercial relations with foreign countries will henceforth be subject. We shall seek to spare industry the perturbations to which it has been subject, as well as any future modifications of the tariff, by persevering in the wise policy of free trade. The reconstruction of our military status is gradually being effected, and you will have to settle the rules by which the administration of the army and staff are to be regulated." The declaration then calls the attention of the Chambers to the depreciation and scarcity of the naval stores, and states that the alterations made in naval construction have induced the maritime powers to undertake fresh burdens for the purpose of keeping pace with the improvements of naval architecture. France is compelled to enter upon the same path, while proceeding with resolution and prudence. The Government will endeavor to give a well-considered impetus to the execution of public

works. While seeking to reconcile important and justly-demanded liberties with the rights of the state and the necessary prerogatives of the executive power, it will submit propositions with regard to the granting of degrees for superior education and the composition of the municipalities. The programme says in conclusion: "It is not without emotion that we approach the first session of the Legislature under a constitutional republic. We foresee the difficulties it may present, but we presume to hope that they will be overcome through your confidence in the superior and loyal wisdom of the President of the Republic, through the constant agreement of the two Chambers, and the general and passionate desire to see France rise again, rendered great by liberty, order, and peace." The message produced a general impression of satisfaction among the members of the Republican party. The closing paragraph of the message was greeted with cheers by the Left and the Centres. On March 16th M. Ricard, Minister of the Interior, was elected a life-senator in the place of Larochette. On March 18th M. Waddington received the professors of the faculties and lycenms of Paris, on which occasion he addressed the following words to them:

"Gentlemen, I wish to inform you of my programme, the programme of my ministry as far as it concerns public instruction. I desire freedom of instruction; I consider it now, and have always considered it, necessary. But, with regard to the granting of degrees, it is my firm intention to restore this right to the state. The state only must possess the privilege of granting degrees. I have always held the same opinion on this point." On the 28d M. Waddington introduced a bill in the Chamber of Deputies, abrogating the clauses of the university law which permitted faculties unconnected with the state to grant degrees.

On March 21st Victor Hugo read a motion in the Senate, proposing a general amnesty for all acts committed during the reign of the Commune. This motion created considerable excitement among the members of the Right, one of whom, M. Paris, shouted, "Do you propose amnesty even for the murderers of the hostages?" To which M. Hugo did not reply. M. Dufaure proposed that the motion be declared "urgent." He said: "Among those to whom the proposal applies are some who regret the excesses into which circumstances led them. By their toils and their regrets they have merited clemency. The President will exercise the right of pardon in their favor. But for those who committed crimes, and who, while remaining enemies to society, employ upon the frontiers the most ingenious means for introducing in France writings which calumniate society and the Government, amnesty is impossible, and the ministry will oppose it." "Urgency" was voted unanimously. In the Chamber of Deputies a similar motion was introduced by M. Raspail.

This for a time caused a very spirited debate, the Bonapartists bitterly attacking the motion, and demanding the names of the deputies who signed it. One of their number, Paul de Casagnac, said, "We wish to know the members who composed the Pantheon of assassins," to which M. Perin, of the Left, replied, "The assassins of the *coup d'état* owe some indulgence to the assassins of the Commune." M. Ricard, Minister of the Interior, proposed that the amnesty motions be declared urgent, but added: "The Government opposes all propositions for amnesty. It firmly intends to cause the decisions of the tribunals to be respected. It would be dishonoring the country to treat the criminals of the Commune as victims of political discord." MM. Raspail and Brisson, of the Left, opposed the motives for declaring urgency advanced by the Government. They claimed urgency solely in the name of humanity. M. Ricard asked whether it would be humane to raise false hopes in the minds of relatives of the prisoners. He said the President would reconcile his duties to the country with the rights of humanity. "Urgency" was finally voted unanimously. On March 29th MM. Ricard and Dufaure gave evidence before the Senate's committee on the amnesty proposals. They pointed to documents showing that the majority of the convicts persisted in considering themselves political martyrs, and felt no regret for their crimes. The return of such men to society would constitute a positive peril. The sentiments evinced in pamphlets, journals, and speeches, by refugees abroad, also showed that they, if permitted to return to France, would bring back sentiments of hatred even more vehement than were displayed during the Commune, and the intention of accomplishing so-called necessary reparation. Therefore, it was absolutely impossible to think of either partial or general amnesty in favor of such persons. The Government, however, wished largely to exercise clemency toward those who desired to live peaceably, and would take measures to bring about the extensive exercise of President MacMahon's right to pardon immediately upon the rejection of the amnesty motions. On March 30th the Senate arranged the method for the partial renewal of its membership every three years, as prescribed by the constitutional laws. The departments are divided, according to alphabetical order, into three categories, each represented by seventy-five senators. The first category comprised the departments from Ain to Gard, including the colonies of Algeria, Guadeloupe, and La Réunion. The second comprised the departments from Garonne to Oise, including the colonies Constantine and Martinique. The third took in the departments from Orne to Yonne, including the colonies Oran and Pondichéry. Lots were then drawn to decide the order in which the senators of the three categories must seek selection. The result was that the senators in the first category are

to retire after nine years, those in the second after three years, and those in the third after six years. The second category of senators thus obliged to retire at the expiration of three years includes at present fifty-one members of the Right and eighteen of the Left.

The Chamber of Deputies, on March 30th, appointed a committee to consider the bill restoring to the state the sole power of conferring university degrees. The majority of the committee, as constituted, were in favor of the bill. Thirty French bishops held a conference on the subject at the same time. The Cham-

ber of Deputies for some time continued to annul the elections of deputies for various reasons, most of them Legitimists and Bonapartists. Among them was the Count de Mun, whose election was canceled on account of undue clerical influence, and M. Rouher, on account of the letter of the prince imperial. The Count de Mun was reelected, while M. Rouher was defeated at the second ballot by Prince Napoléon Jérôme.

On April 11th the Bonapartist deputies proposed that the House should proceed immediately to the debate upon the amnesty question.

CATACOMBS OF PARIS.

The Government, on the other hand, advocated its postponement until after the recess, and this course was adopted by a large majority, all the groups of the Left, without exception, voting with the Government. The proceedings commenced by M. Leblond reading the report of the amnesty committee, which concluded by recommending the rejection of all the amnesty motions, whether of a general or partial character, and proposing instead that the President of the Republic should exercise the right of pardon to the fullest extent. M. Leblond said the Commune was a great crime, and the proclamation of an amnesty would spread terror through the rural districts, compromise the existence of the republic, and, moreover, be an act of weakness. When M. Leblond concluded, the Bonapartists brought forward their motion in favor of the report being discussed at once, and they demanded to know the views of the Government on the subject. M. Ricard, Minister of the Interior, said the Government had certainly asked that the proposal should be dealt with as urgent, but he considered it useless for the House to vote a law which the Senate would be unable to discuss for a month—namely, when it resumed its labors. He added that the country was not uneasy in regard to the amnesty, since it knew the views expressed by the Government and the conclusion of the report on the subject. M. Raoul Duval (Bonapartist) replied that his party was anxious

to see of what value the Republicans would be as a Government party. He thought the amnesty question ought not to be subject to any delay. He added that the Bonapartists would offer no systematic opposition to the Constitution. At this juncture M. Duval was interrupted by M. Ricard with the observation that a fallen party like that of the Bonapartists had no abdication to offer. M. Duval retorted that the minister's interruption was malignant. He regretted the tendency of the cabinet to take up the inheritance of the Government of combat, and said, "An offensive interruption may cause a digression in the discussion, but it will not induce us to deviate from our sentiments regarding the amnesty." M. Ricard again addressed the House, stating that on the eve of the recess the discussion could not be of a mature and well-considered character. He was surprised at M. Duval being vexed at his interruption, which simply stated indisputable facts, inasmuch as it affirmed the vote deposing the empire, which had been ratified by the country at the recent elections. The ministry could not let pass unanswered the assertion that the Bonapartists would not systematically oppose the Constitution—they who spoke unceasingly of its revision, and were concentrating all their hopes upon the period when a revision would be possible. M. Duval replied that he was not accustomed to see such firmness in a member of the Government. The habit of power would break the minister of

the practice of firmness. The minister was wrong in misunderstanding the intentions of the Bonapartists; they would not be irreconcilable enemies of the Constitution, and good policy would consist in not setting them aside. They only wished to make a trial of the Constitution, and desired above all to see the advanced Republican party, which triumphed at the last elections, seated on the benches of the ministry.

On May 12th the Republicans met with a serious loss by the death of M. Ricard, the Minister of the Interior. He was replaced in the cabinet by M. Marcère, his Under-Secretary of State. In the Senate, M. Buffet was elected as his successor in June.

The Chambers reassembled on May 10th. In the Chamber of Deputies the amnesty question was again taken up. After a considerable debate, the Chamber of Deputies, on May 18th, rejected the motion of M. Raspail for complete amnesty by a vote of 394 to 52. M. Marcou, Radical, introduced a motion for amnesty for all common-law offenses committed with a political object. Minister Dufaure opposed the motion. He declared that pardons would be granted in the proportion in which the Chamber refrained from insisting upon amnesty. The Government would show no leniency toward those who continued to display violence and hate in anonymous pamphlets and articles. M. Marcou's motion was rejected by a large majority.

On June 1st the Chamber of Deputies began the debate on M. Waddington's university education bill, and on June 7th passed it by a vote of 388 against 128. In the Senate considerable opposition was shown against it. On June 21st the bureaux of the Senate elected the committee on the university education bill. The committee consisted of six opponents and three supporters of the bill. This result was due to the fact that the members of the Right were more equally distributed among the various bureaux instead of their strength being wasted by concentration on one or two. An examination of the total number of votes cast in the bureaux showed that 182 senators were opposed to the bill, and 181 in favor of it. On July 21st it was finally defeated in the Senate by a vote of 144 to 189.

On July 11th the municipal bill of the Duke de Broglie was reported by the committee to the Chamber of Deputies. The committee's report provided that until an organic municipal law should be established the municipal councils should elect the mayors and deputy-mayors from among their own number by ballot; but the right of electing mayors shall not apply to communes—namely, principal towns of departments, arrondissements, and cantons, the mayors and deputy-mayors of which should be appointed from among the municipal councilors by the President. On the other hand, the Republican deputies had promised their constituencies liberal reforms in this

BAYONNE, FRANCE.

question, and particularly the abolition of the last clause. The cabinet thus found itself between two opponents, neither of whom would concede anything. The law was, however, passed on the 12th. Several amendments restricting the patronage of the Government were proposed, but they were rejected by

large majorities, the greater part of the Republicans deeming it necessary to sustain the cabinet.

While the republic gained more ground every day in the Chamber, the opposition in the Senate had been gaining considerably, and on July 25th all the factions of the Right def-

nately agreed to elect successively Legitimist, Orleanist, and Bonapartist candidates to the vacancies occurring upon the death of the present life-senators. But, in spite of this coalition, the Republicans succeeded in electing M. Dufaure, in place of Casimir Périer, who died July 6th, against M. Chesnelong, Legitimist, who was supported by the united Right, with the exception of the Right Centre.

On July 15th Gambetta, as chairman of the budget committee, reported that the discussion on the budget would be begun in the Chamber of Deputies on the following Monday, and that then the budgets for the ministries of War, of the Navy, of Justice, and of Instruction, and for Algeria, and the direct taxes, would be taken up, while the budgets of the other ministries, and the indirect taxes, should be reserved for an extra session. The Minister of Finance, however, desired the entire budget to be settled before adjournment. On August 12th the Chambers were prorogued by a decree read by members of the cabinet, declaring, in virtue of Article II. of the Constitution, the ordinary parliamentary session closed. The budget was left in an unfinished state.

Immediately after the adjournment of the Chambers, General de Cissey, who had held the ministry of War almost without interruption since 1871, was dismissed at his own request, and was immediately replaced by General Berthaut.

On October 8th, 83,000 communes elected their mayors. The result was mostly the reelection of the former incumbents. Where new ones were chosen, they were generally Republicans, and in some cases Bonapartists.

The Chambers met again on October 30th, but adjourned after a short session, the Senate until November 6th, and the Chamber of Deputies until the 8d. On the 8d the Duke Decazes, Minister of Foreign Affairs, read a statement in the Chamber, with regard to the Eastern question, as follows: "France sympathizes with the Latin Christians in the East, and will take every opportunity to defend their cause. France has not sacrificed a particle of its dignity, but it will observe under all circumstances the strictest neutrality, and will not enter upon a war in which the welfare, the dignity, or the safety of the country is not interested." Immediately after the reading of this declaration, M. Gatineau's bill, providing for the trial of Communists by the civil courts instead of by the military courts, was taken up and discussed, and was finally passed on the 4th, with the exception of the fourth article, thus excepting from this provision those Communists whose offenses had been of the gravest, or who had been convicted of contumacy.

A ministerial crisis broke out in the first week of December. The Government had refused military honors to several members of the Legion of Honor, because they had forbidden any religious ceremonies to be observed at their funeral. This caused considerable dis-

satisfaction among the Republicans, and, to solve the difficulty, the Government introduced a bill providing that in future no civil legionaries should receive military honors, which was, however, rejected by a decisive majority. Defeated in the Chamber of Deputies on the question of funeral honors, and again in the Senate by a majority of 20 on the bill for the cessation of prosecutions for participation in the Commune, known as the Gatineau proposition, M. Dufaure, on December 3d, decided to resign his seat in the cabinet, and his colleagues, approving his decision, resolved to follow his example, and to leave office with him. The President of the Republic received and accepted the collective resignation of the cabinet, and through the medium of the Keeper of the Seals and the President of the Council begged the different ministers to remain in office till he would be provided with their successors. The deliberations on the formation of a new ministry continued until December 12th. On the one hand the Liberals demanded that General Berthaut should not resume the ministry of War, while on the other hand President MacMahon was as firmly resolved not only to save General Berthaut, but also to form a Conservative ministry if possible. A compromise was eventually effected, by which Jules Simon was appointed Vice-President of the Council of Ministers and Minister of the Interior, and M. Martel, First Vice-President of the Senate and a member of the Left Centre, Minister of Justice and Religious Affairs, the remainder of the cabinet remaining unchanged. On December 14th M. Simon, in the name of the new ministry, read an address, in which, after speaking of his appointment, he said: "I am, as you know, a decided Republican, and at the same time strongly conservative in my sentiments; devoted by all my convictions and the studies of my life to the principles of liberty of conscience, and filled with deep respect for religion. The cabinet that is before you is parliamentary, and desires to remain so. We are in perfect accord with each other and with the majority of Parliament. We desire like the majority the preservation and the final establishment of the Constitution which France has given to itself."

The close of the session was characterized by a dispute between the Senate and the Chamber of Deputies. The Chamber had stricken off a number of items set down by the Government, notably that for chaplains. The Senate had restored these items. The Chamber made a few more changes in the budget as it came from the Senate, and the whole budget was then passed by a vote of 412 to 80 in the Chamber of Deputies, and by a unanimous vote in the Senate. The Chamber then adjourned on December 30th.

An agreement was entered into with Switzerland, according to which the commercial treaty of June 30, 1874, should remain in force until August 10, 1877.

The President in the course of the year pardoned a large number of Communists. Up to July 249 had been pardoned, the petitions in the cases of 208 had been rejected, and 199 others awaited consideration. On July 26th the President granted 127 and on November 5th 52 additional pardons.

In March the country was visited by severe storms and inundations. The Seine had risen ten feet higher than in 1872, causing extensive inundations in the suburbs of Paris. All the large streams between Paris and the frontier were out of their banks, causing the country for miles around to be flooded.

FREE CHURCH OF ENGLAND. The following Confession of Faith has been adopted by this Church:

Declaration of Principles of the Free Church of England, in Union with the Reformed Episcopal Church, adopted at Convocation held in London, June, 1876.

1. The Free Church of England, holding "the faith once delivered unto the saints," declares its belief in the Holy Scriptures of the Old and New Testament as the Word of God, and the *sole rule* of faith and practice; in the creed "commonly called the Apostles' Creed;" in the divine institution of the sacraments of Baptism and the Lord's Supper; and in the doctrines of grace *substantially* as they are set forth in the Thirty-nine Articles of Religion.

2. This Church recognizes and adheres to Episcopacy, not as of divine right, but as a very ancient and desirable form of church polity; but, for the avoidance of any possible misunderstanding, it hereby emphatically declares its *repudiation* of the Romish dogma of apostolical succession in the ministry as involving the transmission of spiritual powers.

3. This Church, retaining a Liturgy which shall not be repressive of freedom in prayer, accepts the Book of Common Prayer as revised and recommended for use by the Convocation of the Free Church of England.

4. This Church *condemns and rejects* the following erroneous and strange doctrines as *contrary to God's Word*:

(1.) That the Church of Christ exists only in one order or form of ecclesiastical polity.

(2.) That Christian ministers are "priests" in another sense than that in which all believers are a "royal priesthood."

(3.) That the Lord's Table is an altar on which the oblation of the body and blood of Christ is offered anew to the Father.

(4.) That the presence of Christ in the Lord's Supper is a presence in the elements of bread and wine.

(5.) That regeneration is inseparably connected with baptism.

5. This Church, in its public worship, and in preaching the gospel of the Lord Jesus Christ, is *distinctly opposed* both to sacerdotalism and rationalism.

At the Quarterly Meeting of the Council of the Free Church of England, held February 8th, the following resolution was adopted with reference to the form to be used in the consecration of bishops:

Whereas, The Free Church of England professes to be, and is, an Episcopal Church, and circumstances render it desirable and expedient that this principle should be more clearly defined and expressed, it is hereby resolved that the future bishops of this Church shall be consecrated or set apart to their office in accordance with the form of Consecrating

a Bishop as revised and set forth by the Second General Council of the Reformed Episcopal Church, and that it be a special recommendation of the Council to Convocation that at the consecration of future bishops of the Free Church of England a consecrated bishop or bishops, and three or more presbyters, be invited to conduct the ceremony of consecration.

A Convocation of the Free Church of England was held at Christ Church, Teddington, beginning August 15th. Bishop Cridge, of the Reformed Episcopal Church, was present, and was greeted with a resolution of welcome. He delivered an address, in which he gave a review and a definition of the position of the Reformed Episcopal Church and of the Free Church of England, as contrasted with the ecclesiastical pretensions and prerogatives of the Anglican Church and the bodies in communion with it. The Rev. Bishop Price, having been some time previously elected bishop of this Church, was consecrated in that office, August 15th, with the laying on of hands by the presbyters present, assisted by Bishop Cridge. The name of the Rev. John Sugden was presented to the convocation by the Council of the Church, as having been nominated by them for the office of bishop. The nomination was approved by the convocation, and Bishop Sugden was consecrated August 20th, at Christ Church, Lambeth, with the laying on of hands by the presbyters present, assisted by Bishops Cridge and Price.

FREILIGRATH, FERDINAND, a German poet, born in Detmold, June 17, 1810; died in Canstatt, March 18, 1876. Up to his fifteenth year he visited the gymnasium in his native town, but after that devoted himself to a mercantile business in Soest, in Westphalia. His leisure hours he devoted entirely to the study of history and natural history, and of French and English literature. From Soest he went to Amsterdam, and then to Barmen. In 1838 he left the mercantile career, encouraged by the success with which his collected poems met, which were published in 1838 in Stuttgart. His early works, chiefly descriptions of life in the tropics, showed a wonderful power of imagination, and rapidly gained for him the popular favor. In consequence of Herwegh's celebrated letter to the King of Prussia, Freiligrath published his poem "Ein Brief," in which he attacked Herwegh, and which the latter answered by his poem "Parlei." In 1842 Freiligrath received through the favor of the King of Prussia an annuity of 300 thalers. He now went from Darmstadt, where he had been living, to St. Goar, where with Emanuel Geibel he passed a short period of uninterrupted happiness. But he soon began to be affected by the liberal current then making itself felt throughout Germany, and in the beginning of 1844 he declined to receive any longer the annuity granted him by the King, and in the same year published his "Glaubensbekenntnisse," a volume of poems, with which he went over openly to the Liberal camp. The reasons for this step he sets forth

quite distinctly in the preface to this volume. On account of his radical opinions, which he now loudly proclaimed, he was in 1845 forced to seek refuge in Switzerland, but even here was turned away first in St. Gall, and then in Rapperswyl, and in 1846 went to London, where he found employment as a correspondent in a business house. The Revolution of 1848 he greeted with two poems, "Die Revolution" and "Februarklänge." He returned to Germany in that year and settled in Düsseldorf. On account of his poem "Die Todten an die Lebenden," in which he arraigned the King of Prussia for the murder of those killed by the troops during the riots in Berlin, he was arrested and tried for insulting the King, but on October 3d he was acquitted by a jury. In 1849 he went to Holland, but, being expelled from that country, settled in Bilk, near Düsseldorf. In 1850 he was ordered to leave Prussia, but, having proved that he had been a subject of Prussia for ten years, was admitted as a citizen in Düsseldorf in 1851. The year 1849 also saw the publication of a small volume of poems, "Zwischen den Garben einer Nachlese." It contains no political poems, but, on the other hand, many of his most beautiful productions, e. g., "O lieb' so lang du lieben kannst," a poem which probably gained for him more hearts than any of his other works. In the mean while his relations to the Government had become more and more critical. Early in 1851 he was threatened with arrest for various offenses. During his second exile in England he lived for a few years as a clerk, entirely removed from the schemes of the other refugees. His business again required his full time. For original works he lacked the humor, but he took up his former activity as a translator, producing among other works the admirable translation of Longfellow's "Hiawatha." In 1855 he again devoted himself entirely to literary labors, furnishing admirable articles for the *Athenæum*. In 1857 he received an appointment as general manager of a Swiss bank founded in London, which secured for him an independent living. During this time his friends pressed him to take the necessary steps to secure a return to Germany. All these advices he kindly but firmly rejected. In 1867 the bank of which he was manager failed, and his friends now brought into execution a long-discussed plan of making up a national subscription. The amount of this subscription, over 60,000 thalers, secured for him an independent living for the rest of his life, and in 1868 he returned to Germany and settled in Canstatt. The war with France, 1870-'71, again called forth his full poetical powers, and the poems written during this time are among the best he ever wrote. Besides the translation of "Hiawatha," he also furnished masterly translations of the poems of Thomas Moore, Mrs. Hemans, Robert Burns, Thomas Hood, and Victor Hugo, preserving with wonderful

ability the metres of the originals. The first complete edition of his poems in six volumes was published with his approval by Fred. Gerhard in New York, in 1850. His "Gedichte," published for the first time in Stuttgart in 1838, appeared in their twenty-ninth edition in 1878. He also published "Roland's Album" (1840); with J. Hub and Aug. Schnezler, the first and second series of the "Rheinische Odeon" (1836 and 1839); with Simrock and Matzerath, the "Rheinische Jahrbuch" (1840-'41); with Levin Schücking, "Das malerische und romantische Westfalen" (1840-'42; second edition, 1871); with Duller, "1842, Gedicht zum Besten des Kölner Doms" (1842), and "Karl Immermann, Blätter der Erinnerung an ihn" (1842); "Dichtung und Dichter, eine Anthologie" (1854); and the English anthology, "The Rose, Thistle, and Shamrock" (fifth edition, 1874). His collected works (six vols., 1870, second edition, 1871) met with a brilliant reception. In 1875 he assumed the publication of an English periodical, the *Illustrated Magazine*, which was published by Hallberger & Co. in Stuttgart. His wife Ida also gained considerable reputation as a translator of English poems, while his daughter Kate furnished admirable English translations of her father's poems.

FRIENDS. The London Yearly Meeting of Friends was held May 25th. The statistical reports showed that the number of members was 14,200, or fifty-two more than were reported the previous year. Epistles were read from the Yearly Meetings of Canada and Ireland, and from all the Yearly Meetings in the United States except that of Pennsylvania. The reports from the several quarterly meetings described activity in various departments of religious and benevolent work, as shown in the organization and operations of adult and juvenile Sunday-schools, women's temperance missions, temperance societies, Bands of Hope, indoor and open-air mission-meetings, mothers' meetings, etc. The reports from the tract societies showed that 169,946 tracts and leaflets had been circulated during the year. Some new translations into French and German had been made, and 3,600 copies of French tracts had been distributed by Friends on religious service in France. About 60,000 tracts had been ordered by Friends in Philadelphia for distribution during the Exhibition in that city. The expenditures of the Friends' Foreign Missionary Society during the year had been £6,600, an increase of £1,500 over the expenditures of the previous year. Of this sum, £4,840 had been spent in Madagascar, and £1,297 in India. Two thousand pounds sterling had been spent in translating extracts from the Scriptures and other writings, and 100,000 publications had been issued from the printing-press in Madagascar. The first anniversary of the school in Madagascar had been held six months before. It reported 1,200 children and 800 adults as scholars. An account was given of a first monthly meeting, of

Friends established in Syria. The Friends visiting the mission-stations in the Holy Land had bought a burying-place, mission-house, and school-buildings. The meeting considered the report of a large committee appointed by the previous Yearly Meeting to consider the constitution of the meeting of ministers and elders. It was decided that the name of the meeting should be "Meeting on Ministry and Oversight;" that elders should be members of it, but should come under a triennial revision; that overseers should be members of it; and that the monthly meetings be allowed to appoint, as other members, suitable Friends, not being either recorded ministers or overseers. The report directed that, "in making these appointments, it is felt to be important that they should consist of individuals of varied gifts and qualifications for service in the Church, and monthly meetings should be careful not to limit the selection to those of later life, the introduction of younger Friends being desirable, those being appointed who give evidence of love to Christ and of attachment to the principles we profess."

The discussion of the state of the society developed the view as being the prevailing one that the society, as regards spiritual life, not only contrasted favorably with its condition one hundred years ago, but had improved. All the schools except one had reported to the meeting their expenditures from their receipts.

The minutes of the meeting for business—the body which represents the society during the year while the Yearly Meeting is not in session—and the documents accompanying them, gave accounts of the work in Syria, and the visits of Friends recently sent there; of the visits of ministers to Norway and Sweden; of affairs in Australia, Denmark, Germany, Guernsey, and Jersey; of the action of Friends on the circular issued by the British cabinet in reference to the surrender of fugitive slaves; of action on the subject of vivisection; of action in regard to uncivilized races; of the issue of a pamphlet on Church and state, which had been translated into several languages, and on other subjects.

According to the latest reports, the number of members of the Society of Friends composing the various yearly meetings of the world is 78,140, as follows: New England Yearly Meeting, 4,499; New York, 3,306; Canada, 1,624; Philadelphia (estimated), 3,500; Baltimore, 650; North Carolina, 4,200; Ohio, 3,194; Indiana, 16,057; Wisconsin, 11,696; Iowa, 8,566; Kansas, 3,420; total on the American Continent, 42,712. London Yearly Meeting (comprising England), 14,199; Dublin, 2,935; Australia, 254. There are also a few Friends scattered over France, Germany, and Norway.

FÜHRICH, JOSEPH VON, a great German painter, was born at Kratzau, Bohemia, February 9, 1800; died at Vienna, March 13, 1876. He studied in Prague under Bergler, and by the support of Prince Metternich and Count Clam-Gallas, the owner of Kratzau, was enabled to pursue his studies in Rome. While his first works were devoted to historical subjects, he began in Rome, after the example of Overbeck, to choose Scriptural and ecclesiastical painting as his specialty. He returned home in 1830, and in 1834 went to Vienna, where he became, in 1841, Professor of Historical Painting at the Academy of Fine Arts. For many years his influence was decisive for the tendency of the works of the Academy, and he now found an opportunity to undertake, in union with his friends and associates Kupelwieser, Schulz, and Dobiashovsky, some monumental labors. The most celebrated among them are a cyclus of paintings representing the history of the Revelation, for the church of the Viennese suburb Lerchenfeld. After the completion of these paintings (1861), to which he was indebted for his elevation to the Austrian knighthood, he wholly devoted himself, with steadily-increasing success, to cyclical drawings for engravings and woodcuts. Among his most celebrated productions are the illustrations to the missal which the Emperor of Austria in 1868 presented to the Pope, as well as the parable of the Prodigal Son, of the Psalms (1874), and Thomas à Kempis. A biography of Führich was published in 1875, under the title "Joseph von Führich, eine Lebensskizze" (Vienna, 1875).

FULLER, RICHARD, an American clergyman, born in Beaufort, S. C., April 22, 1804; died in Baltimore, Md., October 20, 1876. He graduated at Harvard College in 1824, studied law, and, before his twenty-first year, was admitted to the bar of South Carolina. He almost immediately entered upon a large and lucrative practice, and was on the road to professional eminence when he was prostrated by sickness. On his recovery, he became a member of the Episcopal Church, afterward joined the Baptist denomination, and studied for the ministry. He was ordained in 1833, and took charge of the Beaufort Baptist Church. In 1847 he assumed the charge of the Seventh Baptist Church in Baltimore. He published "Letters concerning the Roman Chancery," being a public correspondence between him and the Roman Catholic Bishop England (Baltimore, 1840); "Correspondence with Dr. Wayland on Domestic Slavery" (1845); "An Argument on Baptism and Close Communion" (1849); volumes of "Sermons" and "Letters;" and, in connection with J. B. Jeter, "The Psalmist," a hymn-book in general use in the Baptist denomination.

G

GAUNTLETT, HENRY JOHN, Mus. Dr., an English composer of church-music, born in 1806; died March 4, 1876. He was originally intended for the church, but afterward chose the law as his profession. As organist of St. Olave's, Southwark, he was one of the first to introduce the new Bach organs. He also directed his attention to the reform of hymn-tunes. He edited the last two parts of the "Psalmist" (1836-'41), together with Mr. Kearns the "Comprehensive Tune-Book" (1846-'47), and together with Rev. W. J. Blew the "Church Hymn and Tune Book" (1844-'51), which has served as model for nearly every tune-book published since then. He also edited and composed the music in the "Congregational Psalmist" (1851) for the Rev. Dr. Allon, Carlyle's "Manual of Psalmody" (1860), and the chief parts of the "Office of Praise," "Tunes, New and Old," and Harland's "Church Psalter and Hymnal" (1868). He also published several collections of anthems, songs, and Christmas carols. In 1842 Dr. Howley, Archbishop of Canterbury, conferred on him the honorary degree of Doctor of Music, this being the first time, since the change of religion in the sixteenth century, that a primate has exercised the right of conferring the degree.

GEGENBAUR, JOSEPH ANTON VON, a German painter, born in 1800; died January 30, 1876. He studied at the Academy at Munich, under R. von Sanger, and during the time painted a St. Sebastian for the church in his native town, Wangen in Wurtemberg. He continued his studies in Rome from 1823 to 1826, and from 1829 to 1835, furnishing some excellent work, particularly in coloring. Among his paintings of this period are the "First Parents after the Loss of Paradise," and "Moses drawing Water from the Rock," both of which are at present in the Royal Gallery in Stuttgart. He was devoted to monumental painting, and particularly to fresco-painting, which had just come into fashion at Rome; but as he could obtain no orders, he decided to paint movable frescoes and encaustic paintings on stone and on linen, in which manner his "Hercules" and "Omphale" were produced. After his return he received an order from the King of Wurtemberg to decorate, together with Gutekunst, the new palace, Rosenstein, with frescoes, the subjects for which were chiefly taken from mythology. Having been appointed court painter in 1835, he decorated a number of halls in the Royal Palace in Stuttgart with frescoes from the history of Wurtemberg. Among his oil-paintings are a "Sleeping Venus and Two Satyrs," a "Leda," several small Venus pictures, and a large altar-painting, a Madonna with the Child, in the church at Wangen.

GEOGRAPHICAL PROGRESS AND DISCOVERY IN 1876. No signal discoveries have marked the past year in geographical annals; yet the efforts of scientific explorers have furnished abundant new matter for the consideration of thoughtful geographical students. The number of trained and instructed geographical explorers and the number of geographical associations for the organization and support of explorations have increased this year, as they have for many years past, in a rapid ratio. The British Arctic Expedition, which engaged the hopes and thoughts of the geographical world, returned only to report that the Northern Atlantic route is absolutely and hopelessly impassable. Africa is now full of travelers who are pressing into the interior from all sides, equipped and provisioned for long campaigns, and sometimes leading veritable armies to protect them from the unfriendly and cruel natives; while many of the most implacable of the African tribes have learned to tolerate and even assist European travelers. New Guinea is being explored from every coast, and new wonders have been revealed in that strange island. Northern and Central Asia have been visited and traversed in new regions and new directions. The survey of the Territories is progressing at a respectable pace. The publication of new works of travel and geography this year has been extraordinarily large. Several new geographical societies have been established, including four or five national societies.

NECROLOGY.—Carl Ernst von Baer, the distinguished biologist and ethnologist, died at Dorpat, November 29th, aged eighty-four. His contributions to geography embraced several important treatises on the physical conformation of the earth, on the navigability of the arctic seas, on the steppes of Southern Russia, etc., and an account of a voyage of exploration to the island of Nova Zembla.

Louis A. Lucas, who went to Africa last June with the intention of penetrating to the Congo by way of Zanzibar, was prostrated by fever, and after repeated attacks died on the way home near Jeddah, on the Red Sea, at the age of twenty-five.

Theodor von Heuglin, a member of the German expedition of 1861-'62 to Soodan, and other important expeditions, and author of valuable treatises on the geography and natural history of Eastern Africa, died in November.

Constantine Vladimirovitch Chefkin, a Russian statesman and *avant*, who occupied the position of Minister of Public Works, and contributed to the transactions of the Russian Geographical Society a fruitful treatise on the mineral resources of the country, died at Nice in November, 1875.

Timoffski, the pioneer of Russian explorers in China, and author of a work on Mongolia (1820-'21; editor, Klaproth), which has been translated into English, died this year, at the age of eighty-five.

Three other eminent Russian geographers, all distinguished members of the Caucasus branch of the Imperial Geographical Society, have passed away during the year. These were, General Alexander Petrovitch Kartseff, president from 1861-'69, and his colleague Dimitry Elaitch Kovalensky, secretary, who actively forwarded the surveys and explorations of the Caucasus; and Baron Uslar, author of "Four Months in the Khirgiz Steppe," who devoted himself to the ethnology and languages of the peoples of the Caucasus, and collected materials for a great work on these subjects, which unfortunately was never completed.

Dr. Reinhold Buchholz, the well-known arctic and African traveler, died April 17th, at Greifswald, in Germany, after a short illness. He had but recently returned from a three years' journey in Africa, and was engaged in classifying the large scientific collections he had brought back, which he designed for the Museum of the University of Greifswald, which had just invited him to accept a chair of Zoology specially created on his account.

Dr. Richard King, who accompanied Admiral Sir George Back in his arctic expedition of 1833-'35, died on the 4th of February. He was the founder of the British Ethnological Society, and a working member of the Statistical Society; he was also the author of "Franklin Expedition from First to Last," "Narrative of a Journey to the Shores of the Arctic Ocean," "History of the Esquimaux," and works on medical and other subjects, and also edited for some time the *Statistical Journal* and the *Ethnological Journal*.

SOCIETIES.—A Danish Geographical Society, with the King of Denmark as protector, and the crown-prince as acting president, held its first public meeting in the palace at Copenhagen, on the 22d of December of this year.

An international conference upon the means of exploring equatorial Africa was held in Brussels, in September, under the presidency of the King of the Belgians. The different nations were requested to form local organizations for this purpose. A German national committee was constituted in December under the presidency of the Prince of Reuss, and arrangements for a permanent association are in preparation. It is to be under the patronage of the crown-prince, and will be called the German Society for African Exploration. It is the intention to follow up vigorously, systematically, and persistently, the German explorations in Central Africa.

A geographical publication society similar to the Hackluyt has been formed in Portugal, under the style of *Comissáo Central da Geographia de Lisboa*. A geographical society has been formed also at Madrid, which will

confine its attention chiefly to the geography of the Peninsula and the Spanish maritime possessions.

The Appalachian Mountain Club, of Boston, are planning a systematic series of explorations of the mountains of the Atlantic coast. They have also started a new magazine, published in Boston, under the name *Appalachia*, which will contain contributions on botanical, zoological, and physical geography, hydrography, and geology, as well as upon the special objects of the club.

BIBLIOGRAPHY.—Abstract of the Reports of the Surveys and other Geographical Operations in India for 1873-'74. Published by the Geographical Department of the Indian Office. Editor, Clements R. Markham. (London, 1876.)

Anderson, John, M. D.: *Mandalay to Momié; a Narrative of Two Expeditions to Western China, of 1868 and 1875*, under Colonel Edward B. Sladen and Colonel Horace Brown. (London, Macmillan, 1876.)

Baedeker, K.: *Palestine and Syria. Handbook for Travelers*. (Leipzig, 1876.)

Bancroft, Hubert How: *The Native Races of the Pacific States of North America*. (New York, D. Appleton & Co., and London, Longmans, 1876.) This important work, of which the first volumes appeared last year, is now completed in five volumes. It contains about all that is known of the semi-civilized aboriginal peoples of North America, laboriously and critically collected and summarized.

Barkley, Henry C., C. E.: *Between the Danube and the Black Sea, or Two Years in Bulgaria*. (London, Murray, 1876.)

Beveridge, H.: *The District of the Bákarganj*. (London, Trübner, 1876.) This is an historical and geographical account of the district commonly spelled Backergunge, which was overwhelmed in the recent cyclone; written by a resident magistrate.

Brown, Robert: *The Races of Mankind; being a Popular Description of the Characteristics, Manners, and Customs, of the Principal Varieties of the Human Family*. (London, Cassell, Petter & Galpin, 1874.)

Burnaby, Frederick: *A Ride to Khiva; Travels and Adventures in Central Asia*. (London, Cassell, 1876.)

Compiègne, Marquis de: *L'Afrique Equatoriale: Okanda—Bangoué—Osyéba*. (Paris, Plon, 1875.) The second volume of the Marquis de Compiègne's descriptions of travels.

Creagh, James: *Over the Borders of Christendom and Islamieh*. (London, Tinsley, 1876.)

Curlez, E. A.: *Nebraska; its Advantages, Resources, and Drawbacks*.

David, Abbé Armand: *Journal de mon troisième Voyage d'Exploration dans l'Empire Chinois*. (Paris, Hachette, 1875.)

Die Mongolei und das Land der Tanguten. Oberst-Lieutenant Przewalsky's Reisen, 1870-'73.

Dunraven, Earl of: *The Great Divide. Travels in the Upper Yellowstone in the Summer of 1874*. (London, Chatto & Windus, 1876.)

Dyer, Commander Hugh, R. N.: *The West Coast of Africa, as seen from the Deck of a Man-of-War*. (London, Griffin, 1876.)

Eastern Persia: an Account of the Journeys of the Persian Boundary Commission, 1870, 1871, 1872. Vol. I. *The Geography*. By Majors St. John, Lovett, and Euan Smith, and an Introduction by Major-General F. J. Goldsmid. Vol. II. *The Zoology and Geology*. By W. T. Blandford. (London, Macmillan, 1876.)

Evans, Arthur J.: *Through Bosnia and the Herzegovina on Foot during the Insurrection*. (London, Longmans, 1876.)

Forsyth, William, Q. C.: *The Slavonic Provinces south of the Danube*. (London, Murray, 1876.)

Franz, K. E.: *Aus Halb-Asien; Culturbilder aus Galizien, der Bokowina, Süd-Russland und Rumänien.* (Leipzig, Duncker & Humblot, 1876.)

Gill, Rev. William Wyatt: *Life in the Southern Isles; or, Scenes and Incidents in the South Pacific and New Guinea.* (London, Religious Tract Society, 1876.)

Journal of Commodore Goodenough, R. N. Edited, with a Memoir, by his Widow. (London, Henry S. King & Co., 1876.)

Gordon, Lieutenant-Colonel T. E., lately attached to the Special Mission to Kashgar: *The Roof of the World; being a Narrative of a Journey over the High Plateau of Thibet to the Russian Frontier and the Oxus Sources on Pamir.* (Edinburgh, Edmonston & Douglas, 1876.)

Leared, Arthur, M. D.: *Morocco and the Moors; being an Account of Travels, with a General Description of the Country and its People.* (London, Low, 1876.)

Long, Colonel C. Chaillé: *Naked Truths of Naked People: an Account of Expeditions to the Lake Victoria Nyanza and the Makraka Niam-Niam, west of Bahr-el-Abiad (White Nile).* (London, Low, 1876.)

Grant-Duff, M. E.: *Notes of an Indian Journey.* (London, Macmillan, 1876.)

Grove, F. C.: *The Frosty Caucasus.* (London, Longmans, 1875.)

MacGahan, J. A.: *Under the Northern Lights.* (London, Low, 1876.)

Margary, Augustus Raymond, the Journey of, from Shanzhai to Bhamo and back to Manwyne. Editor, Sir Rutherford Alcock. (London, Macmillan, 1876.)

Meinicke, Prof. Dr. Carl: *Die Inseln des Stillen Oceans.*

(Michell, Thomas:) *Handbook for Travelers in Russia, Poland, and Finland; including the Crimea, Caucasus, Siberia, and Central Asia.* Third edition, revised. (London, Murray, 1876.)

Mohr, E.: *To the Victorian Falls of the Zambesi.* Translated by W. D'Anvers. (London, Low, 1876.)

Montiero, Joachim John: *Angola and the River Congo.* (London, Macmillan, 1876.)

Narratives of the Mission of George Boyle to Tibet, and of the Journey of Thomas Manning to Lhasa. Edited by Clements R. Markham. (London, Trübner, 1876.)

Orton, Prof. James: *The Andes and the Amazon.* (New York, Harpers, 1876.) This is a revised edition of the work published before under the same title, containing an account, before unpublished, of a second journey made in 1873.

Palgrave, W. G.: *Dutch Guiana.* (London, Macmillan, 1876.)

Prejevalsky, Lieutenant-Colonel N., of the Russian Staff Corps: *Mongolia, the Tangut Country, and the Solitudes of Northern Thibet: a Narrative of Three Years' Travel in Eastern High Asia.* Translated from the Russian by E. Delmar Morgan, and annotated by Colonel Yale. (London, Low, 1876.)

Recent Polar Voyages. (London, Nelson, 1876.)

Schuyler, Eugene: *Turkistan: Notes of a Journey in Russian Turkistan, Khokand, Bukhara, and Kulджа.* (London, Low, 1876.)

Sketches of Australian Life and Scenery. (London, Low, 1876.)

(Socin, Prof. Dr. Albrecht:) *Palästina und Syria: Handbuch für Reisende.* (Leipzig, Baedeker, 1876.) Published also in English.

Soleillet, Paul: *Avenir de la France en Afrique.* (Paris, 1876.)

South Australia: its History, Resources, and Productions. Edited by Wm. Hareus. (London, Low, 1876.)

Telfer, Commander J. Buchan, R. N.: *The Crimea and Transcaucasia; being the Narrative of a Journey in the Kouban, in Gouria, Armenia, Georgia, Ossety, Imeritia, Swannety, and Mingrelia, and in the Tauric Range.* (London, Henry S. King, 1876.)

The Dutch in the Arctic Seas. By Samuel Richard Van Campen. (London, Trübner, 1876.)

The Queen of the Colonies; or, Queensland as I knew it. (London, Low, 1876.)

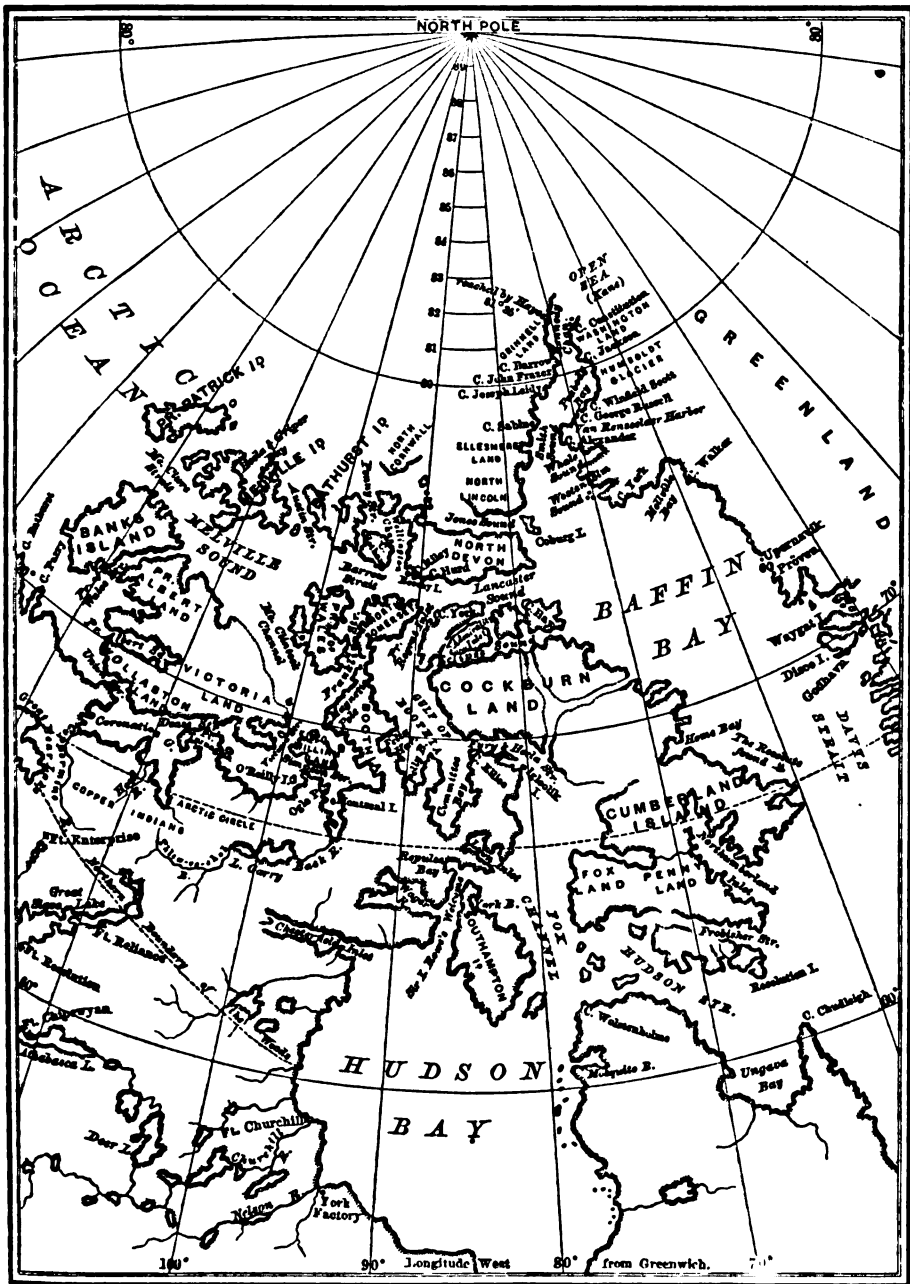

Thielmann, Baron Max von: *Journey in the Caucasus, Persia, and Turkey.* Translated by Charles Heneage. (London, Murray, 1876.)

Thomson, Gaston: *L'Herzégovine.* (Paris, 1876.)

Wood, Major Herbert: *The Shores of the Aral.* (London, Smith, Elder & Co., 1876.)

CARTOGRAPHY.—The new edition of Stieler's "Hand-Atlas," commenced in 1871, was completed with the appearance of the thirtieth part in November, 1875. This work is the product of the united labors of the best cartographers of Germany, and is published by the famous establishment at Gotha. The engraving is as fine as it could be, and an effect showing the contour of the territory, which has never before been attempted in the same degree of minuteness, is admirably produced. Each geographer has worked in his own especial field—Berghaus, for instance, contributing the charts of physical geography, Petermann delineating the results of the latest explorations, in which department he has no rival for judgment and information, Vogel reducing the largest and fullest maps, such as the great Government maps of France, Spain, and Switzerland, with marvelous accuracy and detail. The "Hand-Atlas" embodies the results of all the late surveys in all parts of the world—the American survey of the Territories and the British survey of India, for example, and also trustworthy travelers' charts and notes in South Australia, Central Africa, or any of the newly-visited regions.

HYDROGRAPHY.—The Norwegian hydrographical expedition, under Captain Wille, spent several months this year in interesting explorations south of Iceland and about the coasts of Norway, although they were much disturbed in the study of deep-sea phenomena by the incessant storms. The vessel in which the expedition sailed was the steamer Voringen, of 400 tons' burden. The expedition was equipped for a three years' cruise, and provided with all the apparatus used in the most thorough deep-sea investigations. The scientific staff consisted of Prof. Sars, Dr. Danielson, and M. Fride, for biology; M. Svendsen, for chemistry; and Prof. Mohr, for physics, sea-temperature, meteorology, and magnetism. The region of the ocean to be explored is that lying between Norway, the Shetland and Faroe Islands, Iceland, East Greenland, Jan Mayen, and Spitzbergen. A careful study of the surface-currents, obstructions, and best routes of navigation, is a part of their task. The expedition started from Bergen June 1st, and commenced sounding and dredging in the Sognefjord. The depth was 600 fathoms, with a bottom-temperature of 47.7° Fahr. The fauna was a mixture of Atlantic and arctic forms, and many interesting specimens were raised. After taking magnetical observations of the island of Husø, they sailed along the

coast of Southern Norway up to Cape Stadt. The bottom was of even depth, about 200 fathoms, but the temperature began to fall about 150 miles northwest of Cape Stadt.

After leaving Christiansund it encountered as many as five storms, so that little deep-sea work could be accomplished in this voyage. Dredging in the bank off Christiansund, called

Storeggen, an Atlantic fauna was brought up; while immediately outside, in depths of 800 to 500 fathoms, the water was icy cold, and contained arctic types of life. Sounding off the northeastern corner of the Faroe bank showed a rapid increase of depth; in latitude $68^{\circ} 22'$ north, longitude $5^{\circ} 30'$ west, it was sounded in 1,180 fathoms. The temperatures here were

32.4° Fahr. in 400 fathoms, 31.8° in 500 fathoms, and 29.8° at the bottom. Thermometrical observations, at a station west of 10° 15' west, showed a bottom-temperature of 46.2° Fahr. A visit to the Westman Islands, off the south coast of Iceland, revealed there an ancient crater, and another, more recent, 770 feet above the sea, formed of loose stones, with a base of lava. These islands are entirely volcanic. Off the south coast of Iceland there is a strong flow to the eastward, and between Cape Skagi and Reikiavik the force of the current is terrific. The stormy weather allowed the opportunity to take interesting meteorological observations, but interfered with all others. A stop was made at Reikiavik. After several days spent in magnetic base observations, they sailed, taking the course south from Iceland, and then northeast off the coasts of Norway. The difference between the warm Atlantic water at the bottom and the icy arctic waters east of Iceland was very marked. On the course to Namsen Fiord, a depth was found of 1,800 fathoms in latitude 64° 5', midway between Iceland and Norway. The temperature at the bottom was always under 32° in these waters. The nearer they approached the Norwegian coast, the warmer was the surface-water. The fauna of the deep sea here was not rich, but was very evenly distributed. The bottom was mud, filled with tiny round shells. The weather was too rough to study the captured specimens alive. Several stations were well explored on this line. From Namsos they took a course due west, and sounded for 100 nautical miles before reaching the depth of 800 fathoms. The line of the ice-cold water only commences beyond this point; it is the extent of these banks which explains the mild climate of Northern Norway. Off Romsdal the line between the cold and warm water approaches nearer the coast. Soon the depth began to increase up to 400 fathoms final depth, and 30° bottom-temperature. The fauna had been in the lesser depth mostly Atlantic, but was here entirely arctic.

ARCTIC EXPLORATION.—The English Polar Expedition, in the naval steamers *Alert* and *Discovery*, Captain Nares commanding, returned safely, sailing into Queenstown harbor on the 30th of October, after a voyage of seventeen months. Although the results of the expedition fell far short of the expectations of the more sanguine geographical students, and cannot be said to have solved in any satisfactory way the question of the open Polar Sea, yet they have furnished important information upon the natural conditions of the arctic regions. The explorers have convinced themselves and the majority of geographers that the inner arctic basin is filled with perennial ice; still, many believe that the ice blockade which filled the entrance to the Polar Sea was only an exceptional phenomenon, trusting in the more auspicious promises of the Amer-

ican expedition. The *Alert* and *Discovery* reached Cape Sabine, where they were first impeded by the ice, on the 30th of July, 1875. From this point, latitude 79° north, their progress was a ceaseless struggle. It took twenty days to ply through the ice which covered Kane Basin. In Kennedy Channel, which was only partly frozen over, a swifter advance was possible. The vessels left Bessel's Bay, on the coast of Greenland, latitude 81° north, on the 24th of August, and reached the northern shore of Lady Franklin Bay, which is on the west side of Robeson Channel, where, between Bellot Island and Grant Land, latitude 81° 44' north, the *Discovery* lay in for the winter. The *Alert* proceeded on her lonely northward course, taking Lieutenant Rawson and seven men from the *Discovery's* crew, on the 26th. Along the western coast of Robeson Channel she had to bore her way through a thick crust of ice, until a strong south wind opened a passage from one to three miles broad. She had passed around Cape Union, having therefore entered the basin of the central Polar Sea, when an impenetrable ice-pack forbade further navigation. Captain Nares then let the anchor be cast on the 3d of September, in latitude 82° 27' north. A belt of high icebergs prevented the ice from packing closer around the vessel, and made their winter-quarters secure. Upon the shore hard by they constructed a comfortable building out of chests and barrels, and sent out several sledge-parties before winter to supply depots with provisions for the benefit of the expedition-parties which were to start on their explorations in the spring. One of these expeditions, under Commander Markham, with Lieutenants Parr and May and twenty-one men, lasted from September 25th to October 15th. They ascended to latitude 82° 41' north, or 8' higher than the point reached by Parry in 1827. On the 11th of November the sun went down, to rise again only after a polar night of 142 days on the 29th of February of this year. During this time the officers and men amused themselves as best they could with theatrical and scientific entertainments; and, meanwhile, the observations were prosecuted in a systematic manner. When the spring came, the excursions commenced with a fruitless attempt by Lieutenants Egerton and Rawson to establish communication with the *Discovery*. They started out March 12th, the thermometer standing at 40° C., but had to return unsatisfied in the severest cold, not turning about soon enough, however, to save the life of their dog-driver, the veteran Nils Christian Peterson, who was prostrated by the frost, and died soon after they rejoined their comrades. On the 8d of April, in the harshest weather, three expeditions started out simultaneously to explore the northern regions. One of these, under Markham and Parr, composed of fifteen of the strongest and toughest men in the crew, took the course due north, with provisions for

seventy days. Leaving the coast at Cape Joseph Henry, latitude $82^{\circ} 40'$ north, they struck out across the ice-pack, in hopes of reaching the northern shore, which the Polaris people reported that they sighted in 1871. The way led through a labyrinth of icebergs, and across broad plains of snow; the best part of every day was spent in making a path for the sledges with axes and picks, so that with ten or twelve hours of labor they could only make one or two miles a day. This severe toil soon exhausted the strength of the men, and, to add to their difficulties, the scurvy broke out among them unexpectedly, and to their great consternation. Nevertheless, they continued to penetrate onward, while the thermometer was standing at 45° C. often, until finally, at the distance of 600 miles from the ship, in latitude $83^{\circ} 20' 26''$, there being no sign of land yet visible, Commander Markham gave the word to turn about, and they retraced their weary road terribly oppressed by the frost. The second party, under Lieutenant Aldrich, explored the northern shore of Grant Land, passing around Cape Columbia, latitude $83^{\circ} 7'$ north, and surveying 120 miles of unexplored coast-line. The third sledge-party, commanded by Lieutenant Beaumont, crossed Robeson Channel, and explored the northern shore of Greenland for seventy miles. The officers left in charge of the depots explored the surrounding regions, keeping up communication with the sledge-parties. Three men died of scurvy. On September 9th, the vessel being clear of ice, Sir G. Nares pulled up anchor and sailed southward again, rejoining the *Discovery* on the 20th. The return-passage of the vessels was much less impeded by ice than their upward course, and they soon regained the Danish settlement.

Sir George Nares is firm in the belief that it is impossible to navigate the Atlantic entrance higher than he has done, and that the pole is surrounded by a palæocrystic or ever-frozen sea, at least on this side. At a meeting of the Royal Geographical Society he gave his views substantially as follows: We may consider the polar basin as a locked-up bay continuing out of the North Atlantic channel, with two streams of water pouring into it—a warm current between Spitzbergen and Norway, and icy-cold currents from both sides of Greenland. On the side where the warm water flows in is found little ice and an early season. Near the outlets from Behring Straits, eastward to Banks Land, and thence to Ireland's Eye, is found the heaviest ice; but, as light ice has been observed along the coast of the Parry Islands, it must be inferred that protecting land exists to the northward. He does not express any decided opinion as to whether an open sea extends up to or across the pole, although he inclines to the belief that a broad opening north of Cape Columbia extends as far as the pole. In winter the polar basin seems to be filled with compact masses of ice,

the thinner portions of which are melted in the summer. In that season the separated floes are swayed backward and forward by the winds and currents, which tend mainly toward the outlets, and small portions are driven out through the channels. About the end of September the lanes and pools between the huge bulks of ice, which have been jostling

POLAR BEAR.

and crushing against each other all the summer, begin to be closed up by the young ice, which forms during the winter to the thickness of about seven feet, cementing the moving mountains together into a stationary pack. Sir George Nares calculates that only an insignificant portion of the polar ice can escape through the outlet channels, while the great masses of ice locked in may have an age of centuries. Dr. Petermann, in commenting on the expedition, thinks that Nares has established the impossibility of navigating the Smith Sound approach beyond controversy, but believes that an open sea surrounds the pole, which can be entered by the Franz Josef Land route, or, better still, by the East Greenland route. Throughout the summer the coast of East Greenland is almost free from ice, and even in winter there is a strong outward flow. The immense masses of ice which escape through the broad opening between East Greenland and Spitzbergen, and by the other channel, must leave, he thinks, an open space behind. Many others, among them Dr. Hayes, of the Polaris Expedition, are still confident that the inner Arctic Sea can be entered in favorable seasons through Smith Sound.

PALESTINE.—Lieutenant Conder thinks he has found the site of Emmaus in a place called *Khamasa*, a name which might be a corruption of the Hebrew *Hammath*: it is an ancient place, containing remains of Jewish rock-sepulchres. The natives attach a certain sanctity to the place; it is also situated at the right distance from Jerusalem; there are here the ruins of an ancient Christian church, and an old Roman road runs through the place. He locates Gomorrah at a spot near Hin Feshkah, called *'Amriyeh*, not far from *Kumran*, De Sauley's conjectured site; the name belongs both to a

table-land and a valley there; he bases his supposition on the similarity of the names. A place called *Suffa* he suggests may be the much searched-for Ramathaim Zophim, both on account of its location, which is within Mount Ephraim, and close by the Beth-Horon, which was given to the Kohathite Levites, and on account of the name, which is the form into which the ancient name would naturally change: there is at *Suffa* a sacred place called *Sh'ehab ad Din*, "the Hero of the Faith;" and in the neighboring country is a place which would answer to Sechu. Oonder bases most of his identifications on etymological resemblances, which in many cases are confirmed by records of distances or ancient descriptions in the Bible or in early writers, and in some instances by traditions still attaching to the places; such derivations are, for instance, the following: *El Farriyeh* for Affarea, mentioned by Hieronymus; *Arabúnah* for Arbol, said in the Onomasticon to be nine miles from Megiddo; *El Ghannám* for Anem, a city of Issachar, two miles south of Jenin; for Kedes, a town of Issachar, an ancient site near Megiddo, called *Tell Abu Kadis*; *Allar* for Ana, a town of Manasseh; *Ain el Jemain*, "the Fountain of Two Armies," near Gilboa, for the Well Harod, where Gideon divided his men; Abanarath, within the borders of Naphthali, is found in the modern *En-Narah*; in the plain of Beisan is a place called *Gilgal*, a ford whose name signifies "the Ford opened by God," and a place bearing the name of Rahab. The great map of Palestine will be published for the Palestine Exploration Fund, by Stanford, in twenty-six sheets, on the scale of the drawings, that is, one mile to the inch. A smaller map, scale three miles to the inch, will be engraved upon copper, while the larger size will be lithographed. The notes of Lieutenant Oonder will be digested and published in time.

Dr. Selah Merrill and party, who visited the Jordan Valley and the eastern shore of the Dead Sea, upon the instructions of the committee of the American Palestine Exploration Society in Beyrout, spent eighty days in the excursion, exposed to constant storms and severe heat, returning May 5, 1876. They examined in a thorough manner the botany and geology of the regions explored, as well as the zoology and archæological remains. They collected two hundred ornithological specimens, and discovered two new groups of sulphur springs and a beautiful natural bridge in a wady north of the Yabis. North of the Nimrin they came upon a singular row of large pits. They viewed attentively the mounds existing at the northeast corner of the Dead Sea, which it is sought to connect with portions of the thirteenth chapter of Joshua and the thirty-second chapter of Numbers.

A series of ninety-nine photographs of ancient Greco-Roman and Byzantine buildings in Syria have been issued by the American Palestine Exploration Society.

ASIA.—Another expedition to the Yenisei and Nova Zembla, under Nordenskiöld, left Tromsø in the steamer *Ymer*, on the 25th of July, and, after careful observations and marine investigations, returned to Hammerfest on the 18th of September. The Swedish expeditions of 1875 and 1876 have shown that, contrary to expectation, the Kara Sea is much fuller of animal life than the other arctic waters. The marine fauna appears to be nearly uniform along all coasts of both continents surrounding the pole. Nearly five hundred lower types have been found in the Kara Sea. The last Swedish expeditions have also increased the catalogue of Nova Zembla insects to one hundred species, only seven having been known before, and have added considerably to the knowledge of the vertebrates in those regions. On the Yenisei Nordenskiöld found some fragments of mammoth-hides, and many interesting semi-fossil shells. A large low island was found unexpectedly at the mouth of the river. Dr. Theel, who conducted a land-expedition, failed to meet the steamer in order to sail home. MM. Chekanoosky and Vengloosky, in a route survey along the river Lena from Yakutsk to Ayakit, and across the *tundra* to Olonek, made careful geological notes and collected 1,500 fossils, 700 entomological specimens, many of them from the lower *tundra*, and also a large number of botanical specimens.

A Russian expedition for the examination of the estuary of the Obi departed in May in a small sailing-vessel. The plan was to observe the natural history and make surveys of the mouth of the river, and then, after going as far as 14° north, return and meet the German exploring party and cooperate with them in the exploration of the upper river.

An expedition under Captain Wiggins has been engaged in exploring the estuary of the Lena and the route between there and Archangel, with a view of opening up trade communication with that portion of Siberia.

Drs. Finsch and Brehm, with Count Waldburg-Zeil, all three men of known merit in geographical and scientific research, have been commissioned by the German Arctic Society of Bremen to study the geography and natural history of the plains of the Obi and Yenisei in Northern Siberia. They reached Omsk, after a trying journey, in April, and proceeded to Semipalatinsk, and thence direct to Sergiopol, by way of the little-known Tabagatai range. When last heard from they had reached Tobolsk on their return-journey, having reached the sea of Kara with considerable difficulty. They had collected valuable and numerous ethnological and zoological examples.

According to M. Kuhn, who had an opportunity of studying the khanate of Khokan during the Russian campaign, the khanate occupies a deep depression, inclosed by mountains on three sides and only open toward the west. The climate is very pleasant; water is plenty, and the land exceedingly fertile; it is indeed

a continuous garden, with mountain-streams and dikes intersecting it in all directions. The stationary tribes inhabit the lower slopes of the mountains, the valleys, and plains, cut through by canals south of the Syrdaria. The population consists of the descendants of Turk tribes, which came from Turkistan, Samarcand, and Bokhara. The nomadic tribes dwell to the northward. Grain, cotton, silk, salt, naphtha, and various other products, are obtained. The trade with Russia is carried on with caravans *via* Tashkend; there is also a trade with Kashgar and Bokhara.

The Russian expedition under Sosnovski, through Mongolia into the interior of China for the exploration of better trade-routes, found between Chankow and Saissan good wheeling roads, plenty of water, and a great saving in distance over the route by way of Kiachta for the tea-trade with the province of Se-tshuan. If a railroad as far as Tjumen, connecting with steam-transport on the river Irtish, should be established, an important commercial route would be opened up between China and Russia. The expedition made interesting astronomical, topographical, and orographical observations, and collected specimens of all the principal products and commercial commodities of the country, as well as of its flora and fauna. Sosnovski crossed the Thian-shan north of Khami, where the altitude was 8,980 feet. The elevation of Khami, south of the pass, is 3,150 feet; and Barkul, north of it, is 6,700 feet above the level of the sea. Sosnovski contradicts the common impression that the Chinese are a stationary and non-progressive people, and pays a high tribute to their agricultural and industrial abilities. Their system of fertilization and irrigation is as scientific as that of any country. In some branches of industry, for example, the finer porcelain manufactures, there has been a decline in late years, attributable to the political agitations which have convulsed the land: in 1860, the Taipings destroyed the most important porcelain-factories in China, those of Tsian-se. The fine fleeces of the Thibet goat have also nearly disappeared from the market, because in the last great rebellion in the district of Nin-sia-foo the breed was almost entirely destroyed, the animals having been used for food; and the people, too, who worked up the fleeces into beautiful fabrics, perished in great numbers. The commerce of China is established, according to Sosnovski, on a very intelligent and promising basis. M. Nitkin, a Russian merchant, recently made a journey from Uscha, in Khokan, to Djetschar. He says that the Terek Pass route is only passable for a month or two in winter, when the mountain-streams are frozen over. The pundit Nain Sing made a journey through Thibet in the disguise of a Lama pilgrim. The country traversed by the bold explorer, who was formerly an assistant of Schlagintweit and of Colonel Montgomery, was entirely new to geography,

and most interesting. His route lay from Western Thibet along the series of lakes which extend for 800 miles across the plateau at an elevation of 13,700 to 15,000 feet, the last of which, Lake Pangong, was visited by some of the officers in Forsyth's expedition. The pundit reports that this latter lake is brackish at the eastern and fresh at the western extremity. The boundless grassy plains and verdant hillsides are the pastures of numberless herds of wild asses, antelopes, and the huge variety of sheep called *Ovis Ammon*. The easternmost lake of the series, the great Tengri Nor, was visited once before by the traveler. North of this he discovered several unknown lakes of great extent, which receive the drainage of the northern range of the Himalayas, which divides the plateau from the valley of Brahmapootra. He determined astronomically the position of these mountains, as well as of many other points along his course. He visited the gold-mines in the north, whose annual production does not exceed, he says, £40,000; yet judging from the great numbers of golden statues in the temples, and other objects of gold in the country, and the amount of gold-dust carried down by the rivers, it is probable that the total production of the country is much greater. On his return he tarried a couple of days at Lassa, and followed the Brahmapootra River down for some distance beyond any point before explored, leaving it with a breadth of 500 yards and depth of 20 feet, and a slow current. On his way to Assam, being detained for several months at Tawang, he surveyed the route by this way from Assam to Thibet. The fruits of this journey include a route-survey of 1,200 miles, with 276 latitude and 497 altitude data, through a region entirely new. This journey has also established the position of the northern chain of the Himalayas, and discovered a new and more easterly route to Southern Asia than any formerly known, besides revealing the existence of a great and remarkable lacustrine and river system.

AUSTRALASIA.—Signor d'Albertis has made a trip during the past season in the little steamer *Neva*, placed at his disposition by the colonial government of New South Wales, and an association of subscribers, up the Fly River, into the very centre of New Guinea. He took a plan of the river mile by mile, and made notes of the soil and natural conditions along its banks. He found four species of the bird-of-paradise, one of which (the *Paradisea apoda*) it was supposed could not exist in that climate; also a new genus of *Ptilotis*, a new species of *Gracula*, a curious new water-serpent, and several birds not reported in the fauna of New Guinea. He made also a large botanical collection, and obtained from the natives many curious fabrics and utensils, including a large number of stone implements, paddles, martial and festal ornaments, painted and carved skulls, fancifully-worked arrow-heads of bone fastened to the shafts with a singular cement, dresses

woven of human hair, and others of grass, plain and colored. Messrs. d'Albortis, Hargrave, and party, returned safely from their expedition, having ascended the river 350 miles beyond the farthest point reached last year. The natives were hostilely disposed, and generally refused to hold any communication with the explorers. Another expedition from Port Moresby to China Straits, made by Rev. Mr. Lawes, revealed the existence of a regular lake-village in a lagoon at Cape Rodney, which leads up to a considerable river. At Hood's Bay they ascended a broad river, where, near the coast, they came upon a large and cleanly-kept village, regularly laid out in streets and squares. The natives kept flower-gardens, and were seen at work hewing out large, shapely canoes with stone hatchets. At another point a canoe, paddled by a crew of twenty-one women, came alongside their vessel. Rev. Mr. McFarlane has, in pursuit of his missionary labors, made an interesting voyage to China Straits, and gained much valuable information regarding the island and its inhabitants. Signor Gessi made a second steamboat-voyage up the Fly River later in the season, and added many objects to his collections. Octavius Stone, who has recently explored portions of New Guinea, says that the length of the island is 1,400 miles, while the width varies from 450 to only 20 miles. The shore from Baxter River to beyond the Papuan Gulf, which is low and swampy for 100 miles inland, is thinly populated by the Dinde Papuans, a savage tribe, who live by the chase, and are subject to constant attacks from the neighboring islanders. The only large animals found here are the kangaroo and the wild-boar. The natives are inclined to cannibalism, and use poisoned arrows, saturated in the putrid carcass of an enemy. The eastern part of the island is inhabited by a branch of the Malay race, of totally different habits and nature from the Papuans. They are cultivators of the soil, each one having his own plantation; are strongly opposed to polygamy and cannibalism, and allow their women to share in public affairs. Signor Odoardo Beccari has been exploring the coast in the vicinity of Humboldt Bay. He thinks he can trace the continuation of the volcanic belt of the Moluccas through New Guinea. At the head of a beautiful inlet, one day's sail from Humboldt Bay, he visited a fine conical mountain, which he called Mount Cyclops, the rocks of whose base were, to all appearance, of volcanic origin. At Batanta and upon Amsterdam Island volcanic rocks have also been noticed, and the natives report that there are active volcanoes inward from Humboldt Bay. Dr. Beccari has spent four years traveling in and about this island. He defines the empire that the Sultan of Tidore (Moluccas) possesses in New Zealand, which embraces the lands of the four kings of Waighen, Salvatti, Waigamma, and Misol. These rulers pay to the Sultan an annual tribute in slaves,

birds-of-paradise, and other articles. The Dutch Government is about to suppress the slave-traffic, and divest the Sultan of his sovereignty in the island. The Russian Mielucho Maclay visited the coast of Astrolabe Bay in Northeast New Guinea, which bears his name, for the purpose of protecting the natives from the encroachments of Europeans, as well as prosecuting his scientific investigations. The Dutch naval ship Surabaya has made two voyages, one along the northwestern coast and one along the southern coast, for the purpose of defining the limits of the Dutch claim on the island, which extends to the meridian 141 east longitude. A French expedition, conducted by MM. Raffray and Maindrow, visited the western shores this season. Mr. Lawes describes two separate races, speaking distinct languages, dwelling in the country about Port Moresby. These are the Koitapu and Motu tribes; while farther inland another language, allied, however, to the Koitapu tongue, is spoken by the Koiali tribe. At Hood's Point still another distinct language is spoken. Several other different languages are spoken by the mountain-tribes all along. A cluster of villages, called Manukolo, is said to be inhabited by a race differing totally from all the rest. Three other languages are spoken by tribes in Redecar Bay, the Naali, Kapati, and Maivi; and beyond them, before coming to Aird River, at least three more languages are used; and then in the interior are the Yalao, Ikolu, Palavai, Ereta, and Papaka tribes, each speaking its own peculiar tongue. All these races are the light-colored, flowing-haired type. No knowledge of any metal, and no arts, except the rudest and most elementary, exist here. Only the Motu tribe make pottery. The women carry all burdens in netted bags, suspended from the top of the head. Houses are built, both on the coast and in the interior, at an elevation of six to ten feet, and sometimes in the clefts of high trees. The people smoke tobacco generally. Excursions into the interior took the explorers through an open forest of gum-trees, pandanus, and palms, for fifteen or twenty miles, and beyond that thick scrub as far as the mountains. Many beautiful birds were seen in the forests.

Ernest Giles made another trip across the Australian Continent this season, starting April 10th, from a point 27° 7' south latitude, 116° 45' east longitude, and taking a northeast by east course, by way of Mount Gould, to latitude 24° north; then traveling the Ashburton to its source, and determining the old watershed, which he describes as a rangy country, striking the desert in longitude 120° 20'. He then crossed an open spinifex desert to the coast, suffering much from drought, and hindered by his camels being continually sick from a poison plant, until he discovered the plant, which is not allied to any of the poisonous plants of Western Australia.

AFRICA.—Of the German West African Ex-

pedition, Dr. Pogge and Herr Eduard Mohr are engaged in exploring the Angola coast, while Dr. Lenz has been obliged to abandon his expedition up the Ogowe, and return to Europe, exhausted by fatigue and sickness; not, however, without having concluded an arrangement with the inhabitants of the Osh-eba lands, who have hitherto denied passage through their country. Dr. Pogge visited Quizemena, the great camp of the Muata Yamvo, remaining from December 9, 1875, to April 17th of this year. He was not allowed to make an excursion to the north, but he took a month's journey toward the southeast as far as Inshibaraka, which is only six days' distance from the capital, and three days' from the Lubilash. Constant rains rendered traveling difficult. Dr. Pogge obtained a great deal of information concerning the country between the Kassai and the Quango, and collected numerous specimens of botany and natural history, and some skulls of Cassanda men.

G. A. Hagenmacher's journey into the Somali country, in Eastern Africa, was the first one made into this region, except Burton's excursion in Harar in 1854. He departed with a convoy of natives and fifteen camels, and reached a point 150 miles inland, and, though attacked and plundered by the jealous and pugnacious native tribes, he gathered a curious store of information concerning the geography, ethnography, manners, and pursuits of the country and the peoples visited.

Drs. Schweinfurth and Güssfeldt made a trip from the Nile to the Red Sea, visiting the Coptic monasteries of St. Anthony and St. Paul. Some twenty geodetical positions were determined, and many unlooked-for plants were found in the desert.

Dr. Ascherson, in a visit to Wah-el-Barieh, or Little Oasis, made a complete sketch-survey of the route, and was able, from his friendly reception by the inhabitants, to observe their daily habits. He reports a custom, not practised in other parts of the valley of the Nile, of striking fire by rubbing together pieces of the date-palm leaf.

Mr. E. Young has navigated Lake Nyassa in a steam-launch, starting from the mission-station of Livingstonia, coasting along the eastern side, which was only seen from a long distance by Livingstone. He made the singular discovery that the lake extends at least 100 miles more to the northward than Livingstone supposed, and surveyed it to latitude $9^{\circ} 20'$ south, that is, within a short distance of the southern extremity of Lake Tanganyika, which is 2° or $3'$ to the westward. He speaks of a river called Rovuma, flowing from the northern end of the lake, but the existence of such a second outlet would demand strong confirmation.

One of the most important exploratory exploits of the year has been the circumnavigation of Lake Albert N'yanza by Signor Gessi, of Colonel Gordon's staff. The lake is found to have the length of about 140 miles, and the

width of 50 miles. Its shores are covered with a thick growth of trees. Its southern extremity is very shallow, containing a forest of the ambatch-plant, which only flourishes in a couple of feet of water. The results confirm Speke's account of the size of the lake. Storms of considerable turbulence stir the waters of the lake in certain seasons. Colonel Gordon suspects that a chain of lakes connects it with Tanganyika; this is not impossible, as a break in the mountains is seen in the direction of the latter lake. From Signor Gessi's sketch-map of the branch of the Nile flowing out of the Albert Lake, it appears that a branch stream forks out not far from the outlet, and flows toward the Jaie, which runs parallel to the Nile for several hundred miles, rejoining it at the point where the Giraffe River commences. Colonel Gordon expects that this arm will prove more navigable than the White Nile; however, it must descend from the same elevation, and probably contains rapids not less formidable than the Fola Cataract, and, besides, it was crossed by Petherick in 1862, and found to be not more than waist-deep.

Signor Gessi made the voyage in two iron life-boats, rigged as cutters, and manned with eighteen sailors and twelve soldiers. He left Dufi March 7th, arriving at the outlet of the lake on the 18th. The distance is 164 miles, and for the whole distance the river is broad, deep, and entirely navigable. The country is rich, producing millet, sesame, honey, tobacco, beans, bananas, and cattle, in abundance. The natives clothe themselves in antelope and goat skins. Starting out on the lake toward Magungo on the 20th of March, they were beaten back by a heavy wind after sailing about two-thirds of the way across, and escaped with great difficulty being driven ashore where a party of natives of the disbanded army of Kaba Rega were waiting to attack them. In the night the storm was so high that one of the boats dragged its anchor, and was driven on shore, and filled with water and sand; the greater part of their provisions and the instruments were thus destroyed. Landing and constructing a barricade, and setting up two howitzers, they waited for the storm to go down. Repairing the boat, they succeeded in reaching Magungo on the 30th of March, but, owing to the hostility of the natives, were not able to land, proceeding up the Victoria Nile and waiting until reinforcements came from Aulina. On the 12th of April they set out, passing some sandy isles six or seven miles from shore, which were full of natives, who took refuge there from the troops. The shores were low and sandy; the interior was covered with timber and luxuriant vegetation. They passed three cataracts at the mouth of a large river called the Tisa, which never runs dry; it is probably the Kaiigiri, described by Baker. They stopped in a snug harbor named by Gessi Port Schubra, which probably is the Vacovia of Sir Samuel Baker. Detained here by a storm for a day or two,

they sailed fifty miles to a river, which they ascended seven miles, where they were stopped by the matted growth of papyri and other water-plants, and saw beyond a magnificent waterfall; the natives informed them that this came from the waters which accumulate in the mountains, forming a river during the wet season, but drying up in the dry season. They informed Signor Gessi, also, that he had already reached the end of the lake, that there was no river or cataract beyond, and that the water where the ambatoch grew was only knee-deep. The country here is called Quando, and the natives are suspected of cannibalism. They crossed the lake here along the edge of the ambatoch-field, a distance of forty miles from east to west. A view from the mast-head disclosed a wide expanse grown over with ambatoch, beyond which a valley covered with low vegetation reaches to the foot of the mountains. On the other side of the lake they were unable to communicate with the inhabitants of a village, who fled, arousing the whole country, and sought the next day to lead them treacherously into an ambush. Coming to another large village, Gessi succeeded, with some difficulty, in holding a conversation with an old man, who informed him, as the natives on the opposite shore already had, that he could not penetrate the forest of ambatoch, and that there was no river or waterfall beyond; that there were three waterfalls farther up the lake, which dry up in the dry season, and that the waters of the lake never rise or fall. The mountains descend directly to the lake beyond Vacovia on both sides, and are here devoid of large timber. On the return-voyage they were beaten forty miles out of their course by a violent storm. The whole voyage occupied nine days. The greatest width of the lake is reported by Signor Gessi as 60 miles, and its length 141 miles.

Dr. Emil Holub, a German physician, has made interesting journeys into the interior of South Africa. He started in March, 1875, from Dutoitspan, and, after examining the geological character of the salt-basins between Ohristiana and Mamusa, he passed up the river Limpopo, and then across by way of Shosheng, northward to the Zambesi, intending to explore that stream to its source. He describes the valley of the Marico, one of the sources of the Limpopo, as the richest portion of the Transvaal Republic, containing lands of the greatest fertility, an extraordinary abundance of animals, and mineral resources of the highest value. He observed that the salt-pans or lagoons which are connected with the Suga outlet of Lake Ngami, when at certain seasons they are filled by the rising of the Suga, find an outlet by the Shasha tributary of the Limpopo, thus showing that Lake Ngami and its tributaries far to the west belong to the drainage system of the Limpopo.

M. V. Largeteau made an important and dangerous expedition into the desert of Sahara from Biskra, in Algiers, over a before untrav-

eled route, through the oasis of Tuggurt, to Ghadames, and back to El-Wad, his return-route being about the same as that taken by Duveyrier in 1860.

An important Italian exploring expedition to Eastern Equatorial Africa, sent for the purpose of exploring the country between Shoa and Lake N'yanza, and of deciding the question of the identity of the Godjeb and Juba Rivers, started at the beginning of the year, and have now entered upon their investigations under favorable auspices. The King of Shoa, in an embassy to Italy, in 1872, invited Italian explorers to use his capital as a base of operations, and it was in consequence of this proposal that this expedition was dispatched. The party is headed by the Marchese Antonari, the well-known African traveler, accompanied by Captain Sebastiano Martini and the engineer Chiarini. When last heard from, the travelers had reached Shoa with good fortune, where they were hospitably received.

An important journey into the Nyassa country of Eastern Africa has been accomplished by Bishop Steere. The object of the expedition was to establish a permanent mission at Mataka's capital in the Wahiao country, east of Lake Nyassa. The party, consisting of the bishop, the Rev. O. A. James, and Messrs. Bellville and Beardall, accompanied by Chuma and Susi, Livingstone's attendants, leading twenty Zanzibar porters, set out from Zanzibar toward the end of August, 1875, and landed at Lindy Bay, between Kilwa and the mouth of the Rovuma River. They were delayed until November by the opposition of the coast tribes, and suffered from malaria; at length, successfully passing through the coast settlements, which only extended some twelve miles inland from Lindy Bay, they passed through thick forests and discovered Lake Lutamba, a small lakelet, inclosed by wooded hills, and passed thence for nine days through the settlements of the Wa-Mwera, villages finely situated along the foot of a range of hills; and then, traversing an uninhabited forest and a barren, hilly region, they came to the town of the chief Makochero of the Makao tribe on the Rovuma River. Livingstone visited this chief in 1866, when he was settled at a point beyond the river. These people are subject to attacks from the Gwangwaras and Mavitia. They passed thence beyond the Luatize to their destination, Mataka's village of Mwembe, through a country of more irregular aspect, rising into long ranges of round-topped hills, varied with sharp, rocky ridges; the trees, too, were of different character from those of the Mwera country. Mwembe, estimated by Livingstone at 1,000 houses, lies near a conspicuous mountain called Saninga; the elevation of the town, from Bishop Steere's barometrical readings, is considerably higher than Livingstone's estimate, 2,700 feet. After remaining here a fortnight, Bishop Steere returned by a different route. The country traversed was in great

part entirely new. The barometer indicated a rise from the coast to the ridge of the Mwera Hills, which was about 2,000 feet above the level of the sea, then a decline to the bottom of the low-lying Rovuma Valley, and then another still higher ascent as far as Mataka's town.

Stanley, in June, 1875, had returned to his camp at Kagenyi, and, after having paid a visit to Ukerewe Island, returned to the north, striking out for the Albert N'yanza from Mtesa's town. He traversed the cold, high country of Gambaragura, which he found inhabited by a light-skinned race, and the district of Unyoro coming out to the lake at Unyampaka, a point considerably farther to the south probably than Baker reached. He explored the Kagere and Karagne Rivers upon his return, and then set out again for the south. He had completed the examination of the Victoria Lake, and intended next to explore the country between the lakes Tanganyika and Albert N'yanza. In the highlands between lakes Victoria and Albert N'yanza he came upon a gigantic extinct volcano, many of which have been found in Eastern Africa. The Albert N'yanza extends probably beyond the equator, and is connected with the Tanganyika by a valley between two mountain-chains. Stanley observed that all the mountain-ranges in this region run in a southwest direction. He ascended the Kagere eighty miles beyond Speke's farthest, and describes it as the most important of the tributaries of the Victoria N'yanza. He visited it in the rainy season, when it had the form of a shallow lagoon, four to fourteen miles in breadth.

Captain J. S. Hay read before the British Association an account of the district of Akem in Western Africa, which he had visited while at Accra. This district lies between parallels 6° and 7° north latitude. It consists almost entirely of mountain-ranges thickly covered with ancient forests; four principal rivers water the country, the Berem, the Densu, the Bompong, and the Pompong, all of them rendered unnavigable by numerous shoals and waterfalls. Gold is found in great abundance, small nuggets and dust being taken from circular holes dug at hap-hazard by the natives, and also from the beds of the streams. The forests contain valuable woods. The soil is a tenacious red clay, through which numerous quartz strata crop up; it is so fertile that cotton, rice, ginger, and tobacco, can be grown abundantly. The climate is moist throughout the year. A strange physical deformity is universal among the men of this country: the cheek-bones are unnaturally enlarged, looking like two horns under the eyes. This malformation commences in childhood. They worship a great variety of deities, and have one superior god, whom they call *Anyankpõng*.

Count Pietro Saverngnan di Brazza, accompanied by Maroche, the naturalist, and Bellay, a physician, a French navy quartermaster, and

a party of Senegal natives, entered upon an exploration in Western Africa, steaming up the Ogowe as far as the village of Ilimba Reni in December, 1875, and starting out from there for the Okanda.

SOUTH AMERICA.—A boundary commission have been engaged in measuring the boundary between Bolivia and Brazil, which has been heretofore very vaguely determined. They commenced their task in the autumn of 1874, but were not able to accomplish anything before the summer of the following year, owing to the incessant rains. Since that time they have gone over a good part of the ground, and expect to have their work finished by the end of 1877. The work of surveying the frontier along the chain of lakes bordering the Upper Paraguay was interrupted twice by the periodical floods, which are so high that the country between Bolivia and Curumbá, Villa Maria, or Cuyabá, in Matto Grosso, can only be crossed in boats, while in the dry season it is passable on horseback or in wagons. The lakes, especially Mendioré, twelve leagues in circumference, are described as navigable and very beautiful, except Caceres, which is only a swamp teeming with reptiles and mosquitos. The lake of Gayhiba, which was so stormy that they had difficulty in surveying it, communicates with Lake Uberaba by a natural canal five leagues in length. Uberaba Lake, the largest of all, is so wide that the opposite shores are not visible from each other. Alfred Simson read before the British Association an account of a voyage in a Brazilian government steamer up the Putumayo or Içá River, a branch of the Amazon, which has never been adequately explored, and which the Brazilian Government suspected to be navigable to within a short distance of populated portions of New Granada, and destined to become the commercial outlet for the provinces of Popayan and Pasto. Mr. Simson found the river navigable for 1,050 miles; its length is 1,200 miles. Its average current is not more than three miles an hour. Its course lies through a rich alluvial plain.

UNITED STATES.—The geological and geographical survey of the Territories commenced the labors of this year very late, not doing any field-work before the month of August. They were deterred by the warlike manifestations of the northern tribes of Indians from commencing on a new division, and therefore confined their attention to the completion of the map of Colorado. They ended the survey of the mountainous portion of Colorado, and explored a strip fifteen miles broad in Northern New Mexico, and a strip twenty-five miles in width in Eastern Utah. The point of departure this season was Cheyenne, in Wyoming Territory. Two of the parties were conveyed to Rawlins Springs, whence they proceeded southward; the other two were taken southward from Cheyenne, one to Trinidad and one to Cañon City. The primary

triangulation party, under the direction of A. D. Wilson, started from Trinidad on the 18th of August, and made its first station on Fisher's Peak. Thence they passed through the valley of the Purgatoire, and across the Sangre de Cristo range over the Costilla pass, and skirted the range northward as far as Fort Garland, making another station on Culebra Peak. About six miles north of Fort Garland they explored one of the highest and most difficult summits of the Rocky Mountains, Blanca Peak, the highest point in the Sierra Blanca group. They reached the timber-line, 12,000 feet above the ocean, without difficulty, and, leaving their animals here, picked their way up the crumbling, rocky slope to a projecting point only 600 feet lower than the chief summit, and two miles distant. From this they made their way along an arduous and dangerous zigzag ridge to the base of the summit, which they soon mounted. This point is the highest in Colorado as far as is yet known, and the view from it embraces the greater portion of Colorado and New Mexico. Its elevation was determined by barometric readings, the mean of eight being taken, compared with synchronous readings made at Fort Garland: a verification by trigonometry from the angles of elevation and depression, fore and back, showed a discrepancy of only two feet. The elevation is 14,464 feet (Mount Harvard is 14,384 feet above the sea-level; Gray's Peak, 14,341 feet; Mount Lincoln, 14,296 feet; Mount Wilson, 14,280 feet; Long's Peak, 14,271 feet; Uncompahgre Peak, 14,236 feet; Pike's Peak, 14,146 feet; there are as many as fifty peaks in Colorado exceeding 14,000 feet in elevation). From here the party advanced westward across the San Luis Valley, and followed up the Rio Grande to its source, making a station near the mountain-summits and another on the Rio Grande Pyramid. Leaving the source of the Rio Grande, they crossed the Great Divide, and, passing through the Animas Park by trail, reached Parrott City. They made a primary station on La Plata Peak, and, crossing the irregular table-lands west of the Dolores, completed a survey which they had not finished the season before on account of the hostilities of the Ute Indians. They made a station on the highest of the Abajo Mountains, and then turned their course eastward, making a station on Lone Cone, and, crossing the Grand and Gunnison Rivers, reached the volcanic table-land at the source of White River. The Wilson party mapped out 1,000 square miles of territory during the season, and established eleven primary positions, covering by primary triangles all of Southern and Western Colorado. Accompanying the triangulation party, Mr. Holmes made a geological journey which took in Colorado and portions of Utah and New Mexico, obtaining a general survey of the great plain-belts on both sides of the chain of the Rocky Mountains; he observed a remarkable uniformity in the disposition of the strata everywhere,

there being scarcely an interruption in the cretaceous formation, particularly, from the northern part of New Mexico to Southwest Wyoming. In one group of rocks, however, there is a remarkable disparity between the outcrops on the eastern and western sides of the divide: the upper cretaceous rocks, including numbers four and five, on the west side, comprise over 2,000 feet of coal-bearing strata, chiefly sandstone, forming the tops of the Mesa Verde and Dolores plateaus, and in the Grand River Valley, where it forms the enormous Hogback, attaining a thickness of 3,500 feet; but on the eastern side this group of rocks is only represented by a few hundred feet of shale and laminated sandstone. The Abajo group Mr. Holmes found to consist of trachyte, which had been forced up through fissures in the stratified rocks, like the four other isolated groups in the same region. He places the northern limit of the cliff-habitations of Colorado and Eastern Utah at not above $37^{\circ} 45'$ north latitude. The Grand River division was directed by Henry Gannett, as topographer, accompanied by A. C. Peale, geologist, and by James Stevenson, the general manager of the survey, who went along to deal with the Indians, fearing that they might again disturb the survey as they did last year. Their first task for this season was to survey about 1,000 square miles, lying mostly north of the Grand River and south of the parallel $39^{\circ} 30'$ north, and between the meridians 108° and $109^{\circ} 30'$ west. They reached the field from Cañon City about the middle of August, and, going to the district south of the Sierra la Sal, after securing the services of several Indians at the Ute agency of Uncompahgre, they completed the survey of this country, which is an irregular plateau with some curious features, in eleven days. The Grand River, between the *débouchures* of the Gunnison and Dolores, flows through a valley of twelve miles average breadth, which was skirted on one side by the perpendicular cliffs, called the Roan or Book cliffs, rising in a succession of terraces to a height of 4,000 feet, and forming the termination of a broad plateau; the course of the river here is northwest for twenty-five miles, then southwest, and then south for about seventy-five miles. This plateau, which declines very gradually on the other side to the north-northeast, extends from the Wahsatch Mountains on the west to the lower elevations of the Park range on the east, and is cut through by the Green River, which flows in the contrary direction to the dip. South of the plateau are broken cliffs, and to the north of it is the White Cañon. After leaving the Uncompahgre agency the party went over to the Grand River, following it down to the Dolores, latitude $38^{\circ} 50'$ north, longitude $109^{\circ} 17'$ west. From there they passed northward to the top of the Book Plateau, following the crest eastward for 100 miles, and then descended to the Grand and followed its course up to longitude

107° 35', and thence came by way of the White River agency to Rawlins, arriving there October 23d. They finished in all about 3,500 square miles of topography, and determined about sixty primary positions. Dr. Peale followed the expedition as geologist. The region first surveyed consisted of a plateau intersected by deep gorges, which disclosed sedimentary rocks ranging from the Dakota sandstones to the commencement of the Red Beds. The San Miguel in its lower course flows through lower cretaceous, Jurassic, and triassic outcrops. North of the Grand the exposed strata range from the white tertiary rocks which top the Book Cliffs to the Red Beds at the bottom of the river. The White River division was directed by G. B. Chittenden, with F. M. Endlich for geologist. They surveyed between White River on the north and latitude 39° 38' north on the south, and from the meridian 107° 30' to a point thirty miles west of the Utah boundary, an area of some 3,800 miles, establishing forty-one geodetical stations and sixteen auxiliary positions. It was a before unexplored region, rising gradually from White River up to the steep Book Cliffs which form the divide between the White and Grand Rivers. The deep cañons which intersect the plateau are full of cedars and piñons, and the upper plains are covered with rich grass. The country is inhabitable, but poorly watered and destitute of timber, and seems well adapted to its present purpose of an Indian reservation. The geology is simple: two-thirds of the country contains beds of tertiary rocks, and other parts showed older formations, as far down as the triassic; marks of erosion were frequently visible. The Yampah division, under G. R. Bechler, accompanied by Dr. C. A. White, geologist, surveyed the portion of Northeastern Colorado lying between the Yampah and White Rivers and the Green River, and the lower range west of the Park Mountains. There are table-lands between Rawlins Springs and Snake River, and beyond to the Yampah a more undulating surface covered with sage-bush. Between the Yampah and White Rivers is a mountainous district, rising to elevations of 8,000 and 9,000 feet. The Yampah and White Rivers both flow through plateau countries: the bottom-lands sometimes widen into broad, grassy valleys, and sometimes contract into steep cañons. The territory surveyed was about 3,000 square miles, and the number of stations made was forty. The geological formations extended all the way from the latest tertiary to the Uintah quartzite which underlies the carboniferous. Interesting orographical facts were developed in the geological survey. The fossils found at the base of the tertiary series in the Yampah Valley were found to be identical with those of the valley of Bitter Creek in Wyoming Territory. The latter locality was revisited, and at Black Buttes Station three new species of *Unio* were discovered, making six species

taken from a single stratum, all closely related to living species now existing in American fresh waters. Six sheets of the physical atlas are nearly ready for issue at Washington, covering 70,000 square miles. Each sheet contains an area of 11,500 square miles, on a scale of four miles to the inch, with contours of 200 feet, containing representations of the geological characteristics and agricultural and metallurgical resources of the country. An illustrated account of the geological survey by Dr. F. V. Hayden, with fifteen chromo-lithographs from the drawings of Mr. Moran, is in preparation by Prang & Co., and will be issued in three languages simultaneously.

GEORGIA. The condition of affairs in the State of Georgia during the year has been peaceful and encouraging. Governor Smith, in his parting address to the Legislature of 1877, says:

The public credit, as indicated by the daily quotations at the centres of trade and commerce, is equal to that of any State in the Union. Our public securities, rated at the time I entered the Executive office at thirty per cent. discount, are now above par. I found a recognized floating debt of more than one and a quarter million dollars. The whole of this, amounting in exact figures to \$1,277,788.25, or to an average sum of over \$250,000 per annum, has been entirely paid. The State has been relieved of a fraudulently contracted debt of \$8,500,000, while there has been no addition to the amount of the bonded debt of the State contracted on her own account. Any apparent increase of our public debt is the result of liabilities created by railroad charters granted under former administrations. These results have been accomplished without a material addition to the public burdens.

Throughout the State the stream of justice has moved with a smooth and steady flow. The law has been impartially administered, and not a breath of suspicion has soiled the ermine. Life, liberty, and property, have been faithfully guarded, and not a single human being, of any color or condition, can justly complain of oppression. The great and manifest improvement of our condition—social, educational, and industrial—is due to the home-bred common-sense, the desire for progress, and the love of justice, which characterize the people of Georgia.

The public debt of the State on the 1st of January, 1877, was \$8,447,500, not including the bonds of the Macon & Brunswick Railroad and of the North & South Railroad, which are indorsed by the State. Under an act of February 24, 1876, 542 bonds of \$1,000 each, bearing interest at seven per cent., were executed for the purpose of funding the accrued interest on the bonds of the Macon & Brunswick and North & South Railroads. At the beginning of the year there was a cash balance in the State Treasury of \$511,785.21, and the receipts of the year amounted to \$2,382,938.38. The disbursements of the year were \$2,280,435.26, leaving a balance at the close of \$564,283.33.

There has been very gratifying progress during the last three years in the educational interests of the State. At the close of 1871 there was due on account of public schools in the several counties upward of \$300,000, and the

school-fund of the State had been diverted to other purposes. As a consequence, there were no schools supported in 1872, but in 1873 the new system was put into operation. The following statistics of attendance show the advancement made since 1871 :

School attendance in 1871, whites.....	42,914
" " " colored.....	6,664
Total.....	49,578
Attendance in 1873, whites.....	68,923
" " " colored.....	19,735
Total.....	88,657
Attendance in 1874, whites.....	98,167
" " " colored.....	42,874
Total.....	141,041
Attendance in 1875, whites.....	105,990
" " " colored.....	50,859
Total.....	156,849
Attendance in 1876, whites.....	121,419
" " " colored.....	57,987
Total.....	179,405
Increase of attendance over that of 1875.....	23,011

The following statement shows the amount of money raised for the support of schools :

Amount raised under act of 1873 for payment of school-debts of 1871.....	\$174,000
Amount apportioned for support of schools in 1873.....	250,000
Amount apportioned for support of schools in 1874.....	263,000
Amount apportioned and paid for support of schools in 1875.....	291,819
Amount apportioned and paid for support of schools in 1876.....	291,819
Total.....	\$1,371,638

Besides this, there is evidence of increasing zeal in the local authorities for the support of popular education. The State University, at Atlanta, and the North Georgia Agricultural College, at Dahlonega, are in a flourishing condition. There is an Academy for the Blind at Macon, which had 57 pupils during the year. The Lunatic Asylum, at Milledgeville, contained 605 patients at the close of the year, and the cost of maintenance for the year was \$88,816.65. Appliances for furnishing the institution with pure water have been put in, at an expense of \$20,000. A fire in the asylum, on the 15th of December, destroyed the workshops, and caused a loss of \$9,000. Additional buildings, equal to the accommodation of 125 patients, are in contemplation.

The number of convicts in the penitentiary at Milledgeville, at the close of the year, was 1,108, of whom 114 were white and 994 colored. The convicts were distributed among seven lessees, and were kept employed in mining and agriculture and on public works. Under the provisions of the act of February 25th, a contract has been entered into with three companies, designated as Penitentiary Companies No. 1, No. 2, and No. 3, to take effect on the expiration of existing leases. These contracts are for twenty years from April 1, 1879, and the three companies agree to take all the State convicts during that period, and pay to the State \$500,000 in twenty annual installments of \$25,000. Company No. 1 contracts to take

800 able-bodied convicts to be employed in the coal-mines of Dade County, and a permanent prison has been established there for their accommodation. Each of the other companies agrees to take one-half of the remaining convicts, and a prison for No. 2 has been established about five miles west of the city of Albany, and one for No. 3 near Skull Shoals in Greene County. Each company gives a bond, with sureties, for the control and safe-keeping of the convicts, and guarantees humane treatment.

The earnings of the Macon & Brunswick Railroad, which belongs to the State, were, for the year ending November 30th, \$317,829.18, while the expenses were \$307,054.78. There was also due, from connecting roads, \$47,701.82. The State Board of Directors had advertised at the close of the year for sealed proposals for the purchase or lease of the road. The North & South Railroad was in the hands of a receiver, and operated on behalf of the State. The expenses exceeded the earnings by a few hundred dollars. The Memphis Branch Railroad was seized on behalf of the State in May, on account of its failure to pay interest on bonds indorsed by the State. It was placed in the hands of Robert T. Fouché, as agent of the State.

The work of making a geological survey of the State is progressing favorably. It is reported as one of its results that foreign capital has been attracted to the State and employed to advantage in the abandoned mines of the "gold-region." Immense beds of marl and valuable deposits of fertilizers have been discovered. A geological map is in preparation, showing the various formations, and the distribution of minerals and soils. It is believed that the information furnished by the survey will have an important effect in attracting capital and settlers to the State.

The regular annual session of the Legislature began on the 12th of January, and came to a close on the 24th of February. There was very little legislation of importance. The subject which occupied by far the largest share of attention was that of holding a convention to revise and amend the constitution of the State. Several bills were introduced and referred to a special committee, and an act was reported and discussed providing for an election in April, at which the people should vote at once on the question of having a convention, and for the delegates. By amendment the time was postponed to 1877, and, finally, the measure was defeated altogether. During the debate on the question of having a convention, some remarks were made which called forth sharp criticisms in the North. In response to these, the following resolutions were adopted :

Whereas, It has been charged, on the floor of the United States Senate, and by a portion of the public press of the Northern States, that it is the design of the Legislature of Georgia to abrogate or abridge

the privileges or rights now enjoyed equally by all citizens of the State under the Constitution of the United States: therefore—

Be it resolved, as the sense of this General Assembly, That the equal political rights of all citizens of this State, regardless of previous condition, are permanently fixed and secured by the Constitution of the United States, which is recognized by this body as the supreme law of this land, and that no abridgment or interference with these rights is proposed, or contemplated, or desired, in any action of the General Assembly, or by the people whom we represent; and that any and all legislation in contravention thereof, either by the Legislature or by a convention of the people, would be null and void.

Resolved further, That the political relations of all classes in this State have been harmoniously adjusted upon the basis of the present provisions of the Constitution of the United States; that peace and good-feeling between the races prevail throughout the State; and that it is neither the desire nor to the interest of the people of this State to reopen these questions which have been thus permanently settled beyond the power of agitation to disturb.

The Supreme Court having decided that, under the homestead act of the State, the exemption from sale of \$2,000 of realty, for the benefit of a family, could be waived by express agreement of the head of the family, a new act was passed providing for the recovery of property sold, which had been set apart under the homestead and exemption laws. This authorized courts of equity to confirm the sale on proof that the proceeds were invested anew for the benefit of the family, or in so far as they were so invested; but enacted—

That, in cases where any portion of the proceeds of property sold as aforesaid has neither been invested in other property, nor applied to the benefit of said family, the court shall ascertain the amount thereof and the interest of said family therein, and shall frame a decree to protect the rights and interests of said family in the property so sold, and, at the same time, to protect the rights and interests of the purchasers in the reversion of such property after the particular estate aforesaid shall have been determined, and shall require parties complainant to do complete equity in the premises before obtaining equity.

Section 7. Be it further enacted, That in cases where a portion or all of the purchase-money of property so sold has not been paid, the court may confirm the sale and order the reinvestment of the proceeds, or may cancel and set aside the sale, and compel the restoration of any part of the purchase-money which may have been paid, and may grant relief to the parties according to the principles of equity.

The investigation into the alleged indebtedness of the State to Henry Clews & Co., of New York, in the sum of \$170,048.05, on account of services and transactions during the administration of Governor Bullock, led to a report, submitted to the Legislature, that a careful examination of the books and correspondence of Clews & Co. showed that, in point of fact, the firm owed the State \$170,228.42, with interest from November 16, 1871.

In response to a resolution of the House of Representatives, asking for information regarding the proceeds of the sale of lands donated by Congress for the establishment of a College of Agriculture and Mechanic Arts, the

Governor submitted a detailed statement on the 14th of February. The amount realized from the sale, under an agreement entered into by acting-Governor Conley, was \$243,000, of which sum \$50,400 was paid in cash, invested in seven per cent. bonds of the State, and turned over to the State University. The remainder was payable in eighteen months; and, under the resolution of 1872, authorizing the discount of the purchaser's notes at seven per cent., about one-half of the remaining scrip was surrendered, and \$90,202.17 realized and paid into the Treasury. Under a resolution of 1873 this was kept as a separate fund, but not invested, and it still remains in the Treasury. The last payment of \$96,192 was made in July, 1878, and \$96,000 invested in eight per cent. bonds of the State, and turned over to the trustees of the university.

The political canvass of the year opened early in the spring. The Democratic Executive Committee decided to have no State Convention for the appointment of delegates to the National Convention, but directed the calling of conventions in the congressional districts for this purpose. These were held on the 26th of April, and in each district two delegates to the nominating body at St. Louis were chosen, and four delegates at large were voted for. The State Committee consolidated the votes of the district conventions, and determined who had been chosen as delegates at large. This method of proceeding gave rise to a good deal of dissatisfaction in the party, but there was a general acquiescence in the result. Governor Smith headed the delegation to St. Louis. The Republicans held a State Convention at Atlanta, occupying two days, the 4th and 5th of May. Of the twenty-two delegates chosen to the National Convention, thirteen were white and nine colored. A resolution was adopted expressing approval of the Administration of President Grant. A Democratic Convention for the nomination of candidates for State officers and for presidential electors was held at Atlanta on the 2d of August. Governor Smith and Judge Herschel V. Johnson had both declined to have their names used as candidates for Governor. Alfred H. Colquitt was nominated. The Republican Nominating Convention was held at Macon on the 16th of August, and Jonathan Norcross, of Atlanta, was made the candidate for Governor. Resolutions were adopted approving of the national ticket and platform of the party, favoring free, non-sectarian schools, expressing abhorrence for lawlessness and disorder, and opposing a convention for the revision of the constitution of the State. The State election occurred on the 4th of October, and resulted in the choice of Colquitt for Governor. The total vote was 144,839, of which the Democratic candidate received 111,297, and the Republican 33,444, making the majority of the former 77,853. At the presidential election, November 7th, there were 180,534 votes cast, of which the Tilden and Hen-

dricks electors received 180,088, and the Hayes and Wheeler electors 50,446; majority for the former, 79,642. All the nine members of Congress chosen on the same day were Democrats. The Legislature of 1877 consists of 48 Democrats and 1 Republican in the Senate, and 168 Democrats and 7 Republicans in the House; Democratic majority, 42 in the Senate, 161 in the House, and 203 on joint ballot.

In his message to the Legislature in January, 1877, Governor Smith used the following language regarding the political affairs of the country:

Before closing this, my last annual communication to the General Assembly, I cannot forbear a brief reference to the grave circumstances which now surround us, and seem to threaten the existence of the liberties of the people.

On a given day, over eight millions of freemen, representing nearly forty-five millions of people, came forth from their abiding-places and quietly proceeded to the ballot-box for the purpose of choosing their rulers for the next four years. This grave proceeding was characterized by the utmost good order, notwithstanding the presence, in many places, of the military forces of the Government, sent thither to overawe the weak and ignorant, and to secure the election of particular candidates. The law pointed out the mode of selecting the President and Vice-President of the United States. The question as to who should fill these high offices had been referred to the ballot-box. The true result of that reference no candid man can doubt. The election was held in pursuance of the laws of the United States and of the several States. It was peaceable and orderly, and free from intimidation and violence. And yet immediately after the election we find a few adventurers, acting under the direction of ambitious leaders at the Federal capital, and backed by the military forces of the Government, attempting, by fraud and chicane, to set aside the eminent statesman chosen by the people, and to force into places persons whom the people, after a fair trial, had refused to elect.

The question arises here: Shall the candidates fairly and legally elected by the people be placed in office, or shall persons rejected at the ballot-box be elevated to power? Shall law and order prevail, or shall fraud and violence have the mastery? Shall the people of the United States choose their own rulers, or shall political cheats and swindlers be permitted to perform that vital office for them? We have appealed to the ballot-box: shall the result of this appeal stand, or shall it be set aside by force and fraud? If the latter, then our free institutions are already at an end, and constitutional liberty on the American continent has received its final blow.

The right of the people to choose their own rulers is the corner-stone of a free, democratic republic; and when they voluntarily abdicate this invaluable privilege, or allow it to be wrenched from them, they have already obtained their own consent to become slaves. No more sacred cause can engage the patriotic efforts of a nation than the firm maintenance of the fundamental right in all free governments to say who shall rule over it. This right the people of Georgia, and, I trust, of every other State in our Federal Union, will never willingly abandon. No division of the dirty spoils of office, no promise of personal advancement, no engagement to withhold the iron hand of power, can ever compensate the people for the surrender of a right at once so dear to themselves, and so vital to the very existence of constitutional liberty.

The people of the United States are thus brought face to face with a most momentous responsibility. What shall be done? What shall we do? The motto

of our noble State furnishes the safe guide for our own action in this solemn emergency: "Wisdom, justice, moderation." It is not for us to lead, or even to suggest, but to follow. It is the plain duty of Congress, by adhering to law and established precedent, to give effect to the clearly and legally expressed will of the people. But if Congress should unhappily fail to do this, then it is believed that the proper determination of the grave questions now confronting us can, in the last resort, be safely left to the sober judgment of the right-minded people in the Northern States. If it cannot, then we are powerless, and they as well as ourselves will have lost the inestimable right of freemen—the right of self-government. When they shall have decided what is proper to be done for the preservation of this right, it is assuming but little to say that the people of Georgia will be found ready to cooperate with them, and to do their whole duty under any and all circumstances.

GERLACH, FRANZ, a German scholar, born July 18, 1798; died in November, 1876. He studied theology and philology in Göttingen, received a position in the gymnasium in that town upon graduating, became professor in the cantonal school in Aarau in 1817 and in the University of Basel in 1820, was appointed member of the Educational Council in 1835, and was pensioned in 1875. Among his philological works are the editions of Sallust with a commentary (1823-'31, 8 vols.; 1852, 2 vols.; 1870, 1 vol.), of the "Germania" of Tacitus (1835), which was followed by a translation with a commentary (1837), and the critical edition of Nonius Marcellus (1842), which he published together with Roth. He also published the "Schweizerische Museum für historische Wissenschaften" (3 vols., 1837-'39), with Hottinger and Wackernagel; "Historische Studien" (vol. i., 1841; vols. ii. and iii., 1847-'68), and "Die Geschichte der Römer" (vol. i., 1851), with Bachofen.

GERMANY, an empire in Europe, reestablished January 18, 1871. The Emperor, William I., was born March 22, 1797, and was married June 11, 1829, to Augusta, daughter of the Grand-duke Charles Frederick of Saxe-Weimar. The heir-apparent, Frederick William, born October 18, 1831, has the official title of Crown-prince of the German Empire, and Crown-prince of Prussia. He was married January 25, 1858, to Victoria, Princess Royal of Great Britain and Ireland, born November 21, 1840. Offspring of the union are—three sons: Frederick William, born 1859; Henry, born 1862; Waldemar, born 1868; and four daughters: Charlotte, born 1860; Victoria, born 1866; Sophia, born 1870; Margareta, born 1872. Imperial Chancellor (Reichskanzler), Otto, Prince von Bismarck-Schönhausen. President of the Imperial Chancery (Reichskanzler-Amt), Hofmann, Minister of State, appointed in 1876.

The following table exhibits all the states of the German Empire, the area, the population, the number of representatives of every German state in the Federal Council, and the number of deputies who represent each state in the Reichstag:

STATES.		Square Miles.	Population in 1876.	Votes in Federal Council.	Deputies to the Reichstag.	
Grand-duchies, Kingdoms.	1. Prussia (including Lauenburg).....	184,499	25,772,562	17	226

Hamburg.....	Burgomaster.....	K. F. Petersen.....	For 1876.	
Lübeck.....	Burgomaster.....	H. A. O. Weber.....	For 1876.	
		Theodor Behn.....	For 1876.	

It will be seen from the above table that the dual line of Brunswick is likely to become extinct by the death of the reigning duke. The succession is disputed by the ex-King of Hanover and the Emperor of Germany. It is also interesting to notice that in only twelve of the twenty-two sovereign houses which belong to the German Empire the heir-apparent is the son of the reigning sovereign.

The legislative functions of the empire are vested in the Bundestag, or Federal Council, and the Reichstag, or Diet of the Empire. The

Bundesrath represents the individual states of Germany, and the Emperor must have its consent to declare war not merely defensive. The members of the Bundestag are appointed by the governments of the individual states for each session. On January 1, 1876, the German Bundesrath was composed of the following members :

Prussia.—Prince Bismarck, President and Imperial Chancellor; Hofmann, President of the Imperial Chancery; the ministers Camphausen, Count Eulenburg, Leonhardt, Kameke, and Achenbach; Bülow, State Minister and Secretary of State in the Ministry of Foreign

* The figures marked * give the definite, the others only the preliminary, statement.

Affairs; Stosch, Chief of the Admiralty; Von Philipsborn, Director in the Foreign Office; Bitter; Dr. Friedberg, Under-Secretary of State in the Ministry of Justice; Postmaster-General Stephan; Hasselbach, Director-General of Indirect Taxes; Meinecke, Ministerial Director in the Imperial Ministry of Finance; Nathusius, Geh. Oberregierungsrath; Maybach, President of the Imperial Railroad Office; Möller, Oberpräsident of Elsass-Lothringen; and Burghart, Director-General of Direct Taxes.

Bavaria.—The ministers Adolf von Pffretzsohner, Dr. von Fäustle, and Georg Berr; Freiherr Gergler von Perglas, ambassador in Berlin; Ministerial Councilor von Riedel; and Colonel Fries.

Saxony.—The ministers Richard von Friesen and Chr. W. L. Abeken; Oswald von Nostiz-Wallwitz, ambassador in Berlin; and Major Planitz.

Württemberg.—Minister von Mittnacht; Hugo von Spitzenberg, ambassador in Berlin; Colonel von Faber du Faur; and Councilor Hess.

Baden.—Dr. Julius Jolly, President of the Ministry; Rudolf von Freydford, State Minister; and Moritz Elstätter, President of the Ministry of Finance.

Hesse.—Councilor Dr. Neidhardt, and Councilor Göring.

Mecklenburg-Schwerin.—Von Prollius, *chargé d'affaires* in Berlin, and Director Oldenburg.

Saxe-Weimar-Eisenach.—Councilor Dr. Stichling.

Mecklenburg-Strelitz.—Councilor von Prollius.

Oldenburg.—Councilor Mutzenbecher.

Brunswick.—Councilor Schulz.

Saxe-Meiningen.—Minister Albrecht Otto Giseke.

Saxe-Altenburg.—Minister von Gerstenberg-Zech.

Saxe-Coburg-Gotha.—Minister Freiherr von Seebach.

Anhalt.—Minister Freiherr von Krosigk.

Schwarzburg-Rudolstadt.—Dr. Hermann von Bertrab, State Minister.

Schwarzburg-Sondershausen.—Councilor Rudolf von Wolfersdorf.

Waldeck.—Director von Sommerfeld.

Reuss, older line.—Faber, President of the Government.

Reuss, younger line.—Dr. Adolf von Harbou, State Minister.

Schaumburg-Lippe.—Councilor Höcker.

Lippe Detmold.—Councilor Liebe.

Lübeck.—Dr. Krüger, minister resident.

Bremen.—Otto Gildermeister, burgomaster.

Hamburg.—Dr. Kirchenpauer, burgomaster.

A comparison of the population of the large German cities in 1875 with their population in 1871 (see ANNUAL CYCLOPEDIA for 1872, p. 850) shows almost throughout considerable gains. The following table contains the pop-

ulation of the largest cities, according to the census of 1875:

CITIES. Population in 1875.		CITIES. Population in 1871.	
Berlin	963,634	Cassel	58,045
Hamburg	264,675	Erfurt	43,025
Breslau	289,050	Frankfort on the Oder	47,174
Dresden	197,295	Mannheim	46,423
Munich	193,024	Metz	45,673
Cologne	185,518	Görlitz	45,843
Leipzig	127,387	Potsdam	45,041
Königsberg	132,445	Würzburg	44,564
Stuttgart	107,273	Lübeck	44,709
Hanover	106,634	Darmstadt	43,967
Frankfort on the Main	103,315	Wiesbaden	43,708
Bremen	102,177	Carlsruhe	42,740
Dantzig	98,181	Duisburg	37,371
Strasburg	94,346	Kiel	37,370
Nuremberg	91,011	Münster	33,355
Magdeburg	88,012	Rostock	34,173
Barmen	86,580	Elbing	33,375
Altona	84,218	Gladbach	31,945
Stettin	81,052	Zwickau	31,491
Düsseldorf	80,760	Liegnitz	31,457
Elberfeld	80,599	Ratisbon	31,457

Total.....	19	74	188	10	876	1: 48,000

Fourteen German states have a Diet consisting of one chamber only, and one of these, the duchy of Saxe-Coburg-Gotha, has, besides the common Diet for the entire duchy, two particular Diets, one for the former duchy of Coburg, and one for the former duchy of Gotha. In the majority of these states the members of the Diets are chosen partly by the owners of Rittergüter, or noble estates, partly by the cities, and partly by the rural districts. In several, the sovereign has the right of appointing a few members. The following table exhibits the composition of all these Diets:

II. STATES WITH ONE CHAMBER.

STATES.	REPRESENTATIVES					One Representative for
	Of Landed Estates.	Of Cities.	Of the Country.	Others.	Total.	
Saxe-Weimar.....	10	21 from general elections.			31	1: 9,400

Würzburg.....	Bavaria.....	67	984	85	1,019
Total.....		1,771	16,190	2,186	18,876

In all, twenty universities, of which nine are in Prussia, three in Bavaria, two in Baden, one each in Württemberg, Hesse, Saxony, Saxe-Weimar, Mecklenburg, and Alsace-Lorraine. Sometimes the Academy of Münster, which contains the two faculties of Catholic theology and philosophy, is also counted among the

German universities. It had, in 1876, 29 professors and 436 students. At the following universities, outside of the German Empire, the German language is exclusively or predominantly used, and in the province of literature they may therefore be counted as German universities:

UNIVERSITIES.	Countries.	Professors.	Students.	Students not matriculated.	Total.
Basel.....	Switzerland.....	67	202	52	254
Bern.....	".....	70	283	68	345

Zürich.....	Switzerland.....	77	330	84	364
Total.....		818	8,251	968	9,214

The budget of the German Empire for 1876, as declared by law of December 25, 1875, estimates revenue and expenditure each at 474,256,998 marks (1 mark = 23.8 cents). The revenue was derived from the following sources:

	Marks.
1. Customs and excises of consumption.....	242,629,170
2. Stamp-duty for bills of exchange.....	6,990,450
3. Administration of postal affairs and telegraphs.....	10,562,236
4. Administration of railroads.....	9,473,000
5. Imperial Bank, and other receipts.....	1,510,000
6. Receipts of various descriptions.....	1,865,114
7. From the imperial funds for invalids.....	28,828,611
8. Surplus of the years 1874 and 1875.....	84,368,866
9. Profits from the coining of imperial money.....	10,200,000
10. Interest of invested capitals.....	10,658,000
11. Extraordinary receipts.....	45,495,836
12. Matricular contributions.....	71,376,215
Total.....	474,256,998

The matricular contributions were divided among the particular states as follows:

STATES.	Marks.
Prussia.....	31,780,696
Lauenburg.....	72,798
Bavaria.....	16,073,924
Saxony.....	8,676,779
Württemberg.....	5,987,103
Baden.....	4,647,435
Hesse.....	1,162,731
Mecklenburg-Schwerin.....	753,196
Saxe-Weimar.....	401,332
Mecklenburg-Strelitz.....	132,364
Oldenburg.....	433,256
Brunswick.....	435,145
Saxe-Meiningen.....	266,346
Saxe-Altenburg.....	204,711
Saxe-Coburg-Gotha.....	245,896
Anhalt.....	305,854
Schwarzburg-Rudolstadt.....	104,744
Schwarzburg-Sondershausen.....	95,904
Waldeck.....	74,077
Reuss, older branch.....	65,163
Reuss, younger branch.....	186,145
Schaumburg-Lippe.....	46,725
Lippe.....	141,319
Lübeck.....	93,063
Bremen.....	239,035
Hamburg.....	711,815
Alsace-Lorraine.....	3,074,109
Total.....	474,256,998

The common expenditure of the empire is defrayed, according to Article 70 of the Constitution, from the revenues arising from customs, certain branches of excise, and the profits of the posts and telegraphs. The regular expenditures of the empire were estimated as follows:

	Marks.
1. Chancery of the empire.....	4,083,660
2. Imperial Diet.....	818,139
3. Foreign Office.....	5,563,265
4. Administration of the Imperial Army.....	216,205,788
5. Administration of the Navy.....	21,066,481
6. Interest of the debt of the empire.....	2,742,700
7. Chamber of Accounts.....	396,466
8. Imperial Supreme Court of Trade.....	363,370
9. Railroad Office of the Empire.....	276,430
10. General Pension Funds.....	23,408,141
11. Empire Invalid Funds.....	23,825,611
Total.....	408,245,063

The extraordinary expenditures are thus estimated:

	Marks.
1. Chancery of the empire.....	2,040,230
2. Imperial Diet.....	30,000
3. Foreign Office.....	1,965,500
4. Postal administration, and administration of telegraphs.....	1,462,900
5. Army of the empire.....	83,868,619
6. Administration of the Navy.....	4,769,310
7. Chamber of Accounts.....	40,000
8. Railroads of the empire.....	17,010,334
9. Mint reform.....	7,900,000
10. Manufacture of Empire Bank notes.....	600,000
Total.....	71,011,966

The following table gives the military forces of the empire in time of war:

I. FIELD ARMY.

DIVISIONS.	Officers.	Men.	Horse.
Higher staff.....	868	5,170	5,070
Infantry.....	10,190	455,620	17,303

The "World's Postal Union," founded by an international treaty concluded October 9, 1874,

at Bern, embraced at the close of 1876 an area of 46,000,000 square kilometres (= 17,760,000 sq. m.), with 628,000,000 inhabitants. Among the states belonging to the Union are all the states of Europe; in America, the United States and the French colonies; in Asia, Asiatic Russia, Asiatic Turkey, British India, and the French colonies; in Africa, Egypt, Zanzibar, Tunis, Morocco, the French, Spanish, and Portuguese possessions; in Australia, the French colonies.

The postal statistics of the empire were, according to the latest official publications, as follows:

ITEMS.	Imperial Mail, 1875.	Bavaria, 1874.	W'rttemberg, 1874-'75.	Total in Millions.

The German Reichstag, after its recess for the holidays, resumed its labors on January 19th. The first question of importance that came before it was a consideration of the amendments to the penal code. The conflict between the Liberal majority and Prince Bismarck, which had begun in 1875, continued in 1876. On January 27th a spirited debate ensued on the amendment to section 180, directed against acts inciting hostility between different classes and attacking national institutions, in the course of which Count Eulenburg, the Minister of the Interior, stated that the paragraph was directed against the Social Democrats, against whom the Government was in need of more effectual weapons. He declared their aim to be the "Red Republic," with communism and atheism. The paragraph was finally rejected by a unanimous vote. On the 28th the Reichstag rejected the addition prohibiting the publication of political pastoral letters and encyclicals, and on the 29th they adopted the so-called "Arnim paragraph," relating to offenses similar to that of Count Arnim. The second reading of the amendments was finished on the 29th, the other paragraphs besides those mentioned being of minor importance. In the third reading the "pulpit paragraph," which had been rejected in the second reading, was also passed, and on February 10th Prince Bismarck read an imperial message, closing the session, and, in the name of the Federal Council, thanked the House for their labors. Besides the amendment to the penal code, the House in the session passed, among other laws, the law against the copying of works of art, of models and patterns, and of photographs.

Soon after the close of the Reichstag in February the Parliaments of the different German states began to assemble: in Weimar, on February 14th; for Mecklenburg, in Sternberg, on February 16th; and in Munich and Dresden, on February 21st. The all-absorbing question in all of these states was the scheme of the Imperial Government for buying up all the German railroads. In the Bavarian Chamber of Deputies the matter was brought up by an in-

terpellation of the Government by Herr Freitag, one of the leaders of the Catholic party, who assumed that the Bavarian Government railroads were also to be bought by the empire. Against such a plan (the assumption of which was, however, entirely unwarranted by the facts), Herr von Pffretzschner, the President of the Ministry, declared himself with great precision, making particular reference to the reserved rights of Bavaria. In the beginning of March similar interpellations were raised in Karlsruhe and Dresden, and were answered in both states with equal decision as in Bavaria. In Dresden a resolution was passed at the same time by a vote of 66 to 7, requesting of the Government to oppose every demand for the sale of the Saxon railways, while a resolution in favor of a strong railroad law for the empire was rejected by a vote of 53 to 15. In Stuttgart the Chamber of Deputies passed a resolution by a vote of 88 to 6 against the purchase of the railroads by the empire, but also one demanding a stronger railroad law for the empire. In Bavaria the conflict between the Catholic majority of two against the ministry, and particularly against Herr Lutz, the Minister of Religious Affairs, continued during 1876 with the same want of success as during the previous year. The King effectually aided the ministry, while the more liberal faction of the Catholic party, under Dr. Jörg, avoided extreme measures. The action of the Catholics in invalidating the election of Liberals in several districts resulted in the reelection of the Liberal candidates by increased majorities. In Saxony the Government brought in several bills, which had for their object the restriction of the power of the Catholic clergy. On May 17th the Landesausschuss of Alsace-Lorraine met for the first time in Strasburg, its labors being approved both by the Government and the people of these provinces. In the Lower Chamber of Baden a very spirited debate ensued, when, in considering the budget, the title "Catholic Church" was reached. As the archiepiscopal see of Freiburg remained vacant during 1875, the Government had made no demand for the 18,400 florins usually appropri-

sted for the table of the archbishop, with the reservation that if, in 1876 or 1877 an appointment should be made, to pay the usual dotation from the day of appointment. The Clerical party made an amendment to this, that the usual dotation be again inserted. This was voted down after a lively debate.

The Imperial Government lost one of its oldest and most efficient members by the resignation of Herr Delbrück, the President of the Imperial Chancery. The resignation was accepted in the middle of April by the Emperor.

The reason for this step was stated by Herr Delbrück to be his shattered health, although it was rumored that differences of opinion with Prince Bismarck, particularly on the railroad question, were the real causes. These rumors were emphatically denied by Prince Bismarck in the Prussian Chamber of Deputies. As his successor the Emperor appointed Herr Hofmann, formerly Minister of Hesse-Darmstadt.

The fourth and last session of the Reichstag elected in 1878 was opened on October 30th. The speech from the throne was read by Herr

Hofmann, the Emperor being absent on account of indisposition. The imperial speech mentioned the general depression of trade and industry in Germany and throughout the world, and stated that the object of the Government's commercial policy would be the protection of German industry from the prejudicial effects of one-sided customs regulations in other countries. This object would be kept specially in view in impending negotiations

for the renewal of commercial treaties. Germany's foreign relations, notwithstanding the difficulties of the present political situation, were fully accordant with the Emperor's pacific policy. His constant endeavor was to preserve friendly relations with all powers, especially those connected with Germany by ties of neighborhood and history, and, as far as peace might be endangered among such, to preserve it by friendly mediation. Whatever

the future might have in store, Germany might rest assured that the blood of her sons would be sacrificed or risked only for the protection of her own honor and interests. But the most important question for which the extraordinary session had been called were the three great judicial bills (the law on the constitution of the courts, the civil process, and the criminal process), to the consideration of which the Imperial Commission of Justice had devoted itself since February, with great diligence. Many differences of opinion which had shown themselves in the Federal Council had been settled by the commission, but the propositions of the commission still differed materially on many important points from the resolutions of the united governments. On this point the speech expressly said: "If the united governments hold to the conviction that a happy solution of the task imposed upon the present session by the consideration of the judicial laws is still possible, they do so in the firm belief that you, gentlemen, in considering these questions, will keep in view a safe and unrestricted execution of justice." The organization of the Reichstag occupied two days, because, instead of Prof. Hänel, a member of the "Party of Progress," Herr von Benda, a National Liberal, was elected second vice-president. After having rapidly disposed of the budget for the first quarter of 1877, the Reichstag instructed the Imperial Commission of Justice to consider and report on the differences still existing between it and the Federal

Council; and, in order to give the commission time for this work, the Reichstag took a recess of one week, from November 8th to November 15th. A number of these points were settled by compromises in the commission; but the most important points, as the position of the press (referring all press offenses before a jury, and the abolition of compulsory testimony of the persons employed in the office of a journal against the responsible editor), and the relation of the courts to the administration, were referred by the commission to the Reichstag. In the second reading of the bills, begun on November 15th and finished December 8d, the Reichstag in all cases decided, by large majorities, for the propositions of the commission, and against the objections of the Federal Council. After the second reading was finished Prince Bismarck declared that not less than nineteen points could not be accepted by the united governments, and that the whole work would be a failure if the Reichstag would not relent. To avert this, the leaders of the National Liberal party, Von Bennigsen, Miquel, and Lasker, declared themselves willing to enter upon some compromise, which offer was accepted by the chancellor. A compromise was finally agreed upon, satisfactory to both parties, the National Liberals sacrificing the clause with regard to the press, while the governments consented to relinquish the preponderating influence of the administration over the courts. This compromise was not only bitterly attacked by the Catholics and the Social

AUGSBURG, GERMANY.

Democrats, but also by the Party of Progress (*Fortschrittspartei*), who thus hoped to drive the National Liberals from their position as the leading party of the Reichstag. The compromise was, however, sanctioned by the Reichs-

tag, on December 22d, by a vote of 194 to 100. After passing an appropriation of 10,186,000 marks for the condensation of the telegraphic system of Germany, and for the construction of several main lines by subterranean cables, the

session was closed on December 28d by the Emperor in person. In the speech from the throne he reviewed the results of the legislative period just completed. He enumerated the more important measures which had become law, and expressed his sincere gratification at what had been accomplished by the House. The Emperor thanked the Parliament

for the completion of the judicial law, by which considerable progress had been made toward the desired end of national legal unity. He continued: "A common legal development will strengthen the consciousness of solidarity in the whole German nation, and will give an interior support to the political unity of Germany, such as no former period in the

BADEN-BADEN, GERMANY.

history of our country can show. It will be the work of future sessions to effect legal unity in the whole domain of the civil law." The Emperor proceeded to thank the deputies in very cordial terms for their assiduous and successful labors, and expressed himself firmly confident that on the reassembling of the Reichstag it would be enabled to direct its exclusive attention to the peaceful task of developing the national judicial system." Adverting in conclusion to foreign affairs, the Emperor said: "The negotiations of the powers upon the Eastern question, as far as they have hitherto proceeded, justify the hope that my efforts and the mutually conciliatory and peaceful intentions of the powers immediately concerned will be successful in solving pending questions without prejudice to the good relations now existing between them. Germany will continue, by friendly and disinterested mediation, to lend her coöperation for the attainment of this end."

In the Eastern question the German Government occupied a quiet attitude. Besides the statements made in the different speeches from the throne, the Government in November made an important declaration on this subject. Herr von Bülow, Secretary of State for Foreign Affairs, replying to a question of Dr. Jörg, a member of the Reichstag, said that it was at the present moment impossible for the Government to give information upon pending

questions. He continued: "You know that the policy of the Emperor is a policy of peace, a policy which declines to interfere in foreign matters. Up to the present the development of affairs in Turkey has not touched us directly, nor will it easily affect us indirectly. In the presence of the armistice we can look forward to the future with tranquillity. The policy of Germany with all friendly powers is based upon amity, esteem, and confidence. This is manifest from all the negotiations which have been hitherto carried on, and the Government intends to maintain this position in the future also, if the nation and its representatives place full confidence in the Government. It is not the intention of the Government to withhold from the representative body of the people any necessary communications respecting the situation. The policy of Germany will ever be pacific. Germany will always remain a bulwark of peace, and this bulwark will be so firm that we will claim the confidence of the popular representatives, and, indeed, deserve it."

The foreign relations of the Government were also in other respects of a very peaceful and satisfactory nature. The difficulty with Spain with regard to the seizure of the German schooner *Minna* by the Governor of the Philippines in 1875 was settled by the release of the vessel in January. The difficulty with China with regard to the German bark *Anna*,

which had been plundered by Chinese pirates, and which at one time threatened to lead to serious complications, was also satisfactorily settled. (See CHINA.)

The prosecution of Count Harry von Arnim before the court at Potsdam came to an end on April 27th. He was found guilty of having abstracted official documents in his capacity as ambassador, and was dismissed from the service, which sentence included the loss of his titles and of his pension.

The empire was visited during 1876 by several severe disasters. In the latter part of February great freshets inundated large parts of the country, especially in Saxony and Silesia. The Elbe burst the dikes near Magdeburg, Kalbe, and Wittenberg, and the greater portion of the district of Barby, fifteen miles from Magdeburg, was submerged. In the extreme east of Prussia, the banks of the Vistula were inundated for miles near Pless, causing a great number of families to become homeless. The Oder also overflowed her banks, producing considerable suffering. A number of railroad embankments were washed away, causing several accidents; the railroad from Posen to Thorn being threatened at one time with total destruction. The Empress went in person to the scenes of the disaster, to furnish aid. In consequence of the heavy rains, a landslip occurred at Caub, a small village on the Rhine in Northern Germany, on the evening of March 10th. Eight houses and twenty-six persons were buried, and, although detachments of pioneer regiments were immediately detailed to aid in the extrication of the buried people, only three were rescued alive. In December, the Nogat, a tributary of the Vistula, broke through the dam at Elbing, in the province of Prussia, flooding the country for miles around, and causing great loss of life and property.

In April Queen Victoria paid a visit to Germany, stopping at Coburg, where she was met by the Emperor William. The purpose of this visit was said to be the regulation of the succession to the throne of Saxe-Coburg, Prince Alfred being the prospective heir of the duke, who has no children. Nothing official, however, was stated about the results of this journey.

GLASSBRENNER, ADOLF, a German humorist, born March 27, 1810; died September 28, 1876. In his twenty-first year he became the founder and editor of *Don Quixote*, a humorous journal, which gained great popularity, but was suppressed by the Government after an existence of three years. He then devoted himself to the description of the humors of popular life, in a series of papers entitled "Berlin wie es ist und — trinkt." "Buntes Berlin," "Berliner Volksleben," "Leben und Trinken der feinen Welt," "Aus dem Leben der feinen Welt," etc. In these sketches he created a number of characters which became proverbial in Berlin, and are still living among the people, notably among them "Eckensteher Nante." In 1840 he married Mademoiselle

Adèle Perroni, a celebrated actress, and for her sake went to Neustrelitz. Having taken part in the revolutionary movements of 1848, he was banished and returned to Berlin. Besides the works already mentioned, he published "Die verkehrte Welt," "Komische 1001 Nacht," "Gedichte" (a complete edition of his shorter poems), and the juvenile books "Lachende Kinder," "Sprechende Thiere," and "Die Insel Marzipan."

GOLTHER, LUDWIG VON, a German statesman, born January 11, 1823; died September 17, 1876. Having studied in Tübingen, he entered the service in Würtemberg. He became Minister of Worship and Instruction in 1864, and President of the Privy Council in 1867. He contributed essentially to the promotion of public instruction in Würtemberg, organizing the "Volksschulen," the "Fortbildungsschulen," and a number of secondary schools. The relation of the Catholic Church to the state was regulated during his administration by the law of January 30, 1862. On this subject he published in 1874 a work entitled "Der Staat und die katholische Kirche im Königreiche Würtemberg," which gained considerable celebrity.

GOSZCZYŃSKI, SEVERINUS, a Polish poet, born in 1806; died February 25, 1876. He studied at the University of Warsaw, where he early showed a considerable talent for poetry, taking Byron and Mickievitz for his models. In 1830 he took part in the revolution in Poland, writing many patriotic hymns. After the suppression of the movement he went to France and Switzerland. His first large poem, "Zamek Kaniowski" ("The Castle of Kaniow," 1828), was a poetic narration, having for its subject the terrible revolt in the Ukraine in 1768, and in which he described Cossack life with great truthfulness. In France and in Switzerland he published some excellent novels, among them "Oda," "Straszny strzelec," and "Krol zamczyska." In "Sobotka" he described the celebration of St. John's day in the Carpathian Mountains, and under the title of "Trzy struny" (1839, 3 vols.) published a number of revolutionary poems. His last large poem was "Poslanie do Polski" ("Epistle to the Poles," 1871).

GRANGER, General Gordon, died at Santa Fé, New Mexico, January 10th. He was born in New York in 1828. He graduated at West Point in 1845, and took part in the principal battles of the Mexican War, being brevetted lieutenant in 1847, and, soon after, captain. When the civil war broke out, he became Colonel of the Second Michigan Cavalry. He took part in the campaign in Missouri, and distinguished himself at the battle of Wilson's Creek, August 10, 1861. In 1862 he was made brigadier-general, and commanded a cavalry division in the operations under General Halleck, which led to the fall of Corinth in May. He became a major-general in September, 1862, and in the spring of 1863 he was in command of the Army of Kentucky. He distinguished

himself in the battle of Chickamauga in September, 1863, and was soon after assigned to the command of the Fourth Army Corps. He took a prominent part in the operations around Chattanooga and in the battle of Missionary Ridge, November, 1863. He commanded a division at Fort Gaines, Ala., in August, 1864, and was in command of the Thirteenth Army Corps in the operations which resulted in the fall of Mobile in the spring of 1865. He was now made brevet-major-general in the U. S. Army. Leaving the volunteer service, he became Colonel of the Twenty-fifth and subsequently of the Fifteenth Infantry in the regular army. He was on duty with the latter regiment at the time of his death.

GREAT BRITAIN AND IRELAND, a kingdom of Western Europe. The Queen, Victoria, was born May 24, 1819. She is a daughter of Prince Edward, Duke of Kent, the fourth son of George III.; succeeded her uncle, William IV., as Queen of Great Britain in 1837; married, in 1840, Prince Albert of Saxe-Coburg-Gotha.

Children of the Queen.—1. Princess Victoria, born November 21, 1840; married to the Crown-Prince of Germany. 2. Prince Albert Edward, heir-apparent, born November 9, 1841; married in 1863 to Princess Alexandra, daughter of King Christian IX. of Denmark. Issue, two sons and three daughters; eldest son, Albert Victor, born January 8, 1864. 3. Princess Alice, born April 25, 1843; married in 1862 to Prince Ludwig of Hesse. 4. Prince Alfred, Duke of Edinburgh, born August 6, 1844; married in 1874 to the Grand-duchess Marie of Russia. He is heir-apparent to the Duke of Saxe-Coburg-Gotha. 5. Princess Helena, born May 25, 1846; married in 1866 to Prince Christian of Schleswig-Holstein-Sonderburg-Augustenburg. 6. Princess Louise, born March 18, 1848; married in 1871 to the Marquis of Lorne. 7. Prince Arthur, Duke of Connaught and Strathearne, born May 1, 1850. 8. Prince Leopold, born April 7, 1853. 9. Princess Beatrice, born April 14, 1857.

The cabinet was composed as follows in 1876: First Lord of the Treasury, Right Hon. Benjamin Disraeli, Earl of Beaconsfield; Lord High-Chancellor, Right Hon. Lord Cairns; Lord President of the Council, Right Hon. Duke of Richmond and Gordon; Lord Privy Seal, the first Lord of the Treasury; Chancellor of the Exchequer, Right Hon. Sir S. II. Northcote, Bart., M. P. Secretaries of State: 1. Home Department, Right Hon. R. A. Cross; 2. Foreign Affairs, Earl of Derby; 3. Colonies, Earl of Carnarvon; 4. War, Right Hon. G. Hardy, M. P.; 5. Colonies, Marquis of Salisbury. First Lord of the Admiralty, Right Hon. George Ward Hunt, M. P. Postmaster-General, Right Hon. Lord John J. R. Manners, M. P.

Parliament is composed of two Houses, the House of Lords and the House of Commons. The number of peers in 1876 was 494. Of these, 5 were peers of the blood royal, 2 archbishops,

21 dukes, 19 marquesses, 129 earls, 82 viscounts, 24 bishops, and 262 barons. Of the total number, 16 were representative peers of Scotland, elected for the twenty-first Parliament, and 28 Irish representative peers, elected for life. The Speaker of the House of Lords was Lord Cairns, the Lord High-Chancellor, and the chairman of committees, Lord Redesdale. The members of the House of Commons are elected by the people. The number of electors on register in 1876 was 2,340,763 in England and Wales, 295,420 in Scotland, and 230,773 in Ireland. The following table gives the area and population of the British Empire, according to the latest official statements and estimates:

COUNTRIES.	Square Miles.	Population.
Great Britain and Ireland ..	121,608	33,450,287 (1876)
Heligoland, Gibraltar, and Malta.....	145	172,660 (1873)
EUROPE	121,753	33,622,897
Cape Colony.....	192,420	790,984 (1875)

BRITISH EMPIRE.....	8,643,842	285,480,500

* That part of Kaffraria which had been independent up to the present time was united with the Cape Colony by proclamation of June 22, 1876.

The figures in the above table differ somewhat from the last official statement on the area and population of the British Empire ("Census of England and Wales," vol. iv., 1873), as it contains territories not enumerated in the official census, and, in some cases, later figures. (See Behm and Wagner, *Bevölkerung der Erde*, iv., Gotha, 1876.) The official figures are as follows:

COUNTRIES.	Square Miles.	Population.
Great Britain and Ireland...	131,608	31,629,399
India and Ceylon	962,890	198,712,857
Colonies and possessions ...	6,685,091	9,420,987
Total	7,769,449	234,762,598

At the time this estimate was made the cor-

rected returns for India were not at hand. Another point of difference is that the native states of India are not included, nor the native population in the transatlantic colonies, nor the different colonies added since 1873.

The following table gives the area and population of the United Kingdom according to the census of 1871, as well as the estimates of the Registrar-General (who does not include the islands in the British waters, nor the soldiers and sailors abroad), for 1874, 1875, and 1876. The islands not enumerated in the official work are the Laccadives and the Curia-Muria Islands in Asia; the Northern Territory, Auckland Islands, Lord Howe's Island, Fanning Island, and Caroline Island, in Australasia; and New Amsterdam and St. Paul in Africa:

DIVISIONS.	Acres.	Pop. in 1871.	Pop. in 1874.	Pop. in 1875.	Pop. in 1876.
England and Wales	87,319,221	22,712,266	23,648,609	23,944,459	24,244,010
Scotland	19,496,183	3,380,018	3,462,916	3,495,214	3,537,311
Ireland	20,819,908	5,412,377	5,314,844	5,309,494	5,317,416
Islands in the British waters	198,647	144,638	145,000	145,000	145,000
Soldiers and sailors abroad		216,080	216,000	216,000	216,000
Total	77,828,908	31,845,379	32,787,369	33,110,167	33,450,237

The number of emigrants from the United Kingdom during the years 1853-'75 was as follows:

NATIONALITY.	To the United States.	To British North America.	To Australia and New Zealand.	To other Countries.	Total.
English	894,286	174,901	456,281	79,184	1,604,652
Scotch	165,068	70,669	115,911	13,081	354,669
Irish	1,558,140	119,570	199,984	12,186	1,889,780
Foreigners	551,036	82,205	18,669	22,041	673,944
Not distinguished	163,426	52,631	30,563	43,205	290,185
1853-1875	3,324,961	499,909	821,601	174,597	4,821,068
1813-1875	5,391,542	1,536,658	1,182,437	226,053	8,336,790

The movement of population for 1871 to 1875 was as follows:

YEARS.	Marriages.	Births.	Deaths.	Excess of Births.
ENGLAND AND WALES.				
1871	190,112	797,428	514,379	282,549
1872	202,267	825,907	492,265	333,642
1873	205,615	829,778	492,520	337,258
1874	202,010	854,956	526,632	328,324
1875	200,990	930,187	546,817	383,370
SCOTLAND.				
1871	23,966	116,127	74,644	41,483
1872	25,580	113,878	75,741	38,137
1873	26,780	119,783	76,557	43,226
1874	26,247	123,795	80,676	43,119
1875	25,921	123,698	81,765	41,908
IRELAND.				
1871	23,990	151,665	88,720	62,945
1872	27,114	149,292	97,677	51,715
1873	26,270	144,877	97,587	47,290
1874	24,431	141,298	91,961	49,337
1875	24,259	138,332	95,248	43,084

The number of emigrants from the United Kingdom in 1875 was as follows:

NATIONALITY.	To the United States.	To British North America.	To Australia and New Zealand.	To other Countries.	Total.
English	43,867	9,044	90,749	10,860	153,520
Scotch	5,998	1,871	5,760	1,173	14,802
Irish	81,438	1,891	8,251	874	92,454
Foreigners	28,028	0,016	767	2,596	32,407
Not specified	825	56	8	698	1,587
Total	105,046	17,878	105,525	15,560	244,009

The total number of emigrants from the United Kingdom from 1856 to 1875 was 3,992,955. Of these 408,720 went to the North American colonies, 2,799,597 to the United States, 624,654 to Australia, 164,984 to other places.

The number of persons belonging to each religious denomination is estimated as follows:

DENOMINATION.	ENGLAND.		SCOTLAND.		GREAT BRITAIN AND IRELAND.	
	Population.	Per cent.	Population.	Per cent.	Population.	Per cent.
Church of England	17,731,000	77.8	78,000	3.2	18,587,000	56.6
Church of Scotland			1,473,000	43.9	1,473,000	4.7
Dissenters	3,971,000	17.4	1,486,000	44.3	6,084,000	19.1
Roman Catholics	1,058,000	4.6	320,000	9.5	5,520,000	17.5
Jews	89,000	0.2	6,000	0.3	46,000	0.1

Enumerations of religious professions exist in Ireland only. This country had, in 1871, 4,150,867 Roman Catholics, 667,979 Episcopalians, 497,648 Presbyterians, 43,441 Methodists, and 52,442 of different denominations.

The nativity of the 24,244,010 inhabitants of England and Wales was as follows: 21,692,165 were born in England and Wales, 213,254 in Scotland, 566,540 in Ireland, 25,655 on the islands of the British seas, 70,812 in the British colonies, 139,445 in foreign countries, and 4,395 on the high-seas.

The following table gives the population of the principal cities in July, 1876:

1. London.....	3,439,426	14. Hull.....	136,988
2. Glasgow.....	545,144	15. Portsmouth.....	124,567
3. Liverpool.....	521,544	16. Leicester.....	118,581
4. Manchester.....	357,917	17. Sunderland.....	108,348
5. Salford.....	183,425	18. Brighton.....	100,683
6. Birmingham.....	371,839	19. Aberdeen.....	96,499
7. Dublin.....	314,666	20. Nottingham.....	93,637
8. Leeds.....	291,560	21. Oldham.....	88,609
9. Sheffield.....	274,914	22. Norwich.....	88,430
10. Edinburgh.....	215,146	23. Wolverhampton.....	72,549
11. Bristol.....	199,589	24. Plymouth.....	72,330
12. Bradford.....	173,723	25. Greenock.....	70,192
13. Newcastle-on-Tyne.....	189,929	26. Leith.....	52,919
14. Dundee.....	139,135	27. Paisley.....	43,679

The receipts and expenditures from 1871 to 1876 were as follows:

YEARS.	Receipts.	Expenditures.	Surplus.
1871-73.....	£74,708,814	£71,490,020	£3,218,794
1873-75.....	76,603,770	70,714,448	5,889,322
1874-74.....	77,335,657	76,466,510	869,147
1874-75.....	74,921,873	74,323,040	598,833
1875-76.....	77,181,668	76,621,773	559,895

The revenue and expenditure for the year ending March 31, 1876, were as follows:

REVENUE.		
SOURCES.	Amount.	Delivered to the Exchequer.
1. Customs.....	£20,841,506	£20,020,000
2. Excise.....	23,299,820	27,626,000
3. Stamps.....	11,265,091	11,002,000
4. Land-tax and House-duty.....	1,109,239 } 1,421,515 }	2,496,000
5. Property and income tax.....	4,099,618	4,109,000
6. Post-Office.....	5,780,507	5,950,000
7. Telegraph service.....	1,597,423	1,245,000
8. Crown lands.....	479,675	893,000
9. Miscellaneous.....	4,291,608	4,258,893
Total.....	£73,686,048	77,181,693

The principal items under the head of miscellaneous were: Profits of issue from the Bank of England, £138,578; interest on public loans, £541,807; fees, etc., of public offices, £572,368; receipts by naval and military departments, £805,498; contributions from Indian revenue, £865,027; receipts by civil departments, £464,718; receipts by revenue departments, £823,277; and savings on grants of Parliaments, etc., £474,897.

EXPENDITURE.

ITEMS.	Amount.	Total.
1. PUBLIC DEBT.		
Interest of funded debt.....	£21,415,382	
Management of debt.....	207,381	
Terminable annuities.....	5,364,457	
Interest of unfunded debt.....	182,050	
New sinking-fund.....	230,150	
Interest on loans for local purposes.....	48,750	
		£27,448,750
2. CONSOLIDATED FUND.		
Civil list.....	£406,841	
Annuities and pensions.....	823,110	
Salaries and allowances.....	97,930

The value of the principal articles of import and export was as follows, in 1875 :

IMPORTS.		EXPORTS.	
ARTICLES.	Value.	ARTICLES.	Value.
Corn, grain, and wheat.....	253,096,691	Cotton-manufactures.....	253,108,808
Raw cotton.....	46,359,893	Metals.....	80,884,749
Wood and timber.....	15,424,498	Woolen and worsted manufactures.....	22,659,855
Wool.....	23,487,418	Cotton yarn.....	13,173,800
Sugar.....	21,968,752	Coals and fuel.....	9,668,068
Silk, raw and manufactured.....	16,226,078	Linen yarn and manufactures.....	10,759,437
Tea.....	13,764,961	Machinery.....	9,068,647
Flax and hemp.....	9,298,795	Notions and millinery.....	4,922,420
Metals.....	12,558,890	Woolen and worsted yarn.....	5,099,807
Butter.....	8,502,094	Hardware and cutlery.....	4,264,831
Seeds.....	8,760,415	Leather.....	3,981,168
Coffee.....	7,518,058	Silk.....	2,615,442
Wine.....	6,801,015	Alkali.....	2,299,937
Hides, tanned and untanned.....	7,017,418	Beer and ale.....	2,064,673
Bacon and hams.....	6,982,470	Chemical products.....	2,226,086
Oil.....	7,991,446	Telegraph wire.....	1,166,620

The movement of shipping was as follows (in tons) :

YEARS.	ENTERED.			CLEARED.		
	British.	Foreign.	Total.	British.	Foreign.	Total.
1. Total number entered and cleared :						
1869.....	6,889,000	5,284,000	12,173,000	7,924,000	5,491,000	12,517,000
1874.....	14,884,000	7,585,000	22,569,000	15,256,000	7,804,000	23,060,000
1875.....	15,191,000	7,502,000	22,693,000	15,754,000	7,880,000	23,584,000
2. Laden ships entered and cleared :						
1869.....	4,761,000	5,294,000	10,055,000	6,359,000	4,496,000	10,799,000
1874.....	12,751,060	6,280,000	19,031,000	14,011,000	5,742,000	19,758,000
1875.....	12,852,000	6,185,000	19,040,000	14,455,000	5,959,000	20,414,000
3. Steamers entered and cleared :						
1869.....	2,145,000	464,000	2,549,000	2,042,000	877,000	3,419,000
1874.....	9,555,000	1,871,000	11,426,000	9,353,000	2,001,000	11,854,000
1875.....	10,292,000	1,993,000	12,284,000	10,604,000	2,184,000	12,788,000

The commercial navy was as follows, in 1874 and 1875 :

COMMERCIAL MARINE.	SAILING-VESSELS.		STEAMSHIPS.		TOTAL.	
	Vessels.	Tons.	Vessels.	Tons.	Vessels.	Tons.
	Number of ships registered :					
United Kingdom. { 1875.....	21,291	4,207,000	4,170	1,945,000	25,461	6,152,000
{ 1874.....	21,464	4,108,000	4,083	1,871,000	25,497	5,979,000
British colonies.. { 1875.....	10,737	1,466,000	878	127,000	11,675	1,592,000
{ 1874.....	10,686	1,438,000	802	117,000	11,488	1,555,000
Total, 1875.....	32,068	5,672,000	5,048	2,078,000	37,186	7,744,000
Number of vessels used in 1875 (exclusive of river-steamers) :						
Coasting.....	10,568	716,000	1,188	282,000	11,746	948,000
Coasting and long-voyage.....	1,821	206,000	292	145,000	1,658	351,000
Long-voyage.....	5,827	3,122,000	1,468	1,470,000	6,792	4,958,000
Total, 1875.....	17,216	4,045,000	2,970	1,847,000	30,191	5,293,000

The railroad statistics for 1875 were as follows :

COUNTRIES.	Miles in Operation.	Capital.	Gross Receipts.	Net Receipts.
England.....	11,795	2527,094,000	249,767,000	228,510,000
Scotland.....	2,731	72,887,000	6,578,000	3,297,000
Ireland.....	2,148	80,246,000	2,688,000	1,218,000
Total, 1875.....	16,664	2690,227,000	258,978,000	232,025,000
1874.....	16,443	809,896,000	56,899,000	26,648,000

The number of letters sent in 1874 was 962,000,000, and in 1875, 1,009,000,000. Of these 847,000,000 were in England and Wales, 91,000,000 were in Scotland, and 71,000,000 in

Ireland. The number of newspapers and printed matter was, in 1874, 258,000,000, and in 1875, 280,000,000. The number of postal-cards in 1875 was 87,116,800. The number of inland money-orders in 1875 was 16,485,661, amounting to £26,497,918; the number of foreign and colonial money-orders was 834,218, amounting to £1,195,165. The number of registered letters delivered in 1875 in the United Kingdom was 4,300,000, and the number of returned letters 4,350,000. The number of post-office savings-banks, on December 31, 1875, was 5,260; the number of deposits, £3,132,433; the amount of the deposits, £8,738,852; the number of accounts open, 1,777,108. The length of the telegraph-wires, at the

close of 1872, was 169,487 kilometres (1 kilometre = 0.62 English mile). The number of stations was about 5,400. The number of dispatches, in 1873, was 17,294,834; in 1874, 19,116,634; and in 1875, 20,766,277, exclusive of the press, the Government, and the "news" messages.

The British army is filled up exclusively by recruiting. The term of service is twelve years, after which a soldier can serve for nine years more. At the end of three years he can also enter the reserve, one year in the regular army being counted as three in the reserve. By the reorganization of 1872, the United Kingdom is divided into 68 military districts. In each district there is one brigade depot of 182 men, two battalions of the regular army, which alternately serve abroad, two battalions of militia, and the volunteers of the district. According to the army estimates for the years 1876-'77, the army was to be composed as follows:

TROOPS.	Great Britain.	Colonies.	India.	Total.
Cavalry (81 regiments).....	12,945	4,890	17,275
Artillery.....	18,885	8,806	12,238	34,994
Engineers.....	8,991	1,284	435	5,710
Infantry (148 battalions).....	66,691	16,082	45,651	128,624
Colonial corps.....	2,481	2,481
Army service corps.....	2,856	128	3,014
Army hospital corps.....	1,813	262	1,574
Reserves.....	82,900	82,900
Miscellaneous establishments.....	1,880	801	2,181
Total.....	141,840	24,844	62,549	228,588

Besides the above, there are the following organizations: In Ireland there is a police

force, under military discipline, consisting of 13,000 men and 4,000 horses; the Channel Islands have a militia of 300 officers and 3,000 men, subsidized by the British Government; India has a native army of 140,000 men, and a police force, under military discipline, of 190,000 men, the officers of both of which are Europeans; the colonies all have a militia, a volunteer corps of their own. The home Government stations troops only at fortified places, except in the Cape Colony, where peculiar circumstances exist, and in places where policy demands it, as in Hong-Kong.

The navy consists of 61 iron-clads, about 300 steamers, and 170 sailing-vessels. Of this number 252 were in commission on August 1, 1876, 121 being at home, and 131 abroad. The navy is manned by 46,607 seamen, 14,000 marines, and 20,840 men belonging to the Royal Navy reserve.

The circulation of the notes of the Bank of England, and the average of bullion kept on hand by that institution, together with the total bank-note circulation in the United Kingdom, in 1870, 1875, and 1876, were as follows:

YEARS.	Bank of England.	Total Banks of United Kingdom.	Average of Bullion in Bank of England.
1870.....	£28,268,850	£39,558,829	£20,655,837
1875.....	27,814,206	45,388,905	28,919,196
1876.....	27,950,659	45,780,870	34,714,977

The finances, commerce, and the movement of shipping of the British colonies, in 1874, were as follows, according to the "Statistical Abstract for the Colonial and other Possessions of the United Kingdom, 1860-1874" (London, 1876):

COLONIES.	Income.	Expenditures.	Debt.	Imports.	Exports.	Movement of Shipping (Tons).
Gibraltar.....	£40,000	£42,000	4,282,000
Malta.....	175,000	162,000	(?)	£3,585,000	£7,671,000	4,757,000
Dominion of Canada.....	£3,048,000	£4,855,000	£22,568,000	£28,387,000	£18,449,000	6,051,000
Newfoundland.....	186,000	199,000	239,000	1,532,000	1,523,000	476,000
Bermuda.....	37,000	86,000	18,000	252,000	82,000	144,000
Honduras.....	44,000	40,000	15,000	178,000	241,000	88,000
Bahamas.....	37,000	88,000	64,000	184,000	180,000	204,000
Turk Islands.....	8,000	7,000	2,000	24,000	24,000	108,000
Jamaica.....	587,000	587,000	666,000	1,763,000	1,442,000	807,000
Virgin Islands.....	12,000	2,000	4,000	6,000	8,000

Mauritius.....	720,000	727,000	806,000	2,584,000	3,020,000	564,000

In 1875 the number of schools inspected by the Government inspectors was 13,290 in England and Wales, and 2,730 in Scotland. These schools had accommodations for 3,159,479 children in England and Wales, and 392,357 in Scotland. The average attendance was 1,885,563 in England and Wales, and 314,164 in Scotland. In Ireland there were, on December 31, 1875, 7,104 national schools, with 1,011,799 pupils enrolled, and an average daily attendance of 389,961. In England the number of paupers relieved in 1874-'75 was 817,822, and the amount expended £7,488,481. Scotland in the year had 121,905 paupers, on whom it spent £835,306. In Ireland the number of paupers was 77,913, and their cost £913,095. The rate per head of the total population for relief of the poor was 6s. 3½d. in England, 4s. 11½d. in Scotland, and 3s. 5d. in Ireland.

The attention of the British public was occupied at the beginning of the year with the discussion of the recent purchase by the Government of the shares of the Khedive of Egypt in the Suez Canal, and of the threatening aspect which affairs in the East had begun to assume. Misgivings were felt among a large portion of the people, particularly of the Liberal party, in regard to the expediency of the canal purchase, mingled with a fear that it might involve the Government in political complications abroad, and there were manifestations of a disposition to question the proceeding, if not to censure it and prevent its ratification by the Parliament.

In regard to the difficulties in the Turkish Empire, it was understood that the Government had decided to support the principles of the so-called Andrassy note, with a few reservations, among which were that it would not join in pressing reforms on the Porte with force or threats, and would remain uncommitted in regard to the course it would pursue in the future, whether Turkey accepted or rejected the conditions laid down in the note. This position of the Government was generally acquiesced in.

The Queen in person opened the session of the Parliament, February 8th, delivering the following address from the throne:

It is with much satisfaction that I again resort to the advice and assistance of my Parliament.

My relations with all foreign powers continue of a cordial character.

The insurrectionary movement which during the last six months has been maintained in the Turkish provinces of Bosnia and Herzegovina, and which the troops of the Sultan have up to the present time been unable to repress, has excited the attention and interest of the great European powers. I have considered it my duty not to stand aloof from the efforts now being made by the allied and friendly governments to bring about the pacification of the disturbed districts; and I have, accordingly, while respecting the independence of the Porte, joined in urging on the Sultan the expediency of adopting such measures of administrative reform as may remove all reasonable cause of discontent on the part of his Christian subjects.

The representations which I addressed to the Chinese Government as to the attack made in the course of last year on an expedition sent from Burmah to the western province of China have been received in a friendly spirit. The circumstances of that lamentable outrage are now the subject of an inquiry in which I have thought it right to request that a member of my diplomatic service should take part. I await the result of this inquiry, in the firm conviction that it will be so conducted as to lead to the discovery and punishment of the offenders.

Papers on all the above subjects will be laid before you.

I am deeply thankful for the uninterrupted health which my dear son, the Prince of Wales, has enjoyed during his journey through India; and the hearty affection with which he has been received by my Indian subjects of all classes and races assures me that they are happy under my rule and loyal to my throne. At the time that the direct government of my Indian Empire was transferred to the crown, no formal addition was made to the style and titles of the sovereign. I have deemed the present a fitting opportunity for supplying this omission, and a bill upon the subject will be presented to you.

The humane and enlightened policy constantly pursued by this country in putting an end to slavery within her own dependencies, and in suppressing the slave-trade throughout the world, makes it important that the action of British national ships in the territorial waters of foreign states should be in harmony with these great principles. I have, therefore, given directions for the issue of a royal commission to inquire into all treaty engagements and other international obligations bearing upon this subject, and all instructions from time to time issued to my naval officers, with a view of ascertaining whether any steps ought to be taken to secure for my ships and their commanders abroad greater power for the maintenance of the right of personal liberty.

The address further referred to a bill to be submitted for the punishment of slave-traders who are the subjects of native Indian princes; to the affairs of the colonial empire, including papers relating to the conference of the South African colonies and states; to the suppression of disorders in the Straits Settlements (of Malacca) by military interference; to a bill to be offered for regulating the ultimate court of appeal; to legislation to be proposed relating to the universities and higher education, and to measures of reform in the management of the prisons.
